The Nation.

NEW YORK, THURSDAY, JANUARY 6, 1876.

The Week.

THE willingness of Mr. Reverdy Johnson to palliate or gloss over such (to say the least) doubtful transactions as Mr. Schenck's in London, combined with the readiness of the Centennial Board to let Mr. Forney go abroad to represent them with $25,000 of the Pacific Mail corruption fund in his pockets, are two signs of the times which we most earnestly commend to the attention of our readers at the beginning of this new century of the national existence. Do they not indicate strongly that the decline in the tone of public life by which we are all so much grieved and alarmed, is due fully as much to the easy good-nature and one-eyedness of the honest men as to the rascality of the knaves? Among the most important outworks of the citadel of public virtue are surely sensitiveness about the mere appearance of evil, dread even of vague reproach, and delicacy which fears dishonor as it fears a wound. Are they not being rapidly surrendered by men who know their value and are charged with their safe-keeping? Are we not getting to a point at which an officer may defy public opinion until he reaches the very door of the penitentiary, and at which the most indecent and reprehensible acts are tested, not by the unwritten code by which honorable men live, but by the criminal code as administered in courts of justice? Are we not now every day asked, when we condemn a thing on the part of a public man, to point out its place among the crimes in the Revised Statutes, and laughed at if we cannot find it?

Proceedings at Albany have begun with the organization of the Legislature and the reading of the Governor's message. The Legislature is said by the *Tribune* correspondent to be, "from the look of its faces," a great improvement on the last, the Senate being, according to "old Republicans," the ablest for twenty years; in fact, the abundance of material will cause a good deal of difficulty in making up the committees. Not so much as this can be said for its moral character, however, for there are "half-a-dozen dark spots" on it which will perhaps render the committee-making a little easier than if the whole body were as good as it appears to be wise. The Governor's message gives a flourishing account of the State finances. In 1846 (when the constitutional restrictions were adopted) the State debt amounted to about $24,000,000. This year it may be put down at $10,000,000. In the same period, the debt of this city (not constitutionally restricted) has swollen from $14,000,000 to $122,000,000. The Governor gives an account of the Canal-reform measures of the past year, shows that the falling-off in tolls has been over a million dollars, and recommends: 1st, further investigation, with a view to abandoning unnecessary work; 2d, disposal of unnecessary lateral canals; 3d, the early consideration by the Legislature of the constitutional amendment adopted by both Houses last year, looking to a complete change in the system of Canal administration; 4th, the continuance of the present reduction in tolls. The message contains a good deal of information as to the State institutions, and an account of the Gray Nuns Act, passed May 15, 1875, authorizing the State Superintendent of Schools to issue, "in his discretion," certificates of qualification to teach to graduates of the Sisterhood of Gray Nuns. Though apparently the grant of a special privilege, this act in reality, the Governor says, gave no new right, as the Superintendent has exercised the same privilege for eleven years; and, besides this, the Gray Nuns Act was virtually repealed by the amendment of the General School Act passed June 9, 1875. Notwithstanding this, however, the strong Protestant feeling of the Legislature against nuns, gray or of any other color will probably lead to another repeal of the act, so that we may feel that the schools are reasonably safe for the winter at least. The message ends with a discussion of taxation, the depression of business, and the currency. It is well written, and contains the germs of a sound State policy, but it is too long, like a good deal of Mr. Tilden's writing, and will not attract the attention it would get if it were shorter.

The Mayor, in his message to the Common Council, refers to the past year as one of economy and increased efficiency in city management, and makes good his assertions by figures which show an actual reduction in expenses. He points out that the sinking-fund, which always plays so important a part in the monthly and annual accounts, is devoted not to the extinction of the entire city debt, but only to certain specified portions of it, and that it is largely in excess of the amount required by law for this purpose; and suggests that some change ought to be made in the cumbersome machinery relating to the fund. The Mayor refers in terms of strong praise to the reduction of wages by the Commissioner of Public Works, to the substitution of Mr. Whitney for Mr. E. Delafield Smith, and to the present composition of the Police Board; and, while taking generally a cheerful view of the situation, hopes also a good deal from the Governor's Municipal Commission. With regard to the city debt, he discusses it in somewhat the manner of Lord Dundreary in dealing with similar topics, and it is clearly not his fault if neither he nor any other person can find out exactly what the debt is or whether it is increasing from year to year. Perhaps the most remarkable fact presented in the message is that, out of the $35,000,000 of estimates for 1876, nearly $28,000,000 is appropriated at Albany, or, in other words, that four-fifths of the business of the city government is wholly beyond the control of the city itself, and is carried on by a distant body, elected for a totally different purpose, and grossly ignorant and generally misinformed as to the whole subject. The message as a whole has been well received by the press, the *World* going so far as to say that "it is not a common thing for any city to have a Mayor who can make such a showing for himself." This opinion, however, is not universally held, as may be seen from the *Times*, which says the message is "a very commonplace production," and "mainly composed of dry, colorless details," and says that "it would be too much to expect any new light on the problems of city government" from such a man.

Governor Tilden has confirmed the removal of Matsell and Disbecker from the Police Board, and Mayor Wickham has put in two Republicans, De Witt C. Wheeler and Joel B. Erhardt, who are spoken of as well fitted for their places. The first act of the reconstituted Board was to elect General W. F. Smith president, thus ending the long fight which began last summer in the attack on Matsell by the General. The Board has also issued an order, which would be comical anywhere except in New York, addressed to the police force, and reminding them that any "dishonesty, carelessness, or inefficiency" in the discharge of their duties will be likely to lead to bad consequences to the public at large; acknowledging for themselves the same obligation to be honest, careful, and efficient; expressing the "earnest hope" that "every one from this time forward" will act with a "firm determination" to be guided by the same good motives. Promotions will in future be determined by merit, and "active participation in" or "discussion" of politics will not be allowed; rules will be in all cases enforced, "partiality or favoritism" will be punished, and it is announced also that "no member of the force will benefit himself under any circumstances by solicitation or intercession through any

person," as the Board will in future be guided by "qualification and record." There is, however, a strong feeling at Albany that the people will not endure such measures as these, and it is understood that the Reformers are considering the question whether it would not be better to remodel the charter, so as to put the administration of the entire government into the hands of some department not affected in any way by politics, and we believe Recorder Hackett is thought of as the fittest man.

The negro ex-Senator from Mississippi, Mr. Revels, has written an open letter to General Grant "concerning the situation." Since Reconstruction, he says, the people of his race in Mississippi have been "enslaved in mind by unprincipled adventurers," who were willing to "stoop to anything" to get power. The negroes were "naturally" Republicans, but, "as they grow older in freedom, so do they in wisdom"; and so, on finding out that they were being used "as mere tools," a great portion of them determined, by "casting their ballots against these unprincipled adventurers," to overthrow them; that the negroes were told that they must vote for men "notoriously corrupt and dishonest" because the salvation of the "party depended upon it"; and that any man who scratched his ticket was not a Republican. It was to "defeat this policy," he continues, that at the late election men united, "irrespective of race or party affiliation," and "voted together against men known to be incompetent and dishonest." The colored masses in Mississippi, he says, are unwilling to recognize these rascally officials as Republicans, as they "do not believe that Republicanism means corruption, theft, and embezzlement." These three offences, however, have been "prevalent" among the office-holders; and "to them must be attributed the defeat of the Republican party [in Mississippi], if defeat there was." Mr. Revels looks upon it as "an uprising of the people, the whole people, to crush out corrupt rings and men from power." He says also that the bitterness and hate between the races have been almost "obliterated" in Mississippi, and would have been entirely wiped out but for the efforts of these "unprincipled men" to keep it alive for their own purposes. This account of the matter, as it comes from a negro, can hardly be pooh-poohed as a "rebel lie." We hope it will be brought to Mr. Morton's attention.

The full Report of the Red Cloud Commission is a curious document, both for what it contains and what it does not contain. It contains a statement, for instance, that every witness was examined whose name was furnished by Professor Marsh and who could be got hold of; and yet a certain Mr. Fox, who was undoubtedly one of Mr. Marsh's witnesses, and we believe was within reach, does not appear to have been examined at all. On the other hand, it is only fair to say that the Board made up for any omission of this sort by allowing Smith, the pious Indian Commissioner, to go over the report at his leisure and interpolate evidence which he had not given. The best things in the Report, however, are the conversations of Mr. Delano, reported by Mr. Marsh. In one he observed to the Professor that he (the Secretary) was "a Christian, a gentleman, and not a thief," and in another he gave this advice:

"If you are a praying man, Mr. Marsh, as I hope you are, I beg you will take home this one thought and pray over it: whether it is right for you to be interfering with my Department when you ought rather to aid me in the great work of Christianizing and civilizing these 300,000 wards of the nation. Keep away from the newspaper men, and all will be well."

The withdrawal of Harvard and Yale from the Inter-collegiate Rowing Association was rendered probable last summer by the action of the two crews at Saratoga. They voted before the race, and therefore before they knew that they were both going to be beaten, that it would be better to withdraw. The recent action of Yale, therefore, in retiring her crew does not call for any other criticism than would have been proper at that time. Harvard, too, has been disposed to adhere to the resolution then formed, but she has concluded, and we think wisely, to give a year's notice of her intention to withdraw, and meantime to participate in the regatta of 1876, which is to be held again at Saratoga. There are a good many reasons why it would be better if there had never been any inter-collegiate rowing association at all, chief among which is the disgusting vituperation and abuse in which the whole subject now becomes involved the moment there is any discussion of it. Before the formation of the Rowing Association, rowing may have been local but it was at any rate decent, and whenever a race had been pulled the newspapers were not filled for weeks and months afterwards with charges and counter-charges, exposures and defences and denials, foul epithets and recriminations, as they have been for the last two or three weeks, and are regularly now after almost every race. The great value and beauty of athletic contests, next to the development of muscle, have always been considered to be the production of sound moral qualities, such as manly endurance of defeat, generosity in victory, good temper, and so forth. Athletic sports which produce billingsgate instead, and races which end in "letters to the papers" such as have been lately forced upon our notice, will do as much to injure the tone of college education as they can possibly do to develop muscularity.

Mr. Bowen, of the *Independent*, has discontinued his other libel suits against the Brooklyn *Eagle* in which the evidence in Philadelphia about his contract with Jay Cooke was taken, feeling, doubtless, that this evidence made his case hopeless. If we are not mistaken, his damages in these also were laid at $100,000, and he will thus be out of pocket by these two libels alone $199,000, which is a shocking example of the power of the press over private interests. Mr. Bowen has published a card explaining that, although he signed the contract binding himself to give "the exclusive interest and influence of his money and editorial columns" to the sale of the Pacific railroad bonds, he told Jay Cooke immediately afterwards that his editorial columns could not be used for any such purpose, with which he says Jay Cooke was satisfied, but somehow kept the contract as it stood, and Mr. Bowen went on drawing his cash and bonds under it. The explanation has been received coldly by the public, as far as our observation has gone. He has bought no pew at the Plymouth-Church auction this year—a circumstance which is well calculated to excite alarm among his subscribers, for they will naturally say, if he was so indiscreet and active a bond-broker, even when in good and regular and prominent standing in the church, what will he be when pewless and threatened with ecclesiastical censure?

The old year closed and the new opened on dull markets in Wall Street. The most important event of the week was the successful negotiation in London of two loans—one for £1,350,000, for the Baltimore and Ohio Railroad Co., and the other for £2,000,000, for the Philadelphia and Reading Railroad Co. Both loans were practically taken on the day that they were offered to the public—a fact which shows a strong tendency among English investors to take good American securities. The house in New York representing the negotiation had been selling sterling for several weeks, and it was conjectured at the time of sale that the bills were lent on the hypothecation of stocks in which there is speculation at the Stock Exchange; the announcement of the negotiation of these loans shows, however, that the bills which have appeared in such abundance were drawn in advance against the bonds of the two companies named, which it was correctly calculated would be taken in London as soon as offered. Every one interested in the price of gold and in the money market has reason to be thankful for the timely intervention of these loans, as had it not been for them gold would have been exported, the bank reserve would have been reduced by the loss of specie, and the money market would have been made stringent. As it is, gold has fallen, and money has at no time been fairly higher than seven per cent. for demand loans. The re-

serve of the banks is rising, by reason of the increase in specie, which promises to continue until currency begins to return from the West, when the legal-tender-note part of the reserve ought to increase until the opening of navigation in the spring. The last public-debt statement shows an increase during December of $1,915,000, which reduces the decrease for the last six months of 1875 to $8,856,531. It is gratifying that during the past year there has been a contraction of the Treasury legal-tender notes, the amount now outstanding being $371,827,000. The increase in the debt during December, and the small decrease during the last six months, is explained by the falling-off in the customs, and this by reason of the diminished demand for foreign goods on account of the severe economy so widely practised.

In the total imports into the United States during the eleven months ending with December 1, 1875, there was a falling-off of $45,918,000 compared with 1874, and $96,842,398 compared with 1873. The exports were also smaller than in 1874 by $44,588,000, and $38,838,558 less than in 1873. Reducing the exports to gold values, however, the result is that for the eleven months ending December 1, 1875, the exports exceed the imports $35,858,793 against $34,528,193 for the corresponding time in 1874; in 1873 the imports exceeded the exports $22,145,047. The exports since last year's crops were harvested have, so far as cereals are concerned, been interfered with by a widely ramified speculation in grain. As soon as our grain markets can be brought into proper relations with the foreign markets, the exports of grain should be resumed on a large scale. This can be done either by a decline in prices here or by an advance in the English markets; and the latest utterances of the *Mark Lane Express* raise the hope that the latter may be the case. In general trade the feeling is that, while the process of coming down to sound principles has been painful, we are near to the end, and in some departments at the end, and that during 1876 there will be realized a fuller measure of substantial improvement than has yet been seen. The gold value of $100 greenbacks has ranged during the week from $88 30 to $88 79.

The European papers during the past week have had a great deal to say about a "circular note," touching the affairs of Cuba, said to have been addressed by Mr. Fish to American representatives abroad; but there is the greatest variety in the reports of what it contains—so great that the New York *Tribune* alleges some of the European versions of it to be simply a rehash of an old Washington letter of its own. As well as can be made out, if the note has ever been sent, it is in substance an appeal to European opinion about the Spanish management of Cuba, and if so is, besides being a departure from the Monroe Doctrine, a somewhat dangerous precedent. A diplomatic appeal of this kind about the internal affairs of an independent power must look nearly or remotely to joint intervention, and joint intervention is always a kind of log-rolling. The power which proposes it in a matter in which it is mainly interested, is sure to be called on to render a similar service to its allies in matters in which they are interested, and so on, whence come "entangling alliances." If the mind of the Administration could be in some manner relieved of its feeling of responsibility for the conduct of Spain, and be filled with more distress about matters nearer home, we should all be glad.

The French Assembly was prorogued and virtually came to an end on Friday. The new one meets on the 8th of March next. The Permanent Committee, elected before the dissolution, contains thirteen of the Left to twelve of the Right. The provinces are now busy preparing for the new elections. No legislative body in French history has rendered France so much service as the one which has just broken up. It is a curious fact that it is the only one of revolutionary origin that has sat so long and dissolved peaceably and of its own accord, after determining the form of the government and providing a constitution by rational discussion, and which has not been agitated during its sittings by the fear of being dispersed by the troops. It may be safely said, too, that it is the only deliberative body in French history whose debates have had an educating influence on the French public, and in which the moderate men have steadily gained in influence as time went on, while the extreme Radicals have been pushed into the background. Its journals, in short, furnish the most encouraging chapter in French history, and when we contrast its management of the finances after the tremendous military and financial catastrophe of 1870–71 with that of the legislatures of the first Revolution, one cannot but be deeply impressed by the progress made by the country in good sense and sound morals. What is perhaps most curious in this remarkable episode in French politics is, that this on the whole most safe and useful of Assemblies has been from the first day the target of abuse, at times ribald, from nearly the whole Liberal press of Europe and America. Writers who groan habitually over the recklessness or haste of the French political temperament have been furious because the Republic was not proclaimed in the old style with loud yells as soon as the Commune was put down; and others, who ascribe the mis or tunes of France to her want of capacity for rational discussion, could not put up with the slow debates over the formation of the constitution, and were shocked that there should have been occasional excitement over questions so trifling as the choice between a monarchy and a republic.

The triumph of the Republicans in the election of the seventy-five life Senators by the Assembly is ascribed by the later advices from Europe to the cause to which we ventured to attribute it a fortnight ago, before the whole number had been elected, viz., the ability of the Republicans of the various shades to unite on candidates, while the Monarchists were broken into three irreconcilable factions. The result is that no Bonapartists or Orleanists have been elected, while there is a heavy majority of Republicans, and a small sprinkling of Legitimists, whom the Republicans do not mind, and with whose party they combined in the balloting. The fierce hatred of the Legitimists for the Orleanists and Bonapartists rendered any other combination impossible. Of course, there is not much likelihood that this proportion in the strength of parties will be maintained when the rest of the body is elected. The Bonapartists will undoubtedly fare better in many districts, but there is little hope anywhere for the Orleanists. In any event, it is almost certain that the Senate will be strongly Republican, which, while it will doubtless greatly strengthen the new constitution, is perhaps the very thing the framers of the constitution least expected.

The agreement between the three Eastern powers on the Turkish question has been embodied in an Austrian note, drawn by Count Andrássy, and that the drawing of it should have been left to him is a somewhat significant circumstance. It proposes in substance the equality of all religious denominations, but as this already exists on paper the note cannot mean simply the issue of fresh decrees, but the provision of some kind of organization which will make equality an actual fact. Accordingly, it is proposed to set up both provincial and communal governing assemblies, and to relegate to these bodies at once the power and duty of local taxation, and to abolish the modified serfdom in which the Christian tenants of the great Turkish landholders now live. But it is difficult to see how such changes can be practically effected without intervention. The Sultan has in a recent firman granted all these reforms and more, and in granting them unconsciously admits the substantiality of the complaints made by the insurgents. The peaceable establishment of governing bodies in which Christian influence would predominate, could not possibly be carried out under the protection of Mussulman troops. There is a report, which sounds improbable, that the Grand Vizier has applied to the Pope for his aid in the pacification of the revolted provinces.

THE CENTENNIAL YEAR.

USUALLY the opening of a new year only suggests reflections on the old one. People ask themselves how their situation compares with that of last New Year's Day, how they have lost and how gained, what they have to mourn and what to rejoice over in the twelve brief months. Those, too, who use the beginning of the year as a season for the making of good resolutions are apt to base them on the short experience of the year that has just closed, so that on the whole the New Year's moralizing is not apt to be very profound or far-reaching. Just now, if we were not entering on the Centennial year, most of our philosophers would probably confine themselves to rejoicing over the rapidity with which we had, in 1875, been passing through what is called "the process of liquidation," and over the prospect in 1876 of a real revival of business. We should count gleefully the number of thieves we had detected and punished during the old year, and the number of "rotten concerns" which had been cleared away to prepare for a "healthier condition of trade." We should do it, too, without thinking much of the amount of misery which "the process of liquidation" covers, of the number of cases in which the removal of "dead wood" marks not the culmination of a career of fraud or folly, but the close of a manful and honest strife with adverse fate or personal incapacity, or of the unarmed host behind the combatants who bear the misery of the defeat without the poor consolation of having at least tried to save themselves.

The opening of the Centennial year, however, carries the mind back over many panics and much "liquidation," and through many experiences that are not simply commercial. Hardly anybody of a thoughtful turn has entered on it without asking himself how, not this country simply, but the civilized world, has fared during the century which has nearly elapsed since the Declaration of American Independence. It has probably been asked more earnestly during the past week than it will be asked next July; for we are just now in the midst of a somewhat unhappy winter, and we are at the period of the year in which most people over forty are apt to be grave. Next summer we shall all be so busy in rejoicing, that all questioning will be put aside as inappropriate, even if the weather be cool enough to make it possible.

The very first thing which strikes anybody who compares the Christendom of to-day with the Christendom of one hundred years ago is that North America, as we may call it, while gaining enormously in political force and importance—that is, while rising from the position of a batch of feeble colonies into the rank of a first-class power—has not maintained its moral and social pre-eminence among the nations, if we rule slavery out of the problem. The distance which separated the social condition of the whites of the thirteen Colonies, and especially of those of New England, from the social condition of the population of any European country, as regards personal liberty and independence, moral culture and capacity in the transaction of business, was in 1776 enormous. The first actual observation of the supremacy of law over all classes and conditions of men which the French officers who took part in the struggle ever obtained, they obtained here, and the spectacle which so much excited their surprise would have been equally surprising to the officers of any other Continental power. In France, Germany, Russia, and Italy of that period, either large classes of persons were raised by usage above the law, or the field reserved by law to the discretion of the executive, either directly in express terms, or indirectly by the non-provision of any legal remedy for the abuse of power, was so great that it might be said that there was practically no restraint on the strong but such as the strongest chose to impose. It was, indeed, only in England that men were equal before the law, and that the law was irresistible. But then the equality before the law in England was largely neutralized by the inequality of conditions. Influence, therefore, was more powerful than the law in determining the rights of large bodies of persons. The poor-laws had already demoralized the laboring class by destroying their independence, and all the large chartered towns were close corporations, and contained a real proletariat or mob.

In the Colonies, on the other hand, circumstances had helped both to break down social inequality and to foster individual independence and self-respect in a very high degree, so that an Englishman would have been surprised a hundred years ago by the absence of a peasantry and of powerful men, and the general comfort and intelligence. No European could have come here during or before the Revolution without finding himself in a really new society, from which all that was most objectionable to satirists and moralists in the condition of the Old World was absent. In the last hundred years the advance of Europe in the matter of providing better protection for the individual man, and freer play for his faculties, has been very great. There is no country now in Christendom, except Russia, in which the rights of the citizen are not covered by the law, as administered by independent judges, and in which the arbitrary discretion of the executive is not restrained within very narrow limits. In this very important matter, therefore, the Old World has really caught up with us. America does not now enjoy the pre-eminence in it she did then, although it ought to be said that much of the improvement in Europe is neutralized by the growth of large standing armies and the attendant conscription. In the matter of judicial procedure, also—so important a part of any legal machinery intended for the protection of individual rights—the Colonies occupied the very foremost position reached by the English reformers of the seventeenth and eighteenth centuries touching the value of judicial independence. The ideas of 1776 on this subject have been slowly gaining ground in Europe, and may now be said to be firmly established in all its leading states. On this point, however, our country has not held its own. There has been in all the States a greater or less alteration for the worse in the popular conception of the judicial character.

What the European observers and critics said, when the Revolution for the first time revealed to them this new community which had during the previous century and a half been silently growing up beyond the sea, was, that no respectable or enduring political organization could be based on social conditions of such exceeding and primitive simplicity, and that when the protecting and restraining hand of the mother-country was withdrawn, either whatever was exceptional in the social organization of the Colonies would disappear, or the attempt to weld them into an independent political power would break down. It is really the failure of this prophecy—the growth of a state on the foundation laid in the Colonial period, and without any marked change in the fundamental ideas and usages—which we have to celebrate this year. The rejoicing next July will be not over our having maintained the superiority to Europe which was visible in 1776, but over our having created a nation without any marked changes in our moral and social plans and foundations. In that sense, the experiment is universally admitted to be a success of the most striking kind. The government has been carried on on the lines traced out at the beginning, and, whatever else has happened, has become a strong government, whose will is obeyed in all places over which it claims jurisdiction, and which in a trial of physical strength is one of the most formidable in the world.

In considering the things in which the United States has retrograded, or appeared to retrograde, within the century, such as the matter of administration, in which this retrogression is undoubtedly well marked, the main plea of most of the apologists, viz., the influx of ignorant foreigners, is both disingenuous and insufficient. The influx of foreigners has been part of the growth of the country, which has converted the Colonies into a powerful and wealthy state, and made the waste lands a source of strength. Without it, it is safe to say, the purely political side of the experiment, the creation of a first-class power, would not have succeeded. To say that we had made no preparation for this state of things, too; that the strain it has put on our system of government is greater than it can bear; and that our political fabric is based on virtue, or presupposes general virtue; and that, when the supply of virtue falls short, things get out of order—is a very feeble and one-sided statement of the case. The foundation of this government is, and has always been,

the capacity of the people to see things as they are, and to adapt their legislation to the actual facts of their condition. This lies below all constitutions and laws, and the success of a government, no matter of what form, depends on the amount of it the people possess. There has been a temporary loss or decline of this faculty in the United States during the past seventy years, under the influence of the eager desire felt very soon after the Revolution to put the doctrines of the Declaration of Independence into actual practice, which led first to the remodelling of all the State constitutions, and next to the agitation against slavery. It is safe to say that nothing short of actual demonstration would have satisfied nine-tenths of the American people of the extent of the change which the growth of manufactures and of large cities, and the spread of rapid emigration by the aid of steam, have wrought in the character and circumstances of the population. There are many who are still not convinced, and talk fondly of this city as if it were a simple New England town where the deacons and the minister and the "fore-handed men" could have things all their own way if they would only go to the conventions and the polls. Even if this knowledge of the changes in the problem wrought since the Revolution had come sooner, the anti-slavery agitation would have prevented its bearing much fruit, so long and so thoroughly did that agitation absorb the thought and attention of the class into whose hands reforms naturally fall. Indeed, it is safe to say that it is only within five years that the mind of the country has been waking up to the fact that republican institutions, like others, do not work of themselves, and cannot be so constructed as to serve for all time; and we shall probably witness, during the next quarter of a century, a vigorous effort to regain the ground we have undoubtedly lost in all that relates to the administration of justice, the punishment of crime, the collection and disbursement of taxes, the procedure of legislation, and the protection of property against the taxing power of persons who have no interest in it. The proper place of the country, the place which its pretensions in a measure compel it to hold in these matters, is at the very head of the civilized world; and if we of this generation cannot claim it, let us hope our sons and grandsons will be more fortunate.

MR. REVERDY JOHNSON'S APOLOGY FOR MR. SCHENCK.

MR. REVERDY JOHNSON is a gentleman of whom everybody must speak with respect, both for his character, his career, his age, and his learning. But his good-nature sometimes outruns his discretion, as was manifest during his stay as Minister in London a few years ago. He has now allowed himself to be betrayed by it into an elaborate attempt to set Mr. Schenck right with the public in the Emma Mine matter. It would be very unfortunate indeed if any such attempt should succeed, for it would greatly add to the existing demoralization of all branches of the civil service. Mr. Johnson tells us nothing about General Schenck's connection with the mine that we did not already know. But he does tell the story in such a way—unintentionally, we are quite sure—as to mislead the public as to the real nature of the transaction. When General Schenck was first announced as a director and trustee of the Emma Mine in November, 1871—the very month, be it observed, in which he made his agreement with Park - we commented on the occurrence (Nov. 30, 1871) in the following terms in a paragraph in "The Week":

"The piece of news which has excited most talk during the week has been that of Mr. Robert C. Schenck's appearance on the London market as director of a new silver-mining company. This step on his part is a contravention of a positive rule of the State Department, which prohibits foreign ministers of the Government from engaging in any commercial speculation whatever. It is also a contravention of the general sound and old-established usage which forbids a man who, as an ambassador, is exempt from the jurisdiction of the courts of a country, to engage in enterprises in which other men similarly situated may render themselves liable to civil or criminal prosecution on the part of its citizens. The offence is aggravated in Mr. Schenck's case by the fact that the stock which he is lending his official position to push, is what is called a 'fancy stock,' in which no trustee, executor, or prudent man would invest in this country, and about which we venture to say he does not know anything; and there can be no doubt, for reasons we have given elsewhere, that the general belief will be that he has been paid for the use of his name, and this belief will bring discredit on the Government he represents. Supposing, too, as is not impossible, the scheme should prove, like hundreds of others of the same kind that have gone before it, one of those failures closely bordering on a swindle, or prove wholly a swindle, and the strong arm of the English law should lay hold of his brother-directors, what a nice position the American eagle would be in, flapping its wings over Mr. Schenck's head to save him from the legal consequences of conduct on the moral guilt of which the world would be unanimous."

In a leading article in the same paper, we drew attention to the mode in which bubble companies are put on the London market, by way of showing the probability that the promoters of the Emma Mine had secured General Schenck as a director for the sake of his official title. We said:

"Next in importance to the command of the press is the command of good substantial names on the board of directors, and this is in England, perhaps, a more valuable aid than any other. The usages of the London papers of influence make it difficult or impossible to get any direct editorial help in disposing of speculative stocks, and little is known of 'the great and good man' in the editorial chair, and therefore less importance is or would be attached to anything he said in recommendation of the bonds of an 'Air-Line' road or the shares of a Bear's Grease Company. Moreover, small investors in England are not quite so speculative as they are here, as the struggle of life is harder, and the chances of getting up after a fall much smaller; so they cling with some tenacity to consols or well-established securities. The darling weakness of the English mind is, however, as everybody knows, an admiration of rank or official position. There are few Englishmen who have the heart to doubt a lord or even a baronet, or refuse anything he asks, and they cover all men of high office with much the same reverence. On this weakness the speculators in London play with the same adroitness with which speculators here play on the American faith in the press, and especially the religious press, and with fully as much success. Instead of making terms with 'enterprising publishers,' they try to get imposing names on the board of directors—if those of a lord or two, or of a baronet, so much the better; a general or colonel is, however, not bad, and a knight is better than a mere 'esquire.' There have been, as is well known to everybody who has had any knowledge of the processes by which speculative securities are forced on the London market, cases in which broken-down peers and baronets who could not get a pair of boots on credit, have lived for years out of sums paid them for the use of their names on the board of direction of gold, and silver, and copper, and iron, and coal, and oil, and vinegar, and pepper companies; and it ought to be added that they have found even kinder and more considerate employers among Americans than among Englishmen, for the American speculators who appear in London generally take up the old British devices for getting at other people's money, and make ingenious improvements in them which greatly increase their efficiency.

"We believe there is no case on record, however, of their having got hold of a foreign minister until now, although, of course, his name would have been worth any money to them; and it must be said that, considering the sorrowful experience the public has had in this country of gold and silver mines during the last ten years, there has been a mixture of audacity and dexterity, in securing the name of the American Minister for the direction of a Western silver mine, which has never been surpassed in this particular field. Viewed in the light of recent mining history, it may safely be said that any new silver-mine or gold-mine enterprise of which the scene is laid in Utah, or Colorado, or Montana, or Arizona, is presumptively a swindle—that is, it may be honest, but the burden of proof lies on the promoters. Now, the burden of such proof in the case of this 'Emma Mine' is, from all we hear, heavy; and that its promoters should have perceived that they would need an ambassador to help them through with it, and should have got him, shows them to be men of the highest order of ability in their particular line, and yet not men of judgment—for, though an ambassador can do a good deal towards selling a fancy stock in a flunkeyish community, he is, owing to the responsibility of his position, a somewhat unreliable ally, and cannot compare to a nobleman; for an ambassador may to-morrow lose his office, while a nobleman cannot lose his title. The selection in this case is doubly unfortunate because, whatever Minister Schenck's name may do for a silver company, plain Robert C. Schenck can hardly help it much in England, and would not help it at all here."

Now, here is Mr. Reverdy Johnson's account of what actually took place, and his own characterization of it:

"A few days afterwards [after making his acquaintance], Messrs. Stewart and Park told Gen. Schenck of the mine and of the object with which they had visited London. They explained to him its great value, and enquired whether he would not take some of the shares. This the General declined to do until he had time to examine the proofs which they exhibited to him, among which was a report of Prof. Silliman. The examination he afterwards made, and, being satisfied with its result, he agreed to purchase five hundred shares at £20 a share, the price which other stockholders paid; but his means being limited, and that fact being communicated to Mr. Park, that gentleman agreed to loan him, and did loan him, the necessary amount to complete the purchase. For the security of this loan Gen Schenck pledged the shares, and gave Park as collateral property belonging to him in the United States fully sufficient to meet the obligation, and Mr. Park agreed to guarantee to him an annual dividend of 18 per cent., payable monthly. This dividend was paid regularly by the Company for thirteen months to Gen. Schenck and the other stockholders. At the time of this agreement, no proposition

was made or intimation given him that Park or Stewart, or either of them, desired him to be one of the directors of the Company, nor did he receive such a proposition until several days afterwards. Being then told that this would enable him to protect his own interests and the interests of other American stockholders, and without thinking there was any official impropriety in so doing, he consented, and was appointed a director. What induced him to believe that there was no such impropriety was, among other things, the fact that a company had been formed under a Portuguese charter for the construction of steam tramways at Lisbon, of which the Minister of Portugal, one of the oldest and most esteemed at this Court, Field-Marshal the Duke of Saldanha, was the projector and the chairman of the Board of Directors, and its stock was on this market. Neither at that time nor since has this step on the part of the Duke been censured.

"The guarantee referred to Mr. Park had, by its terms, the right to withdraw at any time, and did in fact withdraw, so that, in truth, it was no guarantee at all. Gen. Schenck was to receive the amount, apparently guaranteed, if the dividends were equal to it, and nothing really by virtue of the guarantee, when that guarantee was withdrawn. What he did receive, therefore, was strictly dividends, and when these ceased to be made he received nothing. The guarantee was of no advantage to him whatever, and did not place him in a situation better than that of the stockholders. It is impossible to suppose, even if he were a man of a different character, that he could have accepted this guarantee under any idea whatever that in doing so he would do injustice to the other stockholders.

Here, on the other hand, is Park's agreement with Schenck, of November 1, 1871, made, be it remarked, a few days after they had first met:

"LONDON, November 1.—Having this day made and delivered to T. W. Park my promissory note for £10,000, the consideration for which is, that sum to be paid for 500 shares in the Emma Silver Mining Company, and with the agreement that, if that number of shares of the capital stock shall not be allotted to me or distributed by the Board of Directors, he, the said Park, shall make up to me that number; now, then, further to secure to said Park the sum of £10,000 in one year from this date, I hereby agree to assign and do assign to him, with power to demand a transfer of the same on the books of the Company, 475 shares of my said stock after the same is allotted or assigned to me, at the end of one year from this date, or at any time thereafter, and to apply the proceeds, not exceeding the amount then due on said note, to the payment thereof; and in addition to this pledge of stock, and as other security on said note, if required by said Park, I hereby agree to execute and deliver to him, at any time within one year, on demand, a mortgage of my house and lot in Washington City, in the United States, at the corner of Fourteenth Street and Massachusetts Avenue, which I claim to be worth at least $30,000, and guarantee to be subject to no other encumbrance, except a deed of trust and note for $5,000 in the hands of Riggs & Co., bankers of that city, being a part of the purchase-money yet due from me, and held for the benefit of Mrs. Adams.

Witness my hand on the day and year above written.

"ROB'T C. SCHENCK."

"[Across the face of this document is written: 'Mortgage given for balance and this paper cancelled and given up on settlement, May 13, 1874.
T. W. PARK.']

"£10,000. LONDON, Nov. 1, 1871.

"On or before the 1st day of November, 1872, I promise to pay Trenor W. Park ten thousand pounds, for value received.

ROB'T C. SCHENCK.

"*Whereas*, Robert C. Schenck proposes to subscribe for (£10,000) ten thousand pounds par value of the stock or shares in the Emma Silver Mining Company, limited, a company proposed to be formed in London; and, *whereas*, I represent the owners of the property to be sold said Company, and am the vendor of the property to be conveyed, and receive in part payment of the purchase-money the amount to be paid by said Schenck on his proposed subscription;

"Now, in consideration thereof and of other good considerations, I hereby promise and agree with the said Rob't C. Schenck that said stock or shares shall pay a dividend of two per cent. per month while held by said Schenck, or that I will at any time on the request of said Schenck take from him said stock or shares and pay him therefor the par value.

"Provided always, that if at any time I offer to take said shares or stock from said Schenck and pay him therefor the par value, and said Schenck declines to receive par for said stock or shares, then I shall from that time be fully discharged from this agreement. T. W. PARK.

"LONDON, Nov. 1, 1871.

"Dec. 2, 1871.—Mem.—I have agreed that the guaranty of the dividend of two per cent. per month shall be reduced to one and a half per cent. per month. ROB'T C. SCHENCK."

The reader will observe that by this agreement Park gets nothing, while Schenck obtains a share in a speculation without any risk whatever. He contracts a debt to Park, but Park takes the stock as security. Should it fall below par, Schenck has the right of paying Park with it *at par* whenever he pleases, and, in addition to this, Park guarantees him high monthly dividends, and Schenck has also the chance of making money by the rise in stock. The only right Park reserves is that of getting out of his guarantee by offering par for the shares, which offer, however, Schenck is at liberty to refuse. The provision enabling Park to demand a mortgage on Schenck's house for $30,000 is clearly illusory, because there was nothing to be secured. Moreover, the demand had to be made within a year. It was not made within a year. When the mortgage was finally given and the above extraordinary agreement cancelled—that is, three years later (May 13, 1874), after the exposure had come—Park had lost his right to ask for it. It may have been to Schenck's credit that he then gave it voluntarily; but his giving it may also have been an attempt at the eleventh hour, and when two continents were ringing with the story of his disgrace, to give an air of honest business to a transaction which for three years previously had been one of the ordinary London agreements between a promoter of a bubble company and a titled "guinea-pig."

Now, what consideration did Park get for his great kindness? Why, the General's name on the Board of Directors, of course. Mr. Johnson would have us believe that there was no connection between the General's appearance on the Board and this agreement with Park. He says in his letter:

"At the time of this agreement no proposition was made or intimation given him that Park or Stewart, or either of them, desired him to be one of the directors of the Company, nor did he receive such a proposition until several days afterwards. Being then told that this would enable him to protect his own interests and the interests of other American stockholders, and without thinking there was any official impropriety in so doing, he consented, and was appointed a director."

Mr. Johnson's acumen has apparently failed him here, for further on he lets out the secret of the transaction thus:

"It is proper, also, to state that before he became a director he asked to be informed who were to be his associates, and this information was given him in a note from Mr. Stewart, dated the 3d of November, 1871, and was to the effect that they were gentlemen of the highest respectability and large wealth, including several Members of Parliament and extensive manufacturers, naming them."

It thus appears that while the agreement was signed Nov. 1, Mr. Stewart was writing him Nov. 3, or two days later, informing him who his associates in the directorship were to be. It is impossible to avoid the conclusion that this was in answer to an enquiry made simultaneously with the signing of the agreement, and that the use of his name was a part of the contract. He held the directorship just one month, resigning Dec. 6; but this was all the speculators needed, for in that short period, according to Mr. Johnson, not only had the stock been launched on the market with great success, but had actually risen from £20 to £30 a share, and General Schenck only resigned on finding what an uproar the matter made both in England and here. When the shares reached £30, Park, like a shrewd fellow, stepped up and offered par for the stock, and thus released himself from his guarantee, well knowing that Schenck would refuse. Had Schenck been equally shrewd, he would have accepted; but we dare say he was then under the impression that they would go higher. He has held on to them, and perhaps has lost money by them, but we cannot accept as a proof of his virtue what may have been simply defective knowledge of the character of the speculators into whose hands he had put himself after three or four days' acquaintance.

The charge of which neither Mr. Johnson nor anybody else can clear him is of having lent his name to speculators whom he knew very slightly, to help them to sell the stock of a mine of which he knew nothing, under such circumstances, and with such forms, as to lead English investors to suppose that he, a man of high position, had carefully examined the enterprise, and had invested in it his own money, and was running the risk of losing it, when the fact was that he had not carefully examined the enterprise, and that he had invested no money in it, and was running no risk whatever, but was the debtor of the vendors, and was really playing the part of a stool-pigeon. This is the gist of the transaction, stripped of all verbiage. Mr. Johnson, we are sure, will not say in cold blood that it is an honorable transaction; but even if he does, we trust, for the credit of the national name, he will not find many to agree with him. We have read, too, with unfeigned surprise Mr. Johnson's argument that there can be nothing wrong in General Schenck's conduct because the Government has neither recalled nor reprimanded him. Of all the rascals, great and small, by whom the Government has been served and

cheated during the last seven years, which of them has it dismissed except under overwhelming pressure from Congress and public opinion, and which of them has it allowed to retire into private life without a certificate of good character? Is not this callous indifference to the character of its subordinates one of the features of the present Administration which has caused and is causing honest and patriotic men most distress; and could there be a more striking illustration of the corrupting influence of use and wont than the citation, by a man of Mr. Johnson's standing, as a proof of an officer's innocence, of the fact that the friend and companion and patron of Boss Shepherd had neither censured nor punished him?

The part the poor Duke of Saldanha, General Schenck's "very much esteemed friend," has been made to play in this affair as a precedent is almost droll. The Duke, who is a man of great wealth, and is trying patriotically to revive industry and enterprise in his poor and sloth-stricken country, invested heavily in a Portuguese railway, and became a director of the company. Therefore we are told there was nothing wrong in General Schenck's pretending to invest, when he invested nothing, in a speculative enterprise of which he knew nothing, and into which, if sound, the capitalists of two of the richest countries in the world were sure to rush. It reminds us of the use to which Sir Robert Walpole is now constantly put by American jobbers and peculators. If you remark to one of these gentlemen that his corruption is shameful and dangerous, he is almost sure to ask you if you remember how corrupt English politics was in the days of Walpole. If you answer in the affirmative, he will ask you again whether English official life is not now pure; and if you say yes, he will declare joyously that American politics will also work out into purity eventually; and then begin stealing and cheating again with unbroken zeal and cheerfulness. In fact, a Walpole paragraph has now become so constant a feature in current apologies for rascality in public life, that we are almost surprised it has not made its appearance in Mr. Johnson's letter.

EFFECT ON EUROPE OF THE SUEZ PURCHASE.

PARIS, December 17, 1875.

THE happy settlement of the *Alabama* claims has made England free, and has allowed her to play again a part in European affairs. It must be confessed that Mr. Disraeli has understood much better than Mr. Gladstone the true interests and the true temper of the English nation. While everybody in England was turning against the North during the War of Secession; while Mr. Gladstone pronounced his unfortunate praise of Jefferson Davis, "He has made an army, he has made a navy, he has made a nation," Mr. Disraeli preserved a prudent silence; he foresaw what nobody around him would see, that the American people would successfully struggle for the Constitution and for the Union. So long as England could fear that if she were at war with a European power new *Alabamas* might issue from the American ports and sweep her commerce from the seas, she was crippled, and she had nothing with which to cover her impotence but non-intervention and economical theories. Mr. Gladstone was the candid exponent of this policy; but whoever knows England well must see that she is not yet resigned to playing the part of a mere witness in the drama of history. Her enormous wealth is like a river which is constantly swollen by rivulets; her colonies are as necessary to her as her constitution; she must be an Asiatic empire in order to remain a European empire.

Mr. Disraeli has seized his opportunity, and he has made a brilliant *rentrée*, as we say of an actor who has left the stage for some time and who comes again before the public. He has hit upon a scheme which could not but strike the imagination of the whole world. We recognize in the mysterious ally of the Egyptian Khedive the author of 'Coningsby' and of 'Lothair,' the man who cares little for precedents and for old rules, and who knows what the real forces are that govern modern society. In 'Lothair,' Disraeli has described the struggle of the Ultramontane secret societies and of the Revolutionary secret societies; and who could say that the Jesuits on one side and the Communists on the other do not represent the two opposite poles of modern politics? Looking for the forces which were at the command of England, Disraeli saw the huge force which is known under the name of capital. Let Prussia, Austria, Russia muster their millions of armed men, England can muster millions of pounds sterling. But England has something better than millions of pounds at her command: she has in India an unlimited supply of men, whom she can turn into soldiers. Not that such soldiers could meet European armies, but they could very well, under English officers, occupy that strip of land called the Isthmus of Suez, and the Valley of the Nile. It is impossible, or next to impossible, for any power to land an army in Egypt if the Mediterranean Sea is free to the English squadron; impossible, or next to impossible, for Russia to send an army by land to Egypt. The Ten Thousand of Xenophon have left us a record of their wonderful march; but what would become of a Russian Xenophon on his way from the shores of the Black Sea, and on his way to Syria and the Isthmus? Alexander carried his Greek legions to the very Valley of the Indus, but Asia Minor is now so impoverished that a large army could not well live off it. The possession of the Isthmus of Suez would secure India for England, and reciprocally India would secure Egypt and the Isthmus, for in the Persian Gulf and in the Red Sea England can find no rival; the sea of the Pharaohs is already an English lake. England holds its key at Aden.

Looking at it from all points of view, it is impossible not to admire the strategy of Mr. Disraeli. To have abandoned the bankrupt Sultan to his fate; to have confessed that all the declarations in favor of the integrity of the Ottoman Empire were mistakes, without gaining any positive advantage for England, would have been on the part of the English nation a sort of abdication. But seeing the Ottoman Empire on the verge of ruin, and knowing, as he did, that the three Emperors wished to exclude England from the final settlement of the Turkish question, Disraeli felt that something must be done; while, on the chess-board of the East, kings and pawns were moving in the dark round Constantinople, he boldly advanced his queen and placed her on the Isthmus of Suez. It is idle for the *Economist* and for other newspapers to discuss the purchase of the Suez shares on its own merits, to count the votes in the General Assembly of the shareholders, to treat the matter in a financial point of view. When Disraeli bought these 177,000 shares, he acted not as the director of a bank, but as a statesman. He indirectly informed Europe that he had chosen his objective in the Eastern Question; he behaved like a general who constructs a line and says: "On this line I will fight my battle." Europe was taken by surprise; for everybody was beginning to imagine that the British Lion had grown old and tame, and that his claws were cut. It is never safe to underestimate or undervalue any power. The Emperor Nicholas could not believe, during the negotiations which preceded the Crimean War, that England would go to war. Count Brunoff, who had been in London since 1840, and who knew Lord Palmerston intimately, kept informing his imperial master that the rage of the City over the despatches of Sir Hamilton Seymour would soon be dissipated; that the English people did not mean war. Nicholas learned too late that his ambassador had been mistaken. The Cobden school is weaker now in England than it was before the Crimean war, because since that time force has become the master of Europe. For more than ten years the English army has been slowly and quietly reorganizing; its cadres are splendid; they only need more men to fill them up. I have it from a French general who followed the autumn manœuvres in England that the small English force is a perfect nucleus; he admired the horses, the equipments, the men, the commissariat; in fact, everything. Let us now imagine a few thousands of such troops, a few marines landing in Egypt; who could dislodge them? The Pasha would soon become a mere vassal, like some Indian Rajah; English officers could organize an army of Fellahs; Sepoys could be sent by the thousand from India. We must be prepared to see England throw aside the thin veil of her ambition, take possession of the Isthmus, and reduce the Khedive to the rank of a mere lieutenant of Great Britain.

France was at first a little dismayed on hearing that the Suez Canal, the work of her engineers, the work of her diplomacy, had fallen into English hands. On second thought the French were rapidly reconciled to the semi-annexation of the Isthmus to the British domains. There was a time when we cared much for our influence in the East, but that time is past. The world will not forget that the canal is our work, that we cut it in spite of Lord Palmerston and his engineers, who made the most awful prophecies about the danger of letting the Mediterranean Sea run into the Red Sea. Let the trade of the whole world profit by our efforts; England, after all, cannot confiscate the canal. England made no efforts in favor of France at the end of the late war; but, then, neither did anybody else. Who dared to oppose, in the slightest degree, the ambition of Germany? France knows the Eastern Question no longer; there is but *one* question left for her, and she has no desire, no right, to tie her fate to any other. Let the three Emperors settle the fate of Constantinople, of Bosnia, of Herzegovina, of Bulgaria, of Roumelia, of Greece, of the Turks and their Sultan, we will look quietly on. We remember the Danish question:

Austrians and Prussians entered the Duchies together, and Sadowa followed. It is easy enough at a great banquet to drink each other's health. The great Emperors may talk as if they were angels come down from heaven to bring peace to the world. What does the word "peace" signify in the mouths of men who cannot appear except in uniform, who spend their lives in holding reviews? Shall we believe in the profound affection of Emperor Francis Joseph for Emperor Wilhelm? Are there no bones left in the fields of Sadowa? With the best will in the world, the solution of the Eastern Question is an extremely difficult problem. Turkey might become a sort of Switzerland of the East, for nature has prepared her better for a confederacy of small states than for an empire. You will find in the Valley of the Danube and in the peninsula of the Balkan many races, many religions, an extraordinary variety of culture. The Turks themselves cannot all be thrown into the Bosphorus, even if, according to the old and cherished prophecy which has become an article of faith among the Rajahs, a Christian emperor come back to Constantinople and enter Saint-Sophia on horseback. But this confederacy I am speaking of, will it be independent and neutralized like Switzerland? It seems hardly possible, in the present state of the population, with so many rivalries and old feuds. The Roumanians believe themselves to be a dominant race; so do the Serbs, who are not so numerous, but who are distinguished for energy and courage; so do the Greeks, who still wrap themselves in the glorious memories of the Hellenic civilization. And if the Eastern confederation or constellation of states is not quite independent, it will be constantly placed between the two opposite poles of Austria and of Russia.

It is the clear interest of Germany that Austria should become more and more an Eastern power. The interests of Prussia in the Valley of the Danube are only indirect, but are none the less strong: the time may be foreseen when the triple alliance of the present hour may be replaced by a sort of triangular fight. The rapid and bold move of England in Egypt has thrown the three powers into a sort of confusion: they are halting on the eve of the great events which everybody foresees, but of which nobody can well see the development and the end. *We* can say at least: "Suave mari magno turbantibus æquora ventis." France must remain quiet and neutral; she has trouble enough at home. She is steadily reorganizing her army, her finances; but she is still torn by conflicting parties. She tries constitutions, senates, republics with or without republicans: she has not yet found her equilibrium. This chaotic state has one advantage, at least: it will hinder France from recommencing some gigantic folly like the Crimean war. Necessity will do for us what our wisdom perhaps would not do; but in reality France feels very keenly that she owes it to herself to husband her resources, not to expose herself to any unnecessary perils. She has no desire to play the first power in the Eastern Question; she knows that in a storm many things must sometimes be thrown overboard to make the ship lighter. The approaching settlement of the Eastern Question must, therefore, and will remain entirely confided to the political wisdom and to the forces of England, of Russia, of Austria, and of Germany. Italy is ambitious, but will be too wise to endanger herself; the Latin races form, therefore, for the present, as it were, an island of peace in Europe.

Correspondence.

AN EXAMPLE OF CIVIL-SERVICE REFORM.

To the Editor of The Nation:

Sir: Your articles on civil-service management (and mismanagement) must have attracted attention, and it is to be hoped that they will exert an influence proportionate to their merit. I call special attention to the following quotation from your first editorial article in No. 543, which gives your views in a few words, and contains the only true doctrine of civil-service reform:

"The modern scientific method [*i.e.*, of maintaining the efficiency of a government service] which is in use in all other first-class Christian states, is to organize the civil service on principles of human nature, and secure honesty and efficiency by diminishing temptation and stimulating hope. . . . That is to say, they recognize the value of character, and employ men who, by having behaved well under observation for a long time, show that they are likely to behave well in the future; they recognize the weakness of the best men by shielding them as much as possible against temptation, by the provision of careful checks, by the payment of good salaries, or giving the equivalent of good salaries in the shape of security of tenure or social consideration."

These opinions should be held by all thoughtful persons, and, doubtless, are held by all who are not blinded by party zeal. If anything can be added to their force, it is only, perhaps, by showing that the method recommended has succeeded wherever tried. The following quotations show that the experiment succeeded where the conditions were much less favorable than they are among us. Referring to Lord Cornwallis's administration in India, Col. Chesney says:

"In vain was it asserted that, however well men were paid in India, at that distance they could not refrain from fee-taking or corruption in some form. The honorable soul of Cornwallis revolted at this theory." . . . "I am doing [writes Cornwallis] everything I can to reform the Company's servants, to teach them to be more economical in their mode of living, and to look forward to a moderate competency; and I flatter myself I have not hitherto labored in vain. But if all chance of saving any money and returning to England without acting dishonestly is removed, there will be an end of my reformation." . . . "Those effects began to appear sooner than viceroy or minister could have hoped; for we find Cornwallis writing thus, four months after the receipt of this assurance [*i.e.*, of Dundas's attention to his suggestions]: 'The Company has many valuable servants; the temper of the times is changing. Men are beginning to contrast their present expenses and their future views.' His unwearied war upon sinecures, jobbery, and fraud had already reduced the expenditure within the estimates, 'which never,' he writes, 'happened before'; while the civil service was beginning to feel the advantage held out to it by the honester system which refused [to use Cornwallis's words] 'to place men in great and responsible situations, where the prosperity of our affairs must depend on their exertions as well as integrity, without giving them the means in a certain number of years of acquiring honestly and openly a moderate fortune.'" ('Essays in Military Biography,' pp. 301, 302, 303.)

CLEWS AND CLUES.

To the Editor of The Nation:

Sir: You are right; but what is *also* remarkable about the dispute between Mr. Henry Clews and the "eminent firm of B. H. Cheever and James Van Buren" is that this Cheever is the same Cheever whom Mr. Clews recommended his friend and fellow-director, Stockwell, to employ in his Washington lobby in 1872, upon the express ground that the eminent Cheever had helped the eminent Clews to get the fiscal agency! (See the report of the Pacific Mail investigation of last winter.)

It is also remarkable that when it came out that "Nestor" Shaw and the eminent Cheever had both obtained such employment through Mr. Clews, that gentleman made speed to save himself by saying that he had, indeed, introduced Shaw to Stockwell, but didn't know what for [of course not; they never do], but kept silence as to the eminent Cheever.

It is also remarkable that although nobody knows Mr. James Van Buren, the eminent banker, everybody here knows the eminent lobbyist, Mr. B. H. Cheever—everybody, that is, except Mr. Clews, who thought he was "a retired merchant"! Dear me!

It is also remarkable that the eminent Cheever's counsel in his suit against Clews should be the same firm that got the former managers of the Pacific Mail Steamship Company last February to sue (in the newspapers) all the recipients of the "subsidy corruption fund"—except Cheever, and a few more!

Now, write me down

An Humble Follower of Clues.

Washington, D. C., 1875.

Notes.

THE last number of Vol. IX. of the *American Naturalist* contains among other articles of interest a paper on "Odontornithes," by Prof. O. C. Marsh, the discoverer of these important fossil birds with teeth, which form a connecting link with the reptile class; and a paper on "Plants that Eat Animals," by Mrs. Mary Treat. The first number of Vol. X., with H. O. Houghton & Co.'s imprint, is distinguished by a cover with a new and improved design, and its contents are purposely of a more popular character than heretofore. A department of Geography and Exploration has been added to the General Notes, and departments of Scientific News, Proceedings of Societies, and Scientific Serials (selected contents) add to the completeness of the scheme. The borrowing of illustrations from books reviewed, which is so attractive a feature of *Nature*, is here imitated in the case of Judge Caton's 'Summer in Norway.' Dr. A. S. Packard, jr., will hereafter edit the *Naturalist*.——Prof. F. W. Putnam, Dr. Packard's late colleague, has been appointed Civilian Assistant on the United States Surveys west of the 100th meridian conducted by Lieut. Geo. M. Wheeler, and

is already occupied in preparing a report on the abundant and very valuable archæological and ethnological material collected by the exploration in Arizona, New Mexico, and California. The report will be profusely illustrated, and, we may venture to predict, will be the beginning of our scientific knowledge of the prehistoric civilization of the above-named regions. ——The *Tribune* has, after an interval of many years, resumed the publication of an index to its yearly issues, an instrument which would seem quite indispensable to the editing of any first-class daily paper. It is needless to add that the uses of such an index are not confined to the office of the paper for which it is prepared, nor to its subscribers; no newspaper can well dispense with it. In size and appearance this index will resemble the *Tribune Almanac*, with which it will also be bound up as well as sold separately.——The Surgeon-General's Annual Report shows a rather closer agreement than common in the health of the white and colored troops of the United States Army, the percentages of sickness being almost exactly the same. But the blacks still hold the second place in point of vitality, losing 16 per thousand to 11 of the whites.——The Surgeon-General's Office has also published a very comprehensive 'Report on a Plan for Transporting Wounded Soldiers by Railway in Time of War,' by Surgeon George A. Otis, U.S.A. The occasion of this report was the free offering to our Government of a plan of transportation devised by a Russian, Dr. Zavodovsky. Dr. Otis reviews the whole subject (which dates from the Italian campaign of 1859), and illustrates with wood-engravings all the essential features of the various contrivances. At the close he gives a bibliography of railway hospital transport. The Report is a mine of information.—— Col. James B. Fry has, with the assistance of Lieut.-Col. G. Norman Lieber and Prof Asa B. Gardner, prepared and privately printed a 'Sketch of the Adjutant-General's Department, United States Army, from 1775 to 1875, with some general remarks on its province, and a register of its officers.' This monograph, slight as it is in bulk, must have required much laborious research, and will be justly valued as a contribution to our Centennial literature. The office of Adjutant-General has been continuous only since 1802, and the Department only since 1813.——A correspondent writes us: "In Prof. Severini's Italian translation of the Japanese novel, 'Rin-Tei,' by Tane Hico, he states that 'it has been made known in America.' Can any of your readers inform me if it has been published here, by whom, and under what name?"——The indefatigable Paul Lacroix has in preparation, for early publication by M. Fontanes, an 'Iconographie Moliéresque,' intended as a companion volume to his 'Bibliographie Moliéresque,' recently reviewed by us.——Ginn Bros., Boston, announce 'Selections from Burke, Bacon, and Webster,' with critical notes, by Rev. H. N. Hudson; and a revised edition of Arnold's 'English Literature'——"D. S." desires us to say that at the close of his letter, which we published last week, he had written: "the feeling among business men is one of *hopefulness* for the future," instead of *hopelessness*, as we printed it.——A correspondent writes us that the contributor of the article on the Yale and Harvard Catalogues was mistaken in asserting that Natural Theology, Constitutional History, General Philology, and the History of English Literature are taught at Yale but not at Harvard; for although these studies do not appear in the Harvard Catalogue with just these titles, they are discoverable in the examination-papers. We believe that such is the case, at least in regard to Natural Theology and Constitutional History.

—The *Evening Post*, as we expected, fails to produce any defence to the charge of "journalism" we made against it last week. It has no quotations to make. It confines itself to telling a story about some one being ducked in a pond, and talks vaguely about the "drift" of a great number of articles, without giving names or dates. It also commits, strange to say, another act of "journalism" by repeating some of the remarks on the *Nation* to which we objected, leaving out the essential word "all." This sort of performance would not be possible in a private room between gentlemen. It ought not to be possible between newspapers. We accordingly admonish the *Post* severely, and warn it against the repetition of these offences. How much more manly is the course of the *Times!* This paper, when detected in "journalism," far from whiffling and quibbling, maintains a dead but dignified silence.

—What is most striking about Miss Woolson's paper on the Oklawaha, in the January *Harper's*, is its distinctly Southern literary value. The ladies at least of her party on the two days' trip up this tributary of the St. John, might have just before been interested spectators, as Queens of Love, Beauty, etc., at a "tournament." To the Northern reader they seem as curious as anything in the scenery amid which they flirted with their cavaliers, and recited poetry, and pronounced brown eyes as heartless and more dangerous than "the calmest blue or the coldest gray." A paper descriptive of "Cambridge on the Charles" contains a good deal of entertaining information, more or less accessible, about Harvard College and the scholars and other notables of the town, past and present. There are illustrations in abundance, but of the portraits only one can be pronounced excellent—that of Mr. Howells. Dr. Barnard finishes his learned review of the progress of the exact sciences during the first century of the Republic, and Dr. Theodore Gill more briefly tells of what Americans have achieved in natural science. Of necessity, these reviews cover the world's advance in knowledge, and are therefore good reading for other than Centennial reasons. The rest of the magazine does not call for special remark.

—The most important article in the *Galaxy* for January is by Captain Raymond, of the Corps of Engineers, on the National Surveys, and is mainly an argument in favor of placing these surveys under the Engineer Bureau. It must be admitted that the writer makes out a very strong case—a case, too, resting on so many points that it is not easy to condense his entire argument. At the same time, his argument is not entirely valid any farther than that it favors placing the control of the surveys under the head in question; it does not justify the conclusion that civilians should not be tolerated in such work except in entirely subordinate capacities. It is at this point that the real difficulty begins. That the present division of the surveys between the Department of the Interior and that of War, leading as it does to the same work being done by different parties and under different systems, is an evil, and that the Engineer Bureau is the one which, above all, is best qualified to select the men who shall conduct the surveys, will, we think, be very generally conceded by careful readers of Captain Raymond's paper. No better illustration need be given of the superior qualifications of the present Chief of Engineers in this respect than his selection of Mr. Clarence King to conduct the survey of the fortieth parallel. But the reason why men of science generally look with dread upon the proposed plan is that they regard it as a step to the entire exclusion of civilians from all positions of credit on the work. If they are to be employed at all, it may be as subordinates to men who really know less than they themselves, and who are to receive the credit of their brains. It may be replied that the very same objection would lie against the selection of a head by the Interior Department or by Congress, since such a head would be more likely to be incompetent and to need the help of subordinates superior to himself, than an engineer officer would. But in this case the civilian would have a much better chance to expose the shortcomings of his chief or to get him changed, than if that chief were an army engineer. The corps of engineers constitutes a sort of aristocracy—something entirely abhorrent to the scientific spirit of our times. It is true that its aristocracy is exclusively one of intellect, combined with the highest moral qualities, and therefore possessed of more claims on our consideration than any other aristocracy—one, indeed, of which our nation may well be proud. If any man of sufficient intellect could become a member of it, and if every member who showed the slightest decay of intellect dropped out of it *ipso facto*, we should be ready to put almost any department of the Government into its hands. But there is only one way into it, and that way lies through West Point. If, in placing the surveys under the Engineer Office, it were well understood to be a purely administrative measure, designed to secure the unity of plan and action so much needed, and to secure the selection of men by those best acquainted with what was to be done, there would, we apprehend, be little objection to it in any disinterested quarter. But the general fear entertained by the civilian naturalists and geologists of the country, that the proposed measure would in some way interfere with their portion of the work, or would result in their being placed in personal relations with the chiefs of the surveys less pleasant than those which subsist when the chiefs are civilians, is not wholly groundless. What military direction might result in we see in the case of the Army Signal Office, with barely a solitary civilian scientist in its employ, keeping as widely as possible aloof from the science of the country.

—"*Shallow.* And how doth my cousin, your bedfellow? and your fairest daughter, and mine, my god-daughter Ellen?
"*Silence.* Alas! *a black ouzel*, cousin Shallow."
—*K. Henry IV.*, pt. 2, a. iii. sc. 2.

What did Justice Silence mean by calling his daughter "a black ouzel"? is the puzzle on which contributors to *Notes and Queries* have been exercising their ingenuity of late. One guesses that Ellen was "a comely brunette"; another, that she was "still unmarried—a solitary bird"; a third finds her described in ornithology as "naturally shy and suspicious, jealous and distrustful," etc. No one suggests the explanation which to simple, non-critical readers might seem to lie on the surface. The owlish Silence will accept none of his gossip's compliments. He may have "been merry twice and once ere now," but is become pessimist and grumbler. All the world goes wrong with him when he is sober. Shallow—who believes that

"good phrases are surely, and ever were, very commendable"—asks after his friend's son: "I dare say, my cousin William is become a good scholar. He is at Oxford still, is he not?" "Indeed, sir, *to my cost*," is the sad response. "Many of mine old acquaintance are dead," chirrups Shallow. "We shall all follow, cousin," groans Silence. In the same humor, he meets the compliment to his "fairest daughter": "No *white blackbird*, alas! only a black ouzel, one of the commonest sort." "A poor virgin, sir, an ill-favored thing, sir, but mine own"—as Touchstone puts it. The ouzel was the common blackbird. We do not find that the name, in Shakspere's time, was ever given to other species, though the French (and adopted English) *merle* was sometimes extended to the field-fare, a larger thrush:

"Blacke byrdes or *ousels*, among wild foule hath the chiefe prayse, for lyghtnes of digestion," etc.—*Sir T. Elyot, Castell of Helth*, 1534.

"*Owsell*, the bird called a *Blacke macke*, with a yellow beake, a *blacke bird*."—*Baret's Alvearie*, 1580.

"*Merle* An wsell, a Blackmacke, a merle, or Blacke-bird."—*Florio*, 1611.

"*Merle* A Meadle, Owsell, Blackbird. *Merle noir*, The Blackbird or *ordinarie owsell*."—*Cotgrave*.

Chapman's

"Black, black as an ouzel,"

and Shakspere's

"The ouzel cock so black in hue,"

have been cited by writers in *Notes and Queries*. A *white* ouzel was a proverbial rarity—"Rara avis in terris, nigroque simillima cygno." Cotgrave (under *Merle*) gives the saying: "Je vous donneray vn *merle blanc*," as equivalent to "I will performe impossibilities, or bestow on you a most rare gift." "Alas!" says Silence, "I have only an 'ordinarie owsell,' cousin Shallow."

—Paper-money seems to have in Italy as well as in the United States the effect of inflating the demand for damages in libel suits. Full reports of the trial and conviction of Mr. S. W. Healy, in Florence, for defaming the character of Mr. Pierce Connelly, the sculptor, have not yet reached us. Mr. Healy, we believe, is in high spirits over the result, and is confident of a reversal of judgment in the Court of Appeals. He states that Mr. Connelly's first appreciation of the injury done his reputation was 200,000 lire ($40,000); "at the time of trial he came down to 35,000 lire, and at the last moment to 25,000. The Court gave him nothing."

—The necrology of 1875 is not so full of distinguished names as that of 1874. Among sovereigns and rulers few have died. The Emperor of China had the distinction of being one of the youngest, if not one of the most important of them. In Europe there died Frederic William I., ex-Elector of Hesse-Cassel, grandson of the Frederic II. who made the name of "Hessian" odious in this country, and a monarch "out of business" since 1866, when Prussia annexed his domain; and ex-Emperor Ferdinand I. of Austria, a very feeble sovereign, whose abdication was the one good stroke of his reign. In the professions most closely connected with government there have been several noticeable deaths. In the army and navy England has lost Commodore James Graham Goodenough, a very promising officer, who prepared the way for the annexation of the Fiji Islands, and was murdered by the South Sea Islanders; Lieut.-General Sir James Hope Grant; Sir Henry Kellett, a very active naval officer, who served with especial distinction in the war with China, and rescued Captain McClure, the Arctic explorer, in 1852–53. In this country there have occurred the deaths of Major-General Lorenzo Thomas, an efficient and respected officer, who had the misfortune to earn a short non-professional notoriety from the *ad interim* appointment of Secretary of War given him by Andrew Johnson; Rear-Admiral Charles H. Bell, a midshipman of 1812; Rear-Admiral Napoleon Collins, who ran down and captured the *Florida* in Bahia Bay, and was afterwards court-martialled and suspended for it; and General George E. Pickett, a West Point graduate, who distinguished himself on the Confederate side in the rebellion. In Europe have died General Heinrich von Zastrow, a member of a distinguished military family, specially commended for gallantry by the German Emperor during the Franco-Prussian war; General Charles-Auguste Frossard, governor of the Prince Imperial, and opposed to Von Zastrow, if we remember right, at Saarbrücken; the Swiss General-in-Chief, Guillaume-Henri Dufour, who saved his country from the "Sonderbund" in 1848; and Vice-Admiral Cyrille-Pierre-Théodore Laplace, who led two scientific Government expeditions around the globe. The deaths of American politicians have been numerous. The list is headed, of course, by Andrew Johnson, who signalized his short reappearance in politics by a bitter and characteristic opposition to the dominant party. Besides Mr. Johnson there were Henry Wilson, Vice-President of the United States, whose history of the anti-slavery struggle gives him a place in another department than that of politics; Senator William A. Buckingham of Connecticut; Senator O. S. Ferry of the same State; Jesse D. Bright, expelled from the Senate in 1862 for a letter of introduction to Jefferson Davis recommending a young man who had an improved firearm to offer the Confederacy; General Andrew Jackson Hamilton, ex-Governor of Texas; Francis P. Blair, jr., journalist, volunteer in the Mexican war, anti-slavery politician, Federal general, and U. S. Senator. Abroad, John Mitchel, the Irish agitator and journalist, died almost immediately after two elections for Tipperary; the first resulting in a vote of expulsion from the House of Commons, and the second promising much trouble. He was followed by his brother-in-law, John Martin, member for Meath, and also a nationalist, but much respected. Count Charles de Rémusat, orator, politician, author, beginning and ending his career as a supporter of M. Thiers, and Count de Jarnac, French Ambassador at London, also died. From politics to journalism is but a step, and we may mention here Frederick Hudson, for a long time managing editor of the *Herald*, and author of a history of journalism; and Henry Clapp, the founder of the *Saturday Press*, a very bright and clever organ of the now almost extinct school of New York Bohemians.

—Science in America has suffered a more than ordinary loss in the deaths of Professor Joseph Winlock, director of the Cambridge Observatory; of Chauncey Wright, for a long time connected with the *Nautical Almanac*; and of Amasa Walker, the political economist. England, too, has suffered heavily in the deaths of Sir Charles Lyell, to whom, more perhaps than to any other one man, is due the credit of having established geology as a strictly inductive or positive science; Professor J. E. Cairnes, distinguished in England as a political economist, but in this country as author of a work on the 'Slave Power'; Sir Charles Wheatstone, one of the foremost experimental investigators of the century; Sir William Edmond Logan, the organizer and for a long time the head of the Canadian Geological Survey; Admiral Sherard Osborne, admirable as an officer, a man of letters, and an Arctic explorer; Sir John Gardner Wilkinson, the great Egyptologist; W. J. Henwood, the mining geologist; and John Williams, for many years assistant-secretary of the Royal Astronomical Society, and discoverer of an improved process for taking impressions of ancient inscriptions, which was eclipsed by the progress of photography. On the Continent several deaths of importance have occurred, among others those of Dr. Oscar Peschel, of Leipzig, geographer, editor, and author; Claude-Louis Mathieu, a member of the French Academy of Sciences, and well known as an astronomer; Marc Séguin, engineer, reputed inventor of tubular boilers applied to locomotives and of suspension-bridges; Dr. Ferdinand Hitzig, Orientalist and Biblical critic; Samuel Heinrich Schwabe, discoverer of the periodicity of the solar spots and of the eccentricity of Saturn's ring; Dr. Wilhelm Bleek, comparative philologist; Georg Heinrich August von Ewald, the great German Orientalist and Biblical critic; Professor Friedrich Wilhelm August Argelander, an astronomer said to have performed the feat of charting more than three hundred thousand stars; Gustave Thuret, an eminent botanist; Dr. Hermann Ebel, the successor of Bopp at Berlin; Marie-Armand-Pascal d'Avezac, at one time president of the French Geographical Society, one of the founders of the Paris Ethnological Society, and a prolific writer on geographical subjects.

—The Church during the past year has not lost so many well-known members as the law. In England, the most noted lawyer who died was Lord St. Leonards, distinguished as a conveyancer and leading Chancery practitioner and as author of several legal treatises, the chief one being that on 'Vendors and Purchasers'; he was Lord Chancellor both of England and Ireland, and his name will be remembered outside the profession for a long time by the very remarkable circumstances attending the proof of his lost will by memory. While Germany has lost Robert von Mohl, the great Heidelberg lecturer on jurisprudence, in this country we note the deaths of Horace Binney, one of the oldest lawyers in the United States and the oldest living graduate of Harvard College; Thomas A. Jenckes, formerly member of Congress, a leading patent lawyer, and for some time engaged in promoting civil-service reform at Washington; Judge Joel Parker, formerly Chief-Justice of New Hampshire and afterwards professor at Cambridge; Judge Lewis B. Woodruff, one of our United States circuit judges, and a sound lawyer of the generation of Charles O'Conor, Oakley, Duer, Murray Hoffman, and Daniel Lord; Judge Theron Metcalf, formerly on the Supreme Court of Massachusetts and author of a valuable little treatise on contracts. The most distinguished preacher who died during the year was a Frenchman—Athanase-Josué Coquerel, since the death of his father, 1868, at the head of French Protestants. In England, the church and letters also have lost Bishop Thirlwall, the historian of Greece, and Charles New, the young missionary who made the first successful ascent of the equatorial

snow-mountain Kilimanjaro; while in this country Charles G. Finney, the revivalist preacher, a greater Moody of a former generation, died.

—Pure literature has suffered most heavily in Europe through the death of Hans Christian Andersen. Among the deceased men of letters are to be noted: Crétineau Joly, a fervent Legitimist, founder of a paper called *Le Vendéen*, and author of one or two historical works; Paul-Henri Foucher, brother-in-law of Victor Hugo, and a native Romanticist; Edgar Quinet, the "father of democracy," as he was called by Gambetta, author of many historical works, chiefly of an advanced liberal and propagandist type, and probably likely to be best remembered as having made modern France acquainted with the modern German advance in letters, science, and art, and also as one of the first Frenchmen who exposed the hollowness of the Napoleonic legend; Amédée Achard, a writer of second-rate fiction; Albert Jacquemart, the author of well-known works on the ceramic art; Johan Gabriel Carlén, the Swedish poet, editor, critic, connoisseur, and collector; Professor Heinrich Rückert of Breslau, son of the poet Rückert, distinguished as a historian; Émile Galichon, one of the earliest contributors to the *Gazette des Beaux Arts* and well known as an art-critic; Count Alexis Tolstoi, novelist and semi-political dramatist of old Russia; Pierre Larousse, educational publisher and author of the 'Dictionnaire universel du XIXe Siècle'; and Michel Lévy. In England, the most familiar names are those of Charles Kingsley, novelist, and exponent of muscular Christianity, and poet; George Finlay, the last of the original Philhellenes, who followed Byron and hoped for the regeneration of Greece, but later in life was an acute critic and exposer of the faults of Greek civilization, and author of many valuable contributions to literature on the subject; and Lord Mahon, the writer of many standard histories. Besides these, should be remembered Professor Key, the Latin scholar and grammarian; Augustus Mayhew, a contributor to *Punch*, and, with his brothers Henry and Horace, author of a series of humorous works and Christmas stories; Sir Arthur Helps, well—and we may say voluminously—known to readers on both sides of the Atlantic as author of 'Friends in Council' and other "social" books; Sir Francis Bond Head, formerly Lieutenant-Governor of Upper Canada, but altogether better known as the author of a graphic narrative of South-American adventure, of 'Bubbles from the Brunnen of Nassau,' a 'Fagot of French Sticks,' and other books; Canon William Selwyn, Lady Margaret's Reader in theology at Cambridge, and author of several works of a theological and classical character; Winwood Reade, African traveller, newspaper correspondent, and novelist; Dean Hook, author of the 'Lives of the Archbishops'; John Timbs, the industrious compiler of readable commonplace books of an antiquarian and gossipy sort; Rev. Robert Stephen Hawkes, the eccentric vicar of Morwinstow in Cornwall, and archæologist and poet as well; and Miss Bunnétt, a tireless translator from the German. In this country, no literary man of great note has died. The list includes the names of Col. Thomas Jefferson Randolph, grandson of Thomas Jefferson, and author of the 'Life and Correspondence' of his grandfather; Charles Sprague, the "Banker-Poet"; Samuel Gardiner Drake, the historian and biographer, and founder of the New England Historical Society; Maunsell B. Field, connected at various times with the public service, and author of a gossipy book of reminiscences; J. Ross Browne, traveller, and author of books made up from his travels; Mrs. Henry Field; Charles Dawson Shanly, Irish by birth, writer for the *Atlantic*, and editor of the short-lived *Vanity Fair* and *Mrs. Grundy*; John Harper, the well-known member of the publishing firm of Harper & Brothers; Mortimer Thompson, known to the reading public as "Q. K. Philander Doesticks, P. B.," a popular humorist of fifteen or twenty years ago, and to-day absolutely unread.

—To the long list of losses to art in France since the Franco-Prussian war must be added the names of Jean-François Millet, a painter of peasant life, well known in this country; Jean-Baptiste-Camille Corot, known all over the world for his landscapes; Louis-Antoine Barye, the animal sculptor; Jean-Baptiste Carpeaux, sculptor; Rohault de Fleury, Government architect; Jean-Frédéric de Waldeck, noted as a traveller and artist, and also as a centenarian, his age at death having been one hundred and nine years, one month, and fourteen days; Casimir de Balthazar, an historical painter; Henri Labrouste, architect; Isidore Pils, the pupil of Picot, and military painter. In England there died J. Birnie Philip, a sculptor, who had a share in the execution of the Albert Monument in Hyde Park; R. W. Buss, portrait and imaginative painter, and illustrator of works by Marryat and others; Alfred George Stevens, the noted decorative artist; Edward Welby Pugin, son, and in a measure the artistic heir, of the great reviver of Gothic architecture and ecclesiastical art in England; Frederick Walker, designer for some of Thackeray's writings, water-colorist, and painter in oils; Mr. G. J. Pinwell, one of the most prominent members of the Water-Color Society; and A. Boyd Houghton, a clever pictorial draughtsman of the *Graphic* corps. As coming under the general head of fine arts, we may add the names of Sir William Sterndale Bennett, one of the most successful of English composers, and professor of music; in France, of Jean-Baptiste Labat, composer and writer on music; and in this country, of Matthias Keller, the composer of the "American Hymn," not to be confounded with "America." The stage has lost, in England, William Bayle Bernard, the author of "The Nervous Man" and other farces; and George Belmore, the comedian. In this country no actors of eminence have died. The theatre in France has suffered an irreparable loss in the death of Pauline-Virginie Déjazet, on the stage for the extraordinary period of seventy-three years, in a great variety of parts, and so well known and admired an artist that 150,000 people are said to have turned into the streets on the occasion of her funeral.

—Not coming under any of the foregoing heads, are the deaths of William H. Aspinwall, known as a merchant who established steam communication between the Atlantic and Pacific coasts, and also for his services as commissioner to England for the purpose of preventing the sailing of the Laird iron-clads; W. B. Astor, noted as the richest inhabitant of New York; E. B. Ward, the Western spiritualist millionaire; Emile Pereire, the notorious French financier and founder of the celebrated Crédit Mobilier; the Swiss traveller, Munziger, made a pasha by the Khedive; Karl Mauch, the discoverer of the ruins of Zimbabye, or, as he at first supposed, the land of Ophir; George F. Trask, the great anti-tobacco agitator, and founder (it is said, too, the sole officer and member) of the "American Anti-Tobacco Society"; W. G. Ralston, the great projector and speculator of the Pacific coast; S. R. Wells, phrenologist; and James Chadwick, whom Cobden once spoke of as having made the most eloquent speech he ever heard against the corn-laws (the speech was: "Mr. Chairman, I cannot make a speech, but I will give you a thousand pounds").

—A pamphlet which, though short, possesses a good deal of interest, is M. Oppert's 'L'immortalité de l'âme chez les Chaldéens,' first published in the *Annales de philosophie chrétienne* for 1874, but issued separately in Paris in 1875. It contains a double translation in parallel columns, one by M. Oppert and the other by M. Lenormant, of an ancient Assyrian text describing the descent of Istar, the Chaldean Astarte, to the abodes of the dead, and the great difficulty of her escape. The document proves that there existed among the Assyrians a belief in the continued life of the soul after death, a fact which had not been established before the discovery of this inscription, and so, of course, by demonstrating a wider prevalence of this popular conception in ante-Christian times, gives stronger occasion for interpreting the Biblical verse about the "bringing of life and immortality to light through the gospel" in a sense which shall correct the notion, we suppose even now common enough among the less learned members of Christian churches, that immortality became first known under the Christian dispensation. The text had been already translated by Fox Talbot, Lenormant, Smith, and Schrader. Oppert and Schrader, who also has treated it in a separate publication, had the fullest form of the original. Smith also, though from less complete data, has indicated its true general sense. Some verses used in exoreisms, which M. Oppert quotes as illustrative, give occasion to an expression of strange difference of opinion between him and M. Lenormant. The verses occur in a bilingual tablet, Assyrian and Sumerian. M. Oppert prefers the adjective Sumerian to Accad or Accadian, as Accad (Genesis x. 10) is a Semitic term, and so not properly applicable to the idiom, which is Turanian. Both savants have translated the text, but while M. Lenormant, whose translation was prior, asserts that his was made from the Sumerian, M. Oppert declares that many of the words and phrases had been established by him from other documents, and that it is impossible to understand a Sumerian text that is not accompanied by its Assyrian translation. M. Lenormant, whose merit in developing the grammar of the Turanian idiom M. Oppert acknowledges, naturally magnifies his work, and says that the difference between the two translations is owing to the fact that the Assyrian is not always faithful and varies sometimes from the original. To which M. Oppert replies, though he admits the possibility of a difference in the genius of the two languages, that if the Accadian is translated differently from the Assyrian, one is translated wrongly: "moi aussi," he adds, "j'étudie les deux." He says, however, that, notwithstanding the differences of interpreters, the Accad is in a better condition than the Cypriote was lately. Even here M. Halévy's unfortunate essays have not prevented penetrating savants from recognizing that the Cypriote is a Greek dialect.

DARWIN'S INSECTIVOROUS AND CLIMBING PLANTS.*

I.

"MINERALS grow; vegetables grow and live; animals grow, live, and feel;" this is the well-worn, not to say out-worn, diagnosis of the three kingdoms by Linnæus. It must be said of it, that the agreement indicated in the first couplet is unreal, and that the distinction declared in the second is evanescent. Crystals do not grow at all in the sense that plants and animals grow. On the other hand, if a response to external impressions by special movements is evidence of feeling, vegetables share this endowment with animals, while, if conscious feeling is meant, this can be affirmed only of the higher animals. What appears to remain true is, that the difference is one of successive addition. That the increment in the organic world is of many steps; that in the long series no absolute lines separate, or have always separated, organisms which barely respond to impressions from those which more actively and variously respond, and even from those that consciously so respond—this, as we all know, is what the author of the works before us has undertaken to demonstrate. Without reference here either to that part of the series with which man is connected, and in some sense or other forms a part of, or to that lower *limbo* where the two organic kingdoms apparently merge—or whence, in evolutionary phrase, they have emerged—Mr. Darwin, in the present volumes, directs our attention to the behavior of the highest plants alone. He shows that some (and he might add that all) of them execute movements for their own advantage, and that some capture and digest living prey. When plants are seen to move and to devour, what faculties are left that are distinctively animal?

As to insectivorous or otherwise carnivorous plants, we have so recently here discussed this subject—before it attained to all this new popularity—that a brief account of Mr. Darwin's investigation may suffice.† It is full of interest as a physiological research, and is a model of its kind, as well for the simplicity and directness of the means employed as for the clearness with which the results are brought out—results which any one may verify now that the way to them is pointed out, and which, surprising as they are, lose half their wonder in the ease and sureness with which they seem to have been reached.

Rather more than half the volume is devoted to one subject, the round-leaved Sundew (*Drosera rotundifolia*), a rather common plant in the northern temperate zone. That flies stick fast to its leaves, being limed by the tenacious seeming dew drops which stud its upper face and margins, had long been noticed in Europe and in this country. We have heard hunters and explorers in our northern woods refer with satisfaction to the fate which in this way often befalls one of their plagues, the black fly of early summer. And it was known to some observant botanists in the last century, although forgotten or discredited in this, that an insect caught on the viscid glands it has happened to alight upon is soon fixed by many more—not merely in consequence of its struggles, but by the spontaneous incurvation of the stalks of surrounding and untouched glands; and even the body of the leaf had been observed to incurve or become cup-shaped so as partly to involve the captive insect.

Mr. Darwin's peculiar investigations not only confirm all this, but add greater wonders. They relate to the sensitiveness of these *tentacles*, as he prefers to call them, and the mode in which it is manifested; their power of absorption; their astonishing discernment of the presence of animal or other soluble azotized matter, even in quantities so minute as to rival the spectroscope—that most exquisite instrument of modern research—in delicacy; and, finally, they establish the fact of a true digestion, in all essential respects similar to that of the stomach of animals.

First as to sensitiveness and movement. Sensitiveness is manifested by movement or change of form in response to an external impression. The sensitiveness in the Sundew is all in the gland which surmounts the tentacle. To incite movement or other action, it is necessary that the gland itself should be reached. Anything laid on the surface of the viscid drop, the spherule of clear glairy liquid which it secretes, produces no effect unless it sinks through to the gland; or unless the substance is soluble and reaches it in solution, which, in the case of certain substances, has the same effect. But the glands themselves do not move, nor does any neighboring portion of the tentacle. The outer and longer tentacles bend inward (toward the centre of the leaf) promptly when the gland is irritated or stimulated, sweeping through an arc of 180° or less, or more—the quickness and the extent of the inflection depending, in equally vigorous leaves, upon the amount of irritation or stimulation, and also upon its kind. A tentacle with a particle of raw meat on its gland sometimes visibly begins to bend in ten seconds, becomes strongly incurved in five minutes, and its tip reaches the centre of the leaf in half an hour; but this is a case of extreme rapidity. A particle of cinder, chalk, or sand will also incite the bending if actually brought in contact with the gland, not merely resting on the drop; but the inflection is then much less pronounced and more transient. Even a bit of thin human hair, only 1-8,000th of an inch in length, weighing only the 1-78,740th of a grain, and largely supported by the viscid secretion, suffices to induce movement; but, on the other hand, one or two momentary, although rude, touches with a hard object produce no effect, although a repeated touch or the slightest pressure, such as that of a gnat's foot, prolonged for a short time causes bending. The seat of the movement is wholly or nearly confined to a portion of the lower part of the tentacle, above the base, where no local irritation produces the slightest effect. The movement takes place only in response to some impression made upon its own gland at the distant extremity, or upon other glands far more remote. For if one of these members suffers irritation the others sympathize with it. Very noteworthy is the correlation between the central tentacles, upon which an insect is most likely to alight, and these external and larger ones, which in proportion to their distance from the centre take the larger share in the movement. The shorter central ones do not move at all when a bit of meat or a crushed fly or a particle of a salt of ammonia or the like is placed upon them; but they transmit their excitation across the leaf to the surrounding tentacles on all sides; and they, although absolutely untouched, as they successively receive the mysterious impulse, bend strongly inward, just as they do when their own glands are excited. Whenever a tentacle bends in obedience to an impulse from its own gland, the movement is always toward the centre of the leaf; and this also takes place, as we have seen, when an exciting object is lodged at the centre. But when the object is placed upon either half of the leaf, the impulse radiating from thence causes all the surrounding untouched tentacles to bend with precision toward the point of excitement, even the central tentacles, which are motionless when themselves charged, now responding to the call. The inflection which follows mechanical irritation or the presence of any inorganic or insoluble body is transient; that which follows the application of organic matter lasts longer, more or less, according to its nature and the amount; but sooner or later the tentacles resume their former position, their glands glisten anew with fresh secretion, and they are ready to act again.

As to how the impulse is originated and propagated, and how the movements are made, comparatively simple as the structure is, we know as little as we do of the nature of nervous impulse and muscular motion. But two things Mr. Darwin has well-nigh made out, both of them by means and observations so simple and direct as to command our confidence, although they are contrary to the prevalent teaching. First, the transmission is through the ordinary cellular tissue, and not through what are called the fibrous or vascular bundles. Second, the movement is a vital one, and is effected by contraction on the side towards which the bending takes place, rather than by turgescent tension of the opposite side. The tentacle is pulled over rather than pushed over. So far it accords with muscular action.

The operation of this fly-catching apparatus, in any case, is plain. If the insect alights upon the disc of the leaf, the viscid secretion holds it fast—at least an ordinary fly is unable to escape—its struggles only increase the number of glands involved and the amount of excitement; this is telegraphed to the surrounding and successively longer tentacles, which bend over in succession, so that within ten to thirty hours, if the leaf is active and the fly large enough, every one of the glands (on the average, nearly two hundred in number) will be found applied to the body of the insect. If the insect is small and the lodgment towards one side, only the neighboring tentacles may take part in the capture. If two or three of the strong marginal tentacles are first encountered, their prompt inflection carries the intruder to the centre, and presses it down upon the glands which thickly pave the floor; these notify all the surrounding tentacles of the capture, that they may share the spoil, and the fate of that victim is even as of the first. A bit of meat or a crushed insect is treated in the same way.

---

'The Movements and Habits of Climbing Plants. By Charles Darwin, M.A., F.R.S., etc.' Second Edition revised, with Illustrations. London: John Murray. 1875. Pp. 208. New York: D. Appleton & Co.

† The *Nation*, Nos. 457, 458, 1874. It was in these somewhat light and desultory, but substantially serious, articles that some account of Mr. Darwin's observations upon the digestive powers of *Drosera* and *Dionæa* first appeared; in fact, this leading motive was to make sufficient reference to his then unpublished discoveries to guard against expected or possible claims to priority. Dr. Burdon-Sanderson's lecture, and the report in *Nature*, which first made them known in E. gland, appeared later.

A mistake on our part in the reading of a somewhat ambiguous sentence in a letter, led to the remark, at the close of the first of those articles that the leaf trap of *Dionæa* had been paralyzed on one side in consequence of a dexterous puncture. What was communicated really related to *Drosera*.

This language implies that the animal matter is in some way or other discerned by the tentacles, and is appropriated. Formerly there was only a presumption of this, on the general ground that such an organization could hardly be purposeless. Yet, while such expressions were natural if not unavoidable, they generally were used by those familiar with the facts in a half-serious, half-metaphorical sense. Thanks to Mr. Darwin's investigations, they may now be used in simplicity and seriousness.

That the glands secrete the glairy liquid of the drop is evident, not only from its nature, but from its persistence through a whole day's exposure to a summer sun, as also from its renewal after it has been removed, dried up, or absorbed. That they absorb as well as secrete, and that the whole tentacle may be profoundly affected thereby, are proved by the different effects, in kind and degree, which follow the application of different substances. Drops of rain-water, like single momentary touches of a solid body, produce no effect, as indeed they could be of no advantage ; but a little carbonate of ammonia in the water, or an infusion of meat, not only causes inflection, but promptly manifests its action upon the contents of the cells of which the tentacle is constructed. These cells are sufficiently transparent to be viewed under the microscope without dissection or other interference ; and the change which takes place in the fluid contents of these cells when the gland above has been acted upon is often visible through a weak lens, or sometimes even by the naked eye, although higher powers are required to discern what actually takes place. This change, which Mr. Darwin discovered, and turns to much account in his researches, he terms "aggregation of the protoplasm." When untouched and quiescent, the contents appear as a homogeneous purple fluid. When the gland is acted upon, minute purple particles appear, suspended in the now colorless or almost colorless fluid ; and this change appears first in the cells next the gland, and then in those next beneath, travelling down the whole length of the tentacle. When the action is slight, this appearance does not last long ; the particles of "aggregated protoplasm" redissolve, the process of redissolution travelling upwards from the base of the tentacle to the gland in a reverse direction to that of the aggregation. Whenever the action is more prolonged or intense, as when a bit of meat or crushed fly, or a fitting solution, is left upon the gland, the aggregation proceeds farther, so that the whole protoplasm of each cell condenses into one or two masses, or into a single mass which will often separate into two, which afterwards reunite ; indeed they incessantly change their forms and positions, being never at rest, although their movements are rather slow. In appearance and movements they are very like amœbæ and the white corpuscles of the blood. Their motion, along with the streaming movement of rotation in the layer of white granular protoplasm that flows along the walls of the cell, under the high powers of the microscope "presents a wonderful scene of vital activity." This continues while the tentacle is inflected or the gland fed by animal matter, but vanishes by dissolution when the work is over and the tentacle straightens. That absorption takes place, and matter is conveyed from cell to cell, is well made out, especially by the experiments with carbonate of ammonia. Nevertheless, this "aggregation" is not dependent upon absorption, for it equally occurs from mechanical irritation of the gland, and always accompanies inflection, however caused, though it may take place without it. This is also apparent from the astonishingly minute quantity of certain substances which suffices to produce sensible inflection and aggregation—such, for instance, as the one-twenty-millionth or even the thirty-millionth of a grain of phosphate or nitrate of ammonia !

By varied experiments it was found that the nitrate of ammonia was more powerful than the carbonate, and the phosphate more powerful than the nitrate, this result being intelligible from the difference in the amount of nitrogen in the first two salts, and from the presence of phosphorus in the third. There is nothing surprising in the absorption of such extremely dilute solutions by a gland. As our author remarks: "All physiologists admit that the roots of plants absorb the salts of ammonia brought to them by the rain ; and fourteen gallons of rain-water [*i.e.*, early rain-water] contain a grain of ammonia ; therefore, only a little more than twice as much as in the weakest solution employed by me. The fact which appears truly wonderful is that the one twenty-millionth of a grain of the phosphate of ammonia, including less than one thirty-millionth of efficient matter [if the water of crystallization is deducted], when absorbed by a gland, should induce some change in it which leads to a motor impulse being transmitted down the whole length of the tentacle, causing its basal part to bend, often through an angle of 180°." But odoriferous particles which act upon the nerves of animals must be infinitely smaller, and by these a dog a quarter of a mile to the leeward of a deer perceives his presence by some change in the olfactory nerves transmitted through them to the brain.

When Mr. Darwin obtained these results fourteen years ago, he could claim for *Drosera* a power and delicacy in the detection of minute quantities of a substance far beyond the resources of the most skilful chemist ; but in a foot-note he admits that "now the spectroscope has altogether beaten *Drosera ;* for, according to Bunsen and Kirchhoff, probably less than the 1-200,000,000th of a grain of sodium can be thus detected."

Finally, that this highly sensitive and active living organism absorbs, will not be doubted when it is proved to digest, that is, to dissolve otherwise insoluble animal matter by the aid of special secretions. That it does this is now past doubting. In the first place, when the glands are excited they pour forth an increased amount of the ropy secretion. This occurs directly when a bit of meat is laid upon the central glands ; and the influence which they transmit to the long-stalked marginal glands causes them, while incurving their tentacles, to secrete more copiously long before they have themselves touched anything. The primary fluid, secreted without excitation, does not of itself digest. But the secretion under excitement changes in nature and becomes acid. So, according to Schiff, mechanical irritation excites the glands of the stomach to secrete an acid. In both this acid appears to be necessary to, but of itself insufficient for, digestion. The requisite solvent, a kind of ferment called *pepsin*, which acts only in the presence of the acid, is poured forth by the glands of the stomach only after they have absorbed certain soluble nutritive substances of the food ; then this pepsin promptly dissolves muscle, fibrin, coagulated albumen, cartilage, and the like. Similarly it appears that *Drosera*-glands, after irritation by particles of glass, did not act upon little cubes of albumen. But when moistened with saliva, or replaced by bits of roast meat or gelatine, or even cartilage, which supply some soluble *peptone*-matter to initiate the process, these substances are promptly acted upon, and dissolved or digested ; whence it is inferred that the analogy with the stomach holds good throughout, and that a ferment similar to pepsin is poured out under the stimulus of some soluble animal matter. But the direct evidence of this is furnished only by the related carnivorous plant, *Dionæa*, from which the secretions, poured out when digestion is about to begin, may be collected in quantity sufficient for chemical examination. In short, the experiments show "that there is a remarkable accordance in the power of digestion between the gastric juice of animals, with its pepsin and hydrochloric acid, and the secretion of *Drosera*, with its ferment and acid belonging to the acetic series. We can, therefore, hardly doubt that the ferment in both cases is closely similar, if not identically the same. That a plant and an animal should pour forth the same, or nearly the same, complex secretion, adapted for the same purpose of digestion, is a new and wonderful fact in physiology."

There are one or two other species of Sundew—one of them almost as common in Europe and North America as the ordinary round-leaved species—which act in the same way, except that, having their leaves longer in proportion to their breadth, their sides never curl inward, but they are much disposed to aid the action of their tentacles by incurving the tip of the leaf, as if to grasp the morsel. There are many others, with variously less efficient and less advantageously arranged insectivorous apparatus, which, in the language of the new science, may be either on the way to acquire something better, or of losing what they may have had, while now adapting themselves to a proper vegetable life. There is one member of the family (*Drosophyllum Lusitanicum*), an almost shrubby plant, which grows on dry and sunny hills in Portugal and Morocco—which the villagers call "the fly-catcher," and hang up in their cottages for the purpose—the glandular tentacles of which have wholly lost their powers of movement, if they ever had any, but which still secrete, digest, and absorb, being roused to great activity by the contact of any animal matter. A friend of ours once remarked that it was fearful to contemplate the amount of soul that could be called forth in a dog by the sight of a piece of meat. Equally wonderful is the avidity for animal food manifested by these vegetable tentacles, that can "only stand and wait" for it.

Only a brief chapter is devoted to *Dionæa* of North Carolina, the Venus' Fly-Trap, albeit, "from the rapidity and force of its movements, one of the most wonderful in the world." It is of the same family as the Sundew ; but the action is transferred from tentacles on the leaf to the body of the leaf itself, which is transformed into a spring-trap, closing with a sudden movement over the alighted insect. No secretion is provided beforehand either for allurement or detention ; but after the captive is secured, microscopic glands within the surface of the leaf pour out an abundant gastric juice to digest it. Mrs. Glass's classical directions in the cook-book, "first catch your hare," are implicitly followed.

Avoiding here all repetition or recapitulation of our former narrative, suffice it now to mention two interesting recent additions to our knowledge, for which we are indebted to Mr. Darwin. One is a research, the other an in-

spiration. It is mainly his investigations which have shown that the glairy liquid, which is poured upon and macerates the captured insect, accomplishes a true digestion; that, like the gastric juice of animals, it contains both a free acid and pepsin or its analogue, these two together dissolving albumen, meat, and the like. The other point relates to the significance of a peculiarity in the process of capture. When the trap suddenly encloses an insect which has betrayed its presence by touching one of the internal sensitive bristles, the closure is at first incomplete. For the sides approach in an arching way, surrounding a considerable cavity, and the marginal spine-like bristles merely intercross their tips, leaving intervening spaces through which one may look into the cavity beneath. A good idea may be had of it by bringing the two palms near together to represent the sides of the trap, and loosely interlocking the fingers to represent the marginal bristles or bars. After remaining some time in this position the closure is made complete by the margins coming into full contact, and the sides finally flattening down so as to press firmly upon the insect within; the secretion excited by contact is now poured out, and digestion begins. Why these two stages? Why should time be lost by this preliminary and incomplete closing? The query probably was never distinctly raised before, no one noticing anything here that needed explanation. Darwinian teleology, however, raises questions like this, and Mr. Darwin not only propounded the riddle but solved it. The object of the partial closing is to permit small insects to escape through the meshes, detaining only those plump enough to be worth the trouble of digesting. For naturally only one insect is caught at a time, and digestion is a slow business with Dionæas, as with anacondas, requiring ordinarily a fortnight. It is not worth while to undertake it with a gnat when larger game may be had. To test this happy conjecture, Mr. Canby was asked, on visiting the Dionæas in their native habitat, to collect early in the season a good series of leaves in the act of digesting naturally-caught insects. Upon opening them it was found that ten out of fourteen were engaged upon relatively large prey, and of the remaining four three had insects as large as ants, and one a rather small fly.

"There be land-rats and water-rats" in this carnivorous Sundew family. *Aldrovanda*, of the warmer parts of Europe and of India, is an aquatic plant, with bladdery leaves, which were supposed to be useful in rendering the herbage buoyant in water. But it has recently been found that the bladder is composed of two lobes, like the trap of its relative *Dionæa*, or the valves of a mussel-shell; that these open when the plant is in an active state, are provided with some sensitive bristles within, and when these are touched close with a quick movement. These water-traps are manifestly adapted for catching living creatures; and the few incomplete investigations that have already been made render it highly probable that they appropriate their prey for nourishment, whether by digestion or by mere absorption of decomposing animal matter, is uncertain. It is certainly most remarkable that this family of plants, wherever met with, and under the most diverse conditions and modes of life, should always in some way or other be predaceous and carnivorous.

If it be not only surprising but somewhat confounding to our classifications that a whole group of plants should subsist partly by digesting animal matter and partly in the normal way of decomposing carbonic acid and producing the basis of animal matter, we have, as Mr. Darwin remarks, a counterpart anomaly in the animal kingdom. While some plants have stomachs, some animals have roots. "The rhizocephalous crustaceans do not feed like other animals by their mouths, for they are destitute of an alimentary canal, but they live by absorbing through root-like processes the juices of the animals on which they are parasitic."

SOME RECENT VOLUMES OF POETRY.*

A NEW volume of poems by Mr. Longfellow is a pleasure alike for the oldest and the youngest reader of poetry. No other living poet has so wide and so affectionate an audience as he, and that this should be the case is an indication of the good taste and good feeling of the average reader. Among the most marked civilizing influences of the literature of our time is that which has been exerted by Mr. Longfellow's poetry from the date of the original publication of the 'Voices of the Night,' thirty-seven years ago, to the present day. His successive volumes have been chapters of spiritual autobiography, with all the intimacy but nothing of the conceit of personal narrative. Sweet and sincere feeling has been expressed in verse as sweet as the sentiment by which it was inspired. The harmony of emotion and thought with the form of their utterance has seldom been more completely realized than in Mr. Longfellow's work. He has been steadily true to his own genius; always modest in performance, never straining his forces, never striving for factitious effect, but faithfully cultivating his art, and setting an eminent example of poetic virtues rare in these days of impatient and inconsiderate rhymsters. It is the character of the man that has shaped and moulded his verse into conformity with its own pure morality, generous sympathies, and delicate feeling. A new volume of such a poet is not to be criticised as if it were by an unknown writer. It comes to us invested with associations and memories. Its tones awaken familiar echoes. We read it with ears already attuned to its harmonies.

The 'Masque of Pandora' is a dramatic and lyric interlude, in which the well-known Greek myth is developed, not with classic severity of treatment, but with a romantic freedom that brings it into closer relation with modern moods of sentiment and reflection. The spirit of the poem partakes more of the grace and pathos of the legend than of its dread horror and of the boding mystery, whether of good or of evil, that attends the outcome of the deed of Pandora. We spoke last year of the domestic charm of the 'Hanging of the Crane,' and we can but repeat our sense of the success with which Mr. Longfellow has represented the inner circle of household joys and sorrows. His "Morituri Salutamus," though an occasional poem, rises, by virtue of its excellence, into the ranks of poems that outlive their occasion. All our readers are familiar with its manly and affecting simplicity and earnestness of address. We accept it as proof not of the age but of the perennial, healthy youth of the poet. But of all the contents of the volume, the last part, the Book of Sonnets, is that which shows Mr. Longfellow at his best. He is master of the form of the sonnet, and the form, by its very stress and limitations, seems to give completeness, compactness, and vigor to its contents. In these admirable poems, the poet, the artist, and the man find their fullest expression.

To turn from such perfected work as this to the sonnets of 'The New Day: a Poem in Songs and Sonnets,' is like the change from the lyre of Orpheus to the "pipes made of green corn" of Chaucer's "little herd grooms," on which, indeed, they play sweetly and deftly enough, but not yet with full power, and not yet as masters of nobler instruments. There is sincerity of emotion, delicacy of expression, seriousness of intention, and artistic capacity enough in Mr. Gilder's verses to give ground for hope that with larger experience and faithful culture he will write such poetry as will add preciousness even to these first works of his muse. He may fill these, indeed, with fuller virtue than they now hold if his future work show that this first volume was but the firm and modest foundation of genuine achievement. The qualities in this volume are indicative of true poetic sensibility, and of potential success. The defects are mainly those of youthful impressibility. The title of the volume, 'The New Day,' would hardly have been given to it if Mr. Gilder had not been moved by 'The New Life,' and his verse often suggests a reminiscence of Dante's love-poems, or those of some more recent poet. But youth has its charm, even when it is trying its wings. Its imitative flutterings are preludes to original flights. And the intensity and purity of Mr. Gilder's love are of the best possible promise as regards his future poetic accomplishment. We shall look for his next volume with sincere, sympathetic interest, and with great confidence that it will, if he can but hold fast his ideal, receive the welcome he would desire for it.

Mr. Lathrop's little volume deserves to be mentioned in similar terms. It is the work of a sincere and pure youth. His feeling and his expression are alike refined, and he has the sentiment of the poet and of the artist. His volume does credit to the society in which such sentiment is possible, but he will not object to the criticism that his range of experience is as yet too limited to give him a right to expect a wide recognition from the indifferent public as the poet of their needs, desires, and aspirations. The sentiments and the sensibilities of an individual must be fused into the great current of universal emotions and passions before the poet can claim an audience beyond the number of his personal friends, or of the few unknown to him with like natures to his own. Mr. Lathrop has the making of a poet in him, and it is long since we had to notice two volumes that gave more hope for the future of their authors than 'Rose and Roof-Tree' and 'The New Day.'

A generation has passed, full of marvellous turmoils and changes, since Mr. Cranch published his former thin volume of poems. Yet there are

* 'The Masque of Pandora, and other Poems. By Henry Wadsworth Longfellow.' Boston: James R. Osgood & Co. 1875. 16mo, pp. 148.

'The New Day: A Poem in Songs and Sonnets. By Richard Watson Gilder.' New York: Scribner, Armstrong & Co. 1875. Sq. 16mo, pp. 112.

'Rose and Roof-Tree: Poems. By George Parsons Lathrop.' Boston: James R. Osgood & Co. 1875. 16mo pp. 126.

'The Bird and the Bell, with other Poems. By Christopher Pearse Cranch.' Boston: J. R. Osgood & Co. 1875.

'American Boyhood. By Horace P. Biddle.' Philadelphia: J. B. Lippincott & Co. 1875. 12mo, 228.

'The Ship in the Desert. By Joaquin Miller.' Boston: Roberts Brothers. 1875. 16mo, pp. 203.

those who still remember its refined thoughtfulness and tender sentiment as the promise of better things to come. The book before us in many respects redeems the pledge given thirty years ago. There are few men who could write from personal experience a poem like the "Three Muses," and feel a just doubt whether to give himself wholly to music, painting, or song. It may be said, indeed, that the Muse is a jealous mistress, who exacts an individual devotion, and that Mr. Cranch's poetry would have been of firmer texture but for the irresolution engendered by this exceptional possibility of choice. But the same qualities that commended him formerly to a select circle of readers reappear now and with a riper charm. The same sensitiveness in giving back the shier influences of nature, of ethical unrest, and of friendship, will make this little volume welcome to those who love the unconscious personal revelations of a genuinely poetical and artistic temperament. Mr. Cranch sometimes strikes a deeper note, as in "The Century" and "The Nation," or a more sonorous one, as in the "Michael Angelo," but his characteristic tone is that of tender thoughtfulness, here and there interfused with playful humor. His main weakness, we should say, was in a lack of self-denial in letting a thing be after he has once fairly said it. His best poems would strike more home if the emotion were less prolonged.

'American Boyhood,' by Horace P. Biddle, is a distinctly original and interesting book, which would be vastly better in prose than in its present garb of verse. Mr. Biddle seems to have formed his poetic style on that of Warner, the author of 'Albion's England'—"a good, honest, plain writer," says Mr. Chalmers, "in the old-fashioned kind of seven-footed verse." The same words apply to his American successor, and there is an amusing mental surprise and sense of anachronism in reading contemporary verse so completely in the style of the late sixteenth century. "The following poem," says Mr. Biddle in his preface, "is an attempt to portray American boyhood, with its surroundings, as it was in the early part of the nineteenth century. It is mainly a picture of country boyhood, . . . the boyhood of all sections and of every class, blended into the unity American." If the author had been content with the less ambitious attempt to describe simply his own boyhood and that of his associates sixty years ago, his work would have been a more valuable contribution than it is to the knowledge of conditions of society which have almost everywhere passed away, and have left so little trace in memory, owing to the rapidity and greatness of the changes wrought during the last two generations, that a faithful and vivid picturing of them would possess a genuine historic interest. Whatever Mr. Biddle tells of his personal experiences, experiences which were those of a settler's son in Ohio at a time when the country was comparatively thinly settled, and ways of life were primitive and simple, is told with such directness and truthfulness as to give an entertaining and curious picture of men and manners. His very want of poetic imagination adds to the value of his memories. His account of the settlers' households; of the pursuits and amusements of men and women, boys and girls; of dress and manners, schools and churches, is full of freshness and valuable reminiscence. He preserves the details of many habits and customs of the primitive civilization of the West. His book is full of information of a kind of which less than could be wished is to be found in our literature. We regret that our space does not allow us to extract some portions of Mr. Biddle's narrative. It were to be wished that he would give us in prose (which his preface shows he writes better than verse) a series of detailed reminiscences of his own life unmixed with matters beyond his own observation.

Mr. Joaquin Miller's last volume, 'The Ship in the Desert,' will not do much to raise his poetical reputation, but will not detract from it. It shows the same merits and defects as his earlier works. The story is both unintelligible and uninteresting, but special parts of it are impressive from the force of the author's realistic imagination in the description of wild nature, and from the intensity of his feverish style. The real merits of Mr. Miller's work are constantly obscured by self-consciousness, affectation, and extravagance. He has imagination, but he possesses so little of the restraining sense of the artist that he constantly runs beyond the modesty of nature, and he has so little culture—so little real knowledge of character and history—that he lacks the measure which is the rule and test of all noble and permanent achievement. It is not surprising that his repute should be higher in England than in America. "We prefer," says one of his foreign critics, "the roughness of the backwoods of America to all the drawing room conventionalities of Europe." This is a mere matter of taste; but the roughness of the backwoods, modified as it is in Mr. Miller's poetry, has a very different effect in England, where it appears as a mere phenomenon, somewhat refreshing, it may be, in the midst of the conventionalities of the drawing-room, from that which it produces here, where it comes to us indissolubly connected with associations of coarseness, vulgarity, and barbarism. For instance, Mr. Miller sings a pæan over the first immigrants to California in the time of the gold-fever—"Those brave old bricks of Forty-nine!" as he terms them. He tells us, "Full were they of great endeavor," and that

> "The wide
> And storied age of chivalry
> Hath not one page like this to me."

No doubt many of these pioneers were not bad men, and many of them suffered and met death bravely. But their motives were not the highest, and such talk as Mr. Miller's concerning them is mere ludicrous rant, which to an American gives the measure of his common sense, while an Englishman unacquainted with the facts might fancy that Mr. Miller was celebrating men who really deserved to be ranked with heroes. In the pleasant 'Mémoires d'un Imbécile' the author tells us that his reading of poetry reconciled him, at least in part, "quant à la forme, avec quelques-uns de nos poëtes contemporains. Je dis *quant à la forme*, car, pour le fonds, je ne puis excuser leur insuffisance à la plupart, leur ignorance, leur insanité volontaire."

Nebraska; Its Advantages, Resources, and Drawbacks. By Edwin A. Curley. (New York: American News Co.)—Mr. Curley, an earnest and accomplished Englishman, who has resided many years in Nebraska, has given us a book of over four hundred pages upon that State, treating fully of its agricultural and other advantages, and at the same time pointing out its defects. His training has enabled him to treat of the composition of its soil, its geology, flora, and meteorological phenomena, in a manner which few could have done. While his book is the result of laborious investigation—journeying over each county and familiarizing himself with the settlers—his deductions are generally accurate and useful to all who are seeking homes in the West. By carefully prepared curves and shaded squares, deduced from official statistics, he shows that Nebraska has increased more rapidly than the States to the east of it, at the same stage of growth. The increase of population in Iowa was from one to three to the square mile in seven and a half years, while Nebraska was but six and a half years attaining this result. Also that New Zealand, the most favored colony of England, was thirty years accomplishing what Nebraska has done in twenty. His analyses are numerous and the results carefully tabulated. The lacustrine deposit, he says, is "one of the most valuable for agricultural purposes in the world, and prevails over more than three-fourths of the surface." This ranges from 5 to 150 feet in thickness, is practically inexhaustible, and is unsurpassed in qualities of soil. Moreover, "Nebraska, taken as a whole, is remarkably well supplied with water. In the eastern part the streams are frequent, but the prairies scarcely require it, as water can always be reached in never-failing quantities with driven wells from 15 to 45 feet, while windmills of cheap construction pump abundance of water for all farm purposes. Going westward the water is found deeper, until, passing the 98th meridian, it is not reached until we penetrate from 100 to 150 feet. The difficulty of insufficient water then commences." The discussion of this subject refers more particularly to the eastern half of the State. The rain-fall, which is ample in the eastern counties, where it is 33 inches annually, gradually decreases towards the west, as Mr. Curley's investigations prove. On page 260 he states that "some years ago the 99th meridian was given as the western limit of profitable growth of cereals without irrigation. More recently the balance of opinion has favored the 100th, and many settlers have pushed far westward of this boundary." "That, for the present, there is a western limit is certain, but our data for fixing it are entirely wanting." He ventures to predict that "it will be, when found, a very irregular line, curving eastward and westward." The sands commence about the 98th meridian, increasing to the westward.

Of the western half of the State, which is neither surveyed nor settled, our author says but little. Of the vicinity of the town of North Platte, meridian 100° 20′, he remarks: "Irrigation can be usefully employed for 150 miles east of it," while there is no agriculture to the west of it or in its vicinity without irrigation. Respecting the great advantages for grazing possessed by the western portions of Nebraska, it appears from actual data that for cattle, sheep, and horses a profit ranging from 25 to 60 per cent. is realized, with the use of large capital, so long as pasturage and winter food cost nothing. But Mr. Curley has failed to represent sufficiently the imperative necessity of shelter and prepared food in exceptionally severe winters. The chapter, however, gives a fair idea of the magnitude of an interest which is soon to spread over the vast dry region of our country. The "Herd Laws" of Nebraska, which render fencing unnecessary, are of the greatest importance to poor settlers, and relieve the people from an im-

mense outlay of unproductive capital. Still, nearly all farmers experiment in hedges; the Bitter Willow succeeding best. Timber-fields grow with amazing rapidity.

The healthiness of the State is shown to be remarkable, owing to the small amount of malarious country and the unusual winds, which might otherwise be objectionable. Although there are extremes of heat and cold, they are considered scarcely worthy of attention and are of very short duration. Mr. Curley's discussion of the grasshopper is interesting and instructive. He says that the ravages of the grasshopper of 1874 will be a check to emigration, and that though this check is of the nature of a panic, without rhyme or reason, it nevertheless cannot be ignored or reasoned away; that the sufferings of that year were more due to drouth than to grasshoppers, and, had it not been the first season of settlements, would have been no worse in its effects than the drouths that occur every dozen years in all countries. It appears that the northeastern portion of Nebraska, comprising a region fully equal in value for wheat-growing and general agriculture to Iowa and Southern Minnesota, is scarcely settled from the want of railroads. Population has been greatly impeded by the large belts of land held by speculators, but time and *taxes* are rapidly disposing of these difficulties. Mr. Curley, possibly from want of data, fails to give sufficient prominence to the fact that six-sevenths of the population of Nebraska is confined to less than one-fourth of the State—its eastern portion—for the reason that much of the western part is unsuitable for agriculture.

To sum up, this is an honest and sincere work, the best of its kind within our knowledge, and what is needed for every State and Territory of the West. The many illustrations which embellish it are excellent, and the sectional maps of the several counties of Nebraska are beautifully and accurately executed, and valuable for reference.

Notes of Travel in Southwestern Africa. By C. J. Andersson. (New York: G. P. Putnam's Sons. 1875.)—To those who have admired the author of 'Lake Ngami' and 'The Okavango River' as an intrepid explorer and an enthusiastic naturalist and sportsman, this book will be a sad disappointment, for it is a record of his personal misfortunes and sufferings, culminating in his death in the heart of the wilderness. In the opening chapters we find Andersson settled as a large trader at a place called Otjimbingue, a hundred miles or so inward from Walvisch Bay. Here he had established himself in the midst of the Damaras, intending to raise cattle and sheep for the market at Cape Town and to carry on a trade in ivory with the elephant-hunters. His first trouble was with the Namaquas, a tribe living between Damaraland and the Cape, who refused to allow his cattle to pass through their territory. Obtaining reinforcements from the Cape, he brought them to terms; but this relief was only temporary, for a fierce war soon broke out between the Namaquas and Damaras, in which Andersson not only took part but acted as leader of the Damaras. In the battle which ensued he was deserted by his followers, was himself desperately wounded, and lost all his cattle and other property. After great suffering he finally arrived at the Cape, where he remained for a year under medical treatment and unable to move about; he finally recovered, but was a cripple for life, one leg being three inches shorter than the other. As soon as he was well he returned to Otjimbingue and endeavored to rebuild his fortunes, but in this he was not successful, the "lung sickness" carrying off his cattle, and the elephants becoming scarce in his neighborhood. Although far from being in good health, he then determined to follow the elephant-hunters northward into Ovampoland. He remained a short time at the villages of Ondonga, but misfortune again overtook him in the loss of a large lot of ivory, which was stolen *en route* to the coast. Then, although suffering greatly from wounds and fever, he decided to push northward and explore the Cunené River and cross it into the Portuguese possessions of Benguela. He reached the Cunené River, but having an altercation with the ferrymen was unable to cross; and a few days later he died of fever near its banks.

The synopsis which we have given of this book will suffice to show its local and personal character. It contains no geographical information, for the country had been previously described by Andersson and Mr. Galton, nor are there any of the well-told stories of wild sport which abound in 'Lake Ngami,' for the author was too ill to hunt, and was not often in good hunting-grounds. He had, however, considerable time to pursue his studies in natural history, and we have three interesting chapters on the "Game Birds of South Africa" (with exact measurements), on the habits of the vulture, and on the leopard and its congeners. Andersson's great work, to which he constantly alludes, was to have been an exhaustive treatise on the 'Avi Fauna of South Africa'; this was unfinished at the time of his death, but the editor states that an abridgment of it has been compiled and published by Mr. John Henry Gurney. The chapter on the diagnosis and treatment of the lung sickness, "that is so terribly fatal to both tame and wild animals in Southern Africa," is instructive in view of its relation to the formidable Rinderpest. A moot point is raised between the author and Dr. Livingstone as to the effects of eating the meat of animals which have been slaughtered on account of this disease. Livingstone states that "it causes a malignant carbuncle, which, when it appears over any important organ, proves rapidly fatal." Andersson contends that "it may be eaten with perfect impunity, at least in Southern Africa. For more than two years hardly anything else appeared on my table, and in no instance has any disagreeable consequence followed." This would seem to be conclusive, but most people would practically accept Livingstone's opinion, or at least defer a personal experiment as long as possible. Another interesting chapter is that devoted to missionary labors, in which the author makes some very sound criticisms to the effect that it is necessary to civilize a savage before evangelizing him; and, while wishing well to the missionaries, he thinks they overestimate their success.

The present book will add but little to the reputation acquired by Andersson in his fifteen years of residence and exploration in the wilds of South Africa; the completed portion was written when suffering from sickness and of course not at his best, and the remainder (about one-third) is made up of the rough notes of his journal, which are nearly unintelligible. The whole tone of the book is solemn and gloomy, and lacks the joyous excitement and enthusiastic vigor of its predecessors; but its very sadness enlists our sympathies in the fate of a man who pursued with such indomitable spirit, and to the bitter end, the rude life of hardship which he had chosen for himself.

Die Psychologie des Mordes, von Franz von Holtzendorf. (Berlin: Carl Habel; New York: L. W. Schmidt. 1875.)—In this interesting pamphlet the eminent author undertakes to show that it is inexpedient to preserve juridically the distinction, based on the presence or absence of premeditation, between murder and manslaughter. He proves by statistics that the same motives occasion both crimes, the difference merely being that some classes of motive have a more sudden and, so to speak, resistless power over the will of the criminal. Cupidity, for instance, produces more murders than manslaughters; hatred and vengeance more manslaughters than murders. He thinks that absence of premeditation ought not to reduce the punishment, as it now does; and maintains—what at the first glance seems a paradoxical thesis—that a society in which premeditated murders should predominate over manslaughter would be more civilized than one in which the manslaughters were most numerous. "For it would be a society in which the moral power of resistance to the first movement of passion (overwhelming in barbarians) had already become effective. That very weighing of the means and the results of the crime which now legally aggravate the offence, must operate, in many cases concealed from statistics, negatively—namely, to prevent a manslaughter which, without it, would probably have taken place." A curious statistical result which he brings forward in support of this view is relative to the ages of manslaughterers and murderers respectively. In Prussia, during three years, three persons between the ages of 18 and 24 were accused of murder to every one that was accused of manslaughter. Between the ages of 40 and 60, the crimes are about equal in frequency, with manslaughter, however, a little ahead; over 60, manslaughter largely predominates. This shows, according to the author, that with the "hot blood of youth" the power of reflection also is conjoined, whilst in old age, in cases where equal passion exists, the controlling will has become weaker.

He argues statistically also that, taking all cases of violent killing together, the chances of an execution for any given criminal are very slight. And in particular is "the prognosis favorable" if, in the execution of the deed, it can be made to appear the result of passionate excitement. Laying great stress on the element of certain execution in the minatory effect of a law, Von Holtzendorff thinks this state of things very demoralizing; and without discussing at all which form of punishment is best (capital or not), he concludes that we should punish manslaughter and murder alike. By maintaining the existing presumption that all forms of manslaughter involve less guilt than the mildest form of murder, "we paralyze, as it were, the ethical powers of resistance against the waves of criminal passion in those circles of the population which are most prone to deeds of violence."

We recommend this important and original little work to all who do not care to consult Von Holtzendorff's larger book upon the same subject.

What we Saw in Australia. By Rosamond and Florence Hill. (New York: Macmillan & Co. 1875.)—This stout volume is an excellent book of its kind. It relates the adventures and observations of two maiden ladies who, in 1873, went out to Australia to visit some relatives, and took advantage of the occasion to gather a large amount of useful information. They are model travellers—energetic, good-humored, appreciative, observant—and they are also exemplary narrators. They are always exact and definite; they have evidently been zealous and careful in collecting their facts; and they are not afraid, on all occasions, to go into minute detail. The only drawback to their book, indeed, is that its pages are rather clogged with small particulars—as, for instance, that in the Town Hall at Adelaide, "beneath each window and about eight feet from the floor there is a ventilator," or that, in Tasmania, having sent a message to the telegraph office, they found an hour later that it had not been despatched, and the clerk returned them their shilling—a finale at which they "could not but feel highly satisfied." If Australia is not a picturesque country, it is not the fault of the Misses Hill, who make the most of their opportunities for entertainment, and express the liveliest admiration for the scenery of Mount Brown, Mount Remarkable, the Razor-Back Hills, the Murray River, and other local attractions. But their attention is chiefly devoted to the penal and penitentiary establishments, and their first visit on arriving in an Australian town is usually to the prison. Of these matters they have evidently made a special study, and are qualified to speak with authority; persons interested in similar enquiries will find in their book an abundance of facts and figures. The Misses Hill passed most of their time at Adelaide in South Australia, but afterwards went to Melbourne and Sydney, and, before returning home, paid a visit to Tasmania. They complain of the great ignorance which prevails in England as to Australian distances, and smile at the naïveté with which people who have friends going to New Zealand commend them to the civility of other friends in Australia. Sydney is, by sea, 1,100 miles from Adelaide, and New Zealand a six days' voyage, by steamer, from the nearest Australian city. This volume will perhaps be found a trifle dry to readers who resort to it for mere amusement, but—except for a little excess of rose-color—it cannot fail to be valuable to persons who desire information about Australia for practical ends. Unless for ends that are pretty sternly practical, our authors do not represent England's great antipodal empire as a very attractive residence. Their picture of it suggests a duller and more mechanical form of our own Western civilization—a West minus the politics and the "humor." The chief entertainment seems to be in making parties to visit "boarded-out children" and hear "lady-preachers." But upon the public works and internal administration of the country the Misses Hill are exact and exhaustive, and their book, moreover, is written in a most correct and agreeable style.

Library Notes. By A. P. Russell. (New York: Hurd & Houghton. 1875.)—It is usually thought invidious to call a man a bookworm, and there is a common impression that great scholars are not always great thinkers. The compiler of this agreeable volume may, however, in no unflattering sense be spoken of as a voracious reader. There are readers and readers—the readers who sift and weigh, and the readers for whom any printed matter has a more or less sacred character. Mr. Russell belongs rather to the latter class; he is not a critic, but a collector. He collects extracts as some other people collect almanacs and medals, and his hospitality is altogether impartial. It ranges from Thomas à Kempis to the author of 'Six Months at the White House,' and from Marcus Aurelius to Señor Castelar. His extracts are classed under heads, in the Emersonian taste—"Insufficiency," "Types," "Mutations," "Standards"; but the connection between the example and the category is not always very manifest. It is difficult to see, for instance, in what way it illustrates the subject of "Rewards" to quote from Crabbe Robinson that dogs sometimes kill themselves by barking at their own echo. This, however, is but a small drawback, as the book is of course meant to be very irregularly handled. Mr. Russell has been a multifarious reader, and if his taste is not always infallible—he has a limited sense of differences of value, and quotes dull passages with the same relish as fine ones—his book is the fruit of a real passion for literature, and is full of curious reflections and out-of-the-way facts. It justifies its title, and the reader, in turning its leaves, seems to inhale the pleasant, half-musty atmosphere of a well-conditioned but well-used old library.

BOOKS OF THE WEEK.

Authors.—Titles.	*Publishers.—Prices.*
Abbott (J. S. C.), American Pioneers and Patriots: Geo. Washington	(Dodd & Mead)
Buck (E.), Massachusetts Ecclesiastical Law; new ed.	(Congregational Pub. Society)
Baumstark (Prof. D. A.), Ausführliche Erläuterung des Allgemeinen Theiles der Germania des Tacitus, swd.	(L. W. Schmidt)
Baker (W. S.), American Engravers and their Works	(Gebbie & Parrie)
Church Almanac for 1876	(Pott, Young & Co.) 0 40
Du Boisgobey (F.), Search for Ancestors, swd.	(R. M. De Witt) 1 00
Fry (J. B.), Sketch of the Adjutant-General's Department, 1775 to 1875	(New York)
Johnson (Mary S.), Memorials of Charles Stoddard	(Congregational Pub. Co.)
Moulton (C. W.), Review of Gen. Sherman's Memoirs Examined, swd.	(Robt. Clarke & Co.) 0 50
Porter (Ad'l D. D.), Memoir of Commodore David Porter	(J. Munsell) 3 00
Prayer-Gauge Debate	(Congregational Pub. Co.)
Stubbs (Prof. W.), Constitutional History of England. Vol. 2	(Oxford) 4 50
Wessely (J. E.), Zur Kenntniss und zum Sammeln der Werke des Kunstdruckes, swd.	(L. W. Schmidt)
Werner (Rev. A.), Bonifacius, Apostel der Deutschen, swd.	(L. W. Schmidt)

TO TEACHERS.
HENRY HOLT & CO.,
25 BOND STREET, NEW YORK,
Publish: Freeman's Historical Course, Taine's English Literature, Otto's German and French Courses, Pylodet's French Course, Keetels's German Course, Bain's English Grammar, Sigiar's Practical English Grammar, Sewell's Dictation Exercises, The Ordo Classics, and numerous other school-books. Teachers interested may find it worth while to have for reference a copy of Henry Holt & Co.'s Descriptive Catalogue. Correspondence invited.

H. K. VAN SICLEN,
BIBLIOPOLE, 133 NASSAU STREET, NEW YORK.
AMERICAN OR FOREIGN BOOKS
Sent by mail, post-paid, at Catalogue prices.
Books and Music neatly Bound to Order.

Protestant Episcopal Church.
Full and authentic information in regard to this Church (and the Church of England), together with its representative and best thought, and much valuable literary and general reading, can be found in the CHURCHMAN, a 32-page weekly, now in its thirty-first year. Single copy, ten cents; three months, $1; one year, $4. To Clergymen, $3.
Address 713 Broadway, New York, or Hartford, Conn.

Handy Eye-Glass Holder.
A Spring Winds the Cord into a drum as in a spring tape-measure. Sent by mail for FIFTY CENTS. Money refunded if not satisfactory.
KETCHAM & McDOUGAL,
4 Liberty Place, New York.
The best makers of Gold and Silver Thimbles.

TREASURE TROVE. Cloth, 278 pp. An Illustrated Poem. Price $2 25. Sent free on receipt of price. E. L. FREEMAN & CO., Publishers, Central Falls, R. I.

TO TEACHERS AND STUDENTS.
G. P. PUTNAM'S SONS, Fourth Avenue and Twenty-third Street, New York, call attention to their new Series of ATLASES, for classes and for reference, comprising Fourteen Works, priced at from 75 cents to $14; also, to Hart's German Classics for Students, used in Yale, Princeton, Bowdoin, and many other colleges; the Elementary and the Advanced Science Series; Haydn's Dictionary of Dates, Fourteenth Edition; Putnam's World's Progress, Twentieth Thousand; Hill's True Order of Studies, and other Standard Publications. A complete Catalogue, containing specimen pages of the Science Series, mailed on receipt of stamp.

Revue des Deux Mondes,
And all the other European Periodicals,
PROMPTLY FURNISHED BY
SCHOENHOF & MOELLER,
Foreign Booksellers and Importers, Boston.
Please send for our New Catalogue of Foreign Literature.

B. F. STEVENS, AMERICAN Library and Literary Agent, 4 Trafalgar Square, Charing Cross, London, England, supplies Books and Periodicals of every sort by mail or express at lowest London prices. Full particulars of terms and mode of remitting United States currency are given in his priced List of English Newspapers and Magazines, which may be had free on application to him direct in London, or to his Custom-House Brokers, Messrs. Tice & Lynch, 84½ Fine Street, New York.

David G. Francis,
DEALER IN
NEW, OLD, AND RARE BOOKS,
17 ASTOR PLACE AND 140 EIGHTH STREET,
NEW YORK.
Priced Catalogues issued from time to time and sent to any address. Foreign Books imported to order promptly

BOOKS AT LONDON PRICES. Now Ready: Catalogue No. 7 of Rare, Valuable, and Curious Books, free on application.
JOHN EVANS, Importer, 518 Hudson Ave., Brooklyn, N.Y.

SCRIBNER, WELFORD & ARMSTRONG,

Have just Received a few Advance Copies of an Important Work.
THE LIFE OF A GREAT PAINTER,
Benjamin Robt. Haydon.
Memoir, Correspondence, and Table Talk.
BY HIS SON, F. W. HAYDON.
Comprising a large number of hitherto unpublished Letters from Keats, Wilkie, Wordsworth, Kirkup, Lamb, Leigh Hunt, Landseer, and others.
In Two Volumes large 8vo, cloth extra, Illustrated with a Portrait,
and facsimiles of many interesting Sketches; including a Portrait of HAYDON drawn by Keats, and Haydon's Portraits of Wilkie, Keats, Leigh Hunt, and Maria Foote, Sketched by him in his Journals. Price $13 50.
*** For sale by all Booksellers. Will be sent prepaid upon receipt of price by the publishers.*

VAN LENNEP'S BIBLE LANDS.

BIBLE LANDS: their Modern Customs and Manners Illustrative of Scripture. By the Rev. HENRY J. VAN LENNEP, D.D. Illustrated with upward of 350 Wood Engravings and two Colored Maps. 8vo, 838 pp. Cloth, $5; sheep, $6; half-morocco, $8.

EXTRACTS FROM RECOMMENDATIONS.

From the *Rt. Rev. Arthur Cleveland Coxe, D.D.*, Bishop of the Diocese of Western N. Y.

"It is fascinating as well as instructive. It throws new light on Holy Writ, and corrects much that has been imperfectly understood and incorrectly reported by mere tourists. It is the work of an expert, and not of a mere surface-observer. For this, as for all that enables us to read and understand God's Holy Word more intelligently, we should be truly thankful."

From the *Rt. Rev. F. D. Huntington, D.D.*, Bishop of the Diocese of Central N. Y.

"It appears to have some special points of value. 1. It includes a great deal of information which has been brought to light in recent explorations and discoveries in several different departments of scientific research, bringing together results not within the reach of previous writers. 2. It is arranged on a natural and philosophical plan of classification. 3. It leaves out unimportant and superfluous matter. 4. The style is compact, clear, and engaging. I trust the work will have the great sale it deserves."

From the *Rt. Rev. Benjamin H. Paddock, D.D.*, Bishop of the Diocese of Massachusetts.

"I am satisfied that Dr. Van Lennep has added largely to our stores of information, as well as given much vividness and freshness to the subject. The book will take its place among the indirect but very valuable *defenses* of our revealed religion. Dr. Van Lennep's advantages for such a work have been unequalled; and I am truly thankful that he has been led to use them for the lasting benefit and enjoyment of so many of his fellow-Christians."

From the *Rev. T. J. Conant, D.D.*, of the Bible Revision Committee.

"The Rev. Dr. Van Lennep, a missionary long resident in the East, and an intelligent and conscientious observer, has written an entertaining and instructive book on Bible Lands, illustrating the Scriptures by existing remains of antiquity, and by customs and usages still prevailing in those countries. In addition to his own abundant opportunities for personal observation, he has enriched his book by the judicious use of other trustworthy sources of information. Aside from the value of its illustrations of Scripture, it is interesting and instructive to the general reader as a fresh and truthful picture of Oriental life."

From the *Rev William M. Taylor, D.D.*, Pastor of the Broadway Tabernacle, N. Y.

"Dr. Van Lennep's recent interesting and valuable book on Bible Lands."—*Extract from 'Elijah the Prophet.'*

From the *Rev. John F. Hurst, D.D.*, President of the Drew Theological Seminary.

"It is one of the very best works of its kind in existence. I can recommend it as in every way adapted to the wants of all who wish to enlarge their knowledge of the countries named in the Scriptures."

From the *Rev. Lyman Abbott*, Editor of Abbott's 'Religious Dictionary.'

"Dr Van Lennep's 'Bible Lands' is one of the most helpful volumes to a student of the Bible ever published. It carries the reader to the Orient, shows him the life and customs of to-day, which have not been greatly changed for 1500 years, and enables him to read the Bible in its light of other days. To one who really wishes not to make the Bible conform to modern theology, but to ascertain what it teaches, such a work is simply invaluable. Its very full Scripture Index makes it in fact an archæological commentary to the student; while its classification and its simple and unpretentious style makes it a volume full of interest to the reader."

From *J. G. Saxe*, in the Brooklyn *Argus*.

"His descriptions are as spirited and pleasing as if he had aimed only to be attractive; and so far as we can judge, as faithful to truth as if he had aimed only to be authentic and instructive."

From the *Rev. William Adams, D.D.*, N. Y.

"I have examined it with great interest and satisfaction. Dr. Van Lennep and his publishers have rendered an excellent service by the issue of this book. So long as our religion has its historical and geographical matrix everything pertaining to the country in which it was cradled must partake of the nature of monumental evidence in favor of Christianity. Nothing illustrating the Bible can be too minute; and in this material age, when so much importance is attached to positive facts, we welcome every testimony in the customs of Palestine in confirming our faith in the reality of the inspired records."

From the *Rev. Charles S. Robinson, D.D.*, Pastor of the Memorial Presbyterian Church, N. Y.

"It is one of those volumes for which some of us are continually on the look out, as helps of unmistakable value in the Sunday-school. Interesting in itself and thoroughly authentic, it comes in just sight as a most fitting present from a class to a teacher, from a school to a superintendent, or from a congregation to a pastor."

From the *Rev. Stephen H. Tyng, D.D.*, Rector of St. George's Church, N. Y.

"I have read it with much interest. Its amount and variety of information on all the subjects involved in such a title are very remarkable, and make it a book of great value to all who take an interest in such investigation. It is collaterally an important aid in reading much of the historical part of Holy Scripture."

From the *Rev. John Hall, D.D.*, Pastor of the Fifth Avenue Presbyterian Church, N. Y.

"This is a good, readable, and timely book on a subject of great interest. Dr. Van Lennep has conceived justly of what is wanted, and the publishers have given effective cooperation. Not the least of the services rendered to the race by our missionaries is their contribution to the literature of the Bible."

From the *Rev. Howard Crosby, D.D.*, Chancellor of the University of the City of New York.

"Dr. Van Lennep's 'Bible Lands' has the fulness and accuracy which will make it a permanently valuable contribution to Biblical literature. It is an encyclopædia of Scriptural Orientalism, prepared from the careful observation of many years' travel and domiciliation in the East. No man was better fitted for this task than Dr. Van Lennep, who, to a conscientious sense of the importance of the subject has brought to the work a mind imbued with Oriental learning, and a heart aglow with reverential love for the work of God. This book must be found on the table of every earnest Bible-reader."

From *Professor James Strong, S.T.D.*, of the Drew Theological Seminary, and Editor of *McClintock & Strong's Religious Cyclopædia*.

"Dr. Van Lennep's long residence in the East entitles him to speak as an authority in the case, and gives great value to his rich and varied illustrations. At the same time, these are so naturally woven together that the book is delightfully interesting even to the ordinary reader."

From the *Rev. M. B. Anderson, D.D.*, President of the University of Rochester.

"I find it a most carefully-prepared and valuable work, useful alike to the student of Holy Scripture, and for the exact and curious knowledge of the East which it furnishes to the general historical student as well. I am especially pleased with its treatment of the Physical Geography of Western Asia, and the different races of people who inhabit it. The work cannot fail to be received with great favor and is one more illustration of the additions to our exact knowledge of the old world which have come to us from modern Christian missions."

"This stately and beautifully-printed octavo deserves to find its way into the library of every pastor and scholar in the land, and into the hands of every Bible-class or Sunday-school teacher. The object of the present work is to throw such light as can be derived from the manners and customs of the modern inhabitants of Bible lands upon the social, religious, and political life of the people who lived in Bible times. And the author has succeeded admirably in his aim. In graphic, chaste, careful, and scholarly language he has depicted the East as it is to-day, in its physical, agricultural, geographical, and ethnological features; and has introduced us to an intimate knowledge of its people, their modes of life and social surroundings, in the tent and in the city, completely uncovering to our view their social, religious, and commercial life. A large space is also given to the natural history of the Bible lands, in which is contributed much valuable and interesting information relative to the beasts and birds and reptiles of the Holy Land. . . . We feel warranted in commending the work to our readers as embodying erudite scholarship and valuable elucidations of the Book of Books."—*The Christian Intelligencer, N. Y.*

"This volume will enable the Bible student to read with a new and most interesting light upon the sacred pages."—*Interior, Chicago.*

"We have examined this book with unusual satisfaction. The learned and industrious author has proceeded with his important task in an enthusiastic and resolute spirit, and the result is as creditable to his scholarly pen as it is agreeable, cheering, and interesting to all who love the lands of the Bible."—*Jewish Messenger, N. Y.*

"We have confidence in reading him that we have something that may be trusted."—*Churchman, N. Y.*

"Dr. Van Lennep has performed his task well. Without pedantry and without weighing down the book with learned disquisitions on the geography, botany, and natural history of the Bible, but referring the reader for information on these subjects to Bible dictionaries and encyclopædias, he has traced such a picture of Bible lands as lies before the mind of an intelligent Oriental. The book is copiously and handsomely illustrated."—*Church Journal, N. Y.*

"As regards the helps it furnishes in illustration of the sacred text, we know of no one volume which is so rich in exactly the kind of information that lets in light upon the peculiar phraseology, customs, superstitions, beliefs, facts, and events mentioned in the Bible."—*Universalist Quarterly, Boston.*

"The work forms an opulent treasury of information concerning Oriental manners and customs. It is to so great a degree the product of his own experience that it is pervaded by an atmosphere of freshness and vitality which entirely removes it from the region of scholastic discussion, and almost from that of didactic statement. It has all the vividness of poetical description, though founded on the accurate comparison of facts, with no symptom of the indulgence fancy. . . . Dr. Van Lennep has certainly performed a valuable service to Eastern geography, as well as to the literature of the Bible, by this copious collection of facts in illustration of the subjects. His work presents the sum of existing knowledge with regard to it in a singularly lucid and attractive form, furnishing an Oriental library of great interest in itself."—*N. Y. Tribune.*

"The branch of study thus indicated is not entirely new, but no writer so well equipped as Dr. Van Lennep has hitherto entered the field. Besides being a man of parts and learning, he has spent almost a lifetime in the East, and enjoyed unrivalled opportunities of intercourse with all classes of the people. A considerable portion of his picture, therefore, is drawn from the life."—*Appleton's Journal.*

". . . It merits the highest praise, showing, as it does, evidences of minute and careful research, commendable scholarship, and great patience in the gathering of material. The style is simple, yet possessing high literary merit."—*Boston Saturday Evening Gazette.*

The Nation.

NEW YORK, THURSDAY, JANUARY 13, 1876.

The Week.

CONGRESS reassembled on Wednesday, and on the same day Senator Morrill introduced a resumption bill, not as a party measure, he said, but "on his own responsibility." It authorizes the Treasury to sell bonds (bearing interest at not more than 4½ per cent.) for legal tenders, and retire the legal tenders; provides that all contracts made after January 1, 1878, shall be payable in gold, unless otherwise specified in advance; and requires all national banks to hold in coin as part of their reserve, from January 1, 1877, one-fourth of the whole, from January 1, 1878, one-half, and from October 1, 1878, three-fourths. The bill gave rise to a slight debate, during which Mr. Thurman took occasion to use some strong language as to the behavior of the majority in passing the resumption bill of the last session without debate, or even giving the minority a fair opportunity of examination. The bill was referred to the Committee on Finance. On Monday the vexed question of Mr. Ferry's powers and rights was raised, four resolutions being submitted by Mr. Morton, to the effect that the tenure of a President *pro tempore* of the Senate elected at one session does not expire at the meeting of Congress after the first recess, the Vice-President not having appeared to take the chair; that the death of the Vice-President does not have the effect to vacate the office of President *pro tempore* of the Senate; that the office of President *pro tempore* of the Senate is held at the pleasure of the Senate; that the Hon. Thomas W. Ferry, the Senator from Michigan, who was elected President *pro tempore* of the Senate at the last session, is now the President *pro tempore* by virtue of said election. Of these, the first two were unanimously carried. Mr. Conover, of Florida, has introduced some resolutions calling upon the President to "declare and maintain the strictest neutrality between the Government of Spain and the people of Cuba," and to put in force and operation "the same provisions made and enacted by the Government of Her Majesty the Queen of Spain, on June 17, 1861"—which means, we presume, a recognition of belligerency.

In the House there has been more activity. On Wednesday Mr. Casson introduced a resolution for the purpose of catching unwary Democrats, commending the soldiers and sailors for their gallant services, and urging their claims to office and to pensions; but the Democrats were not to be caught, and the resolution was agreed to amid great laughter. This was followed shortly after by another bumcombe measure, introduced by Mr. Fort of Illinois, insisting that the "wise and just" principle adopted by the vote on Mr. Casson's resolution ought to apply to the subordinate offices in the House of Representatives, and that in all such offices Union soldiers ought to have the preference over Confederates; but the previous question was not seconded, and, on motion of Mr. Fernando Wood, it was referred to the Centennial Committee. The next day the Centennial Appropriation came up, Mr. Hopkins from the committee reporting a bill granting $1,500,000, one-third payable immediately, and the remainder in four monthly instalments, with a proviso that the Government shall not be further liable for aid or for any debts contracted. This was referred to the Committee of the Whole. The Democratic majority then showed its indisposition to meddle with the currency question at present by voting down the previous question on an anti-contraction resolution, and referring it to the Committee of Ways and Means, and also adopted a resolution for the appointment of a select committee on the Mexican border outrages. On Monday there was an amnesty struggle, Mr. Randall having introduced a bill to amnesty everybody, and Mr. Blaine having offered an amendment excepting Jefferson Davis, which led to a good deal of filibustering, the defeat of Mr. Randall's bill for want of a two-thirds vote, and finally to a speech by Mr. Blaine, who went over the history of amnesty, showed that the Republican party was entitled to the lasting gratitude of the South for its clemency since the war, explained that only about 750 rebels were unamnestied now, and justified his amendment excluding Davis from any general amnesty on account of his criminal connivance at the Andersonville barbarities during the Rebellion.

There are a good many reasons why amnesty should be refused Jefferson Davis, and we agree with Mr. Blaine in thinking his moral responsibility for Andersonville one of them. Mr. Hill of Georgia, an ex-Confederate Senator, who replied to Mr. Blaine, had a right to deny this responsibility, but he made a great mistake in attempting to whitewash the rebel prisons. He was addressing men who had seen the skeletons that came alive out of Andersonville or had survived the horrors of Belle Isle, and he might as well have offered statistics to prove that there had been no Rebellion as that the names of those and other Southern prison-camps are not justly to be for ever infamous as scenes of needless, wanton, devilish inhumanity. One who has ever read of the Federal prisoners' makeshifts for shelter, or, as was still possible after the war, has seen the burrows into which they crawled, or has ever stood before a collection of the implements which they shaped as best they might, knows how long a step towards savagery they were driven to take by their savage keepers. On this subject the North has made up its mind, and Southern members of Congress who desire to get "the bloody shirt" out of politics had better refrain from following the example of Mr. Hill. Difficult as it is to prove Davis's direct part in these atrocities, it is more difficult to relieve him of immediate moral responsibility for them, seeing that he was not in ignorance of the facts, and that he never lifted a finger even by way of protest. It is worth while to remind Congressmen, too, that Wirtz was found guilty by a court-martial of "conspiring and confederating" with Jefferson Davis, and others, in the cruel treatment of Federal prisoners for which he was hung. It would be simple stultification to amnesty his military superior, who looked upon his conduct with indifference or approval.

The President has sent to the Senate the name of E. C. Billings as United States Judge, in place of Durell, who resigned to avoid impeachment. When his intention of making this nomination was first announced, a good many people expressed the belief that it was impossible, inasmuch as it would simply be getting rid of Durell to put in his place the man who advised the acts for which Durell was removed. Billings has been a good deal "mixed up" in Louisiana politics. His enemies say he is the same Billings who had a great deal to do with the illegal midnight order issued by Judge Durell, by the aid of which he and his political friends captured the State government; the same Billings who was Kellogg's counsel; the same Billings who wrote to Kellogg with a view to suppressing evidence before the Senate Committee. This cannot be, however; for we know that General Grant is greatly interested in the reform of the judiciary at the South, and only the other day expressed unfeigned surprise on hearing that Moses and Whipper had been made judges by the South Carolina Legislature. He could hardly believe it, and was reported as calling the particular attention of his informant to the fact that these were not common political places, but *judicial* offices, requiring men of training, high professional standing, purity, and honor to fill them. The fact is, we suppose, that he is just now so much engrossed with devising schemes for our protection against the Pope and the churches that he has hardly time to look into qualifications for office or keep the run of mere politics.

Some of our journalists shed much lustre on their vocation last week when they accepted Mr. Reverdy Johnson's decision in

the Schenck case as final. The question of Schenck's guilt or innocence is not in the least a legal question; it is a moral one; and it belongs to a class of subjects on which journalists are constantly preaching—some of them with loud yells and vituperation. If there be anything in the world on which they proclaim their competency to pass final judgment, it is stock transactions and official propriety. The idea that they would let a lawyer, however eminent, settle the right or wrong of such things for them, has probably never until now entered anybody's mind. But last week, although they had had all Mr. Johnson's facts before them for some weeks, some of them, on reading him, surrendered their judgment with as much docility and alacrity as if they were boarding-school misses listening to an exposition from a minister, and had never heard of such naughty men as Park and Stewart, and had to have stock operations and bubble companies explained to them. "Dear me!" they said, "and so poor General Schenck was calumniated by those wicked editors after all; isn't it too bad? There is Mr. Reverdy Johnson, who says he has done nothing wrong whatever, and what a pity he did not speak sooner, and save the dear old General all this fuss and worry. But how dreadful of Mr. Park and Mr. Stewart to deceive him in this way about their horrid mine, and their shares and things, and get all his property away from him. They have already got his house now, Mr. Johnson says, and he will have nowhere to live when he comes home. Why, he'll have to go to a hotel, won't he?"

The Wiard correspondence came into Mr. Johnson's hands soon after he wrote his letter about the Emma Mine affair, and he judiciously handed it over to Mr. Schenck himself, who wrote an unctuous letter in reply, not denying the genuineness of his letter to Wiard, but explaining that he made nothing by agreeing to push the Machado claim. The case as it now stands, with Mr. Schenck's own explanation before us, and one since made by Wiard himself, is that Schenck, being in a sort of partnership with this Wiard (who is a person of very indifferent reputation) in the manufacture of ordnance, received after he went to England notice of the conclusion of a contract between Wiard and a certain Machado, by which, if Schenck took up a claim made by the latter and obtained payment of it, Wiard was to receive $100,000, but nothing if the payment was not obtained by Schenck. Schenck, on hearing of this, did not repudiate the arrangement or rebuke Wiard for making it, but rebuked him for letting his name appear in the papers, and, about the contract itself, said "he would look into the case and ascertain what could be done"—*i.e.*, would see whether he could not earn the money for Wiard. From letters since published, it appears that Wiard had the contract altered to suit Schenck's objections, meaning, we suppose, that he left his name out. Schenck is now very indignant over the publication of his "private papers," and declares he cannot understand the "strangely cruel malignity" with which he has been "recently pursued." We think we can throw some light on the matter. He is "pursued" because he has been, while American Minister in London, engaged in disreputable transactions, by which hundreds of honest foreigners have been grossly cheated and dishonor brought on the American name, and because those decent Americans who are sensitive about the national fame want him to resign and come home. If he will do so, millions will hear of his return with joy, and we are sure the press will stop "meddling with his private affairs." Apropos of Mr. Schenck's operations, we have to call attention to the report that Mr. Francis Thomas, the late United States Minister to Peru, is now before the courts of that country in a case arising out of his lending money to several Peruvians at 18 per cent. interest, on pledge of necklaces, brooches, rings, and other jewels. In fact, he seems to have been doing a small pawnbroking business during his diplomatic service, and he is now applying to the courts for permission to sell his pledges. The question which this naturally suggests, and which we trust has occurred to Mr. Fish, is, what shall we next hear of in this line? We may mention here that the Centennial Commissioners deny having in any way accredited Forney to act for them in Europe. But he has nevertheless been passing himself off as their agent, and giving himself the lofty title of "International Commissioner," and has been making as much noise in Europe as the Commission itself, and the Commission have accepted such service as he has chosen to render. Now, we hold they are, considering his character, bound to repudiate and disown him. There are surely moral contributions due to the Centennial as well as material ones, and the Commissioners ought to be the first to make them. No man ought to speak for them anywhere in times like these who is not above reproach.

The Mayor has nominated Fitz John Porter as Commissioner of Public Works for six years, but there seems to be little chance of his confirmation. The aldermen are politically, of course, opposed to the Mayor, though the great reform tide which carried them into office has subsided somewhat since the election. The service rendered by General Porter to the public in making a stand against the communistic system of public works has at last attracted the attention of the property-owners themselves, and a number of taxpayers petitioned the committee having the matter in charge for a hearing. This was rather late in the day for a movement of the sort, and it is much to be regretted that these same gentlemen did not bestir themselves before the election, when they might have done much to arouse public opinion to a sense of the true nature of the "reform" movement, and have prevented the reformers from carrying all before them. The committee of course reported adversely. What this movement really was, was beautifully shown the other day in the solemn passage by the aldermen of a resolution binding themselves not to vote for any commissioner who would not pledge himself in advance to pay the laborers two dollars a day. It was then pointed out to the aldermen that such a pledge would, under the constitution and laws, amount to felony, and any one giving it would have to be indicted; on learning this, they reconsidered the vote. The "reform" papers are very calm now, and seldom refer to the late election, except in a dignified and remote way, as a matter with which they had nothing to do and which was decided wholly by "the people."

The suits between Mr. Bowen and the Brooklyn *Eagle* were not compromised. Mr. Bowen withdrew unconditionally, although the defendant's answer contained a list of bubble companies which, it alleged, had been puffed, for money, in the columns of the *Independent*, and of offers or threats, in the nature of blackmail, made by the publisher of that paper to induce people to advertise with him. The case is a pretty shocking one, but we doubt if it will make much impression on the ministers who write for Mr. Bowen or on the clerical trustees of the Congregational Union. The *Methodist* had recently some very good observations on the rapid growth among us of a good-humored and even jocose view of stealing (including, we presume, under that term all dishonest modes of getting money), somewhat resembling the view common among the Latin races about unchastity. We smile now, and the clergy have begun to join us, when we hear or say that so-and-so has been lying or cheating or levying blackmail. The *Methodist* wants to have the ministers take the matter up seriously in their pulpits, and preach about it. We propose that they do not wait till they go up into the pulpit, but take it up in the vestry and in their studies and in their newspaper offices, and *act* as if they really thought there was a certain force in the Eighth Commandment.

Two resumption bills of importance have made their appearance in the House, one introduced by Mr. Morrison, and the other by Mr. Payne, of Ohio. The former directs the Treasury to accumulate a coin reserve "from all sources in excess of the requirements of the public debt," till it amounts to thirty per cent. of the outstanding Government notes; requires every national bank to retain the coin

interest paid on its bonds deposited against circulation, to the amount of the present legal reserve, and in addition to this an amount sufficient (together with these legal reserves) to equal thirty per cent. of its circulation, the whole to be held as a coin reserve against circulation; repeals the Legal Tender Act, the repeal to take effect as soon as the thirty per cent. is actually on hand in the Treasury and the banks; and, finally, repeals so much of the Resumption Act of last year as pledges the Treasury to resumption on January 1, 1879. Mr. Payne's bill also repeals this pledge; establishes a fund for Treasury resumption consisting of five per cent. of all the specie coming from customs; requires the banks also to retain and accumulate five per cent. of their bond interest as security for the redemption of their notes; and provides that the date of resumption shall be determined at a conference between the Secretary and the banks. Both these bills have an air of sincerity, as they provide the means of resuming; but the practice of repealing pledges when making new ones makes the new ones no more valuable than the old. If there should be a Republican majority in the next Congress, why should they not put a stop to this accumulation of gold and try something else? The moral of it all seems to be, Get the currency out of the hands of Congress as soon as possible.

The foreign money markets have been more or less agitated during the week by the apprehension of political complications in regard to the Eastern question, but at the close there was a more tranquil feeling. The Bank of England took another step to prevent the flow of gold from its vaults to the Continent by putting its minimum discount rate up to five per cent. This step proved effectual so far as Paris was concerned; and although exchange between London and Paris has not been changed to the degree of warranting the shipment of gold from the latter to the former, yet as the week closed the rates of sterling at Paris were tending to that point. Exchange between New York and London has continued steady, all the bills on London against the recent negotiation of Baltimore and Ohio and Philadelphia and Reading bonds not having been sold apparently. These bills have been taken by bankers who have been importing United States bonds, and who, had it not been for this supply, would have been compelled to send gold to London—the available supply of commercial paper having been no larger than was needed to meet the demand of merchants having remittances to make. The gold market has been firmer than during the preceding week, on account of the foreign news respecting the Eastern question, and because it is seen that, unless something intervenes to check the return of United States bonds to this country, gold will soon begin to figure in our exports. The New York banks, however, are gaining gold by reason of the Treasury interest payments, and now hold nearly $25,000,000. The condition of the money market has not been notable, except for the efforts of Stock-Exchange speculators to check the downward tendency of rates. Currency is flowing to this centre from all points. The January investments have had their usual effect on all classes of good securities, and prices have advanced. In the movement of the leading staples of the country there has been more activity both in cotton and Western products. The gold price of $100 greenbacks has ranged during the week between $89 88 and $88 30.

The *Daily Bulletin* has been publishing some statistics, which are certainly worth attention, as to the taxation imposed upon us since the war. In 1870, the taxes of all kinds levied amounted to about $730,000,000, and it is safe to say that they have not been materially reduced since. Putting the annual national savings at $500,000,000, our taxes amount to considerably more than our surplus. That we were able to pay such taxes and still accumulate wealth showed undoubtedly a great elasticity and a steady progress; but it was also clear that at no distant day this elasticity would give out and progress come temporarily to a standstill. The comparison made by the *Bulletin* between the growth of population and that of taxes does not seem so conclusive as a mere statement of the enormous figures the taxes themselves have reached. Since 1860, the population may have increased 40 per cent., while the ordinary expenses of the Government may have increased 200 per cent.; but then the wealth of the country may have increased in a far greater ratio than the population. And we may say the same thing of the relation between the increase in New York of 36 per cent. in population to 300 in taxation. A comparison between the increase of the market value of real estate and the increase of the burdens it has to bear would show more strikingly than anything how bad a system we have been enduring. The gradual process by which, in thriving cities like New York and Boston, taxation has gradually risen through wasteful expenditure and fraud, till in many cases the assessed valuation of property equals or is even higher than its actual value in the market, is a very good gauge of the progress from good government to bad.

There is naturally more excitement in Europe over the Thomas, or Thomassen, or Alexander affair than here, because the victims lived there; but, considering the terror that the affair has added to ocean travel, and the great extent to which ocean travelling is done by Americans, the wonder is people are not more troubled here. Nothing, or next to nothing, would seem to have been discovered as yet about his antecedents. Even his wife denies all knowledge of his real name, after eleven years of married life; but he appears to have been a man of education, and of sufficient charm of manners to have been a favorite in society in Dresden. His crime called out a discussion in the German press, in which he was set down as a legitimate product of American civilization, which roused the indignation of the Americans in Germany, and led to a foolish meeting to protest, besides some apparently fruitless enquiries into Thomas's origin. He is also furnishing material for studies in morbid psychology to the London papers, the *Spectator*, in particular, finding him a rich subject. One of the mysteries it finds in him is that he should be willing to kill so many people in order to get a little money, but we suspect he is not singular in this. Thousands of criminals would kill many hundreds to get a thousand dollars, if it were necessary or easy. The attempts to throw railroad trains off the track, and the despatch of unseaworthy ships to sea, and wholesale arson for the sake of plunder, are illustrations of just the state of mind that is found so puzzling in Thomas, and these have not been very uncommon. The curious thing in the case is that a man of so much nerve should have committed suicide on seeing his scheme miscarry, for the slaughter can hardly have appalled him. What is perhaps most alarming about it is the indication it affords of the gradual ascent of crime among the better educated classes, and the turning of keen commercial ability to criminal enterprises. On this subject, the history of the silent conflict which has gone on for years between safemakers and the better class of burglars would throw some instructive and entertaining light.

It appears probable at this writing that England, France, and Italy will give in their adhesion to Count Andrássy's note, if they have not already done so, and it has been presented to the Porte and replied to. There is little doubt it has been taken in good part, and a promise made to execute it. The general belief in Europe is that the execution will be guaranteed by an Austrian military force; but Austria herself proposes as yet only consular and ambassadorial supervision, and denies that any order has been given for the mobilization of her troops. There are still reports of fighting, with severe reverses for the insurgents, but no reverses are now likely to daunt them, with Europe in consultation over their case. The Sultan is reported as still utterly insensible to the situation, and busy with the construction of a grand mosque which will make his memory illustrious.

GOVERNOR TILDEN ON THE NATIONAL FINANCES.

WHAT Mr. Tilden says about the national finances is worthy of attention on other than economical grounds, because he is the only Democratic politician of prominence, unless Mr. Bayard can be called a prominent politician, who professes to have, and has promulgated, any strong and clearly-defined opinions on the subject. Nor is there anything remarkable in his giving so much space to it in his message. In fact, the suggestion that he should confine himself in that document to the discussion of State affairs borders on the absurd. As long as this State pays from fifty to eighty millions a year of the taxes of the Federal Government, and is the principal commercial State in the Union, the condition of the currency, and the mode of collecting and disbursing the revenue, must be matters of paramount importance to its people. Moreover, it is difficult to overestimate the value of the discussion of financial questions in a rational manner by persons whose position gives them the ear of the farmers. We in the great cities, who see profound thinkers and eminent economists in the horse-cars every day by the dozen, and are burdened by the quantity of reading matter which besets us, have little idea of the care and perseverance with which the country voter works through a President's or a Governor's message, or even the oratory of the *Congressional Globe*.

Mr. Tilden's position with regard to the currency is that it is fallacious to suppose that the amount of the currency has any constant or determining influence on prices; that prices are mainly raised by the extension of bank credits, and that this extension is called for by a feverish condition of the popular imagination about the probable course of trade in the immediate future; that because low prices and a small volume of currency, and high prices and a large volume, have often been found concomitant phenomena, they have been erroneously put in the relation of cause and effect; that it has been supposed, but is not true, that if everybody found himself with two gold coins in his pocket instead of one, he would pay double price for his commodities; and, finally, that the ratio of currency to prices is not accurately computable. This is nearly all true; but, like nearly every proposition in economical science, is true with many limitations and reserves, into which we do not purpose entering here. Mr. Tilden evidently introduces it all with the view of preparing us for the theory, which he seems to entertain, that we do not need contraction in order to get back to specie payments; and he pushes this theory into prominence evidently by way of a sedative for the popular nerves, which he thinks are unduly excited by fear that the resumption of specie payments will be attended by a great convulsion. He undertakes to show that we can get back to specie payments without any extraordinary disturbance of trade or industry or contracts. Whatever can be done ought to be done to make this clear, because Mr. Tilden is quite right in attaching great importance in all financial matters to the condition of the popular mind. Finance is really a department of psychology, though constantly treated as if it were a branch of mechanics. Now here is Mr. Tilden's plan:

> "After eleven years of convulsion without a restoration of specie payments, it [the public temper] now claims a restoration of specie payments without a convulsion. The problem does not seem difficult. Resumption by the Government will accomplish completely resumption by the banks. The Treasury has only, by gradual and prudent measures, to provide for the payment of such portion of the outstanding Treasury notes as the public, not wishing to retain for use, will return upon it for redemption. The sum required in coin, if the preparations be wisely conducted so as to secure public confidence, will be what is necessary to replace the fractional currency and to supply such individuals as prefer coin to paper for their little stores of money; and also what is necessary to constitute a central reservoir of reserves against the fluctuations of international balances and for the banks. To amass a sufficient quantity by intercepting from the current of precious metals flowing out of this country, and by acquiring from the stocks which exist abroad, without disturbing the equilibrium of foreign money markets, is a result to be worked out by a study of all the conditions and the elements to fulfil those conditions, and by the execution of the plans adopted with practical skill and judgment. Redemption beyond this provision of coin can be effected as other business payments are effected—or in any method which converts investments without interest into investments upon interest, on terms the holders will accept—and by such measures as would keep the aggregate amount of the currency self-adjusting during all the process, without creating at any time an artificial scarcity, and without exciting the public imagination with alarms which impair confidence, contract the whole large machinery of credit, and disturb the natural operations of business. The best resource for redemption is that furnished by public economies, for it creates no new charge upon the people; and a stronger public credit is certain to result from sounder finance, and will reduce the annual cost of the national debt."

It cannot be said that this is very clear. We have examined it closely, and cannot find in it anything definite enough for the public mind to take hold of and ponder, or anything on which it is possible for the friends of speedy resumption to rally. How is the Treasury to know how much of the outstanding Treasury notes the public, "not wishing to retain for use," will return upon it for redemption? If it does not know, or cannot approximate to it pretty closely, how is the Treasury to prepare for redemption "by gradual and prudent measures"? The theory of the greater number of intelligent resumptionists is that the Treasury must contract—that is, destroy on receiving them—a sufficient number of greenbacks to do away with the discount on them, or, in common parlance, to do away with the premium on gold. There is no escaping from this process. The Secretary may either destroy greenbacks which he receives in payment of Government dues or he may go into the market and procure greenbacks for destruction by selling gold, as he does now. The latter Mr. Tilden would doubtless call "redemption," and the former "contraction"; but they are essentially the same thing, and one or other is inevitable, and to the extent necessary to remove any profit in the exchange of legal tenders for coin. The reason is obvious. As long as the discount on paper exists, it is impossible to say how much gold would be necessary to enable the Government to resume and continue specie payments. The probabilities are that more would be necessary than it could possibly accumulate, or, at all events, accumulate without causing serious disturbance in the money markets of the world, because as soon as it was announced that the Government would begin to redeem on a certain day, the eagerness to save the discount on the greenbacks would be great enough to cause a run on the Treasury, and to throw the public mind into a condition of feverish excitement, and to throw the Treasury off its balance. Mr. Tilden talks of "such individuals as prefer coin to paper for their little stores of money," as if they were a small and insignificant body. They are a small and insignificant body when gold and paper are at par. Give them the right to save even five per cent. discount on their paper, and they would include everybody you meet in the street. There is, in short, only one indication to which the Treasury can trust in this matter, in trying to ascertain how much paper there is in excess of popular needs, and how much it must get out of the way before it can safely offer to redeem all Government notes on presentation, and that is the amount of the discount on greenbacks. This may not bear an accurate mathematical relation to the excess of paper now afloat, but it bears a sufficient relation for practical purposes. Let the Government either buy and destroy greenbacks or receive and destroy greenbacks until $100 in legal tenders brings $100 in gold in Wall Street, and it may then safely offer to pay gold to such individuals as prefer coin to paper for their little stores of money, for they are the only persons who will come to it.

Then, again, how much coin is "necessary to constitute a central reservoir of reserves against the fluctuations of international balances, and for the banks"? Does Mr. Tilden mean that the Government should undertake to form this reservoir, and if so, why? How does it come to be part of the duty of the Government to provide the means of settling international balances? Is not this the duty and business of bankers? What, too, is the method or measure "which would keep the aggregate amount of the currency self-adjusting" during the process of resumption? If Mr. Tilden himself knows of any such instrumentality, he ought to have described it in distinct terms. If he does not know of it, he ought not to impose the duty of providing it on the Government. It is safe to say that no such process has as yet been revealed in financial history. The aggregate amount of the currency is determined every-

where by its redeemability in coin and the exportability of the coin. There is no sign of the discovery of any other, except through the total cessation of international trade, and we regret to see vague intimations like this thrown out by prominent men that there is some agency within the reach of legislation by which the amount of money needed by the country can be fixed from time to time. It is these shadowy allusions which create the chimeras which the Kelleys, Butlers, and Phillipses go about preaching to the workingmen, and which are really, by their bad effects on the popular imagination, the greatest obstacles to a return to a sound currency.

THE TAXATION OF CHURCH PROPERTY.

THE most conclusive reply, considered from a merely controversial point of view, that has been made to General Grant's proposal to tax church property, is contained in the letters on the subject written by Tax-Commissioner Andrews, and now appearing in the *Times*. The President in his message announces the "accumulation of vast amounts of untaxed church property" as an evil that, "if permitted to continue, will probably lead to great trouble in our land before the close of the nineteenth century." He estimates the amount of this untaxed property to have been, in 1850, $83,000,000; declares that in 1860 it had doubled; estimates the present amount at $1,000,000,000, and predicts that by 1900 this property, "without check," will reach a sum "exceeding $3,000,000,000"; and, solemnly assuring us that such accumulations will not be looked upon "acquiescently" by the taxpayers, but may lead to "sequestration through blood," advises the taxation of all property equally, "exempting only the last resting-place of the dead, and possibly, with proper restrictions, church edifices."

In reply to this gloomy warning Mr. Andrews shows, first, that New York (and there is no material difference of law on this subject throughout the country), defines "church property," which the President says is growing at such a fearful rate, as simply "every building for public worship"—in other words, the churches and meeting-houses—and "the several lots upon which such buildings are situated," and the "furniture" belonging to them. Secondly, as to his suggestion that the "last resting-place of the dead" be exempted, Mr. Andrews shows that cemeteries, at any rate many of the most important of them, lying near cities which prohibit burials within the municipal limits, are mere stock companies "earning and declaring dividends," and "just as fairly subject to taxation as a bank of discount." In the third place, Mr. Andrews shows very conclusively that the figures given by the President—except those taken from the census for past years—are mere guesswork. Any one who looks at them will see that the President assumes that because the value of church property doubled in ten years between 1850 and 1860, therefore it has done the same and much more ever since. On the same principle it can be shown that the population of any thriving village in the United States will, in a given number of years, equal that of New York. Finally, even admitting the President's wild figures, there would still be no danger of "sequestration through blood," for the simple reason that the whole vast $3,000,000,000 would in 1900 not belong to one privileged church, but would be divided among forty or fifty, none of which could be united against the others in a communistic raid, except on grounds which would prove fatal to its own possessions, while no possible division of forces into the churches on one side and the taxpayers on the other is possible, since it is the taxpayers who compose the churches, and therefore any movement to "sequestrate through blood" would be a movement of property-owners to destroy their own property for their own benefit.

But though Mr. Andrews thus conclusively disposes of the President's feeble attempt to put forward a church policy, the facts and arguments which he has thus far adduced do not touch the general question of church exemption at all. The main, and indeed only, ground on which the exemption of church property from taxation in modern times can be made to rest is a moral one. Church possessions stand, it is said, on a different footing from all other kinds of property from the fact that they are devoted to higher uses—to uses which it is peculiarly the interest of the state to foster. Differing as they all do from one another in points of creed and dogma, the churches are at one in their general aim of keeping alive and elevating the moral tone of the community, of setting before it lofty standards of purity, of right, and noble examples of self-devotion and sacrifice, and of applying to human action ethical sanctions of a higher order than those of the courts of justice or even of worldly opinion. Churches are, in fact, corporations which perform a very essential, difficult, and praiseworthy office, without pay or reward in this world. So meritorious and necessary has this service seemed to be in other countries that the state has taken the church under its protection in various ways. In this country, however, it has been left to take care of itself; it gets no state support, or countenance, or honor, and is left to struggle for existence as best it may. In a peculiarly commercial society like our own this places it at a positive disadvantage. Other "institutions" have for their support the universal desire of mankind to earn a livelihood and to save a competence. Law or medicine will never suffer for want of state support, simply because all people will pay lawyers to save their property from damage, or doctors to save their bodies from disease. The church, however, has no such motives to appeal to. It does not teach men to be economical, prudent, or thrifty; it teaches generosity, forgiveness, self-sacrifice, and a number of other virtues not at all calculated to help a man in "getting on" in the world. Is it fair to suppose that such an institution as this will pay its way, and are we not bound to do what we can for it by exempting it from the usual burdens of property? In other words, the church is an institution of the highest possible utility to the state, for its object and practice is to spread abroad voluntarily a love of truth, justice, and right, on which the well-being of the state depends. To foster such a public object as this by a small grant (for this is what an exemption amounts to) seems little enough.

If the modern church were what this argument represents it to be, there might be nothing to say in reply; but as it is, the advocate of the taxation of church property might fairly object, Your picture of the modern church is a fancy sketch. You have brought forward as a description of the existing church a collection of ideal views, which bear no resemblance to the reality. The modern church is no doubt, so far as the men who unselfishly devote their lives to it in the pulpit and in missions are concerned, an institution aiming at the noble object you mention; but so far as it consists of a number of associations with the right to take and own property, to sell pews, to buy organs, to hire ministers and organists, to erect costly buildings on expensive corner lots, it resolves itself into corporations of a purely business character, conducted on purely business principles. When we examine the reasons why in any thriving modern community a man owns a pew, or becomes a shareholder in a religious corporation, in nine cases out of ten it turns out to be that he expects to get back, in social consideration and other solid advantages, every cent that he puts into it. On Sundays, indeed, he and his family get returns for the investment a good deal like those which a club-man derives from his club on week-days. His church is to him a sort of Sunday club, out of which the family gets society, social consideration, some good music, and the "privileges of the house." The money which he and his friends put in, if spent in accordance with the principles which are preached from every pulpit every Sunday morning, would go first to the erection of a modest, unostentatious house of worship, which would be put up on a side street and not a "corner lot"; and, second, to bringing within the reach of the poor (*i.e.*, the class especially in need of help and enlightenment) the benefits of religious and moral teaching. Instead of anything of the kind, the money goes first to the purchase of the most expensive lot that can be got for the money at command; second, to the erection of a gorgeous church a little bigger and higher than any put up before; third, to what we may call a band of music, a little more skil-

ful than any other in the neighborhood; and fourth, if possible, to the salary of a minister who will, by striking preaching, attract more money. Everything, from the corner-stone up, is based on money, and the result is, as we say, a Sunday club, from which those most in need of religious help are rigidly excluded; in other words, the main object of the state subsidy is wholly frustrated. It would only be a little step further if churches were carried on like a railroad or bank, with "puts" and "calls" on the stock sold in Wall Street, and an occasional "gobble" of one church by its wealthy neighbor further "up the avenue." Indeed, as a curious illustration of the effect of this business system on church morality and decency, take the story which has been recently published without contradiction in this city with regard to a well-known church that is practically bankrupt, that the stockholders, feeling that the church was "good" for the first mortgage, but for no more, were going to let the second mortgagees foreclose, so that the church might be "bought in" at the price of the first mortgage. The pastor himself is reported to have said coolly in an "interview" that the second mortgagees will have to be "left out in the cold," or, in other words, that the church will be reorganized as a broken-down railroad or an insolvent bank might be.

That there is a great deal of truth in this cannot be denied, and it all points necessarily to taxation of those branches of the church to which it applies. So long as the church was an organization which did a noble and necessary work, which nobody else would or could do, and among those who could not do it for themselves, there was the same (or a greater) reason for exempting it from taxation that there is still for exempting schools and colleges; but if, in certain quarters, as is the fact, the grant of the subsidy has simply resulted in the abandonment of this work, and the conversion of the church into a collection of Sunday clubs for wealthy people who manage them with an eye to the main chance, the reason for the grant, or the exemption, is so far gone. It is hardly necessary to say that the church organizations to which this applies are the wealthy churches of the cities. The country churches—or, in other words, the church at large—stand on a different footing. But the accumulations of property in the shape of churches in the cities are pretty sure to use the name of "church" as a cover to a good many social objects which are not elevated and have a distinct money value. There is still one church, it is true, which does keep up its proper work among the poor and unenlightened, and which is, if any church is, entitled to exemption on that ground. But, on the other hand, the Catholic Church in this country is, perhaps, in as little need of assistance from the state as any, for it has a firmer hold than any other on the affections, veneration, and superstition of its members. There is no church which is able to obtain more money than it, from both rich and poor. It is, indeed, now building in this city a cathedral far surpassing in expense any edifice for church purposes previously put up in this country. The effect of a tax on city church property hereafter acquired would, in the case of the Catholic Church, amount to little more than putting it on a level with the Protestants, while in the case of the latter it would simply be the withdrawal of a bonus to real estate and social speculations of a most demoralizing kind.

THE REVIVAL OF THE LIBERAL PARTY.

London, December 20, 1875.

I MENTIONED to you last year that the leaders of the Liberal party in this country had opened a club in London which, in honor of the long connection of the House of Cavendish with their party, they called the Devonshire Club—the Duke of Devonshire being the head of the House of Cavendish, and his eldest son, the Marquis of Hartington, being the leader of the Liberal party in the House of Commons. A friend has just shown me the rules of this successful institution, and it is somewhat curious to observe that the condition of membership, as laid down by these rules, has become the party watchword. "Those persons only are eligible for admission," the rule states, "who, entertaining liberal principles, recognize individual freedom of political opinion combined with unity in party action." The composition may not be Addisonian—one can hardly imagine Addison speaking of "entertaining a principle"—but the idea of Parliamentary Liberalism which the framers of the rule apparently intended to embody in grammatical English is tolerably clear. The idea has been expressed by Lord Hartington on three different public occasions—at Lewes last spring, at Bristol about six weeks ago, and at Sheffield last week. It comes to this, that the individuals composing the Liberal party in Parliament and in the constituencies may entertain any opinions in the direction of freedom which they like, and may express them freely, provided only that when they are called upon to vote, either in the House of Commons or in the constituencies, they sink their individual opinions in favor of the measure, or the candidate, which, or whom, the bulk of the Liberal party favor. This is the only creed by which the Liberal party can exist as half of the Government of the country. Lord Hartington has seen this early, and has lost no opportunity of giving articulate expression to it, and his propaganda has not been altogether fruitless. The gaps in the Liberal ranks are closing up both outside and inside Parliament. The sheep of the front Opposition bench who were left without a shepherd when Mr. Cardwell retired to the House of Lords, and Mr. Gladstone went forth like David with a sling and a stone to do battle with the huge Ultramontane Philistine, roamed aimlessly about the hillside, not knowing how to turn or where to find a bell-wether for their guide. But now they have found in Lord Hartington the animal they want, and one after the other they have given him their adhesion, and are browsing peaceably together and putting on a good consistent flesh, as well-disposed sheep ought to do. Mr. Forster, Mr. Stansfeld, and Mr. Göschen have all openly expressed their willingness to be led by him. Mr. Lowe probably liked him better than any one else from the beginning, except himself, and he knew that he himself was never possible. Sir William Harcourt may not quite like to see his own pretensions brushed aside; but his likings or dislikings in the matter are not of much political importance. And in the body of the House of Commons Lord Hartington's position is now well established. The speech which he made at the close of the session reviewing the proceedings of the Government, and his character for political frankness and consistent honesty, have told among all but the most factious of those who sit upon his side of the House. They know him to be a man of high honor, of good sense, and of an intellectual capacity quite as great as that of any other possible leader. They see that he is willing to sink his own natural tastes and predilections, which are not necessarily those of the politician, in the interest of the party, and to serve it by leading it, and by bringing all the great influence of his house and connection to bear upon and advance its welfare. Mr. Fawcett, Mr. Mundella, and Mr. Trevelyan may be regarded as the leading men of the Left Centre in the House of Commons—if, without leading to confusion, I may borrow a term from across the Channel. They were the chief supporters of Mr. Forster in the contest for the leadership of the Opposition last year. Indeed, unless I am mistaken, they constituted the triumvirate who conducted the negotiations on his behalf. The two first, in addressing their constituents recently, have openly and directly owned allegiance to Lord Hartington, and Mr. Trevelyan has indirectly done the same thing. Mr. Trevelyan is one of the best of the younger men in the House of Commons, and he has had the good luck, or the good sense, to be prominently identified with some of the most telling Liberal movements of the last ten years. A Radical Association starting in Manchester appointed Mr. Trevelyan their president. They held a meeting the other day which their president, owing to illness, was unable to attend. Their proceedings and speeches, in which they repudiated the leadership of Lord Hartington, were marked by such eccentricity that Mr. Trevelyan found himself compelled to write from his bed of sickness formally resigning his office of president. He has recently, before his illness, been occupied in bringing out a life of his uncle, Lord Macaulay, and this work has to some extent detached him from politics; but from the action which he has taken in the matter of the Manchester association it may fairly be conjectured that when he returns to his political duties he will be as loyal to Lord Hartington's leadership as he has always been to the party which Lord Hartington leads.

The moderate Liberals, therefore, and the Left Centre inside the House of Commons, having accepted Lord Hartington, who, you may ask, are those who refuse such obedience as a Liberal Opposition yields to any leader? They may be divided into three classes—Irish Home-Rulers, Irreconcilables, and Fanatics. The Home-Rulers represent only themselves, and any small influence which they might have had during the last days of Mr. Gladstone's administration is practically gone. Mr. Disraeli is independent of their support, and openly—almost ostentatiously—disregards them. Lord Hartington has told them that the Liberal party will never coun-

tenance their policy, and his words have been endorsed by every man of sense on this side of the Irish Channel, and by most men of sense upon their own side. Even the Radical Association at Manchester declined to buy their support at the price of the disintegration of the Empire. The game, in short, is played out, and before the Irish members can be successfully troublesome to either the present or to any future administration they must originate a policy which commends itself to the practical intelligence of the ordinary Briton.

The Irreconcilables are not numerous, neither are they influential. There always will be some of them in every Parliament, and they must be considered in estimating the available forces of the Liberal party. They generally vote with them, and thus help them when in Opposition; but when the party is in power they are a source of embarrassment rather than of strength. The Fanatics are even fewer than the Irreconcilables. Sir Wilfrid Lawson and Mr. Plimsoll I should put in this class, and perhaps Mr. Jenkins—a gentleman who holds some office connected with Canada—and the distinction I should draw between them is this: that the two former are objectively fanatical for the advancement of a moral principle, or the welfare of a class, while the fanaticism of the latter inclines rather to the side of subjectivity.

If inside the House of Commons the doctrine of individual liberty combined with unity in party action is gaining converts, it appears also, from such sources as are available, that outside in the constituencies it is also making way. You may divide the great Liberal party into five, ten, or twenty sections. For convenience, I would here limit the division to five: Moderate Liberals (including the Whigs), Radicals, Workingmen, Permissive-Bill men, and Scotch farmers. In the constituencies, the first three are pulling fairly well together, while the two last are fighting for their own hands. In the municipal elections the Liberals have had marked successes, and although too much importance must not be attached to this, it shows at least that the three principal sections of the party have not been, thus far, at each other's throats. A seat which seemed hopelessly lost at the general election has just been gained after a keen contest, and one or two seats which are at present vacant are not unlikely to be successfully contested—one of them by a workingman's candidate. In a Scotch constituency a Moderate Liberal, connected by birth with some of the leading Whig families, withdrew in favor of a tenant-farmer for fear of dividing the party and endangering the seat, thus setting an example of loyalty and discipline which can hardly fail to be beneficial to his party. These are all indications of a reviving sense of stability in the party, and are pointed to by the party managers with something which might almost be considered pride. But the best, or worst, sign of returning vitality is the alarm which the Conservative press is showing at these Liberal manifestations. Whatever be in the future, the people who work the Conservative oracle are determined that it shall not be their fault if the Conservative organizations become indolent and supine while the Liberals are up and doing.

GERMAN CONSTITUTIONALISM ON TRIAL.

GERMANY, December 20, 1875.

THE rupture between Bismarck and the National Liberals, with the prediction of which we have been bored every day these last three or four months, has yet to take place. Bismarck is meek as he has never been before, and if his passion gets the better of him and he turns to the pouting-corner with his old threat—they may see how the play will go on without him—he is at once coaxed to face about, and the end of the quarrel is sure to be: "It was not meant so at all." A rupture is, for the present, very unlikely, for the simple reason that the party of the *juste milieu* are pretty sure of holding their own for some time to come, and Bismarck is anything but eager to face once more a majority on the opposition benches. Of all the other parties only the Ultramontanes could possibly secure a relative majority of the seats in the Reichstag if they had the support of the Government, and to suppose that Bismarck could ever for a single moment entertain the thought of "going to Canossa," is absurd. The "Conservatives" are only in a limited sense entitled to the name of a party, for they are not backed by an independent public opinion. The seats they hold they owe to local influences in districts where with the mass of the people not only the political judgment but also the political instinct is weighed down by feudal traditions. Finally, a league between the *Fortschrittspartei* and the Government is evidently out of the question, as the *Fortschrittspartei* is in fact only the extreme left wing of the National Liberals. The threatened crisis, so far as a rupture between the Government and the actual majority in the Reichstag is meant by it, is, therefore, undoubtedly chimerical. On the other hand, it cannot be denied that, though both parties are fully aware what extreme folly it would be to break their alliance, yet both have become more sensitive to the pressure of the ties by which they are indissolubly bound together. Bismarck wished to find the majority more pliant, and he has plainly intimated that he hopes to see his expectations gratified at the next election. The Liberals are confident that he will be deceived in this, and it is certainly to be wished that it may be so. A majority still more yielding than the present one would be a worse than useless chorus, granting everything before they even properly know what they are to be asked for. If the six "political paragraphs" of the 'Novelle' to the Penal Law had been passed, almost the entire nation would have felt as if it was hardly worth while to have a Reichstag. What limits would there have been to obsequiousness after such proposals had been consented to? Bismarck affects to believe that the Reichstag has not truly represented public opinion in this respect, and now all the papers influenced by the Government are repeating the insolent assertion day after day. It is hardly credible that the first official of the Empire can, to such an extent, be misinformed about public opinion. The truth is that the mere proposing of these paragraphs has been felt as a deep insult and as a grave sign that we have not yet seen the last of the fight for the fundamental principles of constitutional liberty. All the six paragraphs affect the liberty of the tongue and of the pen. It is said that they were considered necessary to shield not only the state, but even society itself, against the dangers from which they are beset by Ultramontanism and socialism. If that be true, then the people think better of themselves than the Government does. The people do not think any gag-laws necessary to save them from being swallowed up by either the Black or the Red Sea. They are fully satisfied to rely for their salvation on the power of enlightenment, and they are convinced that in our day no one can be enlightened who is forbidden to speak out his own opinion; in other words, that there are no better means than gag-laws to make all the Blacks and all the Reds genuine fanatics. But this is not all; they take still higher ground. If there is any fundamental tenet of constitutional liberty which we can boast of having already *in succo et sanguine*, it is the conviction that there can be no liberty where the law does not reign. Now, the text of these paragraphs had hardly been published when they were known all over the country by the name of the "india-rubber paragraphs." If they had become law there would have been no law, for that is no law which at the same time means everything and nothing. The accused would not have been judged according to the law, but according to the individual opinions of the individual judge on certain political and social questions. Nobody could have possibly been a gainer; everybody would have necessarily been a heavy loser—the accused, judges, Government, and the people at large. We could not afford to have such a poison dropped into our young political life, not even for the sake of keeping Bismarck at the helm.

The Government organs affect great astonishment that the question is still discussed with a certain animus, though the Bundesrath and Bismarck have kept strictly within the constitutional limits. This is true. They have submitted to their defeat, Bismarck only indulging in a broad hint that they might try whether they would have better luck the next time. That may be very unwise, but it certainly is not unconstitutional. We must, however, beg his defenders to excuse us if we are able to see a little further than the end of our noses. There was another disagreement between the Bundesrath and the Reichstag about the proper way for providing for the necessary expenses of the Empire. In this case Bismarck submitted to his defeat, so far as the form is concerned, with still better grace. He commenced his speech with the solemn declaration that the Bundesrath had never entertained the thought of laying hands on the constitutional privileges of the Reichstag; if they refused their assent to the propositions of the Bundesrath, upon them the responsibility would rest, but their decision would of course be final. The semi-official papers have been very indignant that this declaration has been received with astonishingly little "gratitude" by the Liberal press, and even a paper like the Cologne *Gazette* gravely denies the truth of the charge. Now, it seems to me that our constitutionalism would be a rather strange thing if we owed "gratitude" to the Chancellor for assuring us that a most flagrant breach of the constitution is not meditated by the Bundesrath. And yet it is true that there are a great many people who think the "charge" well founded.

The other day I heard two well-known generals declare with great emphasis that, if Bismarck were no longer backed by the "iron will" of the Emperor, he would at once be "absolutely nothing." Though this is putting the case somewhat too strongly, there is still a good deal of truth in it; but whether it is a thing to be proud of is another question. If in the German people the monarchical spirit is developed to such a degree that a

man of the genius and of the achievements of Bismarck becomes next to nothing as soon as the Emperor conceives a dislike to him, then it goes beyond the limit where it is necessarily an element of national strength, and it may easily become a source of national weakness. I believe it does go with us beyond the proper limit, though I am satisfied that it is far from being so strong as some people imagine, because they unconsciously apply to Germany what is true only of Prussia. Backed by King William, *Herr von* Bismarck was able to come out as the victor in the conflict with the Prussian Landtag, though he handled the constitution of the country with fearful recklessness. Whether *Prince* Bismarck, backed by Emperor William, would be victorious if he dared to make the experiment of a similar conflict with the Reichstag and Germany, is at least very doubtful. In the debate on the ways and means, he warned the Reichstag not to forget how young the Empire was; a pressure which it would easily stand ten or twenty years hence might be too great now. The remark was made principally with a view to the governments of the different states, but it certainly applies just as much to the people of the different states, and I trust Bismarck is too much of a real statesman not to be aware of that. This is our best safeguard against a repetition of the "conflict-tragedy," and we do not doubt that it will prove to be strong enough.

PICOT'S CORNELIAN BIBLIOGRAPHY.

PARIS, December 4, 1875.

IS the taste which is known under the name of bibliophilism a sign of decadence or not? I confess that many good reasons might be given in favor of the affirmative. It is perhaps only when the creative genius is exhausted that men begin to be devotees of this new religion of the past which consists in the careful collection of the finest and rarest books. I have often been struck to find in the libraries of our best writers the cheapest and commonest editions of the great writers; but it may be only that these writers are poor, and cannot compete with our great bibliophiles. The greatest collector of the present time in France is a young gentleman who belongs to the family of the Rothschilds, and who may be said to have an unlimited supply of money. He has devoted himself to collecting the original editions of our great classics, and the gentleman who helps him in this useful work, M. Picot, has already published two great works on Racine and on Corneille. The 'Cornelian Bibliography' which has just appeared may be considered as the type of a new class of publications, which may be styled "books upon books." There was a time when Taschereau could find on the quays of our Seine the original copies of the tragedies of Corneille for five francs—when Cousin bought the collection of all these original plays for one hundred and sixty francs; now, an original piece of Corneille's is the *rara avis* which is only discovered at long intervals, and the collection of them can be found in but very few libraries, as it is equivalent to a small fortune.

Corneille, who may be called the tragedian *par excellence*, did not at first understand his own genius; he began to write comedies, and, it must be confessed, very poor comedies. Such pieces as 'Mélite,' 'Clitandre,' 'L'Innocence délivrée,' 'La Veuve, ou le Traître trahi,' 'La Galerie du Palais, ou l'Amie rivale,' 'La Suivante,' 'La Place Royale, ou l'Amoureux extravagant,' can only be looked upon as the first mistakes of a great man. These pieces appeared between 1633 and 1639. Corneille revealed himself in the tragedy of 'Medea,' and soon afterwards in the famous 'Cid.' The 'Cid' was first represented in the year 1636, and was only published a year afterwards. It is rather strange that it was at the instigation of a bishop—the Bishop of Châlons—that Corneille abandoned the imitation of Seneca, whom he had followed in the 'Medea,' and followed the inspirations of the Spaniards, of Guillem de Castro, of the Romanceros of the 'Cid.' The success of the 'Cid' was prodigious. Pellisson says, in his 'History of the French Academy': "People were not tired of hearing it; one heard of nothing else in good society—everybody wanted to know it by heart. Children learned it, and in many parts of France it became proverbial to say: 'It is as fine as the 'Cid'!" There is no doubt that Anne of Austria was much flattered on seeing the Spanish heroes brought on the French stage, and her protection was more powerful than the enmity of the great Richelieu. The quarrel of the 'Cid,' in which Scudéri took part, seemed like the literary counterpart of the Fronde. Real genius will always assert its right, and Richelieu, who could cut off the heads of the first noblemen in France, could not pluck a leaf from the laurel crown of the timid and modest Corneille.

It is always interesting to follow the history of some work of art. The eighteenth century was not in a Cornelian or heroic mood; the 'Cid' was neglected till the First Napoleon revived it. Talma gave new life to it, and in our time Rachel did her best to give to the world a true *Chimène*. The piece had two hundred and forty-two representations from 1680 to 1715, during the difficult period when France carried on war with all Europe; it was played one hundred and ninety times from 1799 to 1814. Since then it has never been completely neglected, but it can only be acted when a real tragedian can be found.

The animosity of Corneille's enemies seems to have cowed him for a time, though public opinion was with him. He was on the point of abandoning the stage. "He writes nothing," says Chapelain in a letter which Sainte-Beuve had long in his possession, and has left to our National Library, "and Scudéri has gained this, at least, by his quarrels—he has disgusted him with the stage and has stopped his voice. I have, as much as in my power, warmed him and encouraged him to avenge himself on Scudéri and on his protectress by making soon a new 'Cid.'" I do not understand the allusion made to Anne of Austria; this passage of a letter from Chapelain to Balzac seems to prove that her protection was far from useful to Corneille. Corneille may have had some personal reasons for abandoning the Spanish legends and for returning to the classic Romans. 'Horatius' came out in 1640; it was played on the first night before Richelieu. It was played as many as six hundred and twenty-four times during the reign of Louis XIV. It has been said that the following tragedy, 'Cinna,' was inspired by a desire to preach pardon and generosity to the great Cardinal. 'Cinna' came out a little after 'Horatius.' The fashion was still to play tragedy in the costume of the time. Just fancy Augustus dressed as a courtier, with silk ribbons, lace, and a long sword. The women wore high heels and a long train, and had their hair high on the head, adorned with pearls and lace. Under Louis XIV. 'Cinna' was only played one hundred and thirty-nine times in Paris and twenty-seven times at court. It became afterwards the favorite piece of Napoleon I., though he was little inclined to follow the example of Augustus's generosity towards conspirators. The best criticism on 'Cinna' was made by the great Condé. In the famous scene where *Augustus* reminds *Cinna* of all that he has done for him before reproaching him with his treason, when *Augustus* says to *Cinna* that he would be nothing if the Emperor had not covered him with honors:

> "Ta fortune est bien haute; tu peux ce que tu veux;
> Mais tu ferais pitié même à ceux qu'elle irrite
> Si je t'abandonnais à ton peu de mérite"—

here Condé loudly exclaimed: "Voilà qui me gâte le 'Soyons amis, Cinna.'"

The mind of Corneille was eminently heroic and religious. It is well known that he applied his great genius to the translation in verse of the 'Imitation of Christ'—that admirable book in which the true Christian spirit breathes on every page, and which will go down to all future ages wrapped in a poetic mystery. He had abandoned, perhaps with reluctance, the Spanish heroes who fought with Islam under the sign of the cross. After the fashion of his age, he lived chiefly with the ancients; but he soon found in Roman history an episode in which he could show his Christian feelings. 'Polyeucte' is perhaps the highest expression of his genius. What could be more tempting to his mind than to represent a Roman warrior who, touched by the divine grace, becomes a martyr of the new faith? The religious dramas called the 'Mystères' had long disappeared from the French stage. They had never been the amusement of the higher class of society. Victor Hugo has well painted, in his 'Notre Dame de Paris,' the class of writers of mysteries in the person of Gringoire, and the prejudices which used to crowd round the representations of the Passion, as the peasants of Bavaria still do in our time in the Oberammergau. It was a bold enterprise to revive the religious drama, but Corneille succeeded in it, and 'Polyeucte' was as successful as the 'Cid.' The piece had first been read at the famous Hôtel de Rambouillet, before the "Précieuses," and had been coldly received. It was played in 1640, and was warmly applauded. The part of *Pauline* is considered the most difficult in the French *répertoire*. Mademoiselle Rachel was afraid of it, though she played it very well. When she knelt down and said, "Je suis chrétienne," she had the real appearance of a martyr, and it was impossible not to remember that she belonged, as a Jewess, to the race which is characterized by the deepest religious feeling. There was no impropriety in her saying "I am a Christian." What she really meant was the assertion of monotheism in the face of the pagan polytheism; and the Semitic race has always been the exponent of the monotheistic idea. *Pauline* became in the end the favorite part of Rachel. She played it on the eve of the day when she was forced to leave the Théâtre Français.

I will not dilate long on the other pieces of Corneille. 'La Mort de Pompée,' the subject of which was taken from Lucan, the favorite author of the great dramatist, was followed by a comedy which has remained one of the best of the French stage, 'Le Menteur.' It is even now constantly played at our great national theatre, and it is not too *démodé*, as the French say. There is a wonderful animation in it; the liar is made almost interesting; he does not lie from any base motive; he is the victim and slave of his own imagination, and he deceives himself more than he does the others. He is the true French or Gascon liar, a character which could hardly be well understood in an Anglo-Saxon country, where a lie is always supposed to have a base and almost a criminal object. Balzac, in the true bombastic style of the 'Menteur,' wrote to Corneille after the representation: "You will be Aristophanes whenever you choose, as you are already Sophocles."

The 'Suite du Menteur' has no connection with the 'Menteur,' as the title would seem to show. It is taken from a piece of Lope de Vega's, "Amar sin saber à quien." It did not succeed, notwithstanding the efforts of a famous actor of the time. Corneille always maintained that his tragedy of 'Rodogune, Princesse de Parthes,' was the best he ever wrote. This judgment is almost correct if you only read the fifth act, which is a real masterpiece; but you can only arrive at it through four acts which are extremely tedious and bombastic. We never know ourselves, and there is hardly an author who has not some preference for that part of his works which has received the slightest encouragement from the public, in the same way that tender parents fondle sick or ugly children who have not much to receive from the world. "I have never dared to declare," writes Corneille, "all the tenderness I have for this piece. . . . This preference was perhaps in me the effect of one of those blind preferences which many fathers have for some of their children."

I will only mention 'Th odore, vierge et martyre,' which indicates the return of Corneille to his favorite subject; 'Héraclius, empereur d'Orient'; 'Andromède'; 'Don Sanche d'Aragon,' a distant echo of the 'Cid;' 'Nicomède'; 'Pertharite, roi des Lombards'; 'Œdipe,' a subject taken from Sophocles and Seneca. The genius of Corneille was on the wane, and the failure of 'Pertharite' determined him to spend most of his time in the translation of the 'Imitation of Christ.' 'Œdipe,' however, was very well received, and Loret, in his amusing 'Muse historique,' speaking of the 'Précieuses ridicules' of Molière, which had appeared at the same time, says that this comedy drew as many people as—

"L'Œdipe de Corneille
Que l'on tient être une Merveille."

Then came new failures—the 'Toison d'Or,' 'Sertorius,' 'Sophonisbe,' 'Othon,' 'Agésilas,' 'Attila.' Everybody knows the cruel satire which was launched at the time:

"Après l'Agésilas
Hélas!
Mais après l'Attila
Holà!"

Corneille did not say "holà" in time to the dramatic muse; he still wrote 'Tite et Bér nice,' 'Pulchérie,' and 'Suréna.' M. Picot's book will be found invaluable by all bibliophilists; he gives most accurate descriptions of all the editions of the plays of Corneille, separate or collected, as well as of the editions of the 'Imitation of Christ,' and there will also be found in it a complete catalogue of all the books concerning Corneille and his writings. In fact, it is the most complete literary monograph of the kind that has ever been published; and it may be pronounced to be a final work, to which there is nothing to add.

Correspondence.

MR. SAINTSBURY AND THE "NEO-PAGANS."

To the Editor of The Nation:

Sir: My attention has been called to an editorial note in the *Nation* of Dec. 2, which deals at some length with my critical character. I have neither the right nor the intention to quarrel with the *Nation's* estimate of the tone, style, or literary value (actual or probable, positive or comparative) of my work. But I believe that an author has a recognized right of appeal when, as is the case in your note, he is made responsible for the real or supposed opinions of others, and when the moral tendency of his writings is impugned. Your criticism is, as I understand it, directed not so much against anything which I have written as against the supposed opinions and tendencies of a certain "sect" or "school" to which you assume that I belong, and to which you give the name of "the Neo-Pagans." Now, whether this sect exists or not I cannot say, but I can and do most emphatically deny that I belong to any such sect. My opinions (were they of any importance) on politics, religion, and all kindred subjects happen to be of a strongly conservative character, and I have never felt the least inclination to earn either the glory or the obloquy which attaches to innovation in such matters.

I am afraid that the article on Baudelaire which served as text to your remarks must have deserved much heavier criticism than you have meted out to it if I failed therein to make clear from what point of view and how far I approved of that much-reviled writer. I can assure you that it is from no childish pleasure in flourishing "a tardy discovery that morality is not the all-in-all of literature" that that article was written. Ever since, as a boy, I first began to read critically, it has been my one principle never to allow myself to be influenced in judging literary merits by any characteristic of subject-matter whatever. The morality of a writer's opinions is just as much and just as little of an attraction to me as their immorality. The first question I ask is: Is this good work? and if I can conscientiously answer this in the affirmative, it does not matter to me whether the writer's subject is attractive or repulsive, whether his opinions coincide with my own or differ from them. There are, no doubt, divisions and departments of criticism which deal with such matters, but in those departments I hold no office. Had Baudelaire consulted me as to the intrinsic excellence of such a subject as 'Delphine and Hippolyte,' I should have advised him very strongly not to touch pitch. Had Mr. Swinburne asked my advice beforehand about the subjects of certain poems in 'Songs before Sunrise,' I should have said that, to me as a conservative and a churchman, republicanism and anti-Christianism were abhorrent. But the poems once written, I have to judge them as poems first; and if they pass that examination, I hold that enquiry quite subject, and sentiment is barred.

You may say, as I have heard it said, that there is something *louche* about this tolerance, and that it seems to direct itself in a one-sided manner. I reply that I cannot help that. It may be and is a distressing fact that the devil should have all the best tunes; but it is no use trying to meet that fact by denying that the tunes are good. And, moreover, though my critical utterances have not been very loud or numerous, I think I can justify myself by my works. I have in the *Academy* praised Bryant as well as Whitman, and (though this will perhaps be little recommendation to you, sir) I have praised the latter in spite of the fact that if there is one thing in the world which is distasteful to me it is democracy. If I am asked why I select such a notorious writer as Baudelaire for special praise, I can reply that I did so with an honest conviction that he had been hardly used, and an honest belief that his literary peculiarities (for which alone I value him) are to be specially studied in these days of hurried work and over-esteem for facts. The conviction and the belief may be mistaken, but they are honestly held, and with no *arrière pensée*. With apologies for the length of this letter,

I am, sir, your obedient servant,
George Saintsbury.

Elgin, December 22, 1875.

Notes.

The Congregational Society, Boston, have published a revised edition of Mr. Edward Buck's 'Ecclesiastical Law,' an excellent work, both useful and entertaining, which first appeared in 1865. Besides insertions and alterations in the foot-notes, a chapter has been added to the appendix which gives a wider value to the treatise. It shows how religious societies in the several States are legally organized and incorporated. Mr. Buck has departed, we think, from his usual accuracy in the new part of the note on p. 230, where he says the Rev. F. E. Abbot was silenced by injunction "for preaching *atheism*."——The long-established firm of Lee & Walker, music publishers, has been bought out by Oliver Ditson & Co., Boston, and will be succeeded by J. E. Ditson & Co. as the Philadelphia branch of the latter house.——The January issue of the *New England Historical and Genealogical Register* is illustrated by a steel engraving of the late Senator Buckingham, of Connecticut, for which President Porter furnishes the accompanying memoir. From much that is interesting in the contents we single out "Papers relating to the Acadians," in which John Hancock figures; a list of portraits and busts in possession of the American Antiquarian Society and other associations in Worcester; and the first of a series of lists of passengers to America in the last century.——A tiny animal, which has been variously called the "Long-legged Mouse of Hud-

son's Bay," the "Labrador Rat," the "Canada Jerboid Rat," and the "Jumping Mouse of Canada," has just been described by Dr. Elliott Coues, U.S.A., under the name of *Zapus Hudsonius* (Bulletin U. S. Geological and Geographical Survey). The same author discusses (*ibid.*) the breeding-habits, nest, and eggs of the white-tailed ptarmigan, whose eggs seem to have been a test of color-blindness in naturalists, having been described as "light bluish-brown," "chocolate-colored," and "rich creamy drab." Dr. Coues, having "the advantage of the opinion of an expert colorist," calls them a "dull cream-color."——It is proposed to make a complete collection of works issued by the officers and alumni of Yale, to form part, first, of the American educational department at the Exposition, and finally of the Yale Library in an "Alumni Alcove." Books, pamphlets, etc., should be sent at once to Mr. B. G. Northrop, New Haven. ——A correspondent informs us that the term "sound-shunting," the invention of which we lately ascribed to Mr. H. H. Bancroft, is to be found on p. 3 of Earle's 'Philology of the English Tongue.' We presume he refers to the first edition; in the second (p. 4), Mr. Earle translates *Lautverschiebung* by "Consonantal Transition."——From Westermann & Co. we have received the *Almanach de Gotha* for 1876. Numerous changes and fresh features are pointed out in the preface, some tending to make the *Almanach* more and more the "livre d'or de la plus haute aristocratie de l'Europe," others increasing the already great value of the work for its statistical information. Three new articles are devoted to the military establishments of France, Italy, and Russia. The portraits are of Rodolphe, Prince Imperial of Austria; Elizabeth, Princess of Prussia; Alfonso of Spain; and Delbrück, President of the German Cabinet.

—The following comes to us from New Haven, under date of January 10: "The correspondent who asks, in your last number, for information concerning the Japanese novel 'Riu-Tei,' will find in the 'Journal of the American Oriental Society,' Vol. II., an "Account of a Japanese Romance," by William W. Turner, which, as the title implies, is not a translation, but an outline of the plot, based on Pfizmaier's German translation, published in Vienna in 1847. This same novel, translated into Italian by Severini in 1872, has been more recently translated into French by Turrettini, and published under the title 'Komats et Sakitsi,' with the Japanese text, at Geneva in 1874."

—In a pamphlet of about ninety pages, entitled 'The Review of General Sherman's Memoirs Examined' (Cincinnati: Robert Clarke & Co.), Col. C. W. Moulton reviews Boynton's attack upon 'General Sherman's Memoirs,' bringing out new documentary evidence in support of the General's accuracy and fairness. The positions taken in the review of Boynton's book which appeared in these columns some weeks since are all strengthened, and on some points not noticed by us the unreliability of Boynton's criticisms of Sherman is very strongly proved. This is very notably the case in the matter of the alleged usurpation of authority over the War Department and the Staff Bureaus in Washington. Col. Moulton clearly shows by documents from General Grant's own pen that the policy of making the Staff Corps in Washington report to the General of the Army was Grant's before it was Sherman's, and that the latter attempted to carry it out in accordance with the President's order. After a time the Secretary of War, General Rawlins, became dissatisfied, and his influence with the President was sufficient to obtain a revocation of the order which Grant as General had considered necessary to a proper army administration. On several other topics new light is thrown, and this rejoinder by one who has had access to important public and private documents bearing on the discussion will well repay perusal.

—*Lippincott's* for January is noticeably thin in quality. It opens with a feeble and superficial paper on the general progress of the century 1776-1876, the first of a series which will doubtless grow more satisfactory as it goes on, for it promises to be in the end "a complete history of the Exposition," profusely illustrated. Of the other contributed articles, that by Robert Wilson, called "At the Old Plantation," seems to us to have the best excuse for being. It describes the scenery and population and still shiftless management of a low-country plantation in South Carolina at the present time, and is altogether agreeable reading, apparently true to life and devoid of exaggeration. A little-known country, which nature and Catholicism have kept out of the current of modern progress, is exposed, professedly by a native, in a private letter on "Famishing Portugal." The famine caused by last summer's drought gives the writer occasion to show why famines are possible in his country, and he reviews its history to an extent which will interest those who share the prevailing ignorance about it. He lays special stress, perhaps too exclusively, on the evils of the Greek-inherited land tenure known as *emphyteusis*—"the renting of land upon condition to improve it," as Anthony Transtagano defines it in his Dictionary, published in 1773 while Pombal was still in power and engaged in executing his beneficent reforms. What followed that eminent statesman's dismissal, four years later, was a revival of all the old abuses of the system, which was not abolished till 1832. Its effects, as may be supposed, still linger, and, for one thing, the wine crop is cultivated at the expense of the cereals. "The utmost area of land which the average Portuguese peasant can cultivate is two and a half acres." "To-day there is scarcely a tree in Portugal—the woods, including fruit and nut trees, covering less than 400,000 out of 22,000,000 acres, the entire area of the country." "The population of Portugal has not increased during a hundred years." "The crimes of fœticide and infanticide have become so common that there is scarcely a peasant-woman in Portugal not guilty of them, either as principal or accessory. Illegitimacy is more common than in any country in Europe. . . . One-eighth of all the reported births in the kingdom become foundlings." Such are some of the dark traits of the picture drawn with an unwilling hand by the writer of the letter in *Lippincott's*.

—For a long time it has been considered by a certain number of English critics that they themselves were the only persons who knew anything about American poetry, and they have looked with contempt on the opinions on the subject held by the literary and cultivated people of this country. From the fact that America is in many respects different from Europe, they held that any poetry produced within its boundaries must be *in toto* different from any poetry produced on the other side of the water, and it was by *à-priori* reasoning of this sort that Walt Whitman was taken up and more highly lauded in foreign parts than he ever has been in his native land. We are told that it is owing to our prejudice, jealousy, or crass ignorance that "the greatest of American voices," as Mr. Swinburne calls him, is listened to with so little patience in the country which has given him birth. In the face of Emerson, Lowell, and Hawthorne, we are told that Whitman's 'Blades of Grass' is "a book the most unquestionable in originality" that America has ever produced. If we object to its incredible grossness we are accused of "unphilosophical hubbub." Whitman is held up for admiration as the most truly representative poet of America, as well as the greatest, and if we object to this adulation, and assert for others, whom we respect more heartily, that they are as truly representative of our literature, we are told that he alone has quite the flavor of the soil, and that we only attempt to disown him because he is our *enfant terrible*, who shows us up in our native coarseness. By an error, which would be only confirmed by reading his so-called poems, it seems to have been thought that he belonged to the antipodes of the critics' fellow-countrymen, and consequently that all laws were reversed, and all that poets had been in the habit of regarding as essential for their work was considered as ridiculous aping of their betters on the part of American verse-writers, while its absence made Whitman a genuine poet of democracy. Englishmen of very fine tastes and modes of thought are remarkably harmonious about this question. Professor Dowden is sure that Whitman is a great poet. Mr. W. M. Rossetti, who keeps better company in a literary way than a strict competitive examination of his abilities would seem to warrant, follows his great hero, Mr. A. C. Swinburne, in expressing raptures over our one poet; Mr. George Saintsbury, a frequent writer in the *Academy*, who is also a very warm admirer of Mr. Swinburne, has expressed a similar opinion; and Mr. Robert Buchanan, who is no admirer of Swinburne, agrees with him to the extent of praising Walt Whitman. These are the most enthusiastic of the leaders of public opinion who have handed in their assent to the new doctrines of the inspired singer. Mr. M. D. Conway is the solitary American who, wiser than his fellow-countrymen, has had his eyes opened and his mind enlarged by foreign travel, and has learned who is our one great poet. This small but influential band of critics have had it all their own way for some time, and bid fair, by perpetual laudation of a writer whom most people found themselves unable to read, to persuade us that they were right. We were, therefore, glad to see, in the December number of the *Contemporary Review*, a most earnest and vigorous denunciation of our prosaic bard, and of those writers who have tried to foist him upon the world at large. The best thing our readers can do is to turn to the article itself, for our space does not admit of extracts long enough to do the author justice. Mr. Bayne does not wheedle his readers into agreeing with him, and he is very outspoken about his likes and dislikes; but he blows a blast which is very serviceable at the present time, when the effort of many who consider themselves the most cultivated is towards the praise of what is really most corrupt and demoralizing. He overlooks in his wrath many of the less faulty passages of Whitman, where the poetical feeling, which he undoubtedly has, is not diluted

by his wild and barbaric fervor of expression, and hence this article is not the last word of criticism; but there is more involved in the discussion than the worth of Whitman's rhymeless, awkward, formless lines: there is the question of the value of other poetry, which respects human nature, which sets honor, beauty, and grace above repulsive egotism; and it is in its bearing on this more important subject that Mr. Bayne's essay best deserves attention. We are grateful to him for his manly defence of good letters and good manners.

—We can truly say that we never expected to be let into the confidence of the (Washington) *National Republican*, least of all a confidence from which its own readers were carefully excluded. We read in its issue of Jan. 3, under the head of New Year "Receptions by Citizens," how Mrs. M. C. R., assisted by her daughter and a bevy of ladies whose toilets are elaborately described, and "who have graced the courts of the Old World," "dispensed the choicest hospitality to a host of admiring friends"; how Mrs. E. J., whose "pleasant and unaffected manner rendered her cozy house a favorite rendezvous with the pleasant people in society," together with her "young and pretty daughter," who "won many encomiums for her rare entertaining powers, and succeeded in impressing all who called most favorably," were both "attired with exquisite taste"; how Mrs. H. J. C., arrayed in an "exceedingly beautiful costume of pink silk," assisted by "her Parisian friend," Miss P., who "looked like the model of elegance in white silk," received in "the C—— mansion," of which, "did space permit, we would mention a few distinguishing features," "but will merely add that its massive and richly-carved mantels, its stained-glass windows, and its interior decorations, reflect the fine artistic taste of the charming lady who resides therein"; how the Misses E. held "one of the most popular receptions of the day," presided over by "Miss Mollie, who is a brunette of the most perfect type," and "Miss Fannie, who rivals her sister in beauty and graceful manners," and their friend Miss Christina, "a handsome blonde." We read, we say, all these fascinating details of loveliness (there were nearly three columns of them), and we ought to have supposed that they had been procured by the diligence of the "gentlemen connected with the office," and were their reports, indeed, as stated—the result of "two hundred and ninety-six calls." We ought also to have accepted sincerely the editor's apology for possible "errors made in the description of dresses," since "it must be remembered that we are not over-educated in that matter, but done (*sic*) the best we could." But we belong to the privileged few who were permitted to receive the Administration organ's "Complimental Salutations of the Season"—a neatly-printed circular, dated Jan. 1, 1876, backed by the cards of the editorial corps, and conveying the following interesting communication:

"[CONFIDENTIAL.]

"Of your reception to-day we should be pleased to receive before ten o'clock Sunday night, by messenger, these items of information: description of reception costumes worn by yourself and assistants, the names of the more prominent persons received, etc. It is simply impossible for us to visit all our friends, and this is the only practical method of filling a wish to have their receptions properly noticed."

—The death is announced of Dr. Samuel Gridley Howe, in Boston, on the 9th inst. He was born in that city in 1801, and graduated at Brown University in 1821, when his medical studies began. He was interrupted in these by the breaking out of the Greek Revolution, and in 1824 crossed the ocean and joined the Greek forces as a volunteer combatant. Afterwards his professional services were more in request, both on land and with the fleet. Pending the conflict he returned to the United States, and traversing the country raised a large amount of money and material supplies, with which he returned to Greece. In 1867, during the Cretan revolt, he again went to Greece with aid and comfort for the insurgents; but it may reasonably be doubted whether his well-meant efforts to arouse American sympathy on this occasion had any other effect than to prolong a hopeless struggle. Honorable as was this episode in the life of Dr. Howe, his chief title to remembrance lies in the prominent part he bore in the education of the blind, and especially in his wonderful success in educating the blind deaf-mute, Laura Bridgman. He was an active promoter of the colonization of Kansas from the Free States, and he was one of the few confidants of John Brown who was not surprised by the attack on Harper's Ferry. On two occasions during the last ten years his reputation secured him a place on Government commissions which were singularly unfruitful of any good result; one of these was to the freedmen of the South, the other to San Domingo.

—Readers of Dr. Foster's 'Prehistoric Races of America' will perhaps remember that frequent reference is made to Mr. Perkins's archæological collection, of which several specimens are given in the illustrations. Mr. Perkins, a resident of Burlington, Wis. (a native of New York), being about to make a protracted stay in Europe, has deposited his collection with the Wisconsin Historical Society, with a view to ultimate purchase, and the purchase has, in fact, to all intents and purposes, been accomplished. This is probably the most extensive collection in America—certainly in copper implements, which give it its unique character and value. It contains (we quote from the annual 'Report of the Historical Society') "600 stone rollers, pestles, knives, scrapers, awls, pikes, and anomalous forms; 365 stone axes of various forms and sizes; about 50 stone pipes and perforated ornaments; nearly 8,000 spear, lance, and arrow heads; and of copper articles, 68 spear or dirk heads with sockets for shafts, 5 notched for shafts, 15 with flat shanks, 10 knives, 15 chisels and axes, 3 socket-axes, knives or adzes, 5 augers, 2 gads, 1 drill, and 9 of anomalous forms—numbering altogether over 9,000 articles of the prehistoric age." All these articles were found within the State of Wisconsin, and all the copper articles within the last four years. Mr. Perkins's extraordinary success in this field is due to extraordinary industry and perseverance. He has thoroughly ransacked the southeastern part of the State, taking each county (about a dozen in all) township by township, and section by section, and visiting every house upon his way, leaving his address, so as to secure future as well as past discoveries. Nearly every article is labelled with the name of the finder, and a full and careful record describes the time, locality, and circumstances of its discovery. His object was to make all possible provision for scientific study. We understand that it is the intention of the Society to send, if possible, a full and adequate selection of the articles to the Centennial Exposition at Philadelphia.

—We wonder if Mr. Francis Galton ever met with a more curious instance of hereditary genius than the following: About fifty years ago, Mr. John Cleves Symmes, a retired army officer, conceived—in the depths of his consciousness, we suppose, for there never were any facts to give rise to the conception in reason—the theory that the earth is hollow and habitable within, entrance to this inner world being possible by means of an opening supposed to exist, in the shape of an immense funnel, within the circle of ice which encloses the North Pole. Symmes's Hole, as this opening was soon termed, was for many years the laughing-stock of teachers and pupils. It is a little singular, we are tempted to remark by the way, that in these days, when almost every well-known writer is accused of having taken his leading ideas from some older writer, no one seems to have accused M. Jules Verne of borrowing the idea of his 'Journey to the Centre of the Earth' from this old inventor. Captain Symmes spent a large part of the last ten years of his life in zealous advocacy of his theory, writing and lecturing about it, and petitioning Congress to send out an expedition to test its truthfulness. He made few, if any, converts, but died nevertheless in full faith that the correctness of his views would some day be demonstrated. And now, nearly fifty years after his death, which took place in 1829, his son has commenced giving lectures in explanation and advocacy of his father's theory. In a lecture delivered recently in Ohio, after giving some account of the life and work of his father, he presented a curious medley of facts collected from the experiences of Arctic voyagers, all of which facts, he contended, helped to prove the existence of an opening to the inner world. A few of these facts even gave indications of the condition of the inhabitants of this undiscovered country. But the chief point of interest in the lecture appears to have been the expression of profound sorrow that the *Polaris* turned back when within one day's sail of the open water which would have led the vessel to the entrance of this interior realm. Had the *Polaris* continued her course, not only would the father's theory have been demonstrated, but the United States would have acquired dominion over the new world of "Symmeszonia." "At this point," says the newspaper report, "the lecturer appeared so overcome with the intensity of his regret that so fine an opportunity for proving the correctness of his father's theory should have been lost, that he was obliged to terminate his lecture, being almost prostrated with a sudden dizziness."

—Summer schools of science are becoming popular, and those that take their students into the field secure for them a double advantage. We hear of a project for one of a primary character, which strikes us most favorably. It does not assume such a name, but calls itself a "Mountain School of Physical Culture." It proposes to take boys—town-boys especially—for their long summer vacation into a camp for physical culture (with barracks rather than tents) upon North Mountain, in Pennsylvania, and to develop and rightly direct the activities of their bodies as well as their minds, mingling instruction in the physical geography, geology, botany, zoölogy, and meteorology of the region, and the use of scientific instruments, with instruc-

tion in the use of the rod and gun, and all that relates to the exigencies of field and forest life. Dr. Rothrock, who proposes to undertake this, was a pupil of Agassiz, Wyman, and Gray at Harvard, and has won distinction already as botanist, surgeon, teacher, and frontier explorer.

—We had hardly disposed of the case of the *Evening Post* when we caught the *Times* once more in its old practice of "journalizing." The *Nation*, November 4, 1875, called the effort of the Mayor and Public Works Department to pay the market rate of wages—

"The first show of an attempt to carry on the government of the city on business principles."

The above, as journalized by the New York *Times*, January 7, 1876 :

"The first honest attempt which has been made to conduct the government of this city on business principles."

This is a worse case than it seems on the surface.

DARWIN'S INSECTIVOROUS AND CLIMBING PLANTS.*

II.

TO a naturalist of our day, imbued with those ideas of the solidarity of organic nature which such facts as those we have been considering suggest, the greatest anomaly of all would be that they are really anomalous or unique. Reasonably supposing, therefore, that the Sundew did not stand alone, Mr. Darwin turned his attention to other groups of plants ; and, first, to the Bladderworts, which have no near kinship with the Sundews, but, like the aquatic representative of that family, are provided with bladdery sacs, under water. In the common species of *Utricularia* or Bladderwort, these little sacs, hanging from submerged leaves or branches, have their orifice closed by a lid which opens inwardly—a veritable trap-door. It had been noticed in England and France that they contained minute crustacean animals. Early in the summer of 1874, Mr. Darwin ascertained the mechanism for their capture and the great success with which it is used. But before his account was written out, Prof. Cohn published an excellent paper on the subject in Germany, and Mrs. Treat, of Vineland, New Jersey, a still earlier one in this country—in the New York *Tribune* in the autumn of 1874. Of the latter, Mr. Darwin remarks that she "has been more successful than any other observer in witnessing the actual entrance of these minute creatures." They never come out, but soon perish in their prison, which receives a continued succession of victims, but little, if any, fresh air to its water. The action of the trap is purely mechanical, without evident irritability in the opening or shutting. There is no evidence nor much likelihood of any proper digestion ; indeed, Mr. Darwin found evidence to the contrary. But the more or less decomposed and dissolved animal matter is doubtless absorbed into the plant ; for the whole interior of the sac is lined with peculiar, elongated and four-armed very thin-walled processes, which contain active protoplasm, and which were proved by experiment to "have the power of absorbing matter from weak solutions of certain salts of ammonia and urea, and from a putrid infusion of raw meat."

Although the Bladderworts "prey on garbage," their terrestrial relatives "live cleanly," as nobler plants should do, and have a good and true digestion. *Pinguicula*, or Butterwort, is the representative of this family upon land. It gets both its Latin and its English name from the fatty or greasy appearance of the upper face of its broad leaves ; and this appearance is due to a dense coat or pile of short-stalked glands, which secrete a colorless and extremely viscid liquid. By this small flies, or whatever may alight or fall upon the leaf, are held fast. These waifs might be useless or even injurious to the plant. Probably Mr. Darwin was the first to ask whether they might be of advantage. He certainly was the first to show that they probably are so. The evidence from experiment, shortly summed up, is, that insects alive or dead, and also other nitrogenous bodies, excite these glands to increased secretion ; the secretion then becomes acid, and acquires the power of dissolving solid animal substances—that is, the power of digestion in the manner of *Drosera* and *Dionæa*. And the stalks of their glands under the microscope give the same ocular evidence of absorption. The leaves of the Butterwort are apt to have their margins folded inward, like a rim or hem. Taking young and vigorous leaves to which hardly anything had yet adhered, and of which the margins were still flat, Mr. Darwin set within one margin a row of small flies. Fifteen hours afterwards this edge was neatly turned inward, partly covering the row of flies, and the surrounding glands were secreting copiously. The other edge remained flat and unaltered. Then he stuck a fly to the middle of a leaf just below its tip, and soon both margins infolded, so as to clasp the object. Many other and varied experiments yielded similar results. Even pollen, which would not rarely be lodged upon these leaves, as it falls from surrounding wind-fertilized plants, also small seeds, excited the same action, and showed signs of being acted upon. "We may therefore conclude," with Mr. Darwin, "that *Pinguicula vulgaris*, with its small roots, is not only supported to a large extent by the extraordinary number of insects which it habitually captures, but likewise draws some nourishment from the pollen, leaves, and seeds of other plants which often adhere to its leaves. It is therefore partly a vegetable as well as an animal feeder."

What is now to be thought of the ordinary glandular hairs which render the surface of many and the most various plants extremely viscid ? Their number is legion. The Chinese Primrose of common garden and house culture is no extraordinary instance ; but Mr. Francis Darwin, counting those on a small space measured by the micrometer, estimated them at 65,371 to the square inch of foliage, taking in both surfaces of the leaf, or two or three millions on a moderate-sized specimen of this small herb. Glands of this sort were loosely regarded as organs for excretion, without much consideration of the question whether, in vegetable life, there could be any need to excrete, or any advantage gained by throwing off such products ; and, while the popular name of Catch-fly, given to several common species of *Silene*, indicates long familiarity with the fact, probably no one ever imagined that the swarms of small insects which perish upon these sticky surfaces were ever turned to account by the plant. In many such cases, no doubt they perish as uselessly as when attracted into the flame of a candle. In the Tobacco plant, for instance, Mr. Darwin could find no evidence that the glandular hairs absorb animal matter. But Darwinian philosophy expects all gradations between casualty and complete adaptation. It is probable that any thin-walled vegetable structure which secretes may also be capable of absorbing under favorable conditions. The myriad exquisitely-constructed glands of the Chinese Primrose are not likely to be functionless. Mr. Darwin ascertained by direct experiment that they promptly absorb carbonate of ammonia, both in watery solution and in vapor. So, since rain-water usually contains a small percentage of ammonia, a use for these glands becomes apparent—one completely congruous with that of absorbing any animal matter, or products of its decomposition, which may come in their way through the occasional entanglement of insects in their viscid secretion. In several Saxifrages—distant relatives of *Drosera*—the viscid glands equally manifested the power of absorption.

To trace a gradation between a simply absorbing hair with a glutinous tip, through which the plant may perchance derive slight contingent advantage, and the tentacles of a Sundew, with their exquisite and associated adaptations, does not much lessen the wonder nor explain the phenomena. After all, as Mr. Darwin modestly concludes, "we see how little has been made out in comparison with what remains unexplained and unknown." But all this must be allowed to be an important contribution to the doctrine of the gradual acquirement of uses and functions, and hardly to find conceivable explanation upon any other hypothesis.

There remains one more mode in which plants of the higher grade are known to prey upon animals ; namely, that of pitchers, urns, or tubes, in which insects and the like are drowned or confined, and either macerated or digested. To this Mr. Darwin barely alludes on the last page of the present volume. The main facts known respecting the American pitcher-plants have, as was natural, been ascertained in this country, and we gave an abstract two years ago of our then incipient knowledge. Much has been learned since, although all the observations have been of a desultory character. If space permitted, an instructive narrative might be drawn up, as well of the economy of the *Sarracenias* as of how we came to know what we do of it. But the very little we have room for will be strictly supplementary to our former article.

The pitchers of our familiar northern *Sarracenia*, which is likewise southern, are open-mouthed ; and, although they certainly secrete some liquid when young, must derive most of the water they ordinarily contain from rain. How insects are attracted is unknown, but the water abounds with their drowned bodies and decomposing remains.

In the more southern *S. flava* the long and trumpet-shaped pitchers evidently depend upon the liquid which they themselves secrete, although at maturity, when the hood becomes erect, rain may somewhat add to it. This species, as we know, allures insects by a peculiar sweet exudation within the orifice ; they fall in and perish, though seldom by drowning, yet few are able to escape ; and their decomposing remains accumulate in the narrow bottom of the vessel. Two other long-tubed species of the Southern

* 'Insectivorous Plants. By Charles Darwin, M.A., F.R.S.' With Illustrations. London : John Murray. 1875. Pp. 462. New York : D. Appleton & Co.
'The Movements and Habits of Climbing Plants. By Charles Darwin, M.A., F.R.S., etc.' Second Edition revised, with Illustrations. London : John Murray. 1875. Pp. 208. New York : D. Appleton & Co.

States are similar in these respects. There is another, *S. psittacina*, the parrot-headed species, remarkable for the cowl-shaped hood so completely inflexed over the mouth of the small pitcher that no rain can possibly enter. Little is known of its efficiency as a fly-catcher ; but its conformation has a morphological interest, leading up as it does to the Californian type of pitcher presently to be mentioned.

But the remaining species, *S. variolaris*, is the most wonderful of our pitcher-plants in its adaptations for the capture of insects. The inflated and mottled lid or hood overarches the ample orifice of the tubular pitcher sufficiently to ward off the rain, but not to obstruct the free access of flying insects. Flies, ants, and most insects glide and fall from the treacherous smooth throat into the deep well below, and never escape. They are allured by a sweet secretion just within the orifice—which was discovered and described long ago, and the knowledge of it well-nigh forgotten until recently. And, finally, Dr. Mellichamp, of South Carolina, two years ago made the capital discovery that, during the height of the season, this lure extends from the orifice down nearly to the ground, a length of a foot or two, in the form of a honeyed line or narrow trail on the edge of the wing-like border which is conspicuous in all these species, although only in this one, so far as known, turned to such account. Here, one would say, is a special adaptation to ants and such terrestrial and creeping insects. Well, long before this sweet trail was known, it was remarked by the late Prof. Wyman and others that the pitchers of this species, in the savannahs of Georgia and Florida, contain far more ants than they do of all other insects put together.

Finally, all this is essentially repeated in the peculiar Californian pitcher-plant (*Darlingtonia*), a genus of the same natural family, which captures insects in great variety, enticing them by a sweetish secretion over the whole inside of the inflated hood and that of a curious forked appendage, resembling a fish-tail, which overhangs the orifice. This orifice is so concealed that it can be seen and approached only from below, as if—the casual observer might infer—to escape visitation. But dead insects of all kinds, and their decomposing remains, crowd the cavity and saturate the liquid therein contained, enticed, it is said, by a peculiar odor as well as by the sweet lure which is at some stages so abundant as to drip from the tips of the overhanging appendage. The principal observations upon this pitcher-plant in its native habitat have been made by Mrs. Austin, and only some of the earlier ones have thus far been published by Mr. Canby. But we are assured that in this, as in the *Sarracenia variolaris*, the sweet exudation extends at the proper season from the orifice down the wing nearly to the ground, and that ants follow this honeyed pathway to their destruction. Also, that the watery liquid in the pitcher, which must be wholly a secretion, is much increased in quantity after the capture of insects.

It cannot now well be doubted that the animal matter is utilized by the plant in all these cases, although most probably only after maceration or decomposition. In some of them even digestion, or at least the absorption of undecomposed soluble animal juices, may be suspected ; but there is no proof of it. But, if pitchers of the Sarracenia family are only macerating vessels, those of *Nepenthes*—the pitchers of the Indian Archipelago, familiar in conservatories—seem to be stomachs. The investigations of the President of the Royal Society, Dr. Hooker, although incomplete, well-nigh demonstrate that these not only allure insects by a sweet secretion at the rim and upon the lid of the cup, but also that their capture, or the presence within of other partly soluble animal matter, produces an increase and an acidulation of the contained watery liquid, which thereupon becomes capable of acting in the manner of that of *Drosera* and *Dionæa*, dissolving flesh, albumen, and the like.

After all, there never was just ground for denying to vegetables the use of animal food. The Fungi are by far the most numerous family of plants, and they all live upon organic matter, some upon dead and decomposing, some upon living, some upon both ; and the number of those that feed upon living animals is large. Whether these carnivorous propensities of higher plants which so excite our wonder be regarded as survivals of ancestral habits, or as comparatively late acquirements, or even as special endowments, in any case what we have learned of them goes to strengthen the conclusion that the whole organic world is akin.

The volume upon 'The Movements and Habits of Climbing Plants' is a revised and enlarged edition of a memoir communicated to the Linnean Society in 1865, and published in the ninth volume of its Journal. There was an extra impression, but, beyond the circle of naturalists, it can hardly have been much known at first-hand. Even now, when it is made a part of the general Darwinian literature, it is unlikely to be as widely read as the companion volume which we have been reviewing ; although it is really a more readable book, and well worthy of far more extended notice at our hands than it can now receive. The reason is obvious. It seems as natural that plants should climb as it does unnatural that any should take animal food. Most people, knowing that some plants "twine with the sun," and others "against the sun," have an idea that the sun in some way causes the twining : indeed, the notion is still fixed in the popular mind that the same species twines in opposite directions north and south of the equator.

Readers of this fascinating treatise will learn, first of all, that the sun has no influence over such movements directly, and that its indirect influence is commonly adverse or disturbing, except the heat, which quickens vegetable as it does animal life. Also, that climbing is accomplished by powers and actions as unlike those generally predicated of the vegetable kingdom as any which have been brought to view in the preceding volume. Climbing plants "feel" as well as "grow and live" ; and they also manifest an automatism which is perhaps more wonderful than a response by visible movement to an external irritation. Nor do plants grow up their supports, as is unthinkingly supposed ; for, although only growing or newly grown parts act in climbing, the climbing and the growth are entirely distinct. To this there is one exception—an instructive one, as showing how one action passes into another, and how the same result may be brought about in different ways—that of stems which climb by rootlets, such as of Ivy and Trumpet Creeper. Here the stem ascends by growth alone, taking upward direction, and is fixed by rootlets as it grows. There is no better way of climbing walls, precipices, and large tree-trunks.

But small stems and similar supports are best ascended by twining ; and this calls out powers of another and higher order. The twining stem does not grow around its support, but winds around it, and it does this by a movement the nature of which is best observed in stems which have not yet reached their support, or have overtopped it and stretched out beyond it. Then it may be seen that the extending summit, reaching farther and farther as it grows, is making free circular sweeps, by night as well as by day, and irrespective of external circumstances, except that warmth accelerates the movement, and that the general tendency of young stems to bend towards the light may, in case of lateral illumination, accelerate one-half the circuit while it equally retards the other. The arrest of the revolution where the supporting body is struck, while the portion beyond continues its movement, brings about the twining. As to the proximate cause of this sweeping motion, a few simple experiments prove that it results from the bowing or bending of the free summit of the stem into a more or less horizontal position, this bending being successively to every point of the compass, through an action which circulates around the stem in the direction of the sweep and of the consequent twining, *i.e.*, "with the sun" or with the movement of the hands of a watch in the hop, or in the opposite direction in pole-beans and most twiners.

Twining plants, therefore, ascend trees or other stems by an action and a movement of their own, from which they derive advantage. To plants liable to be overshadowed by more robust companions, climbing is an economical method of obtaining a freer exposure to light and air with the smallest possible expenditure of material. But twiners have one disadvantage : to rise ten feet they must produce fifteen feet of stem or thereabouts, according to the diameter of the support and the openness or closeness of the coil. A rootlet-climber saves much in this respect, but has a restricted range of action and other disadvantages.

There are two other modes, which combine the utmost economy of material with freer range of action. There are, in the first place, leaf-climbers of various sorts, agreeing only in this, that the duty of laying hold is transferred to the leaves, so that the stem may rise in a direct line. Sometimes the blade or leaflets, or some of them, but more commonly their slender stalks, undertake the work, and the plant rises as a boy ascends a tree, grasping first with one hand or arm, then with the other. Indeed, the comparison, like the leaf-stalk, holds better than would be supposed ; for the grasping of the latter is not the result of a blind groping in all directions by a continuous movement, but of a definite sensitiveness which acts only upon the occasion. Most leaves make no regular sweeps ; but when the stalks of a leaf-climbing species come into prolonged contact with any fitting extraneous body, they slowly incurve and make a turn around it, and then commonly thicken and harden until they attain a strength which may equal that of the stem itself. Here we have the faculty of movement to a definite end, upon external irritation, of the same nature with that displayed by *Dionæa* and *Drosera*, although slower for the most part than even in the latter. But the movement of the hour-hand of the clock is not different in nature or cause from that of the second-hand.

Finally—distribution of office being on the whole most advantageous and economical, and this in the vegetable kingdom being led up to by de-

grees—we reach, through numerous gradations, the highest style of climbing plants in the tendril-climber. A tendril, morphologically, is either a leaf or branch of stem, or a portion of one, specially organized for climbing. Some tendrils simply turn away from light, as do those of grape-vines, thus taking the direction in which some supporting object is likely to be encountered; most are indifferent to light; and many revolve in the manner of the summit of twining stems. As the stems which bear these highly-endowed tendrils in many cases themselves also revolve more or less, though they seldom twine, their reach is the more extensive; and to this endowment of automatic movement most tendrils add the other faculty, that of incurving and coiling upon prolonged touch, or even brief contact, in the highest degree. Some long tendrils, when in their best condition, revolve so rapidly that the sweeping movement may be plainly seen; indeed, we have seen a quarter circuit in a *Passiflora sicyoides* accomplished in less than a minute, and the half circuit in ten minutes; but the other half (for a reason alluded to in the next paragraph) takes a much longer time. Then as to the coiling upon contact, in the case first noticed in this country in the year 1858, which Mr. Darwin mentions as having led him into this investigation, the tendril of *Sicyos* was seen to coil within half a minute after a stroke with the hand, and to make a full turn or more within the next minute; furnishing ocular evidence that tendrils grasp and coil in virtue of sensitiveness to contact, and, one would suppose, negativing Sachs's recent hypothesis that all these movements are owing "to rapid growth on the side opposite to that which becomes concave"—a view to which Mr. Darwin objects, but not as strongly as he might. The tendril of this sort, on striking some fitting object, quickly curls round and firmly grasps it; then, after some hours, one side shortening or remaining short in proportion to the other, it coils into a spire, dragging the stem up to its support, and enabling the next tendril above to secure a readier hold.

In revolving tendrils perhaps the most wonderful adaptation is that by which they avoid attachment to or winding themselves upon the ascending summit of the stem that bears them. This they would inevitably do if they continued their sweep horizontally. But when in its course it nears the parent stem the tendril moves slowly, as if to gather strength, then stiffens and rises into an erect position parallel with it, and so passes by the dangerous point; after which it comes rapidly down to the horizontal position, in which it moves until it again approaches and again avoids the impending obstacle.

Climbing plants are distributed throughout almost all the natural orders. In some orders climbing is the rule, in most it is the exception, occurring only in certain genera. The tendency of stems to move in circuits—upon which climbing more commonly depends, and out of which it is conceived to have been educed—is manifested incipiently by many a plant which does not climb. Of those that do there are all degrees, from the feeblest to the most efficient, from those which have no special adaptation to those which have exquisitely endowed special organs for climbing. The conclusion reached is that the power "is inherent, though undeveloped, in almost every plant"; "that climbing plants have utilized and perfected a widely-distributed and incipient capacity which, as far as we can see, is of no service to ordinary plants."

Inherent powers and incipient manifestations, useless to their possessors but useful to their successors—this doubtless is according to the order of nature; but it seems to need something more than natural selection to account for it.

RECENT NOVELS.*

'ST. SIMON'S NIECE' is a story of the Colony—in other words, the American colony in Paris. It treats of a young lady who lives with her uncle and aunt—the former a dissolute adventurer of elegant appearance and charming manners, the latter an old lady known as the "Tortoise," and possessed of many singular attributes. The niece of this ill-assorted couple is in love with Talbot Castlemaine (the finest thing yet in names, it strikes us), who is also a dissolute adventurer of a fascinating exterior. The young lady herself is decidedly dissolute as well, and of course most fascinating, as may be illustrated by her constant habit of addressing her aunt—the "Tortoise"—as "T." They live, as we have said, in Paris, in the Avenue Friedland, together with Gregory Alleyne, Helen Devereux, Marian Payne, and Roland Spencer. They are all, even the "Tortoise," remarkably handsome; they possess lots of money; and they are all having, as the envious home-phrase is, "a delightful time over there." Talbot Castlemaine is indeed an Englishman (he in especial is as beautiful as a god), and he marries Marian Payne, who becomes Lady Castlemaine. Helen Devereux, however, is the most brilliant figure, for of her these things are related: "This round of visits among some of the most charming country-houses in England was a sufficiently new experience to be very agreeable, and I might crowd several chapters with the stereotyped accounts of hunts, dinners, county-balls, and the like. I might add to the list three days spent at the Royal castle which overlooks Windsor town—rather long, heavy days, Miss Devereux was forced to admit, under her breath—and a week in the quiet of Chiselhurst, where her old admiration for the most gracious, winning woman of our century warmed into a higher homage at the sight of the uncomplaining fortitude which ennobled that uncrowned brow." The touch about the young lady being bored with the society of the Queen of England, and yet keeping her ennui to herself lest the Queen should be distressed, strikes us as particularly fine. As she stayed a whole week with the Empress of the French, it is to be hoped that, in spite of this lady's sad situation, she found things more lively. But what does Mr. Benedict mean by his allusion to the "uncrowned brow" of the Empress? It seems ambiguous; for, to remind us that she never had been crowned diminishes the pathos of his image, and yet, as she never had been crowned, the phrase of course cannot be an inadvertence for *dis*crowned. Miss Devereux, at any rate, afterwards went to Italy. "The court had left *bella Firenze*, but it was very pleasant there nevertheless, and quite gay. Miss Devereux went out a great deal, and the Castlemaines accompanied her." Miss Devereux is a young girl from New York, without visible protectors or affiliations (she has, indeed, a mamma, who is barely mentioned), who is represented as going hither and thither about Europe at discretion, and occupying, *in propriâ personâ*, a great social position. We think, nevertheless, that when she "went out" in Florence it might have been conceded that she was in the care of the married couple just mentioned, rather than they in hers. This, however, is a peculiarity of Mr. Benedict's young ladies; we are told that in Paris "there was no trace of sadness or gloom in the pretty salons where Fanny St. Simon held sway." We are afraid that Mr. Benedict knows his Paris less well than he would have us believe. To "hold sway" in a salon means, for a woman, if it means anything, to preside in a salon of one's own. But as the author has put his substantive into the plural (and as we take it that he does not mean that Miss St. Simon literally "held," as the phrase is, several distinct salons), it is to be supposed that he simply alludes to his heroine's general sovereignty at evening entertainments. It was certainly very good-natured on the part of the other brilliant ornaments of the French capital to have left it in her hands. Miss Devereux, however, comes over (she has been living in Devonshire) to dispute Miss St. Simon's sway—comes over in a special train, after having telegraphed in advance: "I want an apartment for a month—longer, if I choose; the one we formerly had in the Champs Elysées if possible. They must send from the Café Anglais to manage the dinners." Miss Devereux might have done better for her dinners than to have them "sent in"; but when a poor young lady has to take care of herself, and of her friends as well, to the degree that had fallen to Miss Devereux's lot, she can hardly be expected to keep these little niceties in mind. We are unable to trace further the fortunes of the various members of the "Colony" as Mr. Benedict relates them, and indeed we feel guilty of a certain want of candor in having expatiated on them thus far. 'St. Simon's Niece' is a book to be briefly dismissed—an extremely unpleasant book. Snobbish, vulgar, cheaply meretricious, unwholesome, it reads like the work of a young woman of tawdry imagination, who has battened upon the productions of Miss Braddon and Edmund Yates. We say of a young woman, in spite of the name on the title-page (which may easily be a pseudonym) and because of the intrinsic evidence of the book. The style is inimitably feminine. "So they talked on until Fanny worked herself into one of her nervous states, and was absurdly gay." We think the reader will agree with us that these simple words were not written by a masculine hand.

'Buffets' is a much pleasanter performance; the tone of the story indeed, it must be confessed, is wholesome even to insipidity—unsophisticated to puerility. We cannot say that Mr. Doe's tale has riveted our attention, but it has left an agreeable impression of elevated purpose, of manly sympathies, and even of a slender natural facetiousness. The author has bravely attempted to write a characteristic American novel, which should be a tale of civilization—be void of big-hearted backwoodsmen and of every form of "dialect." He has laid his scene in the city of New York, and he has desired his story to savor of the soil. Unfortunately, his design has been more commendable than his success, and if this is the most that local influences can do for the aspiring and confiding American artist, he will not be encouraged to appeal to them. The first trouble with Mr. Doe's

* 'St. Simon's Niece. A Novel. By Frank Lee Benedict.' New York: Harper & Bros. 1875.

'Buffets. By Charles H. Doe.' Boston: J. R. Osgood & Co. 1875.

story is, that it is really not a story at all ; the author has gone to quite too little cost in invention. A rich merchant in New York is made bankrupt by the breaking out of the war of the Rebellion ; he dies of the shock, and leaves his son to care for his widow, his daughter, and a young girl without near relations who lives with these ladies. The young man, who, so long as he had plenty of pocket-money, was naturally not remarkable for thrift or industry, puts his shoulder to the wheel, cultivates economy, devotes himself to his mother and sister, makes them very comfortable, and at last marries the other young lady, while another young man marries the sister. The drama, it will be seen, is of primitive simplicity ; it is like a story written for children. The author has introduced a number of accessory figures ; but, as no one has anything particular to do, no one produces much illusion. We have in especial a side-glimpse of New York club-life, upon which, more than upon anything else, the author would appear to have expended himself. The theme is treated in the light satirical vein, with an intention, apparently, of consoling all black-balled members. The envied frequenters of the luxurious halls chatter away and puff at their cigars like schoolboys who have locked the door and are trying heroically to get tipsy. We cannot congratulate Mr. Doe on his picture of young New York. When it comes away from its club—which it seems to frequent with an assiduity prompted, at off-hours, by scepticism as to its really and truly belonging to one—it entertains itself with twisting off the bell-handles of the brown-stone fronts and dodging the policeman ; and when it wishes to express itself pleased with a ball at which it has been dancing it declares that it is "forced to admit that while there were some queer coves there whom [it] had never met anywhere before, it was a regular bustin', jolly old toot, and the Houldworthys had done themselves proud no end." We did wrong, perhaps, just now to say that the author had eschewed "dialect." The above is a specimen of the mode of speech of his humorous hero ; here is the conversational style of his serious one : "'Not bad, these people, eh, Frederic, my son ?' addressing himself paternally, and in French. 'Madame a little too well preserved, a little stiff ; but mademoiselle is charming, a pretty child ; I like her much, *la petite*. . . . Decidedly, my brave boy, we must cultivate this acquaintance. It will do to pass the time.'" It is regrettable that, having attempted to portray a number of typical young Americans, Mr. Doe should not have hit it more happily. The frolicsome ones are deplorably puerile, and we do not think the sober ones are quite in the right vein. After the young man who has lost his father and his fortune has knuckled down to work he receives an invitation from one of his old friends to dine with him at a club. He replies to it by a solemn letter declining the invitation, and declaring that he must break with all his old associates and give up all society of every kind. This strikes us as a trifle pedantic ; manly virtue should be a little more flexible. It would seem as if taking care of one's mother and sister were an act so unwonted, so strenuous and heroic, that it would be quite fatal to "let go" for an instant. All this is not easy and mature. The other good young man (the only one in the book who goes to the war, which is raging all this while) is perhaps on one occasion a trifle too easy. Going to confer with a young lady about another young lady with whom he is in love, and wishes his interlocutress to intercede for him, on her promising her support he proceeds to kiss her. The young lady's lover is of course passing the door at the time, and naturally concludes that he is kissing her for her own sake and not for another's. He discovers very promptly the roundabout character of the embrace, and this little ripple has to do duty with Mr. Doe as an episode. It is probable that all story-tellers proposing to deal with New York life will for some time to come, in the way of color and picturesqueness, be obliged to give more to their subject than they receive from it, but the author of 'Buffets' may be charged with not having taken what lay at hand. He has brought the war into his tale, but he has left it standing at the door. It is a singular fact that only one of the author's numerous young New Yorkers (and he in rather a dilatory fashion) is represented as repairing to the defence of his country. If this is satire (we have said Mr. Doe is satirical) it is rather "rough," as the gentlemen concerned would say. 'Buffets,' in fine, is tame and unskilled as a story, but we have read more masterly works which left one a less friendly feeling for the writer. The book is written (when the author is not too severely humorous) in correct and agreeable English, and seems to suggest that if Mr. Doe cannot write good novels he has it in him to write something better worth while than poor ones.

'Leah : A Woman of Fashion' belongs to the same family as 'St. Simon's Niece'; but they order this matter much better in England. 'Leah,' we take it, represents the artistic ideal of the author of 'St. Simon's Niece'—the full-blown perfection of the manner to which the author of that work ineffectually aspires. Mrs. Edwards, however, has the advantage of being in her own line decidedly clever, and of describing things which, if uncommonly disagreeable, are nevertheless tolerably real. Her line is the Continental English of damaged reputation—the adventurers, the gamblers and escaped debtors, the desperate economists, the separated wives, the young ladies without mammas who smoke cigarettes and "compromise" themselves with moustachioed foreigners. The word we have just used is the key-note of Mrs. Edwards's imagination ; every one is compromised and compromising ; her fancy revels in the idea, and presents it in every possible combination. Everything and every one is excessively improper, and are walking the tight-rope over depths of depravity. The depravity, of course, is chiefly of that particular species which, for ladies, is considered most "compromising," and the author's skill lies in making us know as much of it as possible without laying herself open to fatal charges. It is not Feydeau nor Flaubert we are reading, but the work of a British female hand, and here surely there can be nothing to blush at. In truth, the agility of the British female hand in playing tricks with "improper" subjects is something that we must leave to braver analysts than ourselves. Mrs. Edwards's present heroine is a young woman with "subtle-colored hair," a mouth that age might render "sensual or crafty, or both" ("or both" indeed !), and eyes of the "opal tint that Titian has painted for us." Of course, with Titian for a precedent Mrs. Edwards can afford to go very far. Her subtle, sensual, opaline heroine marries and has lovers. That is, has she them or has she not ? The story, such as there is of it, consists of a great fumbling and whispering and sighing and nodding over this important point ; but of course Mrs. Edwards balks at the definite fact, for if the propriety of writers of her school is extremely prurient, their audacity is singularly pusillanimous. We are spared the consummation of those dreadful tendencies about our heroine's mouth, for she dies at the age of twenty in the arms of her second husband, a young Frenchman, with whom, before her first marriage, she had attended at a late hour of the night a *café chantant* in the Champs Elysées. Mrs. Edwards, as we say, is clever ; she infuses a certain force of color into her pictures of shabby gentility and Anglo-foreign Bohemia. She describes in these pages, with a good deal of ingenuity and vividness, an English boarding-house in the Rue Castiglione, and if Thackeray had been before her in his 'Philip' this is hardly her fault. All women at heart, says the familiar axiom, love a rake ; whether or no the author of 'Leah' loves hers we cannot say, but she portrays them with a good deal of discretion. The distinguished, depraved, and impecunious Lord Stair is the best-drawn figure in the present volume. Mrs. Edwards is indeed clever enough to do much better than she does. She has no excuse, save indolence of invention, for putting us off with so very slender an apology for a plot. It is simple to baldness, and yet the commonest probability is violated. Leah is represented in the opening chapters as a horribly vicious young woman—a regular "bad 'un," as they say in England ; and yet without anything in the world having happened to change her, save the death of an ignobly dissipated husband, whom she despised and detested, she is transfigured at the close into a creature too perfect to live. Why also should the story be related exclusively in the present tense ? This device, prolonged through a whole volume, becomes most irritating. It is like reading a letter all italicized. But we are afraid advice is wasted upon a writer who can in any case beguile her readers with tit-bits like this : "Lady Jane Fuller is about the fastest visited woman in London—*probably one of the fastest women of any class in Europe*." This of course is irresistible—the historical impartiality of the "probably," the weightiness of the statement, the vista opened to the imagination as to what it is that Lady Jane Fuller does. It is almost as serious as reading Motley or Buckle—and so much more exciting.

Madame Sand continues, in the evening of her industrious life, to publish novels as rapidly as in her prime, and it would seem that, if some readers perceive in her tales a very natural weariness of imagination, she has not lost her power to entertain the general public. 'Flamarande' is but lately out, and it is already in a fifth edition. This indeed is better fortune than some of her earlier tales enjoyed, for she has never been an eminent "selling" writer, and it was not to the general public that she appealed. But she long ago ceased to write argumentative novels ; she now produces "stories," pure and simple, that no one can quarrel about, and that pretend only to entertain. Considering the enormous amount of work Mme. Sand has done in this way, and the exquisite quality of so much of it, she still is a wonderful improvisatrice. She reminds us of those famous old

'Leah : A Woman of Fashion. By Mrs. Annie Edwards.' New York : Sheldon & Co. 1875.

'Flamarande. Par George Sand.' Paris : Michel Lévy. 1875.

singers who have retired from the stage (or have not retired, as the case may be—the analogy so is more complete), who have lost their voice and their physical means, but who continue to charm the ear by the perfection of their method and their genius. Mme. Sand sings with but a thread of voice, comparatively—the volume and spontaneity of the organ are gone; but it is still singing, it is still melody—the tradition and style are left. In pure form, she is as nearly as possible the perfect story-teller; she unreels her narrative with a smoothness and softness that are quite beyond defining. The reader of 'Flamarande' floats along the limpid current of her prose, which seems too serene to be called voluble, and too finished ever to be called prolix, with a perpetual intention of closing the book—of going ashore—in the next chapter, and a perpetual inability to execute his intention. The story is superannuated, improbable, fantastic—it is like gliding in a gondola past a painted landscape. But the painting is so facile and mellow and harmonious that he at last "makes believe," at least, that he is deceived. If there is not illusion, there is friendly assent. As young artists go to listen reverently to the old voiceless singers, so young writers may do worse than read these last fruits of Madame Sand's indefatigable imagination. They will at least get a reminder of style, in the highest sense of the word. 'Flamarande' is moreover, for more trivial purposes, a capital romance of the old school.

Nothing is more striking in a clever French novel, as a general thing, than its superiority in artistic neatness and shapeliness to a clever English one. When we call an English novel clever, we usually mean that there are good things in it; we do not mean that, as a total, it is a good thing; but when we compliment a French novel, that *is* what we mean. It is the difference between a copious "Irish stew," or any dish of that respectable family, with its savory and nourishing chunks and lumps, and a scientific little *entrée*, compactly defined by the margin of its platter. M. Octave Feuillet serves us up *entrées* of the most symmetrical shape and the most spicy flavor. Putting aside Mme. Sand, it is hard to see who, among the French purveyors of more or less ingenious fiction, is more accomplished than he. There are writers who began with doing better things—Flaubert, Gustave Droz, and Victor Cherbuliez—but they have lately done worse, whereas M. Feuillet never falls below himself. He is the fashionable novelist—a gentleman or lady without a *de* to their name is, to the best of our recollection, not to be found in all his tales. He is perhaps a trifle too elegant and superfine; his imagination turns out its toes, as it were, a trifle too much; but grant him his field—the drawing-room carpet—and he is a real master. 'Un Mariage dans le Monde' is the novel of the moment in France. It is of course about the conjugal aberrations of young Madame de Rias. Her husband, as the French say, "avait des torts," and Madame, in consequence, in his absence, gives a rendezvous in her garden at midnight to M. de Pontis. Another gentleman, M. de Kévern, takes a friendly interest in her, and being informed by his sister, her intimate friend, of her projected folly, writes on a sheet of paper the simple words—"you will be very unhappy to-morrow," and sends it off to her. Hereupon he settles down by the fireside to conversation and reading aloud with his sister. The evening advances, the clock strikes eleven, the door opens and admits Mme. de Rias, who flings herself into the sister's arms and asks if she can have a night's lodging. The sister assents with silent tact, and Mme. de Rias then approaches the brother, extends her hand, and utters the eloquent word—"Merci!" M. Feuillet, after a year or two, always converts his novels into plays, and we can imagine the effect of this scene upon the stage, and how the curtain will fall upon Mme. de Rias's "Merci!" amid the plaudits of effervescent French sentiment. It is quite in the taste of a scene which we remember in one of the dramas of Dumas the younger, in which a *jeune fille* has been accused of having parted with that particular attribute in virtue of which she claims this title: greatly to the distress of a gentleman who loves her, and who has been inclined to believe the charge. Sifting the matter, however, he satisfies himself of its falsity, and, delicately to indicate his change of conviction—the young lady is aware that her reputation is on trial—as he is leaving a room at the moment she enters it, he addresses her with a bow and an italicized and commendatory "*Bon soir, Mademoiselle!*" This touch, we believe, had a great sentimental success.

Prince Bismarck: A Biographical Sketch. By Wilhelm Görlach. From the German by Miss M. E. von Glehn. (New York: Henry Holt & Co. 1875.)—This little book may well serve as an introduction to a profounder study of the character and career of the German Chancellor. It is more narrative than critical or analytical, and it allows Bismarck to speak for himself in copious extracts from his official utterances and, in a very charming way, from his domestic correspondence. Herr Görlach's point of view is that of a Liberal who is not ready to defend the Count's part in the constitutional struggles preceding the war of 1866, or to exonerate him because of the unhoped-for results of his policy, and because, in the words of another biographer, his "bitterest opponents have not hitherto been able to reproach him with pursuing a personal policy—with allowing self-love, in its various manifestations, to be the mainspring of his actions." Nevertheless, Herr Görlach's retrospective judgments are unavoidably tempered by the light which events since 1870 have shed upon Bismarck's aims and on his capacity for progress. In this respect, any biographer of the present day would have an advantage over Herr Bamberger, for example, who wrote before the Franco-Prussian war, and of whose work it may be said both that it is much abler than the one before us, and that it shows clearly the occasion which the slow development of Bismarck's purpose affords of revising opinions logically adopted, but liable to change on the revelation of the secret springs of diplomatic and individual activity. It hardly seems possible now that any phase of Bismarck's character remains unexplored, or that his countrymen's admiration for him is destined to undergo any such profound modification as took place after Sadowa, and again after Sedan. But, on the other hand, what may fairly be called the Protestant unification of the Empire, and the reconciliation of monarchy and of *idées Bismarckiennes* with constitutional freedom, seem to impose a rôle of great delicacy and, as regards an idolized reputation, of great danger; while the foreign complications which menace the peace of Europe so long as the Turks remain on this side of the Bosphorus, and the dismemberment of Austria in the interest of Panteutonism, if brought about in Bismarck's lifetime, promise scope for the attainment of still higher renown, or an anti-climax in which the want of success will popularly offset those achievements which thus far have made him the peer of Frederic II. and Stein, and the foremost statesman in Christendom.

Shakespeare-Lexicon. A complete dictionary of all the English words, phrases, and constructions in the works of the poet. By Dr. Alexander Schmidt. Vol. II. M-Z, pp. 679-1452. (Berlin: Georg Reimer. New York: F. W. Christern. 1875.)—The general scope of this admirable work we noticed in No. 476 of the *Nation*, some eighteen months ago. Little remains to be said, therefore, of the second volume, except that its execution is as careful, as minute, and as accurate as that of the first. For example, *toward*, *towards* (prep.), is treated in separate articles, although Shakspere's use of either form seems to have been as indifferent as is the usage nowadays. Before a consonant, vowel, or aspirate, the instances cited of *toward* are all but exactly as numerous as those of towards; but before a semi-vowel, *towards* occurs in the ratio of four to one. On the strength of a single quotation, Dr. Schmidt allows one more meaning to *towards* than to *toward*—viz., "about," in the passage from Richard III., "*towards* three or four o'clock." Discriminations of like delicacy and suggestiveness abound in this Lexicon. As was promised in the first volume, the appendix contains some grammatical observations covering points overlooked by Mr. Abbott, or which, when rightly referred to general rules, remove a great many of the stumbling-blocks of commentators. This portion of the work cannot be too highly commended as replete with instruction and exhaustive in illustrations. Some of the observations relate to the changeable accent of dissyllabic adjectives and participles, as in

"Might córrupt minds procure knaves as corrúpt";

others to the use of adjectives as substantives, and as virtual parts of compound nouns; of adverbs for adjectives; of the gerund in a passive sense; of the double negative; of the abstract for the concrete, and *vice versa*, etc., etc. They are followed by a notice of the solitary employment of provincial dialect by Shakspere (King Lear, iv. 6, 239); a list of words and sentences borrowed by him from foreign languages; and a novel and very useful list of words forming the latter part in compositions. Thus, to take one of the briefer examples:

"*Land:* Cumberland; England; fairyland; foot-land-raker; headland; Iceland; inland; Ireland; island; Lapland; Netherlands; Northumberland; Scotland; stubble-land; woodland."

Less than two pages are occupied with additions and corrections—high praise for a work of such magnitude as this, conceived and executed by a foreigner, and printed in English in a foreign land. There is only one thing more admirable about it, and that is the modesty of the compiler, his freedom from dogmatism, and his perfect subordination of himself and

'Les deux Frères. [Sequel.]' Paris: Michel Lévy. 1875.
'Un Mariage dans le Monde. Par Octave Feuillet, de l'Académie Française.' Paris: Michel Lévy. 1875.

his name to the task which he had set himself of helping to make Shakspere better understood, and to set a limit to needless conjecture and emendation. As a means of education in the English language, the Lexicon, of course, leaves the Concordance in the shade; and it has even diminished the indispensableness of Mrs. Clarke's Concordance.

Historical Scenes from the Old Jesuit Missions. By the Right Rev. Wm. Ingraham Kip, D.D., LL.D., Member of the New York Historical Society. (New York: Anson D. F. Randolph & Co. 16mo, pp. 375.)—Whoever wishes to understand the spirit of the counter-reformation, as it is sometimes called, cannot do better than to read Dr. Kip's extracts from the correspondence of the Jesuit missionaries. Of this great reaction the Society of Jesus was the inspiration, and almost the embodiment; and nothing better shows the necessity of the Protestant revolution itself, and the profound reform wrought by it in the Church itself, than the comparison of the spirit here manifested with that which pervaded the ecclesiastical world in the half century just before Luther. The heroic labors here described are the great historical mission of the Society, and its title to the world's memory; in view of them one is almost tempted to condone its great sins against Christianity and civilization in other fields.

These translations are made from the famous collection entitled 'Lettres Edifiantes,' from which Dr. Kip has published a previous selection, illustrating the 'Early Jesuit Missions in North America.' The present volume is, therefore, of less direct interest to us; it contains thirteen extracts—letters written from all the continents, but none nearer the present limits of the United States than Lower California. There is one, however, "The Rhode Island Privateer," which throws a curious side-light upon our colonial history. The French fort of Oyapoc, near Cayenne, was surprised and captured in 1745 by a "corsaire anglais," which turned out to be commissioned by "Williems Guéene, Governor of Rodelan"; and Dr. Kip has found that in reality William Greene was Governor of Rhode Island at this time, and has further traced out the personal history of Capt. Simeon Potter, who commanded the privateer. The writer of the letter appears to have been treated very well by the captain, with whom he had some interesting conversations, on theological points principally; but the crew was, of course, a rough and ignorant set. "They were like a band of monkeys, or of savages, who had never been away from the depths of the forest. A parasol or a mirror, the smallest article of furniture a little showy, excited their admiration. This did not surprise me, when I learned that they had scarcely any communication with Europe, and that Rodelan was a kind of little republic, which did not pay any tribute to the king of England, which elected its own governor every year, and which had not even any silver money, but only notes for daily commerce; for this is the impression I gained from all they told me" (p. 166).

The Literature of Kissing. By C. C. Bombaugh, M.D. (Philadelphia: J. B. Lippincott & Co.)—*All About Kisses.* By Damocles, with 100 illustrations by Hablot K. Browne (Phiz). (London: C. H. Clarke. 1875.)—To write two books upon kissing is a doing twice of what was hardly worth doing at all. Both those before us are disconnected strings of excerpts gathered anywhere and anyhow. Dr. Bombaugh has swept his drag-net over the waste of literature to better purpose before; but his volume is still fairly well done. Mr. Browne's, on the other hand, is abominably bad. It has almost every fault that a book of its kind can have. The text is vulgar and poorly printed, the illustrations are rough-hewn woodcuts. As a compilation it is slip-shod and inaccurate. Three stanzas printed, p. 121, and there credited to Burns, are reprinted, p. 144, and credited to Beaumont and Fletcher. It is altogether a most slovenly production. Dr. Bombaugh's has at least the merit of neat typography and careful compilation. It contains a mass of heterogeneous matter, prose and poetry, fact and fiction, history and anecdote, quoted from anybody and everybody, from Milton and from *Punch*. It extends over three hundred and eighty-two pages. We notice with surprise that both books omit Dufresny's dainty little lyric and the beautiful stanza from Mr. Swinburne's "A Catch."

BOOKS OF THE WEEK.

Authors.—Titles.	*Publishers.—Prices.*

ALASKA AND ITS RESOURCES. By W. H. Dall. 8vo, pp. 628, map and illustrations substantially bound in bevelled cloth. Boston: 1870.

Published at $7 50, and now sold, while the remaining stock (only 65 copies) remains, for $4.

Harper & Brothers' List of New Books.

☞ HARPER & BROTHERS *will send any of the following books by mail, postage prepaid, to any part of the United States or Canada, on receipt of the price.*

John Forster's Life of Dean Swift.

The Life of Jonathan Swift. By John Forster. With Portrait and Fac-similes. In Three Volumes. Crown 8vo, cloth, price $2 50 per volume. (Vol. I.—1667–1711.—Ready.)

"The value of this volume is, however, intrinsically very great. Whether Mr. Forster blends his facts into a connected narrative, or otherwise marshals them in carefully-tabulated groups, their arrangement is always indisputably lucid; Swift himself cannot have prized order more highly than it is esteemed by his biographer. When Mr. Forster destroys fictions, he annihilates them with the most satisfactory completeness, and 'smiling eddies' are alone left to 'dimple on the main.' Finally, while he strictly confines himself to his subject, and avoids the temptation to digressions in which no one could have had a better excuse for indulging, his narrative is thoroughly consistent with itself, and solid without the least approach to heaviness. . . . Thus this 'Life of Swift' surpasses in interest, as it does in elaboration, all the earlier works by which its author has established his claim to rank as the foremost of living English biographers."—*Saturday Review, London.*

"Mr. Forster's work will come as a delightful surprise even to those who have been expecting most from it, and the surprise will be not less that, after all there has been already written about Swift, he should have such a profusion of new matter to offer to them, than that, by help of this new matter, he should be able so clearly and completely to correct the more important slanders which have been current concerning the life and character of his hero, first shown in his pages to have had any claim at all to be called heroic."—*Athenæum, London.*

Thrift. By Samuel Smiles.

Thrift. By Samuel Smiles, author of 'Self-Help,' 'Character,' 'Life of the Stephensons,' 'The Huguenots,' etc. 12mo, cloth, $1 50.

Uniform with 'Self-Help' and 'Character.

CONTENTS:

Industry.	Examples of Thrift.	Little Things.	Great Debtors.
Habits of Thrift.	Methods of Economy.	Masters and Men.	Riches and Charity.
Improvidence.	Life Assurance.	The Crossleys.	Healthy Homes.
Means of Saving.	Savings Banks.	Living Above the Means.	Art of Living.

Smiles's 'Self-Help,' 'Character,' and 'Thrift,' in a neat box, $4.

Taylor's Elijah the Prophet.

Elijah the Prophet. By the Rev. Wm. M. Taylor, D.D., Minister of the Broadway Tabernacle, New York, and author of 'David, King of Israel.' 12mo, cloth, $1 50.

General Doubleday's Reminiscences.

Reminiscences of Forts Sumter and Moultrie, S. C., in 1860–'61. By Abner Doubleday, Brevet Major-General, U.S.A. 12mo, cloth $1.

"It is founded on personal memoranda and documents which embody his recollections of the scenes, and forms a valuable contribution to the history of the war."—*New York Tribune.*

"A charming and, what is better, a bold book. It affords a graphic representation of the lively times experienced by our little band of patriots, eighty-one officers, non-commissioned officers, and privates, in maintaining the honor of the dear old flag. . . . No book written on the war will excite more surprise at its revelations, and no book is more worthy of examination and thought."—*Evening Mail, New York.*

"General Doubleday has done a service to 'the truth of history' by giving us this succinct and soldierly account of the initiatory conflict of the Rebellion, in which he was a prominent actor. The thrilling story is so well told, and with such evident candor, that most who take it up will find themselves reading on and on until it is finished."—*Evangelist, New York.*

"What he has to say of those days must therefore, be of interest, and he has made his little book all the more interesting by refraining from introducing into it any thing that in any way approaches partisanship. His history is that of a brave, honest soldier, written without fear or favor, presenting facts as they actually occurred, not varnishing them with the thin lacquer of self-praise or captious criticism."—*New York Evening Express.*

Castelar's Life of Lord Byron.

Life of Lord Byron and Other Sketches. By Emilio Castelar. Translated by Mrs. Arthur Arnold. 12mo cloth, $1 50.

Contents: The Life of Lord Byron.—Victor Hugo.—Alexander Dumas.—Emile Girardin.—Daniel Manin.—Adolphe Thiers.

"Emilio Castelar certainly is very entertaining and instructive as an essayist, and this latest contribution to modern literature will be read with as much interest as those that have gone before. His estimate of the character and work of Byron is just and scholarly, and his words will be read with pleasure and some curiosity by those who have been students of the English poet. The translation by Mrs. Arnold leaves nothing to be desired, preserving as it does all the characteristics of the original."—*N. Y. Evening Express.*

"These essays glow with rhetorical heat, and contain numerous passages that are singularly eloquent, even in the translation."—*Boston Advertiser.*

"As an expression of the peculiar genius of perhaps the most eloquent living writer of Spain, it will be full of interest to every reader of liberal tastes. Señor Castelar presents a golden goblet of sparkling wine, crowned with crimson and purple flowers, but no poisonous flavor lurks in the cup, and the foaming draught will be found wholesome and refreshing."—*N. Y. Tribune.*

Life of the Rev. Dr. John Todd.

John Todd: The Story of his Life, told mainly by Himself. Compiled and Edited by John E. Todd, Pastor of the Church of the Redeemer, New Haven, Conn. With Illustrations. Crown 8vo, cloth, $2 75.

"Dr. Todd was a man of strong character, radical in belief and speech, and yet at heart as tender and pliable as a child. His friends were legion, and the volume which his son has now given to the public will be gladly and heartily received as a permanent memorial of a good man."—*Boston Transcript.*

"Dr. Todd was in many respects a remarkable man. The story of his life is one that deserves to have been told; and now that it has been placed on record, it will repay careful study from all who need encouragement to make their way in the world in the face of obstacles, however numerous or disheartening"—*N. Y. Times.*

Van Lennep's Bible Lands.

Bible Lands: Their Modern Customs and Manners Illustrative of Scripture. By the Rev. Henry J. Van Lennep, D.D. Illustrated with upward of 350 Wood Engravings and two Colored Maps. 8vo, 838 pp., cloth, $5; sheep, $6; half-morocco, $8.

"The work forms an opulent treasury of information concerning Oriental manners and customs. It is to so great a degree the product of his own experience that it is pervaded by an atmosphere of freshness and vitality which entirely removes it from the region of scholastic discussion, and almost from that of didactic statement. It has all the vividness of poetical description, though founded on the accurate comparison of facts, with no symptom of the indulgence fancy. . . . Dr. Van Lennep has certainly performed a valuable service to Eastern geography, as well as to the literature of the Bible, by this copious collection of facts in illustration of the subjects. His work presents the sum of existing knowledge with regard to it in a singularly lucid and attractive form, furnishing an Oriental library of great interest in itself."—*N. Y. Tribune.*

The New Novels.

AN ISLAND PEARL. A Novel. By B. L. Farjeon, author of 'Joshua Marvel,' 'Jessie Trim,' 'Grif,' 'At the Sign of the Silver Flagon,' etc. Illustrations. 8vo, paper, 35 cents.

THE CALDERWOOD SECRET. A Novel By Virginia W. Johnson, author of 'The Catskill Fairies.' 'Joseph the Jew,' 'A Sack of Gold,' etc. 8vo, paper, 50 cents.

Published by Harper & Brothers, Franklin Square, New York.

The Nation.

NEW YORK, THURSDAY, JANUARY 20, 1876.

The Week.

THE Republican National Committee have decided that the party shall hold its nominating convention at Cincinnati on June 14, and recommend the State committees to invite all voters, without regard to the past, who are opposed to sectionalism and in favor of "permanent harmony throughout the country by maintaining and enforcing all the constitutional rights of every citizen," including "suffrage without intimidation and without fraud"; all who are in favor of the continued prosecution and punishment of the officially dishonest, and of economy in administration through the employment of the officially honest; all who are in favor of making such reforms in government as may be suggested from time to time by experience; all who are opposed to impairing the credit of the country, and all who are in favor of sustaining it in every way; all who believe the common-school system to be the "nursery of American liberty," and that it ought to be maintained free from sectarian control; and, finally, all who believe that, "for the promotion of these ends," the Government should "continue to be confided to those who adhere to the principles of 1776," and who are in favor of "recognizing and strengthening the fundamental principles of national unity" in the Centennial year. Those among us who are bent on reviving sectional issues, on establishing permanent discord throughout the land, on intimidating and cheating at the polls, on the immediate discontinuance of the prosecution of the dishonest, or on securing economy by means of official peculation, of making no reforms of any sort, of repudiating the debt, and breaking up the common-school system, and such as think the Government ought not to continue to be confided to those who adhere to the principles of 1776, will not receive any invitation to Cincinnati, and had better not try to go there. They are marked men, and known to be either Democrats or Liberal Republicans. The Democrats maintain that there is not much sincerity in this first "bugle-blast" of the campaign, because a large number of the committee—according to one computation, fourteen out of forty-two—are disreputable persons, scalawags, carpet-baggers, "bummers," and "back-pay grabbers." This is a large proportion, even in these times; but, if true, it does not at all impair the beauty of the sentiments of the document itself.

The Senate has, during the week, eulogized Andrew Johnson and settled what is known as the President *pro-tem.* question. This has been done by adopting (by a vote of 34 to 15) the third of Senator Morton's resolutions, declaring that the office of *pro-tempore* President is held at the pleasure of the Senate; while the fourth, declaring Mr. Ferry President *pro tem.* on the ground of his election during the last session, was withdrawn as unnecessary. This leaves the matter, probably, in the most sensible position in which it could be placed, and disposes of the notion that by some metaphysical and unintelligible process a presiding officer elected temporarily might acquire through an accident a fixed tenure independent of the body which elected him. Besides this, the Senate has been occupied with listening to an attack on the Treasury accounts by Senator Davis of West Virginia, who showed in an elaborate statement that while before 1870 all the finance reports of the Treasury substantially agreed as to the total annual expenditures of the Government, that of 1870 differs as to these expenditures from all like previous reports in respect to the years included between 1860–61 and 1865–66. Besides this, other changes were made after 1870. Mr. Boutwell replied that the whole difficulty was simply a matter of book-keeping and would disappear on investigation, while Mr. Davis made a bad appearance, as it turned out that he did not understand double-entry book-keeping. Mr. Boutwell has presented a Massachusetts petition asking the passage of a law making every member of Congress directly responsible to the electors of his district, so that a majority of them may at any time withdraw him and appoint a successor—a measure which would probably result in nipping in the bud many a promising Congressional career.

In the House of Representatives the Amnesty debate has continued to rage, Messrs. Garfield, Seelye and Banks, Randall and Blaine, taking part in it. Mr. Blaine made a furious speech, in which he did his best to goad the Southern and Democratic members into a little of the old fire-eating fury, but without much success. Mr. Banks made a sort of Centennial harangue, advocating peace and good-will on earth, and also the remarkable doctrine that no president of a government of limited powers, neither Jefferson Davis nor Grant nor anybody else, was responsible for the acts of any of his subordinates. Messrs. Garfield and Seelye were temperate in their speeches, and did what they could to moderate the feeling of the House. The debate left amnesty very much where it found it. The vote on the bill as reported back from the Judiciary Committee (removing all disabilities on the taking of an oath to obey the Constitution and laws) was, yeas 182, nays 97; and so, for want of a two-thirds vote, the bill was rejected. Mr. Blaine then moved to reconsider, but, not succeeding in a last appeal to the other side to let his amendment go to vote, withdrew the motion, and the bill was thus, under the rules, effectually shelved. An attempt was made on Monday by Mr. White of Kentucky, a Democratic member, to bring the House to a vote on a bill amnestying everybody except Jefferson Davis; but again, for want of a two-thirds vote, the attempt failed. Besides amnesty, the House has ordered a good many enquiries, having adopted, among others, Mr. Morrison's resolution enquiring into all expenditures; the Centennial appropriation has been discussed; and the 120th Rule has been amended by an almost strict party vote, so as to permit the cutting down of salaries. Mr. Holman of Indiana endeavored to get a vote in favor of a repeal of the Resumption Act of last session, but it was unsuccessful, a two-thirds majority not being obtained. The long list of Democrats voting yea has an unpleasant look.

Mr. James B. Beck has been elected Senator from Kentucky, and his "record" is in consequence being severely scrutinized. It appears that he is a native of Scotland, and a man of education, and on the money question has voted against inflation measures. From Iowa Mr. Samuel J. Kirkwood goes to the Senate, where he will probably not contribute much original thought to the problems that may arise for discussion, and will, on the other hand, not be likely to do much harm. The Mississippi senatorship has been given to Mr. Lamar, the Republicans voting blank, on the ground, it is said, that the late election was carried by fraud and violence. The Louisiana senatorial dispute still seems as far from settlement as ever, the contestants now being our old friend Pinchback and Mr. Eustis, member of a well-known and influential Louisiana family, and a leading supporter of the "Wheeler compromise." His selection as claimant brings the contending forces of Southern politics—misgovernment successful through ignorance, fraud, chicane, and corruption on the one hand, and honest but down-trodden public spirit on the other—face to face; a state of things which is said to be highly satisfactory to "Pinch."

The aldermen have succeeded in driving General Porter out of the Public Works Department, and so gained a victory on the wages question for "reform." The Mayor has nominated Mr. Allan Campbell, an experienced engineer, to fill the vacancy, and it is supposed that he will be confirmed, though there is some hesitation among

the aldermen, caused by the fact that Mr. Campbell is strongly suspected of having in his employment of laborers on important works paid the market rate of wages; but as it would be difficult to find anybody who had not been in the habit of doing so, and who is at the same time competent to fill the place, the objection has not so much weight as it otherwise would have. An examination of the list of the petitioners for the retention of General Porter shows that it represented the most substantial and important interests in the city, and its almost contemptuous rejection by the aldermen shows how little identity there is between those interests and "political" considerations. What the petitioners asked was that an official appointed to manage their affairs should not be turned out of office for refusing to waste their money. On making this request they were cross-examined by the aldermen very much as if their appearance at all was a gross piece of impudence, and then turned out to cool their heels in the lobby, while the committee went in to report unanimously against taking any notice of their request.

Railroad construction has proceeded slowly during 1875, as appears from the statistics given in the *Railroad Gazette*. In the great railroad year before the panic 7,340 miles were added to the railroad system of the United States; in 1873 the amount fell off to 3,883; in 1874 it was 2,025; and in 1875 only 1,483 miles have been built. The falling-off in construction has been greatest in the South and the Northwest. The States south of the Potomac and the Ohio in 1872 built 1,343 miles of new railroad; in 1875 but 105 miles. In the Northwest (Ohio, Michigan, Indiana, Illinois, Wisconsin, Minnesota, Iowa, Missouri, Kansas, Nebraska, and Dakota) 4,196 miles were built in 1872, and only 475 miles in 1875. These figures give in a small compass an idea of the unhealthy expansion of three years ago and the subsequent collapse. On the other hand, New England and the Middle States—the home of manufactures and capital—built as many miles in 1875 as in 1874, and nearly half as many as in 1872, while the extreme West, including the Pacific coast, built many more in 1875 than in 1874, as many as in 1873, and three-fourths as many as in 1872. The *Railroad Gazette* thinks that the statistics do not clearly show what effect hostile legislation may have had on construction:

"In Wisconsin, the only State where the laws have actually been executed, the only new road was built to save a land-grant, or prevent a contest as to the title to one. But most of the Northwestern States are so well provided with railroads, and the newer ones have so generally been financial failures, that the cessation of construction was to be expected, however favorable the laws."

With regard to a revival of railroad construction, the only significant fact is that more than three-fourths of the whole mileage of 1875 was completed in the last half of the year—a proportion greater than for previous years; and this justifies the conclusion that there was a slight revival of railroad construction during the latter half of 1875, and that it was in its most depressed condition since the war during the first half of the year.

The rates for money have fallen during the week both here and in London. The cause of the fall here was the return flow of currency from the West, the New York banks having gained more than $5,000,000 in legal-tender notes, besides nearly half as much more in national-bank notes. The surplus reserve of the banks is now nearly $14,000,000. In London, the movement of specie to the Continent was checked by the advance of the Bank of England discount rate to 5 per cent., and the Bank has since gained specie; accordingly, although the Bank rate is still 5 per cent., there is no difficulty in getting "prime" three-months' bills discounted elsewhere at 3¾ to 4 per cent. The turn towards ease in the London money market has had little effect on securities. Here it has been very different, and all securities which are safe investments have been in such demand as to advance prices materially. In addition, there has been a very brisk speculation in shares of sufficiently doubtful value to create a difference of opinion as to what their market price should be. With the close of the year the large majority of professional speculators in Wall Street were "short" of stocks, and they have since, not feeling safe in their position, been buying them back, their purchases having created a demand sufficient to carry prices up from two to ten "points"; in this covering movement several of the smaller "bear" speculators have failed, and one Stock-Exchange house—Dickinson & Co.—of high standing both in respect to character and means. The outside public have had little or nothing to do with the upward speculation, although there is a growing opinion that railroad property has passed the point of extreme depression for the next few years; this opinion being encouraged by the more economical management of railroad corporations, but chiefly by the modification of the Granger influence, as is shown by recent events in Wisconsin, where the Granger madness was most virulent.

The figures showing the foreign trade of New York during the year 1875 have appeared during the week. The total imports were $340,658,569, which is a smaller amount than in either of the two preceding years. In 1870 the total imports were $315,200,022; from 1870 back to 1863 there is a decrease, the total in the latter year having been $187,614,577. The customs receipts at New York during 1875 were $105,388,449, or about two-thirds of the whole amount for the entire country, and more than enough to pay the whole coin interest on the public debt; in 1874, the customs receipts at this port amounted to $111,101,214, and in 1873 to $137,215,802. The exports from New York during 1875 amounted to $324,018,878, against $345,162,361 in 1874, and $348,905,076 in 1873. In 1875 there entered into these exports $67,556,650 specie and bullion, in 1874 $61,222,228, and in 1873 $48,659,661. The large specie shipments in 1875 are traceable to the Treasury policy of funding 6 per cent. bonds into 5 per cents, or rather to the Syndicate operations connected therewith. The gold price of $100 greenbacks has ranged during the week between $88 88 and $88 39.

Mr. Trenor W. Park flattered himself and, we believe, tried to persuade the public that the recent revolution in the Emma Mining Company, by which the directors who had instituted proceedings against him and his confederates here were turned out of office, meant the abandonment of the suit against him, and in some sort his acquittal of the charges made against him. There appeared at the same time the usual semi-annual rumor that a "vein had been struck" in the mine, and that all the early anticipations of the large-hearted vendors about the value of that property would be amply vindicated. We fancy it was under the influence of this delusion that Park brought his ridiculous suits against the *Nation* and *Tribune*, in which he proclaims that his "reputation" has been somehow damaged by them. It now turns out, however, that the new managers of the Company are more determined and hostile than the old ones; that a main cause of their dissatisfaction with the late directors and solicitor was the fear that they had compromised or meant to compromise with Park; that the new men have given up the mine as a hopeless swindle, and now mean to devote their time and money to the punishment of the swindlers; that one of them, Mr. MacDougall, a determined and wealthy Scotchman, in order that there shall be no failure of justice, offers to bear the expense of following up the conspirators himself, and has already turned a savage eye on the unhappy Schenck, and is forging new weapons for the pursuit of his friend Park. The papers in the proceedings now pending have been turned over to the new solicitors of the Company by order of the Vice-Chancellor, and we shall probably see Park in a state of great litigious activity during the Centennial year. One of the little tricks in which he is now indulging is attaching the mine and its appurtenances under a claim he makes against the Company, we suppose to produce the impression that he eagerly desires to get

possession of the property again, and wishes he had never parted with it. We can only say to Mr. MacDougall and his associates that they are engaged in a noble work, in which they will have the hearty sympathy of all good people on this side of the water, and that they owe it to the interests both of honest trade and of sound morality to make international swindling, if not terrible, at least unprofitable.

A recent police case in London will, we trust, be a warning to Mr. Schenck, "his much-esteemed friend" the Marquis de Saldanha, and all other diplomatists who go into speculative enterprises in foreign markets. The "London Saw-mill and Short-length Timber Company (Limited)" was launched some weeks ago with an imposing list of titled directors, and the manager has just been brought up before the magistrates on a charge of obtaining money under false pretences, and for conspiring with the directors to obtain money under false pretences. The directors were "major-generals," "colonels," and "honorables," but appear to have been a sad lot. The colonel's address was wrongly given, and he had not the country mansion the prospectus said he had. The "honorable" was only a lodging-house keeper, and another of them, who gave his address at a country-seat, turned out only "a linen-draper." But they had, nevertheless, managed to cheat large numbers of poor people out of sums ranging from £50 to £100. They said in court, like Schenck and Park and Stewart, that they had "a perfect answer," and that if there was a "short adjournment" the money would be returned, but it would not do. The magistrate was inexorable, and they will have to go to trial. Apropos of this, there is talk of Schenck's being recalled, Mr. Foster, now of the Mexican Mission, taking his place. We hope it may be true, but it will be rather hard on him to recall him when he has, as he says, done no more than the Duke de Saldanha, and when the corruption was so great in England in the days of Walpole.

The news from Germany is unimportant. The semi-official Berlin paper, in reviewing the political events of the year, declares that the signs of acquiescence by the Catholic clergy in the execution of the Falk Laws are multiplying, and this is taken as a proof that the Church is prepared at least to compromise, and is corroborated by the news from Rome, which says that Cardinal Antonelli is making preparations to ascertain whether a *modus vivendi* cannot be discovered. The most objectionable feature of the new penal code, which made Germans living abroad liable to prosecution after their return home for violations of the German laws while abroad, has been defeated without difficulty. It appears, from the discussions called forth by the Thomas affair, that under the German penal code as it now stands he would not have been found guilty of murder, as he had not premeditated what occurred, but something entirely different, so that the Bremerhaven slaughter was only the result of an accident. An amendment to the code, however, making the preparations to commit an offence criminal, even if no immediate steps to commit it had been taken, appears to have been thrown out by the Parliament, on what ground we are unable to say. Our latest advices from Germany, by the way, make the recent solemn protest of the Americans that Thomas's crime was not national but individual somewhat less superfluous than at first appeared. There has really been a very intense feeling against Americans all over Germany, and this has not merely found expression in the newspapers, which declared that the American love of money led straight up to dynamite practices, but has affected the intercourse of the two peoples in a very unpleasant manner. We believe it has even been found difficult by Americans to get parcels addressed to them delivered.

Marshal MacMahon has issued a proclamation, preparatory to the general election, in which he calls on the people to apply the constitutional laws "with common accord and sincerity," and warns them that he alone has the right to propose any revision of them prior to 1880; thinks they ought not to be revised, however, until fairly tried, and that for a fair trial a conservative and truly liberal policy, such as he has always intended to pursue, should prevail; invites those who place the defence of social order "above their recollections, aspirations, or party engagements" to rally round his government, and to discourage those who threaten the future of the country "by the propagation of anti-social or revolutionary doctrines"; and declares that, while he neither sought nor desired the power that he is invested with, he will exercise it without weakness. He signs himself "President of the French Republic." The proclamation was generally taken as, and was probably intended to be, a sort of formal notice that the crisis which has recently arisen in the cabinet would make no difference, and that it was sufficiently healed. Enough returns have at this writing come in from the senatorial election of delegates to the Senatorial College to make it probable that the Senate will contain, out of three hundred members, one hundred and thirty Republicans, mostly conservative; one hundred Bonapartists who wish to "push things," or militant Bonapartists, as they are now called; seventy of odds-and-ends, including a certain proportion of "patient Bonapartists," or Bonapartists who wish to bide their time. There are but few extreme Radicals elected, and few Legitimists or Orleanists. In fact, the main divisions of the body will be Conservative Republicans (that is, men who are satisfied with a republic, but would not kick violently against a monarchy) and Bonapartists of various degrees of violence. It has to be borne in mind that the elections which took place on Sunday were those of delegates from the Municipal Councils to the electoral colleges which are to choose the senators. The senators are chosen in the last resort by these colleges and by the councils-general of the Departments and the councils of the arrondissements, besides the seventy-five chosen by the Assembly, who sit for life. The remaining 225 sit for nine years, but begin with short terms of three and six years, distributed by lot, so that one-third shall always go out of office every three years.

The Sultan's firman, which was intended to anticipate the demands of the Western Powers, contains little that was not to be found in previous instruments of the same kind, but it puts the "reforms" in a little better shape. The Christians are to be allowed to elect their own representatives in the courts and municipal councils as well as the Mussulmans, instead of having them nominated, which is a decided step in advance. The Christians, too, are to choose their own tax-gatherers, and the police are not to meddle in the collection. Forced labor on the roads of landlords is abolished; and only those Christians who are between the ages of twenty and forty are to pay the tax in lieu of military service. But there is no provision in the document making any change in the law of landlord and tenant. After the issue of the firman of 1856, known as the Hatti-Hamayoun, the treaty between Turkey and the Great Powers expressly stipulated that the latter powers should not have the right to interfere either severally or collectively in the relations of the Sultan with his subjects or in the internal administration of the empire. The difference between that crisis and the present one will probably be that the powers will now insist on interfering, and on providing permanent means of interference. The probabilities seem to increase that Austria will occupy the disturbed provinces in the spring. There is in the meantime no sign of any disposition on the part of the Sultan to check his extravagance or surrender any portion of his power, and the taxes for the expenses of putting down the rebellion are being wrung from the peaceful districts with relentless severity, and there are signs of considerable perturbation among the Mussulman population of Constantinople, who feel as if the Infidels were getting the better of the Sultan. The Montenegrin contributions to the struggle seem to be increasing, and there is a party in the official class at Constantinople, headed by Hussein Arni Pasha, the late Grand Vizier, in favor of declaring war against the Principality at once, but the fear of bringing Austria or Russia into the field will probably prevent anything so energetic.

AMNESTY FOR JEFFERSON DAVIS.

THE debate on the Amnesty Bill was certainly unfortunate, both in matter and manner It consisted mainly of a game of recrimination between Northern and Southern politicians, in which both sides were very vulnerable. Without meaning in any way to palliate or excuse the speeches and resolutions produced by Mr. Hill of Georgia or anybody else at the South during the war, we may mention that there are but few Northern members of Congress whose speeches will bear being dragged to light and read in the calm of our own time. There was a great deal of ferocious and extravagant language uttered in Washington as well as Richmond which its authors would now either be ashamed of or not care to own. There were doctrines held at the North, by men passing as sane, about "rebels" and "treason" which would now sound wholly irrational even to those who propounded them. Nevertheless, few sensible persons are disposed to blame or think the worse of people who talked wildly during the war. It is only human to talk wildly when guns are booming and men are falling. Great communities cannot fall to killing each other by the thousand each day without throwing individuals off their balance, and producing floods of truculent and boastful menace, and setting large numbers of really soft-hearted and kindly men and women to pretending on paper and on the platform that if they had their way they would draw and quarter their enemies. There was doubtless more of this at the South than at the North, both because the habit of threatening and denunciation was more deeply rooted in Southern manners, and because hatred of enemies had a place in Southern morals which was wholly denied it at the North, and because during the latter part of the struggle at least the Northern blows seemed aimed at the very vitals of Southern society. If a careful comparison were made of the language of the newspapers and public men on both sides, we have ourselves no doubt the South would suffer by it greatly. But why make it? What good end can be served by it? In what way would it promote either the material or moral welfare of a single human being on this continent? On the contrary, is there not something absolutely childish, if not mischievous, in bandying contradictions in a legislative body over what I said, and what you said, and what he said, ten or fifteen years ago in the midst of a conflict long ended, over questions fully settled, and, as far as human eye can see, settled for ever?

It does not follow, however, that because the debate took a foolish and somewhat trivial turn, the subject was not worth debating. We cannot help thinking that the question of excepting Jefferson Davis from the operation of a general amnesty does really deserve careful consideration, and is a respectable, and not inopportune, question even in the Centennial year, and we do not believe that it can be settled by a simple enquiry into his responsibility for the horrors of Andersonville or for any other episode of the war. We, for our own part, should be inclined to exclude him from the benefits of the proposed amnesty, even if he had done everything in his power to secure proper treatment for Federal prisoners, and even if the treatment of the Confederate prisoners had been all that it is said on the Northern side to have been—for reasons which we produced, in great part, after his capture in 1865, and which, as it seems to us, have lost none of their force.

If it be asked, why select him for punishment any more than any other man at the South? the answer is, that it is the Southern people who selected him. They made him the President of the Confederacy because he was the most prominent man in the movement which led to the Confederacy. He bore a leading part in organizing and directing it, and was the foremost representative of its temper and aims. In short, the selection of him was a strong but careful recognition of his claims to be considered, more than any other man, responsible for the rebellion, and he did his best during the war to justify the selection by his acts and language. He never once, during his administration, suggested in the remotest way a possibility of peace or reconciliation, and he spoke in published speeches of the Northern people in terms which probably no leading officer of a belligerent power has, even in modern times, employed towards a civilized enemy. Down to the last kick in the last ditch, he did what he could to prevent the arrangement of any *modus vivendi* between North and South. In short, if any one ought to suffer for the war by special legislative designation, he is, by the choice of his own associates, the very man.

But, ought *any one* to suffer? As regards the mass of the Southern people, there is no question that complete amnesty and oblivion was and is the wisest of all courses, and no less beneficial to the North than to the South. As regards even the prominent men, the peculiar mode of reorganizing Southern society which the North adopted rendered their complete and early liberation from all disabilities a matter of prime necessity. There was nothing the new South needed so much as the direction of character and intelligence; and the policy which after the war deprived it of the political services of its then natural leaders, its honest and educated men, was unquestionably mistaken. Nothing could have justified this legal exclusion from participation in the government but the danger of their again rising in insurrection, and no rational man pretended or pretends that this existed. The crisis at the South after the war was one which called for men of common honesty, common veracity, and ordinary acquaintance with the machinery of civil government, and of these our penal legislation actually for a while deprived the new communities, and blacklegs and gamblers and defaulters rushed in to fill their places. So that, for practical ends, general amnesty was really necessary, and, because necessary, wise and commendable.

But, then, there is no practical end that we know of to be served by making Jefferson Davis again competent to hold office, for this is all that his inclusion in the amnesty would amount to. His present disabilities in no way damage him in body or estate. He holds property, can sue and be sued, come and go, like other men. If he suffers at all for taking his share in the rebellion, he suffers only in mind, and that he suffers in mind there is no good reason for believing. If he were amnestied, however, there can be little doubt that an early opportunity would be taken to send him back to the House or the Senate; and the question now is whether the North can really, even by fair-minded Southerners, be expected to expose itself to a contingency of this kind, and whether it would be well for it to do so. The South can, after complete defeat in war—and such a war!—hardly call on the victors for the suppression of every species of susceptibility and the effacement of every trace of ordinary human pride. There are some signs of indignation over the past, which people who have won, after fighting hard and losing half a million of men, may surely be allowed to display, and there could hardly be a smaller or milder sign than the relegation of Mr. Jefferson Davis to private life for the rest of his days. Then, too, the position the North took during the war, and has taken since its close, in its relations to foreign opinion, must not be forgotten. It distinguished the late rebellion from all other previous rebellions on two grounds—that its object was the preservation and perpetuation of slavery, and that it had broken out under a Constitution which gave perfectly free play to all peaceful efforts to effect constitutional changes. On these grounds it called for the sympathy of the best men of other countries in terms such as no state before when engaged in civil war has felt justified in using, and on these grounds, too, it described the moral guilt of the promoters of the insurrection in terms of unprecedented vehemence. Now, it will not do to act as if this talk was all buncombe, as if all the moral heat and wrath of that period were due to the passions of the battle-field, and had no root in cold and settled principle. It will not do, after describing Jefferson Davis as all our moralists as well as politicians described him, to treat him as if he were simply a mistaken politician who had outlived his errors. A decent regard for the opinion of mankind, even if we are not burdened with self-respect, requires us to exclude him at least from participation in the councils of the nation he tried to destroy. There is a point in legislation, as in social intercourse, at which charity and mercy

become vices dangerous to the social order. The successful cultivation of the virtue of good-nature has, in the opinion of many, carried us to this point already, so that our penitentiaries begin to be regarded by a large class of the community as merely a refuge of the unlucky, in which any of us might any day find himself. Nevertheless, it would not be difficult to show that civil society rests on the assumption that some men are better than others; that people who have led decent lives are entitled to sit in judgment on criminals; and that right and wrong are not mere conventions which may be established one year and may be changed the next. We owe it to ourselves, in short, to say that there was at least one man whose political career was closed by his share in "the greatest rebellion the world ever saw."

THE TYRANNY OF RULES OF PROCEDURE.

THE attempt to obtain restitution from Tweed by legal means has now reached the stage of broad farce in which no lawyer, we think, can fairly complain of laymen for commenting on it with some asperity. When Tweed's frauds and thefts were first discovered, it took the bar and the courts, as well as we remember, two years to find out who was the proper person to sue him—an incident which, we venture to assert, is without parallel in judicial history. When he was first brought to trial it was found necessary for the prosecution to make short biographies of the entire panel in order to challenge intelligently in making up the jury. When he saw that he was going to be tried a second time, and that a "struck" or select jury would be granted, he ran away, leaving his counsel in charge of his cases; and in getting the jury, the extraordinary spectacle was witnessed of the challenge of persons for having opinions unfavorable to the defendant, he being at the time a fugitive from justice. The last announcement that the attempts to obtain a struck jury had failed a second time, and that the panel had been exhausted, and that the counsel for the prosecution did not know what he would do next, and the counsel for the defence declined to say what he would do were he in his place, recalls so vividly some of the scenes in the opéra-bouffe that discussion of the matter in detail would be idle.

To persons outside this city, the case is principally interesting as an illustration of the way in which the judicial and political and even legislative machinery of the country is being clogged, almost to the point of stoppage, by mere forms of procedure, and of the extent to which skill in the use of these forms is allowed to take the place of serious qualifications for real business. In the House of Representatives, the debate which has been attracting so much attention during the last week was not a *bonâ-fide* debate, intended to balance opposing reasons and influence opinion on the subject nominally before the House, but a game of technical skill in the use of parliamentary rules of procedure between two masters of the art, Messrs. Randall and Blaine. The contest which has been going on between the two parties ever since the House met is of just the same nature. The "advantages" which Mr. Blaine gets over Mr. Randall, or Mr. Randall over Blaine, consist not in able presentations of some view or policy to Congress or the country, but in some such dextrous use of the rules of procedure that one party shall be cut off from discussing or voting on something he wished to discuss or vote on, or be compelled to discuss or vote on something he wished to avoid, or be compelled to submit to the production of some question in a shape which will place his position or motives in a damaging light; and the struggle is watched and each step in it recorded by the papers with as much eager interest as if there were no legislative work to be done, no weighty and important problems waiting for solution. In fact, "the rules" have now been so amended and studied and arranged, and some gentlemen have attained such familiarity with them, that in most of our legislative bodies it is increasingly difficult for anybody not an accomplished parliamentarian to get a fair hearing on anything, as he is so surrounded by pitfalls at every step he takes. Moreover, a great many people are beginning to forget, and some have already forgotten, that rules of procedure were originally intended to facilitate discussion, and lead to decisions, whether legislative or judicial, on the subject-matter of the discussion. They are now constantly used simply to enable persons to exhibit tricks displaying quickness and dexterity, and the public is beginning to believe that successful juggling of this sort is one of the marks of statesmanship or of legal talent. The Tweed trials have consisted almost exclusively of tricks and counter-tricks, in which the position of the judges is somewhat like that of a referee at a "billiard tournament." They listen hour after hour to long harangues over the question whether certain regulations, intended originally to produce a full and fair trial of the issue, ought not in right and justice to prevent or indefinitely postpone such trial, and their decisions have a strong resemblance to the "scoring" at a match. In Congress at this moment the principal use of "the rules" seems to be to determine the chances of various gentlemen for a nomination for the Presidency, and a "point well taken" is talked of with as keen interest as if it in some way affected the currency, or the tariff, or the Cuban question, or the civil service, when in reality it only affects the political fortunes of one of many ambitious politicians. The difficulty of getting the merits of any public question or of any candidate for office before a caucus or convention is so well known, and has been so much commented on, that we need not give it more than a mention here. When a well-meaning citizen proposes to himself to take an active part in politics, beginning with attendance at primary meetings, he finds himself met at the door with a mass of rules or customs of procedure which he must not only be familiar with in an ordinary way, but must have so deeply studied and pondered on that he can perceive beforehand the various ways in which they can be used to stop his mouth, and be ready with all the parries. As he generally finds that he can only do this by the abandonment of his lawful calling, he stays at home, and the regular practitioners pretend to mourn his absence, and put articles in the party newspapers deploring his "apathy" and ridiculing the absurd figure he cut at the convention.

There is perhaps no way, however, in which the rules of procedure have been turned so effectively for the obstruction of public business as by the adoption of the theory that anybody who has read, or talked, or heard about a matter of public notoriety, or has passed an opinion about it, cannot be trusted to participate in a judicial investigation of it. The effect of this in a community in which newspaper reading, and oral discussion of newspaper topics, and the formation of opinions on them, are not only a universal custom but almost an accepted duty of the citizen, is to deprive the state of the services of all those who are most competent to aid it in judicial enquiries, and the theory is based on a view of human character which, if well founded, would render civilized society almost impossible. There is something almost incredibly absurd, for instance, in asking a respectable New Yorker whether he has heard of William M. Tweed; whether he thinks Tweed in any way defrauded the city; whether he has heard that Tweed has absconded; and then telling him to stand aside as a person who would probably be unable to give a verdict according to the evidence, under the direction of the Court. Rules which permit this, point directly to government by wholly illiterate laborers or inmates of the almshouse.

The disease, too, curiously enough, seems to be spreading, and has invaded the Christian church. The fencing and sparring which preceded the agreement to call a Mutual Council over in Brooklyn had a strikingly close resemblance to the efforts of Tweed to get a fair trial, and the parallel has almost been completed by the breakdown of the plan, through the exclusion of Drs. Budington and Storrs and their churches. The Beecher case has now been for one year and a half before the country. It has formed during the whole of that period a leading topic of discussion in many thousand newspapers, and a leading topic of conversation in almost every circle. It has been twice tried, once *ex-parte* by a church committee, and once by a court of law. Under these circumstances, the knowledge of it has naturally permeated the Congregational Church, and led inevitably to the formation by every church-mem-

ber of an opinion on the question of Mr. Beecher's guilt. A reference of the question, therefore, to a collection of churches meant of necessity a reference to a tribunal composed of persons biassed in one direction or the other, but presumably capable, under the influence of the Holy Spirit and with the help of prayer, of laying aside their prepossessions and acting fairly. The minute the choice of the tribunal began, however, "the challenges to the favor" began too, and it was soon discovered that as all the churches knew about the scandal, and had thought about it, there could not, "under the rules," be any ecclesiastical trial, and the disputants now go about taunting each other with dislike of investigation, and clamoring for a court the materials for which could probably not be found in any civilized country. Indeed, there seems to be no mode left of trying Mr. Beecher but the ordeal of fire or water, or the wager of battle. The inevitable inference from the incompetency of the Storrs and Budington churches is that church machinery is unequal to the examination of great scandals, and that "mutual councils" cannot be convened in serious cases.

Of course, rules of procedure are necessary to the transaction of all business, but they ought to be the servants, not the masters, of civil society. To allow ourselves to be entangled in a network of parliamentary or legal customs which defeat justice, liberate the thieves, cover up crime, and render investigations into the simplest matters abortive, is to make a distinct return towards barbarism, and is a process somewhat similar to that which arrested the progress of Chinese civilization.

MODERN EXPLOSIVES.

THE invention of explosive agents, to be employed in the arts of peace or for warlike purposes, has kept pace with the progress of science in other directions, until we have accumulated a startling inventory of infernal machines and dynamite powders from which to make our selection. It is interesting to trace the history of some of these dangerous compounds, and to see from what innocent and inert bodies forces can be developed to accomplish the most frightful results. The ancient gunpowder, the invention of which was accepted in its day as being a great improvement upon the catapult or crossbow, although it is still retained for many purposes, is now regarded as too weak and slow to suit our modern notions of what an explosive agent ought to accomplish. As in every other department of science, so it has been in applied chemistry: no one person can lay claim to being the sole proprietor of any discovery. Numerous experiments and researches, often extending over a hundred years, usually precede the culmination of the work into the fully-rounded application. Nitro-glycerine, for instance, is one of the most recent and at the same time most powerful and dangerous of the modern inventions, yet to understand how it came to be made, we must go back to the researches on oils and fats undertaken by Professor Chevreul, of Paris, and published in July and November, 1813. This eminent chemist was the first to make known to us the true constitution of the fatty bodies, and it was he who assigned to glycerine its proper place among organic compounds. Glycerine, from which is derived a whole progeny of explosive compounds, is a triatomic alcohol of the fatty series. The formula for it is $C_3H_5(OH)_3$, and its scientific name is propenyl alcohol; its popular name, from the Greek word *γλυκύς*, sweet, in allusion to its pleasant flavor, was given to it by Scheele a long time ago. To obtain it the fats are usually decomposed by steam, free stearic acid and glycerine being produced. Other methods are sometimes employed, such as the use of hot water, sulphuric acid, or metallic chlorides, but these are matters of detail into which it is not necessary to enter. Glycerine when pure is a viscid, colorless liquid, having a specific gravity of 1·26, of a sweet taste, soluble in water and alcohol in all proportions, undergoing very little change in the air, not molding or evaporating, neutral to test-paper, burning with difficulty, not to be frozen excepting at very low temperature, an admirable solvent for volatile oils, a powerful antiseptic, a good lubricator, and, in fact, possessing properties that have suggested its use in a large number of useful arts.

It will be seen from the above recapitulation of the properties of glycerine that it is a harmless and most valuable substance, and on no account to be confounded with the nitro-glycerine which is derived from it. After Schönbein had discovered gun-cotton, which he produced by the action of a mixture of sulphuric and nitric acids on cellulose, it appears to have occurred to Professor Pelouze, of Paris, that the same acids might produce a similar compound if brought in contact with glycerine, and an Italian chemist, the distinguished Professor Sombrero of Turin, undertook the investigation in Pelouze's laboratory, and succeeded in preparing a compound perfectly analogous to tri-nitro-cellulose or gun-cotton, to which he gave the name of tri-nitro-glycerine or nitro-glycerine, the properties of which he described in the 'Transactions of the Turin Academy,' in July, 1847. The immense explosive force of the new compound was discovered at the cost of many window-panes and the loss of a considerable amount of glassware, but fortunately no lives were sacrificed. Neither Pelouze nor Sombrero was disposed to push the investigation any further, and no one thought of preparing it a second time until 1864, when Alfred Nobel, a Swedish engineer, had the hardihood to make it in large quantities and to propose its use as a blasting agent. His researches, however, cost the lives of many persons before the process of its manufacture was put upon a safe footing. Nitro-glycerine is made by causing one part of glycerine to flow into a tank surrounded by cold water, and containing eight parts of a mixture of two parts of sulphuric and one of nitric acid, previously prepared and cooled, until the whole of the glycerine has flowed in. The nitration of the glycerine takes place immediately, and the product settles to the bottom of the tank in the form of an oil. It is drawn off, thoroughly washed, neutralized with carbonate of soda to remove all traces of acid, and stored in stone crocks in a cool place, covered by a thin layer of water to prevent evaporation.

Thus prepared, nitro-glycerine is a pale-yellow, oily, inodorous, sweet, pungent liquid of 1·6 specific gravity. It is highly poisonous, a drop being sufficient to occasion violent pain in the back of the head, dizziness, and insensibility. Strong coffee is recommended as a remedy, and an external application of caustic alkalies is sometimes prescribed. The oil is soluble in alcohol, ether, wood-spirit, and benzole, and fortunately almost entirely insoluble in water. Some authorities state that it freezes at 45° F., others, at 40° F. It does not take fire like turpentine or alcohol when a match is applied to it, but goes out when the match is withdrawn. The inventor declares that concussion will not fire it, and says that the experiment was made by throwing up a quantity of it in a rocket, when its fall of 1,000 feet did not explode it. The specimen was afterwards fired to show that it was pure nitro-glycerine. The oil was formerly simply poured into a drill-hole and tamped with water or sand; but it was soon discovered that the dangerous liquid was liable to percolate through crevices in the rock, and occasion premature explosions when the workmen were drilling the holes. It is now enclosed in suitable tin cases or cartridges, and must be fired with a peculiar fuse and cap. Many accidents having occurred by the freezing and careless handling of nitro-glycerine, Nobel devised a method of mixing the oil with about ten per cent. wood-spirit, by which it was rendered practically harmless. When required for use it was simply necessary to add water, and the oil would settle to the bottom, and could be recovered. The cans for the transportation of oil were packed in a peculiar kind of sand, called *Kieselguhr*, known also as tripoli and infusorial earth, of which there is a great abundance in Northern Germany. It happened that some of the cans leaked, and the infusorial earth became impregnated with it. Nobel examined the properties of this moist sand, and thus by accident hit upon a process of absorbing the oil, and to the product he gave the name of dynamite.

Dynamite has now come to be a generic term for a variety of powders the chief ingredient of which is nitro-glycerine. The original dynamite is prepared by simply kneading with the naked hands twenty-five per cent. of infusorial earth and seventy-five per cent. of nitro-glycerine, or until the mixture assumes a pasty condition not unlike moist brown-sugar. Before mixing, the infusorial sand is calcined in a furnace, in order to burn out all organic matter, and it is also sifted, to free it of large grains. While still moist, it is squeezed into cartridges, which are prepared of parchment paper; and the firing is done by fulminate of silver in copper capsules, provided with patent exploders. Dynamite is considered to be much safer than nitro-glycerine; it has been subjected to many severe tests, such as throwing it down from great heights, smashing the boxes containing it by heavy weights, and allowing it to burn up quietly in a brisk fire. The employment of the capsule and detonating composition is said to be absolutely essential for the explosion of dynamite.

It may be asked how we account for many accidents which have occurred in contradiction to this statement. Two explanations have been offered—one, that the oil oozed out of the infusorial silica, and, being free, fell under the conditions of nitro-glycerine; the second, that the dynamite was frozen, and also then resembled the solid oil. The premature explosion at

Bremerhaven was supposed to be due to this latter fact. The case containing it had been exposed to severe cold and the dynamite was frozen, and was then exploded by being violently thrown from the dray. This property renders the transportation of dynamite in winter exceedingly precarious, and makes it more than extra-hazardous; it relegates it to the category of articles wholly excluded from transportation.

Dynamite, as ordinarily prepared, is a brownish-gray, sometimes reddish, inodorous, pasty, greasy mass, having the specific gravity of 1·6. It requires a heavy blow of a hammer on an anvil to explode it, and even then only the portions struck are fired. In this respect it presents great advantages over nitro-glycerine. Dynamite is largely employed at the California mines under the name of giant powder. It is usually manufactured on the spot, the infusorial earth being brought from Germany for the purpose. Lithofracteur is a variety of dynamite, being composed of nitro-glycerine, silica, and gunpowder. Dualine is composed of nitro-glycerine, fine sawdust, and nitrate of potassa. There are numerous sub-varieties bearing various trade-names, all of which have the dangerous nitro-glycerine concealed within them, and are hence to be handled with extreme care.

During the siege of Paris the French had recourse to a gunpowder prepared from picric acid. This acid is made by treating carbolic acid with nitric acid; when combined with ammonia or potash, it is exceedingly explosive. The powder is even fired by the active modification of oxygen called ozone, and is therefore liable to explosion by electricity. This renders the storing of the powder very difficult, and it is only in time of war that it is likely to be manufactured.

A powder, introduced by Schultze of Potsdam, and named for the inventor, is prepared by acting on wood by means of a mixture of sulphuric and nitric acid, and mixing the product with 26 per cent. of saltpetre. It is white, very powerful, and is best preserved in a moist state.

A class of explosives called fulminates has long been known. The fulminate of mercury was discovered by Howard in 1799, but its violent character long deterred every one from attempting any practical application of it. The investigation into the preparation and properties of this compound was one of the earliest researches performed by Baron Liebig. It is prepared by dissolving 3 parts mercury in 36 parts nitric acid, and adding to the product 17 parts alcohol. A somewhat stormy reaction takes place, and soon crystals of the fulminate collect on the bottom of the vessel; these are packed in very small quantities in paper, or are best preserved under water. Fulminates of silver and gold of an analogous composition are also now prepared and employed in percussion-caps and patent exploders.

The last explosive to which we shall refer is commonly called gun-cotton. We have not allowed ourselves much space in which to describe this important substance, but fortunately it is already pretty well known. The conversion of cotton-wool into an explosive substance by the action of a mixture of sulphuric and nitric acids was discovered in 1845 by Professor Schönbein of Basel, Switzerland. The name gun-cotton was at first applied to the product, and subsequently it was called pyroxyline and trinitro-cellulose. A solution of gun-cotton in a mixture of alcohol and ether yields the collodion so indispensable in the art of photography. A solution in camphor is now extensively employed to imitate bone and ivory under the trade-name of celluloid. Gun-cotton has been subjected to a vast number of trials, and when diluted with unchanged cotton, and compressed or spun into yarn and rope, its use in artillery and blasting has proved very successful. It can be stored under water, and dried by steam when required for use. Left to itself in dry packages, it is liable to spontaneous decomposition. Although the preparation and properties of this explosive have been much improved by Abel and Lenk, it has never come into general use in the army or at the mines, but in photography its application is very great and of the first importance.

It will thus be seen that all the recent explosives are analogous in composition; that all contain nitrogen, and that none of them can be handled with impunity. The transportation and storage of all of them should be under strict police regulations, and their manufacture should be conducted at a distance from any habitation. The most powerful is nitro-glycerine or dynamite; the safest for popular use is gunpowder.

FLORIDA.

St. Augustine, January 6, 1876.

THE Northern traveller in Florida, especially the Northern traveller with European associations and predilections, can hardly fail to be strongly attracted to this odd little city by the sea, whose flavor of antiquity affords so pleasant a contrast to the bare and somewhat dreary newness of the rest of Florida; a city which has actually a cathedral with frightful frescoed walls, and solemn processions of silent Sisters, and a plaza crowded in its sunny places with dark-eyed Minorcan children; a city, in short, in which one feels the familiar, pleasurable need of a guide-book, and begins to be actuated by a lazy desire to "do" something. To be sure, the Stars and Stripes wave obtrusively at either end of the sea-wall, and the bulk of the tourist population require to be judiciously ignored; but even against this St. Augustine will hold its own for a few years yet, by virtue of the old Spanish element and the languorous climate, two excellent bulwarks against the march of progress. Here and there among the old coquina houses springs up an obnoxious mansard roof, but the *coup d'œil* is still effective, and dirt and laziness, those powerful allies of the picturesque, have not yet vanished before the besom of Northern energy.

It is evident, however, that St. Augustine is an embryo Newport, its climate and position justifying the prediction that before many years it is to be a winter sanitarium as brilliant as Nice or Brighton. Indeed, the whole east coast of Florida possesses a charming climate, being isothermal with Madeira, the Bermudas, Southern California, and Egypt, while its heats are modified by the trade-winds from the Atlantic, and the Gulf winds which sweep across the narrow space between the west coast and the ocean. The great fertility and varied capacity of the soil of the State are undeniable, and it is in its unfortunate political history alone that the reason is to be found for the desolation and neglect so painfully apparent to the Northern eye. We have within our national boundaries so small a proportion of tropical or semi-tropical climate that every rood of available land south of the parallel of 30° N. latitude is certain to reach and maintain a high value, and the easy and constantly improving communication between Florida and the great markets of the North points to a rich future for the landowners of the State. Although the social and political disorganization consequent upon the death of slavery still exists here as in other parts of the South, Florida has the advantage of her sister States in that her lands are being colonized by an exceptional class of settlers, viz., Northern and Western farmers and mechanics, who are attracted primarily by the climate, and who bring with them capital either in money or in the still more valuable form of industrious and honest habits. Add to this the fact that the annual wave of travel leaves always on its reflux a certain proportion of permanent residents, who are commonly well-to-do and able to begin immediate improvements, and it is clear that Florida is likely to be reconstructed on a sound and natural basis. The task of reconstruction is also to a certain extent simplified by the fact that the native population is small, widely scattered, and nearly one-half negro, so that in many cases the flame of opposition has died out purely from want of fuel. There has been little opportunity for concentration, and, lacking the stimulus of kindred ardor, the heat of individual feeling has rapidly cooled—a state of things which leaves almost free play to Northern sentiment, and offers no obstacle to the establishment of the Northern institutions which come logically in the train of such colonists as those above-described.

The present cheapness of land is of course only temporary, and already fancy prices are being asked and paid for orange groves in bearing, sugar plantations, etc.; but there are still some 18,000,000 acres of United States land waiting to be pre-empted under the Homestead Law, and thousands of acres of cleared and cultivated land to be had at from $3 to $1 50 per acre. Here should be remarked a somewhat perplexing result of the frequent cessions and secessions of Florida, viz., the difficulty of obtaining clear titles to real estate. Grants of enormous extent, including much of the best land of the State, have for years remained in the hands of the original grantees of the English or Spanish Governments, or of their heirs, and in most instances these properties, belonging to non-residents, have been unfairly assessed, or not assessed at all, even the name of the owner being often unknown, and not to be discovered except by diligent search. This difficulty is gradually disappearing, but there is still too little energy in the enforcement of the State laws, and much good land is lying idle, or, worse still, is involved in expensive and troublesome litigation. It is of course below the frost-line that the most valuable crops for the Northern markets are raised, and Orange County and the neighborhood of the Halifax and Indian Rivers hold out inviting prospects to the agriculturist; but even in St. Augustine, where sharp frosts are not infrequent, many semi-tropical fruits do well, and late experiments with the finer varieties of grapes, such as Golden Chasselas, Flame-colored Tokay, Muscat, etc., are exciting great hopes among fruit-raisers.

As a permanent residence for Northerners who can afford to choose, or as a winter resort, St. Augustine has no rival on the Atlantic coast; for in addition to its delicious climate and historic interest, its immediate neigh-

borhood affords plenty of fair sport, while under its walls lies that exhaustless reservoir of amusement and excitement—the sea. For the present season, too, there is a novel attraction in the shape of the threescore Indians who for the last few months have been confined in the old Spanish fort, San Marco. It will be remembered that these men were brought on last summer from Fort Sill as being tolerably bad specimens of their kind, and they have since been held here nominally as prisoners of war, though in reality merely under a liberal surveillance, their unexpected mildness and regularity of conduct having won for them the confidence of the officers in charge. They show a good deal of intelligence, and one of their attendants assured us the other day, in an access of enthusiasm, that one or two of them are "statesmen"—a compliment upon which we, as American citizens, put divers interpretations. The good result of their imprisonment is that they are becoming deeply impressed with the power of the white man and the white man's government, and are beginning to comprehend the futility of further resistance, so that they have probably evolved certain wholesome ideas, which it is hoped they may, on their return to their respective tribes, communicate to their untravelled companions.

On this account it seemed a mistaken judgment which permitted the holiday festivities of last week to culminate in a well-advertised buffalo hunt and war-dance, as being the best thing which Christian civilization had to offer these wild warriors in the shape of entertainment. The first was a failure, being "Hamlet" with the part of *Hamlet* left out, inasmuch as the buffalo dwindled into a very small, very tame, and entirely helpless Florida bull, which meekly submitted to be slaughtered by the accustomed hand of an Indian chief. The war-dance, however, was undeniably effective, although the performers themselves seemed to find it somewhat lacking in flavor. It was a weird and savage picture which met our eyes as we passed from the soft darkness of the Southern night into the great shadowy quadrangle of San Marco, all aflame with bonfires of resinous pine logs, with ramparts massed with spectators, grey coquina walls made magical by intensest lights and shades, circles of semi-brutal figures monotonously moving to the dull beat of native drums, and over all the great, still sky. Morally, it was all wrong; from an artistic point of view, it was good enough to justify even professional moralists in forgiving its getters-up, though, in justice to the Indians, repetitions of it should be forbidden. It made but too real the tales of horror which are written in the archives of St. Augustine, and was so strangely in keeping with the dramatic proprieties of the place that one could not but be glad to carry it away as a most fitting souvenir of the city whose record runs through three centuries of massacre and pillage from Menendez to Confederate guerillas.

ORLEANISTS OUT IN THE COLD.

PARIS, December 31, 1875.

MR. SEWARD had much affection and admiration for France. Even during your terrible war, in the conversations which I had the honor to have with him, he often left the subject of his own difficulties to discuss the affairs of my country. "Your misfortune," he once said to me, "is that you have too many parties; you have as many as four—the Legitimist, the Orleanist, the Bonapartist, and the Republican. As soon as one of these parties seems to enjoy a quiet tenure of power, the three others unite, and their coalition, becoming irresistible, ends in a revolution."

I have often remembered these words of Mr. Seward since the Assembly met at Bordeaux after the disasters of the German war. To be sure, the Bonapartist party seemed then quite annihilated, and when the Assembly passed a vote of *déchéance* of the Bonapartes, in one of its first sittings, it seemed to be quite unanimous. I remember the protest uttered by M. Conti; he alone stood pale and excited in the tribune, and his voice was lost in the clamor of the new deputies. The Orleanist party had been, during the latter years, quite disorganized by M. Thiers. The doctrine preached almost every night by him in his salon in the Place St. Georges was this: there is no essential difference between the doctrines of the partisans of constitutional monarchy and those of the Moderate Republicans. Both parties are attached to the great principles of 1789; both want a representative government, and would entrust the direction of affairs to a responsible cabinet. Let us be indifferent to the form of government, let us all unite against the Imperial despotism; time will show if, after the victory, the monarchy or the republic is the best solution of our difficulties. The theoretical expression of these doctrines can be found in the 'France Nouvelle' of Prévost-Paradol, who was the doctrinaire disciple of M. Thiers, and who drew his inspiration from the conservatism of his patron. These eclectic views were solemnly set forth by M. Thiers in the famous speech which became the basis of what was called the "Truce of Bordeaux." This truce, however, could not last for ever; everybody thought that it ought to be maintained while the most urgent business was being done, while France was reorganizing her finance and her army, paying the heavy ransom to Germany, and combating the Commune. After the Commune a strong reaction took place in favor of conservatism and monarchical ideas. An attempt was made to fuse the two monarchical parties into one; the Orleanists did not ask the Legitimists to renounce their allegiance to the Comte de Chambord; they showed themselves disposed to forget the claims of the Comte de Paris, as son of Louis Philippe. The Comte de Paris, moved by a patriotic feeling, went to Frohsdorf. It was thought that three parties only were left in France—the partisans of the Bourbons, the partisans of the Republic, and the partisans of the Bonapartes; and, as the last were completely vanquished at the time of the so-called fusion, that there were practically only two parties left.

Unfortunately, the Comte de Chambord proved intractable; he did not understand the situation of France, and his patriotism was not equal to the patriotism of the Comte de Paris. He offended the pride and the sentiment of France, and the fusion, which might have saved the country, will only be remembered in history as a lamentable failure. The Assembly, which had been on the point of erecting the monarchy, found itself unable to do so; the politicians invented for a time a new sort of government, under the name of Septennate. The conservative majority confided the executive power to the head of the army, and waited for some time in hopes of some political inspiration. The Septennate could not be called a military dictatorship, as the Chamber was still sovereign and made all the laws; but this parliamentary sovereignty could not last for ever, and it was felt that some definite organization must be found. The Orleanists, who had tried to make a fusion with the Right, now tried to make a fusion with the Left. As time went on and the memories of the Commune were forgotten, the idea of a conservative republic was slowly gaining ground amongst those deputies who were grouped under the name of Right Centre. The Republicans themselves had become for a time very moderate; the lion, Gambetta, seemed as mild as a lamb. Marshal MacMahon inspired the radicals with such awe that France had become the quietest country in Europe. Negotiations were opened between the Orleanists and the Republicans. The famous *conjunction* of the Centres, a phenomenon which had been often predicted, but which had long proved as impossible as some conjunction of planets, took place at last. The Republican negotiators were not the ardent Gambettists. They were chosen among scholarly, wise, religious people. M. Wallon, the author of the constitution which has kept his name, has written a life of Saint Louis which a monk might sign with his name. M. Laboulaye is known as a man of great learning, wisdom, and moderation of character. The marriage between the Orleanists and the Moderate Republicans was what the French call a marriage of reason. Such men as M. Wallon and M. Laboulaye well understood what they owed to the party which was the most important in the Chamber. They knew that the majority of the Chamber was monarchical, that the obstacle to the monarchy had not come from the Chamber but from the outside. The state of the country was such that it required a strong executive power, and direct universal suffrage had shown such caprices in France that it was felt necessary to create a Senate which was not the expression of the mere sovereignty of number. The oldest Orleanists were slow to persuade themselves to jump over the Republican Rubicon. They saw on the other side of the water, behind the good and wise men who were waiting for them, the long and dark lines of the Republican army, and in the distance, behind the Republican electors, the red flag of the Commune. The younger Orleanists felt more confident. They took the leap first, and the Wallon constitution was voted. During the long discussion of this constitution, Gambetta was silent; Louis Blanc alone objected to some of the provisions of the constitution. The Republican press was celebrating the disinterestedness, the moderation, of the Left.

No sooner was the Republican constitution voted and the great boon secured than the Republicans changed their tactics. The Assembly had decided that the new Senate should have as its nucleus seventy-five senators for life, named by itself. These *patres conscripti* were destined to be the patrons, the guardians of the new compact. What would have been more natural than to choose these seventy-five political *Immortels* out of the ranks of those who had together made the new constitution? But M. Thiers and Gambetta, now in close alliance, decided to exclude entirely the Orleanists from their lists, and formed an alliance against them with the Bonapartists and the Ultra-Legitimists, who were incensed with the Orleanists simply because they had accepted the Wallon constitution. This time again we saw the old spectacle of three parties united against one,

and the coalition was all the more immoral because the two Centres of the Assembly had seemed for a moment united in the same wishes, and because the Orleanists, grouped in what we call the Right Centre, had voted and accepted the new constitution in good faith and without any reserve. This systematic and unmerciful exclusion of the Orleanists from the senatorial lists is an event of great significance. Of course it will be said that all is over with them, and it may be that the same coalition which has triumphed in the elections in the Assembly will be tried in the provinces; but what will be the result? Have the Republicans any good reason for seeing in the two future Assemblies fewer Orleanist and more Bonapartist names? The Right Centre has twice tried to diminish by one the number of the French parties—first, by the so-called fusion; secondly, by assenting to the Wallon constitution. Now it may be inclined to try a third method; it can suppress itself, retire into private life, and leave the Republicans *tête-à-tête* with the Bonapartists. The letters of the Duc d'Aumale and of his brother the Prince de Joinville are a step in this direction. The Princes of Orleans declined to be named senators in the Departments of which they have been the deputies since 1871. They frankly tell their electors that they had wished the re-establishment of the monarchy "which made France"; this was found impossible, but they do not think themselves obliged to serve their country otherwise than as soldiers. Nobody is bound by any duty to become a legislator, and the natural legislators of a republic are the confessed and professed Republicans. A republic which could only hold its own by covering itself with the prestige of old names, of conservative finance, of nobility, and of wealth, which should be obliged to screen itself behind a thick veil of eminent monarchists, could not be of long duration. Everybody knows that the Orleanists will not conspire against the Republic in the Bonapartist fashion; they will make no *coup d'état;* they will not, like M. Granier de Cassagnac, promise to the country a régime of "panem et circenses"; they will make no low appeal to the socialist passions of the multitude; but they are not obliged to become the leading actors in the new drama which is now beginning. Napoleon the First called all the surviving Jacobins to his Senate; he changed their red Phrygian caps into feathered hats, their carmagnoles into embroidered coats; he was mistaken not in his judgment of men, but in his judgment of their ability; his Jacobin senators deposed him as soon as he ceased to be strong enough to force them into obedience. Fouché the regicide became the minister of Louis XVIII., but he brought no real strength to the Restoration. There must be a certain unity in the life of every man; when he ceases to play an active part, he can remain a witness.

The French electors will soon have to name their new senators and their new deputies, and it may be said that the *loyal* trial of the Republic is only now beginning. Every good Frenchman must hope that the trial will be a happy one; but we are not all obliged to come forward and force ourselves on the public. The time may come when new men will be asked for, when the actors who will soon come on the stage will be hissed, when the country will require a complete change of politics. The country does not really regret the Empire, and if the Republic of the Republicans proves to be a failure, the monarchical party will be all the stronger for not having consumed its strength in unnecessary struggles.

Correspondence.

"THACKERAYANA."

To the Editor of The Nation:

Sir: A recent number of the *Nation* contains a review of a book called 'Thackerayana.' Will you allow me to state that Mr. Thackeray's representatives entirely disapproved of that publication, though they had no legal power to stop it? The drawings reproduced were mere schoolboy scrawls, roughly reproduced, and giving an utterly inadequate impression of Mr. Thackeray's feeling for art and powers of execution. Some proof of this statement may be found in a small collection of his more mature drawings, carefully reproduced by a satisfactory process, and contained in a book just published called 'The Orphan of Pimlico.'

I feel it right to add, in regard to a suggestion in your article, that it is from deference to Mr. Thackeray's own express desire that no biography or correspondence has been or will be published by his representatives.—Yours truly,

Leslie Stephen.

London, Dec 30, 1875.

Notes.

By the Fourth of July New London is to be honored with a very remarkable Centennial publication, nothing less than a work maintaining the thesis—"New London, rather than New York, as a Mercantile Port for all the Navies of the World." It will "display and illustrate with the highest procurable art, and with mathematical accuracy," the site of New London, "its inland sea, its access to the various States, municipal sections, seats of commerce, and homes of agriculture in the United States, which give it the opportunity to be the first depot of trade in the whole Empire." So says the prospectus, and adds that the work will be edited by Col. Charles A. Cole, late the Senior Clerk of H.M. Public Record Office, England, Assistant Commissioner of the Great Exhibition of 1851, etc., etc. Colonel Cole may be addressed at the Metropolitan Hotel, New London, Conn. The price of the volume to subscribers will be $100; a few copies in vellum, $500.——J. B. Lippincott & Co., Philadelphia, have in press 'A Summer in Europe,' by Mary H. Wills; a 'Life of "Stonewall" Jackson,' by S. N. Randolph; 'The Conflict of Labor and Capital,' by Albert S. Bolles; 'Brachet's French Grammar,' adapted for English schools by P. H. E. Brette and Gustave Masson; and an 'Encyclopædia of Chemistry.'——Mr. Leypoldt makes a number of interesting announcements in his *Publishers' Weekly* for Jan. 8. First, he will bring out during the present year his great 'American Catalogue,' in two volumes; then, in uniform binding, he will publish a 'Centennial Publishers' Uniform Trade-List,' after which this annual will become a biennial, on even years; and, finally, "for general use and distribution in connection with the Exhibition, a little catalogue of representative American books, arranged by publishers, only American books being admitted."——Henry Holt & Co.'s announcements include 'The Religious Sentiment,' by Dr. D. G. Brinton, together with a second edition of the same author's 'Myths of the New World'; 'Life Histories of Animals, including Man,' by Prof. A. S. Packard, jun., and the fifth edition of his excellent 'Guide to the Study of Insects'; 'Wages and the Wages Class,' by Prof. Francis A. Walker; the sixth volume of Freeman's 'Historical Course for Schools,' being a history of the United States, by J. A. Doyle, with maps by Prof. F. A. Walker; a new edition of Maine's 'Village Communities,' supplemented by heretofore uncollected miscellanies; 'Wit and Wisdom from Thomas Carlyle'; and Taine's 'Ancient Régime.'

—With Part 30 the publication of Stieler's Hand-Atlas comes to an end (Gotha: Justus Perthes; New York: L. W. Schmidt, and B. Westermann & Co.) Of the total ninety maps the last three now before us represent India and Inner Asia, together with the debatable ground east of the Caspian which is as yet called Russian Empire only in part, Persia, Afghanistan, and Beloochistan. In fact, this instalment has a peculiar interest for British students of that extreme "Eastern Question" which looms up along the line of the Himalayas. The atlas thus completed has no rival outside of Germany, and it has there the advantage of being the latest. The rapid progress of geographical discovery of course makes any such work begin to grow obsolete as soon as it is finished on stone or on copper, but for many years to come the value of Stieler will be practically unimpaired for the great majority of those who consult it. This is especially true of the more civilized portions of the earth. For example, the physical map of Europe will stand in little need of change except for the Turkish dominions, which are still very imperfectly known. Meantime, the latest results of geographical research must be sought by the curious in the numerous maps published in connection with such periodicals as the *Geographical Magazine* (London: Trübner & Co.), the Paris Geographical Society's *Bulletin*, the Berlin Geographical Society's *Zeitschrift* (Dietrich Reimer), Petermann's *Mittheilungen* (Gotha), the Italian *Cosmos* (Turin), etc., etc. Thus, the English magazine for December contains two maps embodying Stanley's observations on the Upper Nile, and will doubtless first give to the world the itinerary of Lieut. Cameron, who has just traversed Central Africa south of the Congo, and is daily expected in England. The *Zeitschrift*, No. 59, gives a new map of the Transvaal Republic (by a German missionary, A. Merensky), which is on a larger scale, more full of details, and on the whole more accurate than the corresponding map (No. 72) in Stieler. As for Central Asia, one has only to read in the last *Polybiblion* (for December) the account of the activity and enthusiasm of the Russian Geographical Society to conclude that no atlas-maker can hope to keep up with its contributions to our knowledge of that region.

—Of all our Western Territories, the most fertile and attractive portion is that which has been set aside by Government for its wards, the remnants of the Indian tribes. A rolling country, well covered with timber, with

fertile valleys well watered by the tributaries of the Arkansas and Red Rivers, the Indian Territory has long been looked upon with an envious eye by the settlers of the less-favored regions on its borders. Should the railroad bills now before Congress be passed during the present session, a long-desired opportunity will soon be given for white settlers to gain a foothold in the Territory. This once accomplished, we shall not be surprised to learn some day that religion and humanity require the removal of our red brethren to a less fertile spot and the opening of the country to settlement by the whites. A large map of this Territory (in four sheets, 22×18 inches each) has recently been issued by the Military Department of the Missouri, Gen. John Pope commanding. It is a compilation made by E. H. Ruffner, First Lieutenant of Engineers, and A. Hunnius, draughtsman, from the plats of the Land Office and from route maps of various military expeditions. It is neatly drawn on a scale of 1:500,000, or about eight miles to the inch, and handsomely photolithographed, on good paper, by R. P. Studley & Co. of St. Louis. To the gentlemen whose three years' labor it represents great credit is due for their skill and patience in co-ordinating the heterogeneous material they had at hand. The map gives a larger amount of detailed topography along the water-courses than could be found in most of those of our thickly-settled Eastern States. The township lines of the land surveys, as well as the boundaries of the various Indian reservations, are also represented. Taken as a whole, it is necessarily very unequal in finish, since, while the parts taken from the Land Office plats (on a scale of two inches to the mile, or eight times as large as this) present a disproportionate amount of detail, some portions are left nearly blank. While this defect, necessary from the incompleteness of the material in the hands of the compilers, detracts from the general effect of the map, it is a guarantee of its reliability, since the draughtsman has evidently confined himself to facts, and given less scope to his imagination than is apt to be the case where a map is made simply to attract the eye of the public. Moreover, the map is accompanied by a list of the authorities on which it is based. For strictly military purposes, it might be considered that the topography would have been clearer had the township lines been omitted. It is, however, a very praiseworthy effort on the part of our military authorities to render available, as far as their limited means will allow, the map material which is scattered through the various Government Departments. We hope the day is not far distant when our Government, following the example of European nations, may adopt some regular system for preparing reliable maps of our country, which may be available not only to the army but to the general public.

—The magazines for the beginning of the year always contain a variety of noticeable articles, and in looking over the January number of *Scribner's* and the *Atlantic* we have been puzzled to say which among many were most important. The story by Mr. Howells, called "Private Theatricals," lately begun in the *Atlantic*, and now marching steadily forward to what may possibly be its tragic conclusion, is, of the purely literary articles in that magazine, most distinctly an "event." We may, by the way, commend it to the notice of the discriminating writer of the reviews of what is known to the *Saturday Review* as "American literature," who, it seems to us, is contracting a habit of devoting his time too exclusively to books the existence of which is unsuspected on this side of the water. In it Mr. Howells is again showing his remarkable power in the delineation of feminine character. This has always seemed to us to be one of his strongest points. No one who studies the manœuvres of Mrs. Farrell can fail to admit the possession by the author of a power of insight into the female heart and mind that is masterly. It is, indeed, a picture which would probably draw down upon Mr. Howells the severest censure of the *Woman's Journal*, were it not that Mrs. Farrell belongs to a class which the greater part of women unite in condemning, and the admiration of whom by men always excites very general feminine pity and amazement. Mrs. Farrell is an accomplished flirt—or, perhaps we should say, a born flirt—designed for her part by nature, and perfected in it by diligent and conscientious application. Her mission in the story seems to be, if we may venture a prediction, to shatter the friendship of two young men, one of whom is already hopelessly in love with her, while the other "sees through" her completely. But we must defer any extended notice of what promises to be a very entertaining story till it is completed.

—Mr. Clarence Cook is writing some articles for *Scribner's* on household furniture, illustrated by some pretty cuts of what we suppose the Philistine would derisively call earnest candlesticks, worthy étagères, and sincere chairs and tables, and moral furniture in general. We can cordially recommend to those who can afford to follow them most of Mr. Cook's ideas, though we should say for so severely moral a devotee of beauty he rather glosses over the expense of the matter in saying that many of "the best things in house decorating and furnishing are those that cost least." We should be willing to lay a very heavy wager that the pretty little chair and table in "No. 5," modest and unostentatious as they appear in the picture, would cost a pretty little sum of money for the families of the "meek and lowly" to expend. There is, too, a slight vagueness which will perhaps trouble some readers when Mr. Cook lays it down that there ought to be gathered on the shelf or shelves over the fireplace "a few beautiful and chosen things—the most beautiful that the family purse can afford, though it is by no means necessary that they should cost much, the main point being that they should be things to lift us up, to feed thought and feeling, things we are willing to live with, to have our children grow up with, and that we never can become tired of, because they belong alike to nature and to humanity." And when we are finally advised, in case we cannot find what we like at the furniture stores, to employ an architect—"any one of the company of cultivated, thoughtful young men who are doing so much to honor architecture among us"—to tell him what we want and have him draw a design, we cannot but feel a sordid curiosity as to what Mr. Cook's glittering generalities about expense really mean. There is, however, an enormous class of people who have plenty of money to spend, and might just as well spend it with good taste as with bad, and if Mr. Cook can persuade them to do it, the recording angel will no doubt blot out his somewhat tortuous record as to statements of cost. It seems to be, too, a radical mistake to suppose that it is the expense which stands in the way of the development of good taste in the United States. There are no countries in the world where people are more ready to spend money on what is intended to please the eye and make domestic life attractive than England and this country; the trouble is that we do not know how to do it. Naturally, we fall back upon the simple and barbarous device of making as much display with our money as possible. It is not, therefore, a demonstration that it is possible to make our houses beautiful for a trifling cost that is needed, but general æsthetic cultivation among the possessors of wealth, who, it must be confessed, may fairly be denounced for the present as Philistines. We may suggest to Mr. Cook that he might make an excellent article showing, not how beautiful, but how ugly and barbarous interiors and exteriors may be made, with illustrations from real life in New York, showing the imitation coal-fire with gas flames, Pullman palace-car wainscoting, sham marble pillars, and, best of all, the modern brown-stone high "stoop." One or two of the finest specimens of the latter ought, by the way, to be detached from their houses and exhibited at Philadelphia, with a descriptive label giving their cost and the use to which they are put.

—Among English art-periodicals the *Portfolio* is so easily the first that it is difficult to find proper epithets for it except those that would seem to be meant for the ideal or imaginary organ of perfect artistic criticism. Mr. Hamerton is an editor whose rare and impartial culture makes him hold in his mind with an even balance the claims both of his country's art and of that of the Continent, and he suffuses through his periodical a cosmopolitanism quite new to similar English publications. M. Ménard, who manages the notices of French pictures, must be singled out for high praise also; he has an enviable manner of getting aloft over the noise of the schools that are warring and clashing around him, and delivering judgments that are urbane and impartial without being insipid. The only nationality that has seemed to suffer neglect hitherto, the German, is to be handled in the approaching numbers by Mr. Beavington Atkinson. The coming months will also be distinguished by plates from that rare etcher, Dr. Seymour Haden, and from Ernest George; otherwise, the *Portfolio* for 1876 will not change its pathway in any important respect. It could hardly strike out a better. The numbers for December and January are quite as good as usual. The *Portfolio* is represented in New York by J. W. Bouton.

—The unusually high annual death-rate for the city of Boston in the years 1872 and 1873 led to the appointment of a medical commission to investigate the sanitary condition of the city. While the death-rate for 1871 was 23·5 per 1,000 living inhabitants, and the mean death-rate for the twenty years from 1854 to 1873, inclusive, was 24·5, that for 1872 was 30·4 and that for 1873 28·5. The primary object of the Commission was to ascertain whether this serious increase of mortality indicated any new causes of disease peculiar to the city or any such exaggeration of the old ones as might call for special measures of counteraction. The report is a model of careful and judicious investigation and systematic and intelligible statement of results. It is really the work of Dr. T. B. Curtis, to whom the other members of the Commission take pains to give full credit in a

printed note accompanying the report. The unusual mortality of the two years mentioned above was found not to depend upon any increasing or permanent local source of disease, but to be due to temporary epidemics of small-pox, scarlatina, and cerebro-spinal meningitis, together with diarrhœal affections caused by the excessive heat of the month of July in 1872. Nevertheless, the Commission proceeded to examine all the facts bearing upon the health of the city, with a view to improve its sanitary condition, so far as possible, and to reduce its death-rate within narrower limits. One of the most interesting features of the report for the general reader is its statement of the difficulties connected with sanitary statistics and their use for arriving at practical deductions. Even supposing the causes of death in any given community to be fully and accurately registered, it is by no means a simple matter to decide upon their interpretation. So many different elements combine to produce the final result, that if one of them be overlooked the most erroneous conclusions may be adopted. It is well known that the annual death-rate of a town or city gives little or no indication of the vitality of its population, unless the birth-rate is also ascertained; and while it is comparatively easy to provide by municipal regulations for a complete registration of deaths, it is notoriously difficult to secure a similar registration of the births. A remarkable instance of liability to such statistical errors is given in the report in reference to consumption. The mortality from this disease had steadily diminished for fifteen years, both in Boston and throughout the State of Massachusetts, from 4·58 per 1,000, the rate in 1855, to 3·95 per 1,000, the rate in 1870. This was naturally regarded as indicating either an increased freedom from the causes of consumption, due to amelioration of climate, or better methods of medical treatment. But it appears on further investigation that there are two other facts which may have had a share in the result. First, the Irish as a class are much more liable to consumption than either the native population of native parentage or those of any other foreign nationality; and, secondly, the proportion of Irish population in Massachusetts has been steadily diminishing during the same period as that in which the proportion of deaths by consumption has decreased. It is possible, therefore, that the disease may be as frequent and as fatal among all classes as it was formerly; only the class most liable to it having become comparatively less numerous, of course the total percentage of deaths from this cause is diminished in proportion. Among the conclusions reached by the Commission are the following: 1st. The death-rate in Boston is considerably higher among those of foreign than those of native parentage; the population of foreign parentage being, in 1870, 58·4 per cent. of the whole, but the deaths among the same class being 70·9 per cent. of the whole. 2d. The Irish are more liable to mortality from constitutional causes than either natives or the generality of other foreigners; and Boston has a larger proportion of Irish population than any other city in the United States. 3d. The Irish, as compared with other foreign populations throughout the United States, are liable in an exceptional degree to death not only from consumption, but from bronchitis and Bright's disease. They are also exceptionally liable, though in a less degree, to cancer, pneumonia, and diarrhœal affections. The report contains a number of well-executed colored charts, so arranged as to present to the eye, in a convenient form, the comparative numerical statements bearing on a variety of topics.

—The *Academy* of Oct. 2 and 9 contains a review, by A. von Reumont, of Ficker's latest work, 'Forschungen zur Reichs- und Rechtsgeschichte Italiens,' in which he sketches the history of the formation of the States of the Church, according to the recent and authoritative investigations of this distinguished author. These territories, as they continued from 1278 to 1860, comprised four distinct groups—the Duchy of Rome, the Duchy of Spoleto, the March of Ancona (the old Pentapolis), and the Romagna (the old Exarchate). The first of these, in the dissolution of the Byzantine rule over Italy, came under the authority of the Bishop of Rome—as so many cities at this time came under the rule of their bishops—without, however, ceasing to form part of the imperial dominions. It is known distinctively as the Patrimony of St. Peter. Then came the donations of Pepin and Charles the Great and the bequest of the Countess Matilda, in virtue of which the Pope laid claim to all central Italy, including Tuscany, and to the Island of Sardinia. It was not, however, until the pontificate of Innocent III. that these claims could be pushed; for this able and ambitious pontiff found only a weak and divided empire to contend against. At this period, therefore, the Duchy of Spoleto and the March of Ancona were acquired, and the acquisition was made secure after the fall of the Hohenstaufen. The Romagna was resigned to Gregory X. by Rodolf of Habsburg (1278); but the claims to the inheritance of Matilda were resisted by the Tuscan league of cities, and were tacitly dropped at the time of the decline of the Papacy and its removal to Avignon in the fourteenth century. The territories remained, therefore, as they were at the close of the twelfth century.

—Jules de Mohl, whose death was announced recently, although a German by birth, became a naturalized citizen of France, and was well known for his interest in the study of Oriental languages, which he pursued almost entirely in the latter country. He was born at Stuttgart October 25, 1800, and at Tübingen studied theology with the view of becoming an evangelical clergyman. But his taste for linguistics turned him from that plan, and he went first to England, and in 1823 to Paris, that he might give himself wholly to more congenial work. In that city he studied Chinese under Abel Rémusat; Persian and Arabic, under De Sacy. He published Latin translations of the 'Y-king' and the 'Shi-king,' and a French translation of the 'Shah-Nameh.' In 1844 he was elected a member of the Institute, succeeding Burnouf the elder in the Academy of Inscriptions and *belles-lettres*. In 1847 he was chosen to fill the Professorship of Persian in the Collége de France. In 1852 he was appointed inspector of the Oriental department of the Imprimerie Impériale, and was also made Secretary of the Société Asiatique. His reports, while holding this position, have been of much service to Orientalists. Of his private life, it may be of interest to state that for many years—that is, from 1831 until his marriage in 1847—he lived with Jean-Jacques Ampère. Two or three of his letters to Ampère are to be found in the recently published 'Correspondance et Souvenirs' of Jean-Jacques and his father. Mohl himself objected to having more printed. It is to be hoped that they may yet see the light. They will doubtless be entertaining reading, judging from the few specimens given. Three brothers of M. Mohl have obtained eminence in Germany—one as a botanist, another as a writer on political economy, and a third as a professor of law and as an active politician and political writer.

—Two histories of Hungary, publishing by instalments, are worthy rivals for the favor of the public. The first, by Fessler, is an old standard work, now edited and enlarged by Ernst Klein. It appears in *Lieferungen* of 125 pages, fourteen of which have already appeared, making three volumes, and reaching about to the close of the fifteenth century. It is a book of considerable literary merit, and although of German authorship (published by Brockhaus at Leipzig) carries with it the authority of the distinguished Hungarian historian, Michael Horváth, who provides it with a preface. The rival work, that of Ladislas Szalay, is more distinctively a national history, being written originally in Hungarian (translated by Heinrich Wögerer) and published at Buda-Pesth. This also has reached three volumes, the last of which has been recently published. Its first *Abtheilung*, published in 1873, covers the period of the Hunyadi (including, also, the reigns of Albert of Austria and his son, Ladislas Postumus); the second (1874) gives the kings of the family of Jagiello down to the extinction of Hungarian independence with the battle of Mohács (1526). Notwithstanding the tragic event with which it closes, the history bears after all a triumphant impress; for Hungary has, during the publication of the work, regained her lost independence. The first volume was published in 1851, when its author was in exile in Switzerland; the German translation appeared in 1866, the year whose events compelled the substantial independence of Hungary. The events, too, of this third volume are well adapted to the pen of a patriotic historian, as it was under the house of Hunyadi that Hungary reached her greatest glory, even if her period of greatest power may be attributed to the Angevin kings of a century earlier.

—A recent valuable contribution to the subject of Indo-European folk-lore, and more especially to that of Great Britain, is from the pen of a Frenchman, and is entitled 'Contes Populaires de la Grande-Bretagne' (Paris, 1875). In this handsome volume of over four hundred pages M. Loys Brueyre has given a translation of one hundred of the most popular stories of Great Britain, selected chiefly from Campbell's 'Highland Tales,' Kennedy's 'Fireside Stories of Ireland,' and the works of Henderson, Halliwell, and others on this subject. The translations are preceded by an interesting introduction containing a very good bibliography of the subject, and an examination of the various theories of the origin of popular tales. M. Brueyre pronounces, very correctly it seems to us, in favor of the theory which traces these tales back to a time before the dispersion of the Aryan peoples. He divides his hundred stories into three classes—viz., stories of Aryan origin, traditions of local origin (in England this class contains the fairy stories), and religious legends, ballads, nursery rhymes, etc. Each story is followed by a learned note tracing the material of the story in the folk-lore of other lands. These notes are generally quite full, as far as Scandinavian and French parallels are concerned; but the part relating to Italian folk-lore is generally meagre, perhaps owing to the fact that M.

Brueyre was not able to obtain Pitrè's great collection in time, although there was no reason why he should not have consulted Gonzenbach's 'Sicilianische Märchen' (2 vols., Leipzig, 1870), with Köhler's invaluable notes. Excellent as is his work, therefore, it is far behind those just mentioned. It will, however, doubtless serve to awaken an interest in the subject in France, and, we might add, also in England, where, judging by some of the reviews of this book, there is still much to be learned in regard to the fundamental principles of Indo-European folk-lore.

—One of the most popular stories of the above collection, that of Tom Thumb, has been made the subject of an elaborate monograph by the distinguished French scholar, Gaston Paris, with the title 'Le Petit Poucet et la Grande Ourse' (Paris : Vieweg ; 1875). In this interesting work, the size of which, small 16mo, is quite appropriate to the subject, the author endeavors to show that the story of Tom Thumb is a stellar myth, and also is closely related to the myth of Hermes. In the Walloon dialect the constellation of the Great Bear is termed *Chaur-Pôcè—i. e., char-Poucet;* the four stars forming a square represent, according to the peasants, the four wheels of a cart, the three in a line to the left the three horses, while the little star (*g*) above the middle horse is considered the driver and named *Pôcè*. With this as his point of departure, M. Paris investigates the history of the constellation from the earliest times, shows how it was once considered a mere assemblage of oxen, and connects Tom Thumb with it from one of the latter's chief characteristics, that of driver of his father's horses or oxen. In the second part of his investigation he shows the relation between the myths of Hermes and that of Tom Thumb. It must be confessed that there is a striking resemblance between the thievish propensities and experiences of the two, and it is difficult to regard this resemblance as merely fortuitous. In the course of his researches M. Paris examines in detail all the various forms of his story in the folk-lore of nearly every European people, and brings to light a mass of interesting details, etymological as well as mythological.

BURKE AS A PROPHET.*

BURKE'S 'Reflections' have a singular interest as illustrations of the extent and limits of historical prediction. To his own age he was in the strictest sense a prophet. His most celebrated critic thus testified in later years to his prescience : "The Opposition mistook the moral character of the Revolution, the Ministers mistook its force, and both parties, from pique, pride, habit, and obstinacy, persisted in these mistakes after they were disabused by experience. Mr. Burke alone avoided both these fatal mistakes. He saw both the malignity and the strength of the Revolution; but where there was wisdom to discover the truth, there was not power and perhaps there was not political skill to make that wisdom available for the salvation of Europe." "Edmund Burké," writes Coleridge, "possessed and had sedulously sharpened that eye which sees all things, actions, and events in relation to the laws that determine their existence and circumscribe their possibility. He referred habitually to principles. He was a scientific statesman, and therefore a seer, for every principle contains in itself the germs of a prophecy ; and, as the prophetic power is the essential privilege of science, so the fulfilment of its oracles supplies the outward and (to men in general) the only test of its claim to the title." Nor can a cool critic who compares Burke's forecast of the then future with the actual course of what is now the past, deny that his contemporaries were justified in ascribing to him something like the power of divination. Isolated predictions which are remarkable enough may easily be culled from his ante-Revolutionary writings—such, for example, as the prophecy uttered in 1791, that the Revolutionary excesses would end in the military despotism of some "popular general, who understands the art of conciliating the soldiery, who possesses the true spirit of command," and "shall draw the eyes of all men upon himself." So might be cited, and with more point, the following words, which all but close the letter in which the 'Reflections' are embodied : "I have told you candidly my sentiments. I think they are not likely to alter yours. I do not know that they ought. You are young ; you cannot guide, but must follow, the fortune of your country. But hereafter they may be of some use to you, in some future form which your commonwealth may take. In the present it can hardly remain ; but before its final settlement it may be obliged to pass, as one of our poets says, 'through great varieties of untried being,' and in all its transmigrations to be purified by fire and blood." The force of these sentences can be understood only by recalling the hopes which agitated Europe in 1791, and comparing them with the forebodings with which in 1876 men speculate on the possibility of France being ever able to reach any final settlement.

Recent investigations further prove Burke's insight into the character of the leading Revolutionists and the results of their policy. No one who has studied either the views of Quinet or the minute researches of Mortier-Ternault can doubt that Burke was in the main justified both in his statesmanlike contempt for the incapacity of the Terrorists, and in the opinion that the division of powers introduced by the Assembly would, inevitably, lead to the uncontrolled despotism of Paris. But instances of happy conjectures which may be balanced by some gross mistakes, or of acute criticisms the effect of which is diminished by observing one or two examples of ignorance or miscalculation, do not give a measure of Burke's foresight. With him (as with all prophets) the predictive portion of his work is of secondary importance compared with his moral teaching. His claim to be a seer lies in the possession of the true prophetic gifts combined with the strength and the weaknesses of the prophetic temperament. His foresight is grounded on the perception of the certainty of the moral laws of human nature, combined with the passionate conviction that theories or policies grounded on the neglect of these laws lead to the ruin of all who put their trust in them. In this feature Burke's foresight differs from the foresight of a man like De Tocqueville, whose predictive power results rather from the perfection of intellectual criticism than from the force of moral insight. With Burke, the conclusions of his intellect are always colored by ethical sentiment. This is so even in his treatment of the quarrel between England and America, though his writings on the American War are by far the finest specimen of his intellectual power ; but, throughout his anti-Revolutionary polemics, intellectual criticism, however acute, is little more than the cover of moral denunciation. An example of this moral indignation, as well as of the kind of insight to which it gave rise, is seen in Burke's picture of the violent movement by which the Royal family were brought by the populace to Paris. Most Englishmen saw in these opening scenes of the Revolution the triumph of liberty over despotism. Burke, in the march from Versailles, presaged the Reign of Terror. He describes it as a "spectacle more resembling a procession of American savages entering into Onondaga after some of their murders, called victories, and leading into hovels hung round with scalps their captives, overpowered with the scoffs and buffets of women as ferocious as themselves, much more than it resembled the triumphal pomp of a civilized martial nation—if a civilized nation, or men who had a sense of generosity, were capable of a personal triumph over the fallen and afflicted." The language savors of exaggeration, but, in denouncing the characteristic cruelty of French factions, which was quite as apparent in the crowd of émigrés who went to jeer at La Fayette in prison as in the Parisian fishwomen insulting their captive king, Burke was on sure ground. Massacres and outrages were not the augury of a period of freedom and reform. The Whigs, who hoped to see the movement of 1789 become a repetition of the Revolution of 1688, were forced to shut their eyes to patent facts. Burke, who refused to believe that cruelty and perfidy could beget freedom and justice, had, at any rate in this respect, the immense advantage always belonging to a man who can look facts in the face. His fierce moral indignation led him so far to the truth, and, seeing the truth, he possessed the moral foresight of a prophet.

Yet, to modern students, the failure of Burke's prophecies is as conspicuous as their success. He thought England threatened with revolution, yet every historian sees now, what Coleridge saw clearly enough a few years later, that England was not, at the beginning of the war with France, in the condition of a country in which there existed a general disposition to change and rebellion. Burke looked upon France, at any rate when he wrote the 'Reflections,' as on the point of ruin, though France was on the eve of asserting her supremacy over Europe. He based his policy on the assumption that the French nation was with the nobles at Coblentz, but every year which has passed since he wrote has given this assumption the lie. Though he formed a just estimate of the "malignity" of the Revolution, and in a certain sense of its "strength," he clearly misunderstood the nature of the movement. The outbreaks of violence in Paris, the death of the king and queen, and the Reign of Terror, are but the most dramatic incidents of a movement of which what is specially called the "French" Revolution was itself merely a part.

If the history of France for the last eighty years shows the soundness, the history of England for the same period exhibits the weak side, of Burke's views. His constitutionalism, with all its veneration for the balances, the fictions, and, to speak plainly, the dodges of the constitution, is as dead as the wordy Jacobinism in which so eminent a man as Price expressed his keen sense of real grievances, mingled with the vague

* 'Reflections on the Revolution in France. Burke's Select Works, with Introduction and Notes by E. J. Payne.' New York : Macmillan & Co.

feeling which possessed all the leading spirits of the day (except Burke himself) that society stood in need of radical reformation. Nor is it hard to explain Burke's errors. Prophetic passion opens to genius secrets hidden from the more torpid imagination of ordinary common sense. But passion is at the best a delusive guide. What Burke saw he saw with all the clearness of genius, but he saw clearly partly because he fixed his gaze intently on one part of the prospect, and, though unconsciously, none the less absolutely refused to look at anything else than the follies and the horrors of the Revolutionists at Paris. To the feelings which led men of all creeds and nations to welcome any hope of change, he was absolutely dead. He himself is perplexed by the outbreak of violence and fanaticism for which he can find no justification. "Louis the Sixteenth is no tyrant. All the outcry against the nobility" is "a work of art." In the French clergy he sees nothing but virtue ; the higher clergy especially "seemed to me rather a superior class—a set of men amongst whom you would not be surprised to find a Fénelon." Why then should king, nobles, and clergy be hated ? On the other hand, the "philosophic cabal," and Rousseau especially, fill him with simple horror and contempt. Sometimes he appears to think that there might be such a thing as national lunacy, and that the French had gone mad. He cites a passage from a speech of Rabaut Saint-Etienne, to the effect that everything in France must be destroyed and created anew, and comments on it as the remark of a madman; yet a little reflection on the speaker's history might have guided Burke to one at least of the sources of French discontent. Rabaut Saint-Etienne was himself a leading Protestant, whose father had passed his life in preaching to persecuted co-religionists at the risk of death and torture. It has been said with considerable truth of Burke, that though he was not a Roman Catholic he was in no sense a Protestant. His sympathies were with the old Church. The 'Reflections' contain a curious passage deprecating the destruction of monastic institutions, which must, as Mr. Payne points out, have been intended as a censure on the policy of the Protestant reformers.

This tenderness to the old creed, connected as it no doubt was with Burke's family history, has also a very close connection with traits of his genius which account in a great measure for his attitude towards the whole European revolutionary movement. His Catholic proclivities are a part of what Mr. Payne well calls his "conservatism." They are also connected with his political view of religious questions, as well as with his almost morbid hatred of the application of abstract truths or generalizations to politics. Hence, the real strength not of the French revolutionists, but of the teachers whose dogmas gave intellectual force to the Revolution, was hidden from Burke. The fervor for "enlightenment," which in the noblest spirits of the eighteenth century, such as Turgot, was a passion for truth, and which gave an element of true faith to men of a much baser stamp, was as unknown to Burke as it could be to any man of genius and benevolence. He did not understand this passion, and, therefore, failed really to appreciate the nature of the fanaticism to which the passion could give rise. He saw a disorderly movement destroying much that was good, and as he did not enter into either the evils against which it was directed or the good which was contained in it, his passionate belief in the truths he did perceive led him, in some respects, even further astray than ordinary persons were led by their dull common-sense, which, if it does not see far, at least takes cognizance of facts brought immediately within its ken. Thus Burke failed to perceive the fact patent to the observers of his time, that whatever were the evils of the Revolution the country people gained immensely, partly by the confiscations, partly by the abolition of tithes, and still more by the cancelling of debts worked by the assignats. Failing to perceive this, he clung far more tenaciously than a practical statesman like Pitt to the illusion that disgust at Revolutionary violence would produce enthusiasm for a restoration. Burke's English disciples have, as is the way with disciples, never been able to divest themselves of this the weakest part of their master's teaching. Yet on this point the following remark of De Tocqueville is decisive :

"Ingenious persons have in our day undertaken to restore the credit of the *ancien régime*, . . . but I judge of the *ancien régime* not by what I imagine, but by the sentiments with which it inspired those who endured and destroyed it. I see that during the whole course of the Revolution, oppressive and cruel as it was, the hatred of the *ancien régime* always surpassed in the hearts of all Frenchmen every other hatred, and took such deep root in their hearts that it survived even its object, and passed from a momentary passion into a sort of permanent instinct. I remark that during the most perilous vicissitudes of the last sixty years the fear of the restoration of the *ancien régime* has surpassed all other fears. For me this is enough. To my mind the proof is complete."

This sentence should be placed as a motto on Burke's 'Reflections.' It points to the limitations which bound the range of even the most prophetic foresight.

BROWNING'S INN ALBUM.*

THIS is a decidedly irritating and displeasing performance. It is growing more difficult every year for Mr. Browning's old friends to fight his battles for him, and many of them will feel that on this occasion the cause is really too hopeless, and the great poet must himself be answerable for his indiscretions. Nothing that Mr. Browning writes, of course, can be vapid ; if this were possible, it would be a much simpler affair. If it were a case of a writer "running thin," as the phrase is, there would be no need for criticism ; there would be nothing in the way of matter to criticise, and old readers would have no heart to reproach. But it may be said of Mr. Browning that he runs thick rather than thin, and he need claim none of the tenderness granted to those who have used themselves up in the service of their admirers. He is robust and vigorous ; more so now, even, than heretofore, and he is more prolific than in the earlier part of his career. But his wantonness, his wilfulness, his crudity, his inexplicable want of secondary thought, as we may call it, of the stage of reflection that follows upon the first outburst of the idea, and smooths, shapes, and adjusts it—all this alloy of his great genius is more sensible now than ever. 'The Inn Album' reads like a series of rough notes for a poem—of hasty hieroglyphics and symbols, decipherable only to the author himself. A great poem might perhaps have been made of it, but assuredly it is not a great poem, nor any poem whatsoever. It is hard to say very coherently what it is. Up to a certain point, like everything of Mr. Browning's, it is highly dramatic and vivid, and beyond that point, like all its companions, it is as little dramatic as possible. It is not narrative, for there is not a line of comprehensible, consecutive statement in the two hundred and eleven pages of the volume. It is not lyrical, for there is not a phrase which in any degree does the office of the poetry that comes lawfully into the world—chants itself, images itself, or lingers in the memory. "That bard's a Browning ; he neglects the form !" one of the characters exclaims with irresponsible frankness. That Mr. Browning knows he "neglects the form," and does not particularly care, does not very much help matters ; it only deepens the reader's sense of the graceless and thankless and altogether unavailable character of the poem. And when we say unavailable, we make the only reproach which is worth addressing to a writer of Mr. Browning's intellectual power. A poem with so many presumptions in its favor as such an authorship carries with it is a thing to make some intellectual use of, to care for, to remember, to return to, to linger over, to become intimate with. But we can as little imagine a reader (who has not the misfortune to be a reviewer) addressing himself more than once to the perusal of 'The Inn Album,' as we can fancy cultivating for conversational purposes the society of a person afflicted with a grievous impediment of speech.

Two gentlemen have been playing cards all night in an inn-parlor, and the peep of day finds one of them ten thousand pounds in debt to the other. The tables have been turned, and the victim is the actual victor. The elder man is a dissolute and penniless nobleman, who has undertaken the social education of the aspiring young heir of a great commercial fortune, and has taught him so well that the once ingenuous lad knows more than his clever master. The young man has come down into the country to see his cousin, who lives, hard by at the Hall, with her aunt, and with whom his aristocratic preceptor recommends him, for good worldly reasons, to make a match. Infinite discourse, of that formidable full-charged sort that issues from the lips of all Mr. Browning's characters, follows the play, and as the morning advances the two gentlemen leave the inn and go for a walk. Lord K. has meanwhile related to his young companion the history of one of his own earlier loves—how he had seduced a magnificent young woman, and she had fairly frightened him into offering her marriage. On learning that he had meant to go free if he could, her scorn for him becomes such that she rejects his offer of reparation (a very fine stroke) and enters into wedlock with a "smug, crop-haired, smooth-chinned sort of curate-creature." The young man replies that he himself was once in love with a person that quite answers to this description, and then the companions separate—the pupil to call at the Hall, and the preceptor to catch the train for London. The reader is then carried back to the inn-parlor, into which, on the departure of the gentlemen, two ladies have been ushered. One of them is the young man's cousin, who is playing at cross-purposes with her suitor ; the other is her intimate friend, arrived on a flying visit. The intimate friend is of course the ex-victim of Lord K. The ladies have much conversation—all of it rather more ingeniously inscrutable than that of their predecessors ; it terminates in the exit of the cousin and the entrance of the young man. He recognizes the curate's wife as the object of his own stifled affection, and the two have, as the French say, an *intime* con-

* 'The Inn Album. By Robert Browning.' London : Smith & Elder ; Boston : J. R. Osgood & Co. 1875.

versation. At last Lord K. comes back, having missed his train, and finds himself confronted with his stormy mistress. Very stormy she proves to be, and her outburst of renewed indignation and irony contains perhaps the most successful writing in the poem. Touched by the lady's eloquence, the younger man, who has hitherto professed an almost passionate admiration for his companion, begins to see him in a less interesting light, and in fact promptly turns and reviles him. The situation is here extremely dramatic. Lord K. is a cynic of a sneaking pattern, but he is at any rate a man of ideas. He holds the destiny of his adversaries in his hands, and, snatching up the inn album (which has been knocking about the table during the foregoing portions of the narrative), he scrawls upon it his ultimatum. Let the lady now bestow her affection on his companion, and let the latter accept this boon as a vicarious payment of the gambling debt, otherwise Lord K. will enlighten the lady's husband as to the extent of her acquaintance with himself. He presents the open page to the heroine, who reads it aloud, and for an answer her younger and more disinterested lover, "with a tiger-flash, yell, spring, and scream," throws himself on the insulter, half an hour since his guide, philosopher, and friend, and, by some means undescribed by Mr. Browning, puts an end to his life. This incident is related in two pregnant lines, which, judged by the general standard of style of the 'Inn Album,' must be considered fine :

> "A tiger-flash, yell, spring and scream : halloo !
> Death's out and on him, has and holds him—ugh !"

The effect is of course augmented if the reader is careful to make the "ugh !" rhyme correctly with the "halloo !" The lady takes poison, which she carries on her person and which operates instantaneously, and the young man's cousin, re-entering the room, has a sufficiently tremendous surprise.

The whole picture indefinably appeals to the imagination. There is something very curious about it and even rather arbitrary, and the reader wonders how it came, in the poet's mind, to take exactly that shape. It is very much as if he had worked backwards, had seen his dénouement first, as a mere picture—the two corpses in the inn-parlor, and the young man and his cousin confronted above them—and then had traced back the possible motives and sources. In looking for these Mr. Browning has of course encountered a vast number of deep discriminations and powerful touches of portraitures. He deals with human character as a chemist with his acids and alkalies, and while he mixes his colored fluids in a way that surprises the profane, knows perfectly well what he is about. But there is too apt to be in his style that hiss and sputter and evil aroma which characterize the proceedings of the laboratory. The idea, with Mr. Browning, always tumbles out into the world in some grotesque hind-foremost manner ; it is like an unruly horse backing out of his stall, and stamping and plunging as he comes. His thought knows no simple stage—at the very moment of its birth it is a terribly complicated affair. We frankly confess, at the risk of being accused of deplorable levity of mind, that we have found this want of clearness of explanation, of continuity, of at least superficial verisimilitude, of the smooth, the easy, the agreeable, quite fatal to our enjoyment of 'The Inn Album.' It is all too argumentative, too curious and recondite. The people talk too much in long set speeches, at a moment's notice, and the anomaly so common in Browning, that the talk of the women is even more rugged and insoluble than that of the men, is here greatly exaggerated. We are reading neither prose nor poetry ; it is too real for the ideal, and too ideal for the real. The author of 'The Inn Album' is not a writer to whom we care to pay trivial compliments, and it is not a trivial complaint to say that his book is only barely comprehensible. Of a successful dramatic poem one ought to be able to say more.

WARING'S FARMER'S VACATION.*

THE title of this book gives no idea of its contents, and if Colonel Waring had gone a great deal farther in the same vein and called his work "Holland and the Channel Islands, as seen by a Scientific Agriculturist," the title would still omit the most valuable and interesting portion of the author's observations. The explanation of this somewhat unfortunate name probably is this : a large part of the work has already appeared in *Scribner's Magazine*, and for a series of magazine articles "A Farmer's Vacation" was an attractive title, well calculated to entice the readers of light literature into the study of the wonderful works of a wonderful land. The author has doubtless thought it more honest to retain the title lest he might inveigle his former readers into believing he had published a new work on the same subject. But, nevertheless, this story-telling title will screen the real merits of the book from a class of readers who would seek with avidity the stores of interesting information which it contains.

The marvellous works of the "Hollow-land"—among the greatest, if not the very greatest, of the successful efforts of the human race ; as great in their engineering difficulties as the Pyramids, and incomparably greater in their conception, their purpose, the means by which they were wrought out, and the dangers by which they were beset—merit the attention of every intelligent mind. And, indeed, a more striking contrast cannot be drawn than by comparing these great works of ancient and modern civilizations. The uselessness of the Pyramids, their want of any rational end, structures which added nothing to the wealth of the world nor to the happiness of mankind, undertaken to satisfy an ambitious idea and built by immense sacrifices of life and industry through the means of a weary train of task-masters and slaves, how very paltry do they appear beside this other conception of driving back the waters of a stormy sea, and making its depths the most fertile fields of the earth. All well-read persons know something of Holland, and have seen the historic side of the picture, drawn from a literary point of view, in the pages of Prescott and Motley ; but we have never been more impressed with the greatness of the undertaking, the boldness of the idea, the indomitable courage, the steady patience, and heroic resolution of the Dutch nation than when viewing, through this book, the practical difficulties of the work with the eyes of a working engineer. Yet the magnitude of the work indeed, is not to be measured or illustrated by the common metaphor of a battle between man and the ocean. There has, it is true, been a continuous warfare, which is going on to-day, involving on man's side courage, discipline, training, and increasing vigilance ; but, apart from that conflict, there have remained difficulties which would have been insuperable to almost any other people. When the sea was driven back, there remained submarine marshes, deep in mud and slime, having no natural outlets, rapidly refilling with the rains of heaven and the filtrations from the ocean. The not least marvellous portion of the national work is that these are now rich with everything that makes civilization desirable. Thickly populated, of quadruple the value of the natural uplands, bearing as ruddy and healthy a population as the mountains of Colorado, their agriculture excels even that of England, and their farmers are, as a class, probably the most wealthy and cultivated in the world. Moreover, their necessary drainage, an inevitable source of endless expense, has been utilized into an immense economy, so that the American farmer beholds there the strange spectacle of the crops gliding on boats from the harvest-field to the barn and from the barn to the market.

At this time the public works of Holland should also have especial interest for the American people because of the peculiar condition in which we find our own. When half of us have come to believe that it is impossible for public work to be well done, and when all of us see canal embankments, built at enormous cost, crumbling under the ripples of a horse-boat, it must be almost a new view of human nature to see a country having towns, villages, and a large agricultural population below the sea level, where property and life, and indeed national existence, depend, and have for two centuries depended, on the fidelity and intelligence of the public service. If Holland managed her public affairs for ten years as those of the State of New York have been managed, with the decade would probably end her national existence, and the devastation of property and life that would ensue would seem comparable only to the deluge.

But these reflections have drawn us too far from 'A Farmer's Vacation.' It is fortunate that Col. Waring has been peculiarly trained to deal with the subject-matter of this book, and almost equally fortunate that he has contented himself with the handling only of those subjects for which his training so fitted him. In early life, if we remember aright, he made agricultural chemistry a specialty, and delivered practical lectures upon it in different parts of the United States. Later he became the engineer of drainage of the Central Park, and since then has made drainage and sewage and sanitary engineering his profession. Added to these qualifications are the experiences of a practical farmer, in which he has made the Jersey cattle a subject of special study and attention, and of an author who in many descriptive and scientific articles has attained the command of a clear, attractive, and polished style. When such qualifications are stated it is well-nigh needless to add that the author has written an unusually entertaining and meritorious book. Its solid matter embraces such subjects as Dutch drainage, Edam cheeses, Holstein cattle and Alderney cows (though, strange to say, both of these terms are misnomers, there being in fact neither Holstein cattle nor Alderney cows) ; but the author also carries his readers from Dutch canals through the unfrequented ways of Normandy to the embowered lanes of Jersey, and the

* 'A Farmer's Vacation. By George E. Waring, jr.' Boston : James R. Osgood & Co. 1876.

picturesque precipices of Sark. The book is handsomely printed and profusely illustrated, and the illustrations show the variety of the reading matter. As instances of this variety we cite at random an Edam cheese-press, a Scheveningen fishwife, the clock-tower at Rouen, the head-dresses of Normandy, the castle of Mont St. Michel, a cow at home in Jersey, and the interior of Victor Hugo's drawing-room in Guernsey.

Life and Adventures of a Quaker among the Indians. By Thomas C. Battey. (Boston: Lee & Shepard.)—The concern felt by the Society of Friends for the Indians has recently been more than usually conspicuous, owing to the ecclesiastical allotment of the tribes under the Department of which Mr. Chandler is the temporary high-priest. But from the days of Penn it has been continuous and real, although less observed by the world's people and not always yielding the hoped-for fruits. A privately printed 'Journal of a Visit to the Western Indians,' made in 1804 by a committee of the Baltimore Yearly Meeting, is an incidental example; but that quaint narrative of a two-thousand-mile journey of benevolence is entirely eclipsed by the latest account of similar work in a more arduous field. Mr. Battey's book consists of the notes of a missionary who faithfully inculcated peaceful principles, and sought to impart useful knowledge under very unpropitious conditions. For eight months in 1871–2 the author, a Quaker schoolteacher, taught Caddo children at the Wichita Agency in the Indian Territory, when, under a powerful impulse, he conceived it his duty to go among the Kiowas. Of unreliable and vicious savages the Kiowas may be regarded the best types east of the mountains; and as they murdered forty whites and stole several hundred head of stock about that time, he was constrained to agree with the agent that the view was "discouraging." Notwithstanding this his "mind was secretly drawn to" them, and on December, 1872, he actually went, under the patronage of Kicking Bird, to their camp. With these people he remained as his health permitted, until he entirely broke down in the summer of 1874; and the diary of his nomadic life is the soul of the volume. His school did not succeed, but in the hope of ultimately overcoming their prejudices he remained among them, at times at personal risk; and it is probable that he exercised a restraining influence, as he evidently believes. He describes the diplomacy born of the arrest and release of Satanta and Big Tree and certain later negotiations, and very clearly convicts the authorities of vacillation and of apparent double-dealing in most delicate matters. And, like all honest men who have had opportunities to enquire, he asserts the frequent causeless aggression of the bad whites. These are the important parts of the book. The most entertaining chapter is the tenth, describing the Kiowa medicine-house and dance, which Mr. Battey had unusual opportunities to observe. This is the latest and perhaps the fullest description of such ceremonies among the Southern Indians.

The book bears marks of painful truthfulness throughout, but, except the points just noted, contains little that one not an absolute novice in such literature would care for. In fact, it is more remarkable for its omissions than for its information. Thus, the author credits the Kiowas (p. 102) with having a "decimal system even more simple than our own," but says no more about it. He speaks of enormous rattlesnakes (p. 148), and attributes the uniform recovery from their wounds, in his experience, to the use of a remedy growing "in great abundance" in that region, but makes no attempt to describe it or the method of its use. He intimates (pp. 94, 169) that the lodges usually open to the east, but he assigns no reason. Although Satanta, whom he frequently mentions, may be regarded as the leading Kiowa, he appears ignorant that in his earlier life he was a much better friend of the whites than in later years, and that many of Satank's misdeeds have been put upon his shoulders. But most peculiar of all is his silence as to the sign-language, which is the court-language of the plains. It is the ordinary medium of communication between tribes having no common speech, and it is really that upon which the interpreters chiefly depend. The author's facilities for its acquisition were unsurpassed; it would have been of the utmost value to him in his philanthropic efforts, and yet, judging by his book, he is utterly unaware of its existence. To overlook or disregard a subject of such real importance throws a suspicion upon the aptitude as an educator of a man who seems well stocked otherwise with good sense and with coolness and courage. In like manner he fails to represent clearly the various ideas which the Indian groups under the borrowed term "medicine." And this, like the preceding, would directly concern him as a civilizer. In a measure he apologizes (p. 319) for these deficiencies by explaining that he is not writing upon Indian customs, but simply narrating his own life among them. But the lives of few individuals concern the public, except as they illustrate groups of facts or social laws.

In a literary view the book is disfigured by the frequent interjection of religious musings which, edifying as they may be to the subject, are out of place in print. It may be commended as a plain statement of some things that pertain to barbarian camps existing at this moment in the heart of our country, and as corroborative evidence that a consistent and rational policy of peace is not so absurd and puerile as the white savages of the frontier insist. The volume is illustrated by eight tolerable woodcuts from photographs of Kiowas, but those of Kicking Bird and Satanta in particular by no means do justice to the originals. White Horse, who is occasionally mentioned, is not so honored, but the inquisitive tourist may now safely inspect him in his proper person at St. Augustine, Florida.

A General History of Rome, from the Foundation of the City to the Fall of Augustulus. B.C. 753–A.D. 476. By Charles Merivale, D.D., Dean of Ely. 'Historia scribitur ad narrandum non ad probandum' (Quintilian, Inst. Orat. x. i. 31). (New York: D. Appleton & Co. 1875. 8vo, pp. xxxiii. and 708.)—Mr. Merivale has undertaken to fill a real gap in preparing a complete history of Rome, from Romulus to Romulus Augustulus, in moderate compass and presenting the results of the latest scholarship. Certainly his book has no rival in the English language, nor is it perhaps likely to have one; for the qualifications for the task are not easy to find united in one person. Mr. Freeman has promised one, and in the intervals of his two great works he may find time for what perhaps seems to him a trifle; but Mr. Freeman has no adequate sense of proportion—he is at his best when he works with plenty of room; when he undertakes to compress, he cannot make up his mind to leave out anything, and the brilliant writer becomes perforce dull and heavy. We do not, therefore, expect much from his history of Rome. Mr. Merivale, on the other hand, possesses this qualification in a high degree, and with it the power of seeing his way through the complications of historical events, and of presenting them in a clear, connected, and graphic style. Perhaps, on the whole, we are not likely to have any better complete history of Rome for general readers than this.

And yet it is far from meeting the requirements of the undertaking, even such as we should be justified in expecting without setting up too severe a standard. Within his range Mr. Merivale is all that could be desired, and his range is neither low nor contracted. Besides the high qualities as an historian to which we have already adverted, he has a wide and thorough scholarship of the old-fashioned English type—a type of scholarship which for geniality and elevation of tone surpasses that of any other nation. Nevertheless, English scholarship, with its other merits, does not include that of doing justice to the scholarship of other nations. We cannot recall a single Englishman who has treated of Roman history, except Mr. Seeley, who has shown the smallest appreciation of the labors of German scholars—since Niebuhr—in this field. This was a defect even in Mr. Merivale's great work, in a period where the common-sense of the self-governed Englishman might often outweigh the painful conclusions of more recondite scholarship; but when he undertakes to handle the early period, it completely deprives his labors of authority and value. Mr. Merivale ought to know that to study early Roman institutions without the aid of Mommsen is as absurd as it would be for the student of physics to neglect Helmholtz.

Mr. Merivale would say, no doubt, that Mommsen is arbitrary in his conclusions; and so he may appear to those who consult only his history, and find there only results—no processes. But he is not arbitrary to those who take the trouble to study his more special works. When Quintilian says that history is written *ad narrandum*, he certainly does not mean to imply that the historian himself should not pursue studies *ad probandum*; and this Mr. Merivale appears to have neglected, so far as the most authoritative discussions of the early history are concerned. A little study of Mommsen's 'Forschungen' and 'Staatsrecht' would have saved him from some blunders; for instance, the assertion (p. 33) that "it was required of the consuls that one only should exercise his functions within the city at a time, and the other should take his station in the camp beyond it." From the statement (p. 30) that "land at Rome was held of the state, as formerly in France and England of the king, as sovereign owner, by the tenure of military service," we do not know what could have protected him.

When we search the later period which, as well as the earlier, is not covered by Mr. Merivale's principal work, we find a much more satisfactory treatment, and yet, even here, the same lack of familiarity with the results of German scholarship. There is nothing, for instance, to compare with Mr. Seeley's forcible analysis in 'Roman Imperialism' of the causes of the downfall of the Empire. The assertion (p. 572) that, in the time of Diocletian, "prædial slavery was far from general in the provinces," that it was "the habits of the country and the times" that bound the *coloni*

o the soil, rather than any law, is hardly excusable since Emil Kuhn's analysis of the status of the various classes of population in his 'Verfassung des römischen Reichs'—even if it would have been before.

There are a few isolated points to which it is worth while to direct special attention. The ethnology of the earlier portions—including Niebuhr's now abandoned Pelasgian theory, an actual Arcadian settlement on the Palatine, and a regular succession of Siculi, Ligurians, Pelasgians, and Aborigines on the soil of Rome before the Romans themselves—is more "arbitrary" than anything in Mommsen. On page 7, Fannus, instead of Picus, is said to have been identified with Sterculus. Among the Stoic writers (p. 690), Epictetus should have been mentioned by the side of Marcus Aurelius. The maps are very clear and good. The physical features of Central Italy, however, are not well given. The division lines between the east and west under the sons of Constantine, and Valentinian and Valens should be indicated, as well as the final division; the dioceses and præfectures should also be given. The map of Rome as well as the letterpress (p. 662) imply that the New Way extended all the way to the foot of the Capitoline. We will add that while the constitutional history of the later Empire is not fully satisfactory, the ecclesiastical history is, as we might expect, every way good.

The Elements of Graphical Statics, and their Application to Framed Structures, etc. By A. Jay Du Bois, C.E. (New York: John Wiley & Son. 1875.)—That method of treatment of various engineering problems which is known as the "graphical" may be said to date almost entirely from the appearance of the work of Prof. Culmann, of Zurich, in 1866. Since that time a number of writers, mostly German, have added to the literature of the subject and extended its applications. A representation to the eye of the magnitude and kind of the different strains to which all parts of a framed structure, roof-truss, bridge-truss, or arch, as well as the various portions of a machine, are subjected, can readily be seen to possess great value to the designer. While there are a few men of such a bent of mind that only the most abstract analysis of a problem satisfies them, there is no engineer of experience who will not gladly welcome this clear and comprehensive presentation of the subject of graphical statics as developed up to the present time. The analytical treatment of structures is not ignored, but, where a union of the two methods will expedite and shorten the work, formulæ are freely used, and for some of the most difficult engineering problems many new and practical formulæ are added. The book opens with an historical and critical introduction, translated from the German of Weyrauch, which is followed by a valuable list of the works at present published relating to this branch of mechanics. An inspection of this list will show how few books there are in English upon a method of such approved interest and practical value, and what a great service, therefore, Prof. Du Bois has rendered the engineering profession. As here presented, the subject requires only a knowledge of geometry as commonly taught, and, consequently, it can be introduced into our technical schools as well as be read by practical engineers. The work consists of one volume of text with another of plates, conveniently arranged for use; the mechanical execution of both text and plates is good, and the book has apparently been carefully prepared.

BOOKS OF THE WEEK.

Authors.—Titles.	*Publishers.—Prices.*	
Adams (C. F.), Memoirs of John Quincy Adams. Vol. VIII.	(J. B. Lippincott & Co.)

TO LITERARY SOCIETIES AND PUBLISHERS. A gentleman having fourteen years' experience as Librarian, and four years' as a literary editor, desires a position. Prepared a *Classified* Catalogue which was favorably noticed in the *Nation* of June 3, 1869 (page 435, column 2). Ample testimonials furnished. Address A., 137 West Fifty-sixth Street, New York.

BOOKS AT LONDON PRICES. Now Ready: Catalogue No. 7 of Rare, Valuable, and Curious Books, free on application.
JOHN EVANS, Importer, 318 Hudson Ave., Brooklyn, N.Y.

Zell's Encyclopædia.

NEW REVISED EDITION. Agents Wanted.

150,000 articles, 3,000 engravings, and 18 splendid maps. The best book of universal knowledge in the language. Now in course of publication Specimen with map sent for 20 cts.

BAKER, DAVIS & CO., Philadelphia.

Valuable Books

OFFERED AT

VERY GREATLY REDUCED PRICES

BY

SIDNEY S. RIDER,

BOOKSELLER,

PROVIDENCE, R. I.

A GENERAL SYSTEM OF BO- tany, descriptive and analytical, in two parts. By Le Maout and Decaisne. Translated by Mrs. Hooker—the orders arranged by J. D. Hooker. With 5,500 engravings, 1,066 pages, royal 8vo, cloth. London: 1873.

This grand treatise was imported in quantities by Messrs. Lee & Shepard, from whom the undersigned has purchased the balance of the stock and reduced the price from $25 to $9.

LIFE OF ALEXANDER VON HUM- boldt. Compiled by J. Lowenberg, Robert Ave Lallemant, and Alfred Dove. Edited by Prof. Karl Bruhns. Translated by Lassell. 2 vols. 8vo, cloth, 3 portraits. London: 1873.

This splendid biography of one of the great lights of modern science was first placed on the American market at $21. A balance of edition has been purchased by the subscriber and the price reduced to $5 the set. Only thirteen sets now remain.

ALASKA AND ITS RESOURCES.

By W. H. Dall. 8vo, pp. 628, map and illustrations, substantially bound in bevelled cloth. Boston: 1870.

Published at $7 50, and now sold, while the remaining stock (only 65 copies) remains, for $2.

Protestant Episcopal Church.

Full and authentic information in regard to this Church (and the Church of England), together with its representative and best thought, and much valuable literary and general reading, can be found in the CHURCHMAN, a 32-page weekly, now in its thirty-first year. Single copy, ten cents; three months, $1; one year, $4. To Clergymen, $3.
Address 713 Broadway, New York, or Hartford, Conn.

BOOKBUYERS will find their orders executed with intelligence and promptness by GEO. E. STEVENS & CO., Booksellers, Cincinnati, O.
Letters of enquiry as to prices, etc., are invited. Any books will be carefully forwarded on receipt of their advertised price.

PUTNAM'S SONS, Fourth Avenue and Twenty-third Street, New York, call attention to their new Series of ATLASES, for classes and for reference, comprising Fourteen Works, priced at from 75 cents to $14; also, to Hart's German Classics for Students, used in Yale, Princeton, Bowdoin, and many other colleges; the Elementary and the Advanced Science Series; Haydn's Dictionary of Dates, Fourteenth Edition; Putnam's World's Progress, Twentieth Thousand; Hill's True Order of Studies, and other Standard Publications. A complete Catalogue, containing specimen pages of the Science Series, mailed on receipt of stamp.

The Nation.

NEW YORK, THURSDAY, JANUARY 27, 1876.

The Week.

THE correspondence with Spain, over which there has been so much talk was communicated to Congress on Friday. In it Mr. Fish again complains, in a despatch dated Nov. 5, 1875, of the seizure of the property of American citizens in Cuba without process of law, and of the contempt with which the orders of the home Government with regard to these seizures have been treated in the island; also of the trial of American citizens on the island by court-martial, and of the acknowledgment of the wrongfulness of such proceedings by the Spanish Government, coupled with its subsequent failure to afford any redress. He complains also of the evasion of the agreement made in 1873 after the *Virginius* case, inasmuch as though the money compensation to the relatives of the victims has been paid, no steps have been taken for the punishment of General Burriel, which also was promised. He says the state of things in the island is bad enough and hard to bear, but it is aggravated by the refusal of the Spanish Government to pay any attention to remonstrances or offers of mediation, and, above all, by its disregard of treaty obligations and of the rights of American citizens. He, therefore, urges Spain to do something to put an end to the conflict, and declares that in the absence of any such effort this Government may be called on to interfere, both in the interest of humanity, and because the relations of this country with Spain are now in such a delicate condition that another such occurrence as the *Virginius* affair might arouse "a feeling and excitement in this country which might force events." Finally, he says that in the absence of any prospect of the termination of the war, or of any change in the manner in which it has been conducted on either side, he feels "that the time is at hand when it may be the duty of other governments to interfere, with the view of bringing to an end a disastrous and destructive conflict."

On the same day Mr. Fish addressed a circular note to the American Ministers in London, Paris, Berlin, St. Petersburg, Vienna, and Rome, with a copy of the above despatch to Mr. Cushing, expressing the President's belief that an expression of opinion by these governments in support of the views of the United States would induce Spain, "by some wise and conclusive measure, to render all thought or necessity of intervention from any quarter unnecessary," and informing them that intervention is not contemplated as an immediate result, but as a contingent necessity, in case "the contest be prosecuted and a satisfactory adjustment of existing griefs be not reached"; but the President would "discountenance the recognition of belligerency or independence." The only thing published in the nature of a reply to all this is a telegram from Mr. Cushing, dated Dec. 4, in which he says he has had an important interview with the Spanish Minister, in which he admits our grievances, condemns sequestration of foreigners' property and the delays of redress, and offers to settle every case promptly and to remove all cause of complaint as to the treaty, and "reprobates the conduct of the authorities in Cuba."

The reflection which the correspondence suggests at once is that Mr. Fish mixes up two things which have no necessary connection. Redress for wrongs done to citizens of the United States, whether by the confiscation of their property or their illegal trial he has, of course, the right to demand, and is in duty bound to press without needless delay; but these cases are few in number, and easily proved and disposed of. With the general condition of the island and the Spanish mode of governing it they have no necessary connection, any more than the *Alabama* claims had with the condition of Ireland. If there be a belligerent power in arms against the Spanish Government on the island, this Government is bound to recognize it, and may fairly offer to mediate between the combatants. If there be not, the general disorders of the administration are none of our business, and we could not possibly meddle in them without incurring the grave and weighty responsibility of providing a remedy. If, as a result of our intervention, the Spaniards should withdraw or be driven out, the island would certainly be left on our hands, and we have no machinery for governing it as a dependency. We could only do one thing with it—admit it as a State, and what a State it would be with its ignorant, barbarous, superstitious population! Now, we do not need to point out in detail the objections to our assuming any such burden; and yet to our assuming it Mr. Fish's heats and threats and lamentations and offers of mediation inevitably point. Everybody knows that there is no race or party on the island capable of administering it if Spain abandons it, and, therefore, we must by all means keep clear of it until we get rid of our own difficulties, which are certainly great enough for such statesmen as we have in Washington.

We called Mr. Fish's attention two weeks ago to the performances of Mr. Francis Thomas, the late American Minister to Peru, in acting as a pawnbroker in that country by lending money at exorbitant rates of interest on the pledges of jewels, as another sign of the condition into which the diplomatic service was falling, and as a fresh argument in support of our suggestion that it should be abolished before matters get worse. Since then another extraordinary revelation has been made. Mr. Gratiot Washburne, the late Second Secretary of Legation in Paris, was a short time ago home on a short leave of absence, and, during his stay here, appears to have acted as agent of a spirited American circus proprietor named Myers, who has just opened or is about to open a monster "Hippodrome" in Paris. Mr. Washburne accordingly advertised in his own name, in the New York *Clipper*, for "a first-class bareback male and female rider" for "Mr. Myers's Great American Circus, Paris, France—the palace circus of the world." The *Tribune* states that it learns, on enquiry, that he tried also during his stay here to secure animals for the "palace circus." He went back about the end of November, and has now been promoted to the First Secretaryship of the Legation at St. Petersburg, where he will be at least a novelty. *Harper's Weekly* very properly contrasts the extraordinary indulgence shown to General Schenck and his kind with the stern retribution dealt out to Mr. Motley for a mere error of judgment in the conduct of a negotiation. He was not even allowed to get "under fire," but dismissed with an opprobrious rebuke.

The meeting of the stockholders of the Emma Mine called by the directors to pass on the proposal to authorize Mr. MacDougall to prosecute Park and his confederates in the sale of the stock was held in London on Saturday last, and the resolution was passed with only seven dissentients. Park, in the meantime, continues to spread the report that something wonderful in the way of yield has been taking place in the mine within a few weeks which will completely vindicate him; but this is now an old and well-worn story, and either had not reached London on Saturday, or, like so many of its predecessors, was disbelieved. If MacDougall carries out his threats, General Schenck will be placed in the very awkward predicament which we foreshadowed in November, 1871. In other words, he will be forced to plead his privilege in bar of criminal proceedings.

Mr. Morton has been making during the week his long-promised speech on the intimidation of Republican voters at the South, and

especially in Mississippi, at the late election. It contains nothing new and does not point to any remedy; indeed, the only remedy it even remotely suggests is the occupation of the South for an indefinite period by a large military force. The kind of intimidation on which he lays most stress is what is called "social ostracism"—that is, the unwillingness of Southerners to employ Republican lawyers or doctors, or to visit at the houses of Republicans, or invite them to their own. This is a topic which, if it calls for discussion at all, should be dealt with by the press and pulpit. Making speeches on it before a legislature is a vain performance, because a legislature is utterly powerless with regard to it. The record of murders and woundings at the South which Mr. Morton produces is of course, if correct, a dreadful exhibit; but then it wants the element of pertinency in failing to tell us why the murders were committed. That reckless, numerous, and unpunished murders are a marked feature of Southern life we all knew, but how many of them are political Mr. Morton does not know. That the vast majority of them have nothing to do with politics is a legitimate inference from the history of Southern manners during the last hundred years. Why should Southerners murder less since the war than before it? Why should their murdering be confined now to political opponents, which it never was in old times? We wish for our part, from the bottom of our hearts, that we thought the recklessness of Southerners about taking human life had its root in the present condition of politics. We fear it lies far deeper, and lies where neither Morton nor Conkling nor any of the "Senatorial group" can get at it, with either infantry, cavalry, or artillery, viz., in the barbarism of society—a barbarism only to be got rid of by time, education, industry, and the growth of population.

Perhaps the most startling thing about the speech is that it should have been made, listened to, and reported. We presume that there is nobody in the country who now has the smallest belief in Mr. Morton's honesty as a politician, or supposes that there is any sincerity in anything he says. He makes speeches, everybody knows, on whichever side of any question he supposes most likely to be popular, and he has no hesitation in flatly and publicly contradicting in January what he said in July. Nobody, in fact, credits him with any convictions of his own. In a pure and healthy state of politics and of public opinion, he would be living in close retirement and taking his exercise after dark. Nevertheless, no man courts observation more, or tackles grave questions with more audacity and ostentation, and he gets outwardly as respectful a hearing, and there has to be as much editorial weighing of his words, as if he were a loyal, upright, unselfish man. Of course he really cares no more about the condition of the South than he cares about hard or soft money, and, though people listen, nobody has any intention of acting on his utterances. One of the first signs of real reform in politics will be the disappearance of his type of politicians.

The Senate has spent the week chiefly in debating the attack on the Treasury accounts, discussing and passing a measure introduced by Mr. Sherman proposing an investigation into the trade in alcoholic liquors, and listening to Mr. Morton's Mississippi speech. The Republicans have finally succeeded in getting the Treasury enquiry demanded by Mr. Davis referred to the Finance Committee instead of a special investigating committee, as proposed by him. The House has been carrying on a protracted Centennial debate. In the course of the latter, General Banks distinguished himself by announcing the discovery of a constitutional authority for the appropriation in the treaty-making power—a feat in hermeneutics almost as remarkable as that accomplished in science by the late Mr. Phœnix when he backed his theodolite "into the plane of the true meridian." The debate showed that several of the Southern members are still strong on nice legal points, one of them making a very good offset to General Banks's argument by a speech in which he conclusively proved that the United States are not "a nation," but a confederation of sovereign States. The Constitution, he said, was not made by "men," and he created a sensation, according to the newspaper report of the proceedings, by declaring that it was made by "States," thus clearing up all doubts on the subject which may have existed in the minds of some of the members. On Tuesday the House voted the appropriation by 146 to 130, after incorporating in the bill an amendment providing that the $1,500,000 shall be repaid to the Treasury before any dividends go to the stockholders. Mr. Morrison has introduced his resumption bill, a synopsis of which was published a fortnight since.

The Rev. Dr. Newman, General Grant's pastor in Washington, has been examined by a committee of the House about the results of his tour around the world as an "Inspector of Consulates." The office he filled is unknown to the law. It was created on his own motion by the President, with the assistance of Mr. Boutwell, who fell in with the scheme, and gave Dr. Newman a treasury commission to inspect the consuls' accounts, while the President gave him one to examine the consular offices. He drew $5,000 a year while he was away, and had his expenses paid. His commission had expired by the time he reached St. Petersburg on his way home, so he magnanimously travelled the rest of the way at his own expense. He makes some recommendations about the consulates, but it would be clearly unsafe for the committee or anybody else to act on them. Dr. Newman had no fitness for his task either through training or experience. The trip was arranged for him, not to serve the Government, but to serve him. When he started there was, of course, no expectation that he would find a Democratic majority in the House when he came back. If an appropriation for his services were refused, it would be a proper and fitting rebuke of his appointment. When the President and Secretary of the Treasury combine to create offices unknown to the law, and to spend public money in advance of any appropriation, indemnity ought to depend on their selection of some one plainly fitted for the work. The despatch of a statistician like Mr. David A. Wells or General F. A. Walker, or some merchant with long experience of foreign trade, on the errand assigned to Dr. Newman, would probably have resulted in a valuable and instructive report; as it is, all the country gets for its money is scraps of information picked up, no one knows how, by a Methodist minister during a hasty tour.

The negro Whipper, elected a judge by the South Carolina Legislature, and refused a commission by Governor Chamberlain, has been making an exhibition of himself in a speech delivered in the House of Representatives at Columbia. The speech was entirely made up of a denial of all charges against himself and a furious attack upon Governor Chamberlain and the *News and Courier*. He declined to produce any evidence to prove his innocence, because, as he very frankly said, it might be used in court to convict him. He gave a terrible description of Chamberlain's character, and predicted that, if the two men got their deserts, Moses would hereafter be "a saint in heaven," with Chamberlain below "in hell howling." As to the opposition press, he declared that the "very sanctum" of the *News and Courier* "reeks with the foulest corruption," and that the floors of the building, the walls, and the roof that protects them, "were purchased with money wrung illegally from the taxpayers." As to the charge of being a gambler, he admitted that he had been once, but added, "This I place in the past tense." His gambling, it seems, belongs to "the degenerate days of the past, and they are gone for ever." He admitted that the government of South Carolina was not perfect, but reminded his hearers of "the historic fact that there had been errors in all governments." Finally, he attributed the opposition to his selection as judge to Caste, vowed that nothing should prevent his getting hold of his office, and warned "usurpers and traitors" generally of the danger of rousing the "spirit that in the reign of Charles I. unseated the throne, beheaded the king," and so on, and intimated the belief that this spirit was "abroad in the land." Except for the implied threats contained in it, the speech reads like a burlesque of speeches by white politicians "under fire."

A contributor to the *Woman's Journal* chronicles the important fact that the Iowa Legislature is "forging ahead" on the woman question, the Senate having elected one woman for enrolling clerk, one for engrossing clerk, and two as "paper-folders." The House has not done so well, having put only two women in as clerks; but, on the other hand, the nominees for postmaster and assistant-postmaster were also women. Governor Carpenter, too, catching the enthusiasm of the Legislature, has suggested that the success of the experiment of woman suffrage in the Territory of Wyoming, taken together with Centennial and other considerations, seems to make it proper that the people of Iowa should have an opportunity to vote on the pending constitutional amendment extending the suffrage to women. We may venture to suggest in reply, that while women may and no doubt do make very good clerks and postmistresses, the fact that they do is not a very conclusive argument in favor of their having the ballot; and we think the people of Iowa would also do well to consider whether the perpetual introduction of the success of the Wyoming experiment into discussions of woman suffrage has not been a little overdone. Wyoming is a vast territory, about as large as all the New England States and New York together, almost unpopulated, and with hardly any women at all. The notion that thickly populated States with highly complex systems of government are to watch the experiments of Wyoming to find out who they ought to give the suffrage to is really preposterous, and we can only account for the continual reappearance of it as coming from the well-known and irrepressible love of humor which distinguishes all agitators and social reformers.

There has been an immense amount of talk during the week over the failure of the two parties in the Plymouth Church quarrel to call the Mutual Council, but the facts covered up by it are few and simple. Plymouth Church agreed to allow Mrs. Moulton to call whom she pleased, but "protested" against her calling the churches of Drs. Budington and Storrs. Drs. Budington and Storrs hearing of this protest declined to serve, and then Mrs. Moulton refused to go on. The church then declared that it never meant to shut out Drs. Budington and Storrs by its protest if Mrs. Moulton was really bent on having them, to which Mrs. Moulton replied that, in point of fact, the protest had shut them out and had restricted her liberty of choice, and she must decline to proceed. Whereupon the church said that she really never wished to proceed, and Mr. Van Cott, her counsel, advised her to take no further notice of such people, and then Mr. Beecher denounced Mr. Van Cott from the pulpit as an untruthful person, and so on. Mr. Beecher, indeed, seems to have wholly abandoned the silent, patient, Christlike rôle which he played so long, and is now as noisy and bellicose as any of the brethren, and flings charges of perjury and falsehood and fraud about quite freely. He had, in fact, somewhat prepared the public for fatal objections to any mutual council by the announcement some weeks ago that he was not going to be tried by a tribunal of "wolves and foxes," meaning, it was supposed, by these terms any minister who took an unfavorable view of his case. As we pointed out last week, if the absence of bias be necessary to a proper investigation of the case, no denominational tribunal can try it. We are sorry to have to call attention again to a certain want of ingenuousness on Mr. Beecher's part. When, by way of ridiculing Mrs. Moulton's desire to have certain new witnesses examined, he said these, or several of them, had been summoned to appear before the first committee of investigation and had failed to do so, he ought to have mentioned that every member of that committee was selected by himself, and that it conducted its enquiries with closed doors, and that it was, therefore, most natural that witnesses whose testimony would be likely to damage him should be unwilling to go before it.

The feeling of the public about the whole affair we take to be one of utter weariness and disgust; but there is also a widespread opinion that the Congregational body ought, for its own sake, if it can, to investigate the matter thoroughly, hearing *all* witnesses and all kinds of evidence, before some tribunal not made up by Mr. Beecher and Brother Shearman. The "advisory council" which is now about to meet will prove simply another useless *ex-parte* device for disposing of the matter. Nothing *will* dispose of the matter but the examination of every human being who can, or says he can, throw any light upon it, and Mr. Beecher may be assured that the bold, defiant, combative policy is not better *now* than "the policy of silence" was. The time to have turned and fought like a brave man was when Moulton and Tilton summoned him from his prayer-meeting like a culprit. What is needed now is perfect candor and good temper, and the avoidance of all demurrers, or protests, or reservations, or special pleas of any description. Brother Shearman likes these things because he is skilled in their use. But Brother Shearman is a poor counsellor for a man whose reputation is in deadly peril.

The week has been notable in Wall Street for the further advance in United States bonds and other securities known to be safe investments. The rise in United States bonds has been brought about by the purchases of savings-banks, insurance and trust companies, and even discount banks, some of the latter having taken as large an amount as $300,000, and from that down to $50,000. This demand has been supplied for the most part by the German bankers, who have been bringing bonds from London and the German markets. The effect of the bond movement has been to strengthen the gold and foreign-exchange markets, and it is evident that if bonds continue to be ¾ to 1½ per cent. higher here than in Europe, it will soon be necessary to export gold, which is something to be regretted at a time when there is so little gold in the country, and when, in view of the pledge to resume specie payment in 1879, so much is needed. In London there have been no changes of note, money having unexpectedly become dearer early in the week, so that the Bank of England did not feel justified in reducing its rate below 5 per cent.; there has since been another change, and the other London discount houses have done business as low as 3½ per cent. In business affairs there has been much dulness, the unseasonable weather having contributed much to that result. Merchants, it is proper to say, are hopeful in respect to the business of this year, and while they do not look for a large speculative trade, are confident that there will be more done this year than last, and that the profits will be larger. The money market is becoming very easy, and the surplus reserve of the banks is now nearly $15,000,000, with the currency movement still in favor of New York. The gold price for $100 greenbacks has ranged during the week between $88 69 and $88 39.

Mr. Edward Jenkins, the author of 'Ginx's Baby,' and who is actually keeping Mr. Fitzjames Stephen out of Parliament, has written another "work," this time a temperance tale, entitled 'The Devil's Chain,' in which, he says, "his aim is here, as in 'Ginx's Baby,' to exhibit in rude, stern, truthful outlines the full features and proportions of the abuses he would humbly help to remove." The "tale," which has the proportions and pretensions of a novel, appears to be an ineffably silly performance, in which, however, there is no solid objection to Mr. Jenkins's engaging; but there is every objection to the presence of a person whose proper work is the composition of such stories in the legislature of a great and civilized state at a time of great difficulty and perplexity. The Dominion of Canada, we are glad to see, has got rid of him as its "Agent General" in London, by abolishing the office. If he could be removed from Parliament in the same summary fashion it would be a great gain, because his present position has a debauching influence on the imagination of thousands of weak persons of a philanthropic turn all over the Anglo-Saxon world. He helps every day to spread the notion that if a man grows excited and fluent over pauperism and drunkenness, his judgment on all questions of government becomes valuable and instructive. Our civilization is probably in more danger from the Jenkinses and their admirers than from any other one agency.

THE CENTENNIAL BEFORE CONGRESS.

THE *World* has been carrying on a vigorous attack against the Centennial appropriation on the ground of its unconstitutionality—its argument, which is not to be despised, being that Congress, having power to levy taxes "to pay the debts and provide for the common defence and general welfare of the United States," cannot appropriate money in aid of a "private joint-stock company in a particular State"; it cannot do anything it pleases for the "general welfare," otherwise there would be no need of any constitutional restrictions whatever. It will not perhaps avail much to say to a free-trader that this point has been sufficiently settled for the purposes of the Exposition by the long practice of the Government with regard to the protection of national industry. Every student of the tariff is familiar with cases in which taxes have been levied which could only enure to the benefit of a single private manufacturer or a single private corporation, or to that of the people of one State or section, and could only promote the general welfare so remotely and indirectly, if at all, as to be incapable of calculation or appreciation by any legislature. In fact, the protective system has now been so long pursued and acquiesced in, for far-off and shadowy ends, that Congress has become possessed of an amount of discretion, in the construction of the term "general welfare," which, it is useless to deny, easily covers the case of the Exposition. We may regret this, or not, as our political ideas may determine, but the fact remains. The country is at this moment studded over with private corporations which could not exist for six months but for the imposition by the Government of taxes for their benefit on the community at large. Whether the community at large does now or will ever derive any benefit from them, is a question on which there is great and widespread difference of opinion. From many of them the most ardent protectionists admit it does not at present derive any benefit whatever. Those who say it will in these cases derive benefit in the future are mostly prophets, whom it is impossible to refute, and yet on their prophecies an elaborate system of fiscal legislation has been in great part built up and is maintained. There is, in short, no country in the world in which the liberty of judging what does and what does not contribute to the general welfare has been more freely exercised by the legislature than in the United States. The imposition of taxes to help people engaged in a particular trade would, *à fortiori*, justify almost anything else of the kind.

To be sure, Hamilton, while claiming for the term "general welfare" the widest meaning, and making it cover applications of money to "whatever concerns the general interests of learning, of agriculture, of manufactures, and of commerce," makes the qualification "that the object to which an appropriation of money is to be made must be general and not local; its operation extending in fact, or *by possibility*, throughout the Union, and not being confined to a particular spot." But, then, this reserve has little practical value. How can a protective duty on pig-iron be made to benefit States in which there is no iron-ore, coal, or wood? How can a bounty on fish benefit the people of Colorado or Kansas? The fact is that the majority of the protective duties are in their direct benefits thoroughly local, and the possibility of their usefulness to the rest of the country has to be left to the imagination.

It must be remembered, too, that when we admit the United States Government to be the government of a nation, we concede, on general grounds, almost everything the applicants for the Centennial appropriation can desire. Nothing is better settled by long usage than that provision for the "general welfare" of a nation goes far beyond the mere direct protection of life and property, and that it includes a great deal that is simply ornamental, or which, if useful, is only useful through its æsthetic influence on the imagination or on the manners. How do the vastness and architectural beauty of the Capitol contribute to the general welfare, if not in this way? How does the *World* justify the expenditure of the public money on the pictures and statues and mural decoration and tiling and fine furniture of the interior? Why does the American Minister in London or Paris receive a large salary, when his year's work might be done in a week? Why has the President $50,000 a year? Who paid the expense of sailing the *Endeavor* to England and giving her to the British Government? On what principle did the Government entertain King Kalakaua or send the Rev. Dr. Newman on his trip round the world? Where was the constitutional warrant for loading a frigate with corn for the famine-stricken Irish in 1847? The offer of President Monroe to bring Lafayette to this country in a man-of-war, and the presentation to him by Congress of $200,000 and a township of land after he came, were neither more nor less than appropriations of the public money to express gratitude; and, if Congress may levy taxes for the mere expression of gratitude or admiration, and this can be called the promotion of the general welfare, it is hard to say what limit there is to its discretion under this head, except such as is imposed by good sense and decency. If the Centennial Association, for instance, private corporation as it is, were to conduct the Exposition in such a manner as to reflect great credit on the country, and to raise it in the estimation of foreign countries, and to stimulate the demand for the products of its trade and industry and inventiveness, and were to come out of the enterprise with loss, where would be the warrant for denying to Congress the right to indemnify it, and what substantial difference is there between protecting it against a probable deficit and making good an actual one?

We opposed the Exposition strongly in the beginning because its beginning was bad. It was started in a State which has more than any other relied on Government aid for all sorts of undertakings, and has done more than any other to confuse the public mind with regard to the proper limits of Government interference. Its promoters asked for Government recognition on the express promise that they were not to seek Government support in money, and almost immediately broke their promise and began to seek it. Had they then got it, we have no doubt that private exertions would have been relaxed, and private and State contributions would have been withheld, and the whole burden have been thrown on Congress, and, Congress having shouldered it, the political cormorants from all parts of the Union would have flocked to Philadelphia for a share in the spoils. Congressmen would have demanded places and privileges for their "henchmen" as the price of their votes, and the party in power would very likely have insisted on turning the whole concern to some account in this year's campaign, and the Exposition, instead of proving a national glory, would have proved a national shame, and the year 1877 would have been passed in investigating and exposing a crop of disgusting "scandals" produced by it. We confess we had doubts, based on the spirit in which the enterprise seemed to have been begun and on the peculiar kind of machinery created by the charter, whether it would under any circumstances be well organized or well executed. Happily, Congress refused to become pecuniarily or otherwise responsible for it, and the managers, finding themselves compelled to rely on themselves, went manfully to work and, in spite of the prevailing business depression, speedily won public confidence. The Exposition now promises to be all that could be desired, and the amount of money raised already for it, by the States and individuals, is so great as to make it as certain as anything of the kind can be that Congress will be called on for no more than the sum now asked for—$1,500,000; and the nation is certainly interested to that extent at least in the success of the undertaking, and is, we think, morally bound to contribute it, for the discredit of failure will now fall not on any one State or city or corporation, but on the Union, and, for reasons too numerous to mention, it is very undesirable that any further discredit should befall us in foreign eyes. The "general welfare" is not made up alone of hogs, and corn, and miles of railroad, and yards of cotton, and tons of iron. Influence and reputation enter into it largely, especially when they magnify principles and ideas which the whole nation has deeply at heart, and which, whatever the practice may be, lie at the foundation of American polity, and do more than anything else to fire the popular imagination and keep it in readiness for great undertakings.

THE GRANGER COLLAPSE.

THE inaugural address by the new Governor of Wisconsin brings out strikingly the great change of feeling on the subject of Granger legislation which has come over the Northwestern States within the past year. The whole question of the validity of the laws passed by Wisconsin and other States is now before the Supreme Court, and will soon be decided by that tribunal finally and without appeal. But whichever way the decision may go as to the principle of the laws, the question whether they have worked well—whether they have benefited the States which have adopted them—is a practical question which must be decided by the Grangers' own experience; and it is this question on which the farmers have now pretty much made up their minds. In Wisconsin, it seems from the Governor's address, experience shows that they have produced the following effects: Railroad construction, even in those parts of the State which most need it, has come to a dead stand-still; no company has paid dividends on its stock for the past two years, and during the past year only four companies have paid interest on their bonds. If this cessation of dividends and interest meant a diversion of the money into the pockets of the oppressed farmer, it might be very well; but unfortunately the farmer is a borrower of money, and the farming States of the West depend for their prosperity upon the stability of their credit; and the Governor declares that while the right to pass Granger laws is one "of vital importance," it cannot at the same time be denied that "the existing laws" have, "either justly or unjustly," "impaired the credit of the State, and of *its individual citizens*, in the commercial and financial centres of the world." With "immense resources undeveloped," and a "consequent need of capital from sources where it is in excess," the people "find capital repelled" by these laws. This the Governor thinks is not strange, inasmuch as everybody outside the State can see, 1st, that capital has been invested in Wisconsin railroads; 2d, that they are in daily use by the people of the State; 3d, that this use pays nothing to the owners; 4th, that the owners are compelled by law to permit the use, and "deprived by law of the right to say what they shall receive for it." He therefore recommends the repeal of the Granger laws, and the substitution for them of provisions against extortion and unjust discrimination, as well as the establishment of "maximum rates" "not greater than those fixed by the companies when they made their own tariffs"—the latter suggestion being, of course, a convenient device for covering the Granger retreat. The laws will, in all probability, be repealed this winter, and as the Grangers ceased some time since to influence general politics, we may fairly be considered to have arrived at the end of the agitation.

A curious parallel might be drawn between the history of the Granger delusion and that of another "new party" which had a brief existence some twenty years ago. Then, as at the time of the beginning of the Granger excitement, there was a strong suspicion, well or ill founded, that the two dominant parties were in a moribund condition, that they had served their purpose and must disappear. The question was, What should take their place? The "American" party came forward and explained to the public that the Catholics and foreigners were at the bottom of all the existing troubles, and if the foreigner could be checked, the ballot-box purified by changes in the naturalization laws, and the Bible kept in the public schools, all would be well, discontent would disappear, and peace and contentment reign throughout the land. Ludicrous as this cry may seem after all that has happened since, and now that we know by bitter experience what was the real trouble, the politicians and demagogues of the day were delighted with it. To some it seemed to offer an opportunity of avoiding the disagreeable subject of slavery, which always led to hard words and sometimes to hard blows, and of uniting the masses in a really popular movement. To others it seemed as if the organization might be captured for the benefit of already existing interests. The American movement spread like wild-fire. In its origin a secret order—very much like the Patrons of Husbandry—it spread from New York into half the cities, towns, and villages throughout the country. The disintegration of the old parties, which was going on twenty years ago, just as it seemed to be three years ago, brought it new recruits every day. Pro-slavery men went into it because they thought they could make it a "Union" party; anti-slavery men, to make it an anti-slavery party. In 1854, the organization had an important influence in the Northern elections, and the year closed with one of the old parties beaten, the other disorganized, and seventy-five members of the new party elected to Congress from the Northern States. When the "council" of the American Order met in Philadelphia, in 1855, this party of two years' growth was supposed to number from a million and a half to two millions of voters, and it held a national convention for the purpose of carrying the Presidential election. The next year it was dead. The politicians who had concocted it were obliged to abandon its convenient shelter, and declare themselves for or against the extension of slavery.

The reason why it died is obvious enough. It was an attempt to get up a party on the basis of a cunning appeal to race prejudice and bigotry in a country the corner-stone of whose institutions and prosperity is toleration and a repression of prejudice. There were then, as there have been since, abuses of the right of suffrage, corruption in elections, and danger to the schools from rich and powerful religious sects. But these abuses were necessary incidents to the system of government and the condition of society, and to attempt to get rid of them by giving up the principles on which the whole system rested, and to expect a national party formed for this purpose to last, was very much like expecting success for a movement among landowners to abolish property in land, or for an agitation among editors for the suppression of the freedom of the press.

The Granger movement differed, of course, from its earlier prototype in many of the surrounding circumstances, but not in principle. What the slavery question was twenty years ago, the questions of "reform"—*i.e.*, of honesty in public life, of the abuse of governmental powers, of the revenue and the currency—are now. When the Granger excitement began, as when the American movement began, there were doubts as to the permanence of either of the dominant parties, and, as in the earlier case, a large number of ingenious and fertile minds at once busied themselves with seeing whether they could find out what move public opinion would make next. It must be confessed that, in the more recent case, they made what at first seemed a better hit than their predecessors had done. The railroad system of the country was overrun with abuses which had made a great noise, and the farming population of the West were interested in reforming these abuses, as a well-managed railroad system was necessary for the transportation of agricultural products. These were the materials to work upon. By inflaming the cupidity of the farmer and making him believe that the railroads were despoiling him, a new party would be formed which would have "all the elements of success." Republicans would come into it because it was a "reform" party, Democrats because it was a "free-trade" party, the farmers because it was a farmers' party. A taking confusion between *meum* and *tuum* was introduced now to serve the same purpose that an appeal to bigotry and prejudice had done before.

Just as before, it was announced that the two old parties were practically dead; that there was a great rising of the people; that a "new era" of purification and reform had set in. Granges spread through State after State, and in many State governments the Republican and Democratic parties ceased for the time to have any existence. The movement was represented to be directed against tyranny and oppression, and the "absentee" railroad owner was made to play very much the same part in the later, that the foreigner and the Catholic Church had been made to play in the earlier craze. Most of the leading newspapers had a good word to say for the movement as being, whether founded in reason or not, at any rate in "the right direction," or, in other words, likely to result in the breaking-up of the old parties. The move-

ment continued to spread until it numbered voters by the hundred thousand. It owned judges, legislatures, and Congressmen. And now it, too, is dead.

Our readers will, we believe, bear us out in saying that we have always predicted this result from the time when the new movement first showed its real character. We did so not because a movement against railroad abuses was at all distasteful to us, but because we have never believed that a movement would succeed in America which was really directed, not against abuses, but against the rights of property. That a particular class in the community would, under cover of a vague cry about oppression and wrongs, the exact nature of which they were never able to state clearly, be long allowed to masquerade as reformers for the purpose of making a living at their neighbors' expense, we have always had too high an opinion of American honesty and common sense to suppose. When the Grangers had once proclaimed that their object was to "fix rates," or, in other words, to declare by law what proportion of the market value of services they themselves should pay, and that they would not be bound by the terms of their contracts, it was perfectly clear that the Granger movement was rank communism, and its success in this country was against all reason and experience.

At the time when the Granger fury was at its height, those who endeavored to expose its fallacies received a great deal of advice from persons who felt it their duty to "labor" with all doubters, and to show them that a great movement was really on foot and was going to "revolutionize the country." These instructors of the public now maintain a judicious silence, and apparently have entirely forgotten the fearful perils which "watered stock" and railroad "combinations" and "pools" and "consolidation" and "Tom" Scott and Vanderbilt were going to bring in their train. The State, they assured us, must either absorb the railroads or the railroads would absorb the State. Unless we all became Grangers, this was the inevitable end to which we were tending. We trust that the collapse of the Granger movement will be a warning to all who shared these gloomy apprehensions, and who tried to persuade themselves and their neighbors that the way to remedy them was to plunder the railroad companies. When another attempt is made to "revolutionize the country," or to break up the old parties, we trust they will ask themselves, not how many votes the new movement probably numbers, but whether it has a solid reason for existence; whether the arguments of its supporters are true, or mere hollow imitations of reasoning; whether the grievances against which it is directed really exist, and whether, if they do, the movement will remedy or merely increase them; and, finally, whether the character of the men who advocate the new ideas is solid or flimsy; whether they are men who can defend the stand they have taken by their intelligence and reputations, or whether they are mere howling demagogues, emitting sound and fury and nothing more. If they cannot satisfy themselves on these points, we strongly advise them to let the movement rage, and to believe that honesty and good sense will outlive it, no matter how many States it may carry.

GIRTON COLLEGE.

JANUARY 16, 1876.

THE first question put by English people to an American student at Girton College is: "Why have you left your own country, where public opinion is so advanced on the question of female education, and where women's colleges are many, to come here?" The answer we might give is that the existing women's colleges in the United States are little more than high-schools, whose status is undefined, whose degrees, when won, mean little or nothing to the public, and whose domestic economy is usually so narrow, and their discipline so onerous, that women accustomed to refined and easy modes of life are unwilling to enter them. Girton College, for the first time in the educational history of England or America, brings women into direct competition with men, under the auspices of an institution of high character and wide reputation, and thus attracts to itself the best young Englishwomen; while the traditions of social refinement and domestic comfort which the college shares with the university of which it is a dependency, make a sojourn within its gates possible and delightful to the most fastidious.

For many years a large circle of earnest women in England have longed for a change in the education of their sex. Their views of what the ultimate system of female education might be did not, perhaps, always agree. To most of them it eventually became clear that women could only be fairly tested by the educational standard and methods which the experience of ages had shaped for men. "Let us move the stagnant waters," they said, "and the stream must find its true channel." The first answer to their prayers and efforts was the admission of girls, in 1865, to the Cambridge and Oxford Local Examinations for persons under eighteen years of age. The effect of this extension was immediately felt in all private schools, and also in the home training of girls. It introduced for women the era of definite and thorough elementary training. The best private schools are now organized with a view to sending up their pupils to these examinations, and many girls of the best families have been prepared at home and have passed. At first, the names of girls were not published in the class-lists. Now, it is optional with the candidate whether her name shall be published or not. The next step in the movement was the institution, in 1869, of the Cambridge Higher Local Examination for Women (since 1873 for men and women) over eighteen years of age. Finally, it was thought feasible to claim for women the supreme privilege of admission to the regular examinations of the University of Cambridge.

In 1869, a house was hired at Hitchin, about twenty miles from Cambridge. Some of the best tutors of Cambridge, who were interested in the proposed experiment, promised to give the benefit of their tuition, at no small sacrifice of time and comfort. In October, 1869, six women came together at Hitchin and entered upon their new and arduous undertaking. They were mostly ignorant even of the elements of classics and mathematics, and among their instructors there was no one who could well appreciate their peculiar position. Senior wranglers lectured on conics to students who did not know the symbols of algebra or the first propositions of Euclid, and girls who had just learnt the Greek alphabet were led into the mazes of Platonic philosophy. After a year of desperate, struggling work, the feeble band went up to Cambridge for the "Little-Go," still doubtful whether the university examiners would receive their papers. This crisis was successfully passed, and, three years later, one of the original students was examined in the papers set for the mathematical Tripos, and took her place high in the second class of mathematical honors. In February, 1873, two others took classical honors, Miss Cook, of St. Andrews, sending in the best philosophical papers of the year—an achievement which would have earned a college fellowship for her if she had been a male student of the university. Meanwhile, a field of sixteen acres was purchased in the parish of Girton, about two miles from Cambridge, and a college-building, fitted to accommodate twenty-one students, was erected. This building is one side of a proposed quadrangle. The funds required for it were raised by loans on mortgage and by public subscription. While the building was in progress, undergraduates and dons made it the favorite goal of their afternoon ramble, and many a brick was laid by these as a token of their goodwill. In 1872, the institution was incorporated under the name of Girton College. In October, 1873, the occupation of the new building began; and since then the interest of Cambridge in her foster-child has been more generous than ever.

It is needless to dwell upon the course of study at Girton, for it is simply identical with the university course. All university regulations as to the previous examinations and as to terms of residence are observed. The regular examinations take place at Girton on the day and at the hour when the students of the university take their places in the Senate-House. A Master of Arts comes out to Girton to superintend honor examinations, the sealed package of examination-papers in his pocket; and the allotted time for each paper is scrupulously observed. In every case, the papers containing the candidates' answers are immediately folded, at the close of the examination, and forwarded to the university examiners, who compare them with the men's papers, and report, formally, to the Mistress of Girton College the position which each candidate deserves upon the class-lists. After final examinations, the college ratifies to each student the decision of the examiners by what is called a *degree certificate*. Of course, as Girton is not incorporated in the university, the names of successful candidates do not appear upon the lists. It need not be said that the highest aspiration of Girton is incorporation in the university; but these hopes it scarcely yet dares to breathe audibly.

The only peculiarity in the methods of study at Girton is dependence upon the lecturers of the university for tuition. Hitherto this has never been felt as a disadvantage. The best "coaches" of Cambridge have

cheerfully sacrificed their afternoon hours, usually so jealously guarded for purposes of recreation, to lecture at Girton, and have expressed pleasure in the contact with the fresh, enthusiastic minds they found there. For nearly two years the college had the benefit of a resident classical tutor, one of its own graduates, and for three terms of a resident lecturer in mathematics and natural science, also a graduate. Private circumstances have now caused the withdrawal of these ladies from the college staff. How the tuition of the college will ultimately be organized it is hard to say. Its friends can only hope that the future has in store honors for Girton students which will qualify them as first-class tutors, and funds for the college which will enable it to offer inducements adequate to secure the permanent services of such tutors, whether its own graduates or those of other colleges. The arrangements for lecturers have hitherto been made by the Mistress, who holds a position corresponding to that of the Master of a Cambridge college. Since the resignation of this office by Miss Emily Davies last June, the responsibility of these arrangements has, I believe, been transferred to a board of lecturers. Up to the expiration of this last Michaelmas term, seven students have taken honors, none as yet higher than second-class. For a first-class graduate, Girton must probably wait until her students come prepared by the careful training which boys receive from early childhood. Four students have also passed the general examinations for the ordinary degree of B.A., one of them, last June, at the head of the list.

A confusion has often occurred between Merton College (now Newnham Hall) at Cambridge and Girton, somewhat to the disadvantage of the latter. Merton was originally established as a mere boarding-house for women desirous of preparing themselves for the Cambridge higher local examinations. No entrance examination, such as that which at Girton ensures the possession of a good English education, is enforced at Merton. Latterly, its students have been examined in the papers set for the Triposes, as at Girton ; but Merton does not require its students, as Girton does, to pass the previous examination, nor to observe the university rules as to the terms of residence. For instance, a student may pass an examination for classical honors five or six years after entering Newnham Hall ; whereas a Girton student must take her examination according to university regulations in her twelfth term of residence. Owing to this laxer constitution, Newnham Hall has more students than Girton ; but Girton's rigid observance of rules is the silent assertion of its worthiness to enter the body of the university.

Turning from the constitution of the college to its inmates, one feels it difficult to convey an idea of their vigorous tone without arousing in the imagination of American readers a suspicion of the "strong-minded" type, which has become so justly odious. Perhaps one may best indicate how false such an idea of Girton students would be by dwelling on their great unconsciousness of any representative character. They never seem to regard themselves as the exponents of a cause ; there is rarely any reference made among them to their conspicuous position before the eyes of the public. They are simple-hearted English girls and women, doing work for its own sake, spontaneously and with pleasure, without any of that morbid craving for recognition which is so frequently obtrusive in women's work. About half of the girls look forward to being teachers ; not governesses, but teachers and head-mistresses in schools. The great endowed schools for girls, the schemes for which were framed by the Endowed-Schools Commission, and are now being perfected by the Commissioners of Charity, will doubtless look to Girton for their head-mistresses, while, in turn, they will prepare students for her. At one of these schools—St. Paul's, London—£700 a year is provided for girls from the school to pursue their education at institutions of superior learning ; and at least a large share of this will naturally be spent at Girton. Other schemes have similar provisions. The other half of the students at Girton are working without reference to any special career.

Although the students now come somewhat better prepared, and the kind of "coaching" they need is now better understood than when the college was started, aspirants for honors still labor under a great pressure, except in cases of remarkable natural talent. Notwithstanding this, there has been but one instance of a student's health being injured by work, and that was the case of a young girl who entered at the minimum age and was led by her ardor to squander her strength. Several cases of nervous prostration have been materially benefited. Those students whose health is feeble usually limit their aspirations to taking the ordinary degree, which any girl of medium intelligence can obtain without onerous exertion, as the standard of attainments requisite to take a degree *without honors* at Cambridge is lower than that of the principal American men's colleges. What greatly facilitates an English college course for women is the absence of any system of marking at recitations. This allows a student, whenever she is temporarily out of sorts, to fall below her average of work, or miss her lectures entirely if necessary, with the knowledge that she can redeem the lost time afterward. Another feature of Girton life, while it is a condition of first-class work, appears to me also a great safeguard to the nervous, and therefore to the general health of students : I mean the opportunity which each student possesses of perfect privacy in her own apartments. A bedroom and a study, or one large room combining the two uses, is set apart for each student ; and as there are never more than five students on a corridor, there is never such a noise outside the doors as to cause disturbance. This arrangement forms a marked contrast to the provision at Vassar, for instance, where five students have only three bedrooms and one study together.

The internal discipline at Girton is as slight as possible. Students are required to enter their names on the marking-roll three times daily, and to be present at lectures, unless especially excused by the Mistress. They must not accept evening invitations more than once a week ; they must not receive visits from gentlemen in their rooms ; and they must always be within the college gates at 11 P.M. Within these limitations they study, walk, ride on horseback, play cricket and their favorite "fives," without let or hindrance. The student's day begins about 7 A.M. At 8 o'clock, prayers are read in one of the lecture-rooms. Between 8.15 and 9, breakfast is on the table. After breakfast, the morning hours are devoted to study, which is entirely done in the private rooms. As there is, as yet, no proper library-building, the small though choice collection of books that the college owns is kept provisionally in one of the three lecture-rooms. This is, of course, frequently occupied by lecturers, and books of reference are therefore carried off by students to their studies when needed. These studies are cheerful, airy rooms, enlivened with photographs and engravings, flower-pots in the windows, Turkish rugs, book-shelves, etc. In each of them a big table, loaded with papers and text-books, denotes the essential character of the apartment. Luncheon is spread between 12 M. and 3 P.M., but it is mostly about one o'clock that the students come in for a light repast, of which the rich, sweet milk, abundantly supplied, is an important part. After luncheon some hearty exercise is the general desire. Many of the students go off in pairs for an hour's rapid walk—in springtime or early autumn over the fields, through hedge and ditch ; in winter, when Cambridgeshire fields are half-flooded, along the highways. Like most English people, Girton girls are ardent lovers of nature, and as soon as spring stirs in the meadows a basket or pail is carried on every student's arm, and comes back from the ramble filled with entomological or botanical treasures. If the weather is bad, or if it is necessary to condense a great deal of exercise into a few minutes, a Bloomer suit is put on, and recourse is had to the gymnasium. This gymnasium is a covered court, separated from the college building, and has been erected by the students themselves. It is still destitute of gymnastic apparatus, and is mostly used for "fives," a game played with bat and ball, and resembling tennis. In the spring and autumn, lawn-tennis or cricket is preferred to exercise in the gymnasium. These games are played on the grass plots near the college building. The *entourage* of the building, by the way, is rather dreary. The land belonging to the college is mostly let to a neighboring farmer, and the portion reserved immediately around the college is only provisionally laid out, and almost destitute of trees.

Most of the lectures occur in the afternoon. A student does not have, on an average, more than one lecture a day. The variety of subjects which are pursued renders the number of those who attend each course of lectures very small, often only one person. At these lectures the lecturer reviews the work done by each student since the last lecture, whether mathematical problems, Greek and Latin compositions, or answers to papers of miscellaneous questions on the subject of study. Any questions which have occurred to the student are answered. Then the lecturer starts off on his lecture proper, usually choosing portions of the subject or methods of treatment which are not found in the class-books in use. Those students who have not taken exercise before their lecture go out after it. In the Michaelmas and May terms many of the students get a ride on horseback, in parties of two and three, before dinner, which is at six o'clock. This meal is always a specimen of good, plain English cooking—abounding in roast joints and puddings. After dinner, dressing-gowns are donned and tresses unbound. Sometimes a little music, college-songs in chorus, or a country-dance intervenes. Then the nocturnal labors of the students begin. There is always a break of thirty minutes or an hour, caused by the appearance of tea, coffee, or cocoa, which innocent beverages are brought to the students' rooms by the college servants before nine o'clock, or pre-

pared by the students themselves over their open fires at a later hour. This is the moment when hospitality is most practised. One student invites several to her room, and these gatherings take the place of the men's "wines." Many are asleep at 10.30. Others burn the midnight oil.

On Sundays most of the Girtonians attend both morning and afternoon service in Cambridge, lunching between at a lady's reading-room to which they have access, and where light refreshments are to be found. The services at the little parish church of Girton, half a mile from the college, are very drowsy, and seldom withhold the students from the fine services in Cambridge, specially attractive among which are the afternoon sermon in the University Church, always by some distinguished preacher, and the choral service afterward at King's College Chapel.

Cambridge is often visited during the week also by the Girton students, either to see friends or for the purposes of their simple shopping. At different times, again, students have gone into Cambridge regularly to attend professors' lectures which happened to be open to women, or courses of lectures (called the Cambridge lectures for women) similar in character to the college lectures above described, and gotten up in connection with the Cambridge Local Examination and Merton College. Once in a while, the students devote an evening to theatricals, a debate, or a Shakspere reading; but it is rare that all can unite to give up an entire evening to amusement. About once a year the Mistress gives an evening "at home" to the friends of the college from Cambridge. Some guests also come from London and elsewhere, and it is always a bright, pleasant occasion. The college has never been rich enough to afford a chapel, and the only religious exercises are family prayers, conducted by the Mistress, which it is optional with the students to attend. Girton rather labors under the reputation of a bias towards free thought, but fully two-thirds of the students have been staunch Churchwomen. The dress and manners of students at Girton are those of English girls of their class—*i.e.*, the professional and upper-middle. If one student threatens some eccentricity, there is a general outcry by the others. "Do not let us make too many experiments at once," they often say. They are asserting their capacity for that thorough education which is the foundation of practical effort in every department of life, and, if this experiment succeeds, they are confident that the practical life of women will so expand as to burst the gilded shackles of luxury and fashion by which it is now confined. Girton students, moreover, are as a rule much too true to their English nationality to profess any contempt for marriage. Some of them, however, seem formed for a purely scientific life, and one can scarcely imagine them hampered by domestic ties. There is considerable discussion among the students as to the proper fields of activity for women in after-life. One article of faith, however, has brought all these busy girls together: the conviction that, whether as scientific specialists, as teachers of the young, as business-women, or in a purely domestic sphere, the liberal education which they are gaining must ever be the best preparation for their duties. Such an education is not intended for all women, any more than for all men. To the superior minds of either sex it must be the best succor in adversity, the truest luxury in prosperity.

ENGLAND.—THE NEW PEERS.

LONDON, January 3, 1876.

THE Parliament of the United Kingdom of Great Britain and Ireland is composed of four constituent elements—the King or Queen, and the three Estates of the realm, viz., the Lords Spiritual, the Lords Temporal, and the Commons. These several powers collectively make the laws that are binding upon the subjects of the British Empire. The Lords Spiritual and Temporal constitute the House of Lords—the former consisting of the Archbishops of Canterbury and York and twenty-four Bishops of the Church of England; the latter consisting of—

1 The Prince of Wales,
4 Dukes of the blood-royal,
21 Dukes,
18 Marquises,
111 Earls,
24 Viscounts,
245 Barons,
16 Representative Peers of Scotland,
28 Representative Peers of Ireland,

or 468 in all. There are also 7 ladies who are peeresses in their own right. The House of Commons consists of 658 members, viz., 493 returned by English and Welsh, 60 by Scotch, and 105 by Irish constituencies. The members of the House of Commons, though they varied in the past, have remained stationary at the mystical number of 658 since the union with Ireland at the close of the last century, and this stationariness has survived notwithstanding the numerous, and almost fundamental, alterations which have been made in the distribution of the electoral franchise by the several reform acts which have been passed during the century. There is no reason why 658 should be selected rather than any other fancy number. Thirty or forty more or thirty or forty fewer members of Parliament would not make any perceptible difference either in the quality or quantity of the legislative or deliberative acts performed by this body. But the whole distribution of political power in this country is full of curiosities and anomalies, grown out of tradition or compromise, and fostered by the conservative instincts of a slowly-moving population. Probably 658 is as good as any other fancy number, and does its work with a sort of clumsy method that suits the genius of the people. The numbers of the House of Lords are not restricted. Peerages become dormant from time to time, or die out, but the gaps made by these natural processes are more than filled up by new creations and promotions from a lower to a higher rank. During the reign of Queen Victoria no fewer than 146 creations or promotions in the House of Lords have been made. Each Prime Minister seems to feel bound to tap the fountain of honor in favor of his supporters at the beginning, in the middle, or at the end of his tenure of office. When Lord Melbourne was Prime Minister, at the commencement of the Queen's reign, a couple of dozen peerages were authorized. Sir Robert Peel, between 1842 and 1846, was satisfied with four. Lord Russell, between 1847 and 1851, and again in 1866, created twenty; Lord Palmerston, fourteen; Lord Derby, ten. Mr. Gladstone, feeling the weakness of his party in the upper House, advised the creation of no less than forty peers in six years, and Mr. Disraeli, not to be outdone, has, in the brief periods of his two reigns in 1868 and 1874-5, created seventeen, and within the last few days he has promoted three of his supporters and elevated four more—giving him a round total of four-and-twenty in three years, or an average of eight a year. But among his four-and-twenty there are no less than three dukes, and no Prime Minister except Mr. Disraeli has ever managed more than two. Few, indeed, have ventured to aspire above a plurality of viscounts.

New creations are intelligible enough to any British-born subject. In a country in which position in society is so highly valued as it is in this country, entrance into and acceptance by the old hereditary nobility of Great Britain are obvious objects of ambition. What men desire, and still more what women desire, when they have acquired the necessities and comforts of life, is consideration from and power over others. A title, even the humblest kind of title, say a knighthood, is a stepping-stone towards the realization of their desires. But a knighthood is a poor thing after all. It confers the title of "Lady" upon your wife or widow, but it does not help your children. As soon, therefore, as a man is made a knight, he aspires, if he has a family, to become a baronet, and then the title descends to his eldest son, and so on through the generations which succeed him. But this, though a hereditary title, does not bring him within the hereditary peerage. A baronetcy does not give a man a seat in Parliament, and it does very little for his younger children. It gives them a sort of shadowy precedence at a dinner-table among a lot of commoners, and this shadowy precedence the sons and daughters of baronets are not slow to exact. But it does not give them either power or consideration. A barony is a very different thing. A baron is an august being. He is an hereditary peer of the realm, whose blood is ennobled, and whose dignities can be lost only by attainder or taken away by act of Parliament. He cannot sit in the House of Commons, but he has a seat in the House of Lords, which descends to his eldest son. He has precedence over all commoners and baronets and knights and privy-councillors who are not ennobled. He is, in virtue of his dignity, one of the king's councillors, and an hereditary member of the highest judicial body in the country. His wife shares his titles and honors with him, and their sons and daughters are distinguished from the herd whom their parents have left behind by courtesy-titles of "Honorable" added to their names. Their descendants, however, do not remain in the ranks of the nobility, as they do abroad. They fall back into the gregarious commons, and become the simple "Mr." and "Miss" of domestic life.

To be thus raised above your fellows into what most people consider a higher sphere of social existence is, if not a laudable, at least an intelligible, desire. What is not quite so intelligible is the desire for promotion in this higher sphere. Promotion in the army, or the navy, or the civil service means higher pay and more interesting and important and responsible work. Promotion in the peerage, if it means anything at all, means the

reverse of this. Why, for instance, should the present Lord President of the Council, the Duke of Richmond, desire to add a new barren dukedom to his name? He is Duke of Richmond in the peerage of England, Duke of Lennox in the peerage of Scotland, and Duc d'Aubigny in the peerage of France. He is Earl of a good many places, and Baron of many more. But his taste for titles is insatiable, and last week he was gazetted Duke of Gordon. He may wear his weight of dukedoms like a flower, but he cannot fit four rows of strawberry-leaves into his coronet; and, if he did, he and his coronet would look supremely ridiculous. Malignant rumor says he has persuaded the Prime Minister to advise the Crown to make him Duke of Gordon in order to snub the young Marquis of Huntly, who, as the lineal descendant of the old Dukes of Gordon, naturally aspired to see the dignity revived for him. Unfortunately, however, for his chances with the present Tory Government, Lord Huntly is Liberal—almost Radical—in politics, and actively hostile to the present administration. This is the only explanation hitherto vouchsafed of the Duke of Richmond's proceedings. The motive is contemptible if it be the true one. But Lord Huntly may console himself, if he cares to do so, by comparing his pedigree with that of the cuckoo duke who has entered into his nest. For, while his ancestry is lost in the clouds of antiquity which obscure the times anterior to Malcolm Canmore, the cuckoo duke descends from one of Charles the Second's bastards, who was born two trumpery centuries ago. Why, again, should the Earl of Abergavenny—the descendant of the Nevilles, one of England's oldest families—ask a Jew Prime Minister to enable him to sink the earldom which has been for generations in his family, and the barony which his ancestors have held since 1450, in a brand-new marquisate of 1876? It is easy enough to see why the Jew Prime Minister granted his request. No one has done more work behind the scenes, of a kind that peers do not generally do, for the party now in office than the "Tory Bloodhound," as the present representative of the Nevilles is called among his friends. But even the staunchest bloodhound looks for fondling and for supper when his work is done. Accordingly, he has got his promotion. He is entitled to be addressed by the Crown as "our right trusty and entirely beloved cousin"; to hear his eldest son called "Viscount," and the rest of his sons called "Lords"; and to take precedence over all the earls. He will probably rest and be thankful now, and leave the obscurer forms of party tactics to the humbler orders of the Tory peerage.

The thirst for such promotions in the peerage is difficult to understand by those who are not of it. But for many of that distinguished body all interest in politics and the political life is concentrated in that portion of the official gazette which narrates the new promotions. The explanation perhaps may be found in the principle that the steps of the social ladder are infinite in number, and every Englishman wishes to fix his foot upon the one immediately above him. Well, it is an innocent, if not a noble, ambition. It does not lead to crime like the desire for wealth, and it does not lead to universal misery like the desire for glory.

And for what services, you may ask, are these much-coveted honors granted? For an answer I must refer you to Mr. Disraeli. Speaking of Pitt's peerages, he says: "He created a plebeian aristocracy. He made peers of second-rate squires and fat graziers. He caught them in the alleys of Lombard Street, and clutched them in the counting-houses of Cornhill." But this description is but partly true. In the old time, when we were a military nation, peerages were granted for great services to the state. The conqueror of Blenheim was not a second-rate squire nor a fat grazier, and neither Wellington nor Nelson hailed from Lombard Street or Cornhill. In 1858, a man from one of the distant Hebrides was made Lord Clyde for distinguished service in the Crimea and in India, and even as late as 1868 General Napier took his title from the Abyssinian campaign. Literary services have from time to time been honored by a patent of nobility, and every Minister takes at least one peer out of the ranks of the legal profession. "Second-rate squires and fat graziers," no doubt, are raised to the peerage more frequently than men of any other class when Mr. Disraeli's friends hold office. But they generally do some party work before they earn their elevation; and it cannot be denied that devotion to one of the two parties in the state is the road that leads most certainly and most easily to the peerage. Given wealth enough to support the title, and a reasonably old pedigree, and sometimes even without the latter, a man can buy his way into the House of Lords. But he must begin early, and he must spend profusely, and he must do it wisely, to promote the true interests of the party of his choice. If he does this long enough, and has the education and cultivation essential to the dignity of the position, he will have bad luck if he does not die ennobled; and to this proud object of ambition there are not a few English gentlemen and ladies who will devote their lives.

Correspondence.

ART-INSTRUCTION IN MASSACHUSETTS.

To the Editor of The Nation:

Sir: In an article, which appeared in the *Nation* of December 30, the system of art-instruction in Massachusetts is judged by a set of heliotype reproductions of drawings selected from State and city schools (published in the last report of the Drawing Committee), and condemned on the ground that it is essentially unæsthetic. As purely æsthetic culture is not its aim, how can it be fairly criticised for its non-æsthetic character? The value of any system of instruction depends wholly upon its fitness as means to a given end; wherefore, in judging it, we should consider what it is intended to accomplish, and not what we think it ought to accomplish. The latter course is, however, taken in the article in question, nor is the adverse judgment pronounced at all mitigated by the proof furnished in certain drawings from the high-schools and evening schools that æsthetic culture is attempted in them to a necessarily limited degree; nor by the expression in the text of the report of an earnest desire that casts and flat copies of the highest order should be multiplied in the upper schools, so that the industrial character of the authorized instruction given may there be elevated and refined. The writer criticises the system as if it had been framed to give an artistic training to the children in the public schools. He would have them taught as if they were pupils in so many art-schools, while the State wishes to teach them drawing as reading is taught, not for the purpose of making them professional readers, but to give every one the common and valuable power of reading. He says that "art-instruction is properly directed towards æsthetic culture alone"; the State says that to teach any subject in the public schools in such a manner as would be of advantage to the few would be directly contrary to the purposes for which they are established, and to attempt, even if it were possible, a directly artistic training, would be to sacrifice the advantage of the many, who would never become artists, for the benefit of a few exceptionally gifted individuals.

The aims of the State, being what they are, can only be compassed by means which, were they other than they are, would be totally inadequate. What we wish to show is that those used are adapted to do the work intended, and, being so, are worthy of commendation. The industrial drawing taught under the present system is such as every one, whatever his occupation, will be the better for. It is elementary, not special, and has the merit of being of such a character that the ordinary school-teacher can teach it in class-rooms of an ordinary description. On the contrary, a system of artistic and æsthetic instruction could not be carried on by regular teachers, but would necessitate the employment of special instructors at an enormous cost (could they be found in sufficient numbers to teach in the common-schools of even one city) and a complete change in the lighting of rooms and the arrangement of desks.

That drawing of some kind should be taught in the public schools is evident to all those who admit that a manufacturing State like Massachusetts cannot afford to neglect its interests so far as to do without that which is calculated to develop taste and skill, and thus bear directly upon improvement in industrial design. This being granted, it follows that the method of teaching it must be inexpensive and practical, and this we assert the Massachusetts system to be. Starting with the conviction that every one can learn to draw common objects, it treats drawing in the lower schools as a kind of writing, and, wishing to train the eyes and hands of children to attainable habits of accuracy, it bases its elementary instruction upon geometry, because the correctness or incorrectness of geometrical drawings can be mathematically demonstrated. It awakens the first idea of design in the young mind by teaching children to combine simple geometrical forms into patterns. This arouses their interest in the subject. The designs produced may be very inartistic, but in producing them the child's interest has been awakened. He has discovered that out of several units he can form a systematic whole, and when he is subsequently shown that plant-forms, used in the same way and treated according to the laws of growth, will produce still higher units, his mind is widened and he is already on the road to better things.

Having tried to make designs himself, he will begin to observe designs upon objects around him. These will appear to him in a new light, and as his taste improves he will learn to distinguish between the good and the bad in pattern and color. This he will be helped to do in the high-school, where, with the help of good examples, he will pursue his studies under a special instructor who has studied the subject of design and can explain its principles. There also his love for the beautiful will be in a measure culti-

vated by means of antique and mediæval statues and bas-reliefs and ornament, and by carefully-selected flat copies. When he leaves school and takes up some trade or profession, he will find himself able to draw any object with tolerable accuracy, he will have some idea of design, and some slight degree of æsthetic culture. All that the State expected that the authorized system of instruction would do for him, and all that it pretended to do for him, has been therefore done, and though the end thus reached be considered unworthy by some persons, they should not judge what is done as if the aim were to do what they think ought to be done.

In conclusion, we would point out that the system introduced into Massachusetts by Mr. Walter Smith is not identical with the South-Kensington system, and is not considered to be so by Englishmen who are acquainted with both. In proof of this we quote below from an article in the *Builder* of Oct. 9, 1875, written by Mr. E. R. Robson, Architect of the London School Board, a gentleman well known for his interest in and knowledge of matters connected with education, who, by the advice of the authorities at South Kensington, when they were requested to counsel the School Board as to how drawing should be taught in the London schools, came to this country to hear what Mr. Walter Smith had to say on the subject :

"In the struggle after science, good workmanship, and extended manufactures (writes Mr. Robson), one weak point had been keenly felt. America is profoundly ignorant of art. Further, she knows so much as to know her ignorance in this respect. Competition in all manufactures requiring artistic design (and what manufacture does not ?) must result in failure if wanting in this initial necessity. Efforts are, therefore, now being made in the direction of art-education *with a purpose*. This purpose is no other than the creation of a national school of designers, who at all points should be able to cope successfully with the artists of Vienna, Paris, and London. The movement has its beginning in Boston, where, by great good fortune, one of the best English instructors in elementary design, Mr. Walter Smith, has been induced to settle. It is not generally known that our system of schools of art, as carried on under the South-Kensington 'régime,' is merely a road which leads nowhere, because the ultimate aim and goal of all drawing and modelling, viz., the knowledge of the art of designing, is not taught. The advent of Mr. Poynter to South Kensington may probably inaugurate a new era for us. But the evil is radical, and arises from a bad system of teaching. Meantime, that drawing and designing can be taught at one and the same time by a skilful teacher, Professor Smith, of Boston, is proving every day."

Your obedient servant, VIGIL.

BOSTON, January, 1876.

[Our judgment of the system of art-instruction in Massachusetts was not based, as the author of the preceding communication asserts, upon the set of heliotype reproductions of drawings published in the last report of the Drawing Committee. Those reproductions, being avowedly selected to show the aims and results of the system, served us as illustrations of its defects, and we criticised them in detail with the express purpose to prevent the bringing of the charge of vagueness against our strictures. The defence of the system leads to the following dilemma : If these reproductions fairly exhibit, as we may suppose, the tendency and aim of the system, that system is, even for the accomplishment of its professed object, essentially defective. If they do not fairly exhibit its tendency and aim, the system, by its own showing, is a failure. The point of our objection to the system is by no means "that its aim is not purely æsthetic," or that it does not attempt "a directly artistic training," but that, proposing to teach drawing with especial reference to design for industrial purposes, its methods are ill-adapted to the end in view, and that this end is but one, and not the chief, end of instruction in drawing. No system of instruction in other than purely mechanical drawing, no system of drawing which contemplates design as an end, is good unless its prime and constant object be to train the eye and the hand so as to become the skilled instruments of expression—in other words, instruments for the expression of individual thought, feeling, and fancy. Among the first and essential processes of this training is the education of the powers of observation and delineation of natural objects. It is a sufficient condemnation of the Massachusetts system that it practically pays no attention to the careful study and delineation of nature. Not one of the examples selected for reproduction in the report is of a natural object. In the exhibition last year of many thousand drawings from the schools in Massachusetts, there were few, if any, drawings direct from nature, but, in their stead, elaborate and in part skilfully executed copies from chromolithographs of flowers!

Good design for industrial purposes is not likely to be the result of a system from which the study of nature is omitted, and much less anything that in a proper sense deserves the name of art.—ED. NATION.]

TO THE EDITOR OF THE NATION :

SIR : Several of the artists of Boston who have read the article on "Art-Instruction in Massachusetts," published in the *Nation* of 30th December last, desire me to express their surprise and thanks for the article. Surprise, that any one should dare to call in question the system of art-education as established in this great State by Mr. Walter Smith ; and thanks, that you published it.

We do hope that the author of that article will go through the bill of fare as set forth by Mr. Smith, and show in the columns of your (may I say influential?) journal how devoid of all true nourishment it is, and how much it fails to meet a serious and great demand for the best art-instruction in this as well as in other States of the Union. In the midst of so much muddle about art-education and the crying need of competent instructors, it seems almost useless to offer a protest against the present system, or to set forth the simple, easily-satisfied demands of those who need above all others lessons in art.

Very respectfully yours,

A SCULPTOR.

64 BOYLSTON STREET, BOSTON, MASS., Jan. 22, 1876.

COLONEL FORNEY AND HIS MISSION.

TO THE EDITOR OF THE NATION :

SIR : In your number of 13th inst., it is said "the Centennial Commissioners deny having in any way accredited Forney to act for them in Europe." This is inaccurate, in spirit at least, for Mr. Forney did bear with him authority from the Director-General of the Commission and the President of the Centennial Board of Finance to make known in Great Britain, and on the Continent, the character and purposes of the International Exhibition, and this duty he has performed most efficiently and satisfactorily.

When he was about leaving the United States for an absence of a year or more, he offered his services, for the purpose stated above, gratuitously, and they were accepted, and the allowance which has been made him has been confined to the actual expenses incurred by him for our purposes, not including either the cost of travelling or of living.

When he went abroad, the charge against him concerning the Pacific Mail had not been made. When made, we did not think it our duty to become parties to it ; his term of office was drawing near to a close, although it has, by his continuance abroad longer than he expected, been prolonged ; but as he has taken his passage for the 2d prox. for his return, it will cease in a few days.

The results of his mission, and the voluntary testimony borne to the propriety and great good judgment which Mr. Forney showed in its performance by a large number of American travellers abroad of high personal character, satisfy me that no one else could have been more successful than he has been. Whilst I agree with you that "no man ought to speak for us anywhere in times like these who is not above reproach," you no doubt agree with me, should it happen that he has done so, it is hardly just to injure a good cause because of it. Our unavoidable difficulties are great enough. May we not rely on you to aid us in lessening them as they arise, rather than to make them the greater by their aggravation ? It is due to Mr. Forney that I should say that he denies the truth of the charge made against him. He has been faithful to us. I sincerely hope he is so in all things.

Very respectfully,

JNO. WELSH,

President of the Centennial Board of Finance.

PHILADELPHIA, Jan. 15, 1876.

[The denial came to us from a member of the Executive Committee, and was unqualified.—ED. NATION.]

Notes.

G. P. PUTNAM'S SONS will publish in the course of the next six months 'A History of Transcendentalism in New England,' by Rev. O. B. Frothingham ; 'A Survey of American Literature,' by Prof. Moses Coit Tyler ; 'Spiritualism and Allied Causes of Nervous Derangement, in their Medical and Medico-legal Relations,' by Prof. Wm. A. Hammond ; 'Cabin and Plantation Songs,' as sung by the Hampton Students ; the Japanese

romance 'Chinshingura,' with thirty full-page illustrations; and fresh volumes in their 'Series of Brief Biographies.'——The Congregational Publishing Society, Boston, have in press 'The Arabs and the Turks,' their origin, history, religion, etc., with chapters on the other non-Christian tribes of Western Asia, by Rev. Edson L. Clark, member of the American Oriental Society; and in preparation a translation, by Dr. Smythe of Andover, of Uhlhorn's 'Conflict of Christianity with Heathenism.'——Harper & Brothers announce 'A Bible Word-Book,' by Prof. Wm. Swinton; 'Early Man in Europe,' by Prof. Charles Rau; and 'Robinson Crusoe's Money,' by David A. Wells, with illustrations by Nast.——Scribner, Armstrong & Co. will publish 'The Chaldean Account of Genesis,' by George Smith; a volume of poems by Prof. John Stuart Blackie; and part third of Dr. Stanley's 'Letters on the History of the Jewish Church.'——Baker, Davis & Co., Philadelphia, have begun the reissue of 'Zell's Encyclopædia,' and have already published eight parts out of the sixty-four. So far as we have observed, the changes in it to bring it up to date are only such as could be made by alteration of the plates, and generally within the limits of the original article; thus, the results of the past half-decade's explorations in Africa are summed up in two new lines telling of Karl Mauch's supposed discovery of Ophir. Eighteen colored maps from 'Zell's Hand-Atlas of the World' are to be added to the Encyclopædia.——Mr. Charles Nordhoff's remarkable letters from the South to the *Herald* have been collected in a volume and published by D. Appleton & Co., under the title, 'The Cotton States in the Spring and Summer of 1875.' It belongs in the same useful category with the late Mr. Dennett's letters to the *Nation* on 'The South as It Is' (1865–66), and with Mr. Sidney Andrews's 'South since the War' (1866). In his "Preliminary," Mr. Nordhoff gives a striking summary of his conclusions, which will be found most suggestive reading by all who take an interest in politics or in the national welfare.——The readable papers on Florida in *Lippincott's Magazine*, by Mr. Sidney Lanier, now appear as chapters of a well-filled guide-book which deals exhaustively with that State ('Florida: Its Scenery, Climate, and History.' Philadelphia: Lippincott). It is certainly the best of its kind. Much valuable information is given about winter-resorts in other Southern States and about sub-tropical fruit-culture. The appendix also contains a gazetteer of Florida. The illustrations are excellent, and evidently from photographs.——The *Publishers' Weekly* offers a prize of five dollars for the shrewdest answer to the following question (first of several to be put to the trade): "Which are the most salable works in Biography?" Twenty-five titles must be given, in the order of their popularity.——The *Publishers' Circular* (London) shows, in its analytical table of books published in 1875, that works on theology numbered 782—"a very marked sign of recovery [from 1874] although an absolute decrease [from 1873]." The American importations under this head amount to but twenty-five.——Mr. F. W. Christern has received specimen pages and the prospectus of Firmin-Didot's magnificent publication, 'Paris à travers les Ages.' It will be three years in issuing, at the rate of one *livraison* per quarter.——Two acting editions of Tennyson's 'Queen Mary' have been published in America, and a third has been performed in Philadelphia with but little success. Renewed attention has also been drawn to the 'Queen Mary' of Aubrey de Vere. Two old plays by Decker and Webster and Thomas Heywood, affording opportunity for comparison with Mr. Tennyson's drama, have just been reprinted in London by Mr. Pickering, with a "Prefatory Essay on the Relations of the Old and Modern Dramas in this Chapter of History" by Mr. William John Blew. These are 'The Famous History of Sir Thomas Wyatt' and 'If you Know not Me, you Know Nobody; or, The Troubles of Queen Elizabeth.' The latter, we are informed in *Notes and Queries*, has been recently reprinted in Germany.——M. Henri Gausseron has just begun in *Notes and Queries* the publication of a list of English words used by French writers, and missing in Littré's 'Dictionnaire.'

—In an article on minor French novelists in the *Galaxy* for February, Mr. H. James, jr., discusses at some length the writings of M. Gustave Flaubert. Chief among these is of course 'Madame Bovary,' a novel which has had the remarkable success of attaining the reputation with half its readers of being a powerful moral tale, and with the other half of being one of the vilest novels ever written. Mr. James very candidly says that he remembers thinking, on reading 'Madame Bovary' for the first time, that "it would make the most useful of Sunday-school tracts." On the other hand, the book was judicially impeached and prosecuted for immorality; and though the writer was acquitted, the impeachment and prosecution, when we recollect the liberal character of the canons of French criticism, show at least a division of domestic public opinion. Whether a book is really one of the best or one of the worst in the world is rather an important question, and the solution of it which we should feel inclined to offer would be that, in this case, it depended entirely on the age, character, and education of the reader. As a Sunday-school tract, Mr. James would probably now be quite ready to admit, as he seems indeed to imply, the book would be a failure, for the reason that children would discover in it nothing to attract them but the immorality, which for the childish imagination has in all ages and in all races a certain fascination. On the other hand, persons of mature years and real cultivation, who will honestly read 'Madame Bovary' through without skipping the many unnecessary pages, will, we believe, admit in closing the book that they have not only performed a very difficult task, but that they have derived a great deal of information and instruction from it. It is a picture of the consequences of sin, or rather of the consequences of giving rein to the baser propensities of human nature, the most dreary and the most conclusive that we have ever seen. The career of Madame Bovary from the nursery to the grave is the "easy descent" that we all know about theoretically, but generally fail to know practically, except from the experience of our friends or ourselves. As a work of art, besides its manifold defects in construction, our objection to it would be that the fall of Madame Bovary is accomplished with a too logical necessity, and that in real life she would have had a *locus penitentiæ*, at which the devil would have been kept at bay for a time, or rather the reader would have been left in doubt whether he was at bay or not. As M. Flaubert is a realist, it is not a fair reply to this criticism to say that the other way is the true ideal manner of treating the subject. As a whole, the book is a wonderful pyschological study, whatever may be thought of it as a novel.

—*Scribner's* contains an article which deserves the attention of all fencers and persons intending to take part as principals or seconds in affairs of honor. For some reason or other most Anglo-Saxons, when they treat of Gallic peculiarities, social, moral, or intellectual, always discover a disinclination to take Frenchmen seriously, and a positive disposition to look upon the whole tableau of French life as a sort of genteel comedy, got up for the amusement and relaxation of the gloomier races. Of this tendency we see some slight traces in the article of which we have spoken. It is very brightly written, and evidently by some one who has been a good deal in Paris, long enough, too, to have acquired a genuine liking for the people without losing at all his powers of observation. His life, indeed, must have been spent a good deal in the fencing-rooms of Paris, where, as he avers, he has met with more genuine politeness than anywhere else in the world—an observation which will warm the heart of the honest conservative who sighs at the decadence of the duello and the disappearance of the polished manners of the old school. We are sorry to see that the writer explodes a tradition of fencing which has survived duelling in countries where duelling no longer exists, and which has furnished the foundation for many an exciting encounter in many an entrancing novel—the belief that there are "secret blows" possessing for offence magic properties which, once learnt, place the tyro on a level with the most expert swordsman, as, for instance, the "commander's blow" and the "Italian blow." These are, it seems, simplicity itself, and, like a well-known mate at chess, unless the adversary is a fool, cannot be successfully executed. There is one blow, to be sure, which is certain, and that is known as the "gendarme's blow," described in the following manner: "When your adversary is about to attack you, assume a horrified expression of countenance, cast a terrified glance at the horizon *back* of him, shout, 'There come the gendarmes!' As he turns his head to look, run your sword through him, exclaiming as you do so, and this artfully, that the whole sentence may seem to be one ejaculation, 'Let's make haste!'" The writer says, however, that it wrings him to the heart to be obliged to add that judges and juries are not disposed to look upon the gendarme's blow as a legacy of the Chevalier Bayard.

—A journal that has its editor, business manager, and contributors all in the "summer-land," as the future life is sometimes called by the Spiritualists, certainly possesses some advantages over those directed by us who are "in the form," or alive, and who are hampered by the responsibilities of this dark vale. Especially in times like these is this the case, and the enterprising citizen of Boston who, in order to publish a paper, has allied himself with just such partners, who have their names, preceded by the word "spirit," in the advertisement, showed full appreciation of their immunity from the processes of law, from assaults by offended readers, etc., etc. In what court, for instance, could we pursue Spirit L. Judd Pardee, editor-in-chief of the *Voice of Angels, a monthly journal edited and managed by Spirits?* The man "in the form" is amanuensis and publisher; in his announcement about the paper he tells us he is both an impressional and mechanical medium, who sometimes hears the words of his contributors and sometimes sees them as if they were written in a book; "but," he goes on,

"all are written mechanically through my hand—that is to say, I use not a particle of volition, as far as I know." It is not without suffering that he has reached this state of self-abnegation, "for at times," he tells us, who can well believe it, "when the project flashes suddenly across my mind I feel an indescribable, weakening, nauseous, sickening sensation in the region of the stomach—a sort of sinking-down feeling pervades my entire being." As to the paper itself, it needs but little comment. It has long since been noticed in what for distinction must be called earthly periodicals that all the contributors showed a monotonous likeness in their writings, and in this paper it is doubly true. Little "Tunic," James Fisk, jr., and Victoria Margery Wilton McG——y, all show astounding similarity of style. Fisk, for instance, speaks of "harmonizing mankind to the vicissitudes of life on the lower plane of being," and explains his own vicissitudes by saying that he was worked upon by a band of evil spirits, "with as much certainty of bringing about certain business results as a skilful pianist can, by manipulating the keys of a piano, produce sweet music." Unless fame does him injustice, this was not always his manner of speech.

—The late Dr. Francis Gardner, master of the Public Latin School in Boston, deserves to be remembered partly for his immediate contributions to classical scholarship in this country, but more on account of his prolonged term of service as instructor in the first classical school in the country—first in point of time as well as in excellence, for it is coeval with if it does not antedate Harvard College. He became an usher in it in 1831, and for the last twenty-five years was at its head. In this long period the best of Boston's youth, of all classes, came under his strong discipline and were prepared for college; and always, we believe, the Latin-School contingent formed a significant fraction—sometimes a sixth or a fifth—of the Harvard Freshman Class. Mr. Gardner's impress, therefore, was felt not only in his own school but markedly in the higher institution of which it was the principal feeder, since the Boston quota in every class at Harvard is large enough and coherent enough to give tone to the rest, being probably not less than 40 per cent., while the Massachusetts quota is, according to President Eliot's last report, 63 per cent. Probably not less than five hundred pupils were successfully prepared for college by Mr. Gardner, and no doubt a much larger number, who never went to college, have received their finishing education at his hands. When we reflect, with President Eliot, that "high education is hereditary in this country as in all others," Mr. Gardner's intellectual progeny assumes the formidable proportions of physical descent from a single ancestor in a few generations. He has left no other posterity, for he was never married. He had the faults of a rigid disciplinarian, and he was calculated to excite like and dislike about equally among his pupils. Those who got nearest to him knew him and will long remember him as a very kind and even tender-hearted man, whose time was ever at the service of others, and whose example of faithful, unflagging devotion to his calling would have compensated a multitude of defects. His death at the age of sixty-four seems premature, for he had an iron constitution well preserved by gymnastic exercise long after he was past middle life.

—The last number (December) of the *Rivista Europea* is an unusually interesting one. It opens with an article by Maurizio Schiff on "La Fisica nella Filosofia," an inaugural discourse delivered at the beginning of the present scholastic year at the "Instituto di Studii pratici e di perfezionamento" of Florence. Baron Otto Reinsberg von Düringsfeld gives an account of the various Christmas customs now observed in Denmark, the translator of the article adding some interesting parallel uses in Sicily. The editor, Prof. Angelo De Gubernatis, continues his well-known "Ricordi biografici" with a critical notice of Tullo Massarani, the conspirator, statesman, poet, and artist. A writer who hides himself under the name of "Pio Nesci" contributes a bitter article on the "Riordinamento nazionale degli Studii universitarii in Italia." He asserts that the universities are sectional, too conservative, and not original. The professors are underpaid and not well treated, the appropriations are wasted on supernumerary officers and extraordinary professors, and an enormous amount of time is lost through the observance of religious and national holidays and vacations. This gloomy view of Italian higher educational institutions is followed by an article on "L'Educazione e l'Insegnamento nelle Scuole dei Gesuiti." The establishment of the Catholic universities in France is viewed with much anxiety in Italy, and the writer of the last-named article endeavors to show the methods of instruction adopted by the Jesuits, and draws from them lessons of utility for the present approaching struggle between secular and clerical education. The remainder of the *Rivista* (with the exception of some articles which we shall mention later) is taken up with copious literary news, reviews, correspondence, etc., relating to Italy, France, Germany, England, Switzerland, Hungary, Russia, Spain, Roumania, and India. This department is considerably enlarged in the present number, and will be a characteristic feature of it in the future. We need not say that, as a rule, anything from the editor's pen is worth reading. In a review of Max Müller's last volume of 'Chips,' De Gubernatis deplores the strife waging between Müller and Whitney, thinks Müller is in the right, and advises Whitney to let his profound studies be his own defence and terminate the present discussion, "quanto curiosa per il pubblico, altrettanto disgustosa per i veri studiosi."

—The most interesting articles for the general reader of this number of the *Rivista* are those referring to the Count Alexis Tolstoï, the famous Russian poet who died last October. A year ago Prof. De Gubernatis, who delivered a public lecture at Florence on the poet, requested him to give him a sketch of his life. Tolstoï's letter in answer to this request is now published in the *Rivista* for the first time. It is dated at Mentone, March 4, 1874, and gives a number of interesting details about the poet's early life. He was taken by his uncle to see Goethe at Weimar, and always remembered the great poet's imposing countenance and being taken on his knee. He says he began to write verses when he was six years old, and when he was thirteen went to Italy, for which country he always cherished a profound affection. He closes his letter as follows: "Voici, mon bien cher Monsieur De Gubernatis, mon histoire au dehors et au dedans. Je crains qu'elle ne vous paraisse bien longue, mais du moins je vous ai épargné mes affaires de cœur, lesquelles, vu la grande intensité que prennent d'ordinaire mes souffrances, ainsi que mes satisfactions morales, n'ont pas joué le dernier rôle dans ma vie et ont dû de leur côté déteindre sur mes écrits. Je crois du reste qu'en cela j'ai subi le sort commun à tous les poëtes." That same winter (1874) the poet was in Florence suffering intensely from neuralgia and asthma, accompanied by sleeplessness, in spite of the use of opium in large quantities. It was during this period of physical and mental suffering that he wrote his last poem, which is Dantesque as well in metre as in spirit. It is entitled "The Dragon," and is an allegory descriptive of the German oppression of Italy. The scene is laid in Lombardy just before the destruction of Milan by Frederic Barbarossa. The *Rivista* gives a prose translation of the entire poem. Besides these interesting reminiscences of the poet, there is a letter giving an account of his last moments and funeral, a letter from Turgenef the celebrated novelist, and an excellent life of Tolstoï, translated from the Russian periodical, *Viestnik Evropy*.

—The Acropolis of Athens has at last been relieved from the square tower of mediæval times which stood out so conspicuously at the side of the Propylæa. The Archæological Society demolished it; Dr. Schliemann provided the funds. History has not recorded the name of the Venetian who built the tower, nor the year in which it was built, but some rude drawings or daubs on the adjacent walls, which were covered up by its erection, may yet determine its earliest possible date. A few sculptured marbles were found in its demolition, of which the most noteworthy are an echinus with larger eggs than have been met with hitherto, being perhaps the only fragment remaining of some colossal building, and the left angle of the pediment of the Propylæa—a block of marble one and a half metres long. The right angle had been discovered by Beule. Eighteen inscriptions were found. In one of Roman times, the demos honors Lucius Valerius Catullus (son of Lucius) and his mother, Terentia Hispylla. It is conjectured that this Catullus was none other than the brother of the Roman poet who died in the Troad, and doubtless passed through Athens on his way thither. Another inscription, belonging to the IVth century B.C., contains the names of the fifty prytanes of the tribe Leontis, who joined in setting-up a monument of victory to their eponymous hero, Leos. The formula of dedication is a novel one, and suggests several problems as to the contest in which the prytanes were victorious.

—A full account of the destruction of the tower, with copies of seven of the inscriptions, is given in the last number of the Ἀθήναιον. The other articles of this number are an art-criticism on the designs for the tomb of the patriarch Gregory the Fifth; on forms of early Christian worship; a textual criticism on the epic poem, 'Digenis Akritas,' the earliest known work in Modern Greek, a production of the tenth century, but first published last year in Paris; on new experiments in electricity; inscriptions recently found at Tanagra, at Chorseia, and in Attica. It appears from a note that the reported recovery of certain Elgin marbles is a mistake. They were sunk seventy years ago off the coast of Cythera, and have been searched for this summer by diving, but without success. The Ἀθήναιον, now in its fourth volume, is published in Athens six times a year, by two professors in the university. The subscription price, including postage to America,

is 16 drachmas, or $2 75 in gold. The reduction of postage between Greece and America ought to be followed by increased interchange of current literature. Persons desiring to study the Modern Greek may like to know that a weekly family paper of good literary character, the *Ἀστὴρ τῆς Ἀνατολῆς*, published under evangelical auspices, can be obtained for $2 50. A small daily, the *Παλιγγενεσία*, costs only twelve drachmas a year in Athens, and could probably be mailed in weekly packets for about two cents a week. For a grammar of the vernacular, the school manual of Gerakis can be bought for a drachma. Of course the student will not overlook the helps which our own scholars have provided—*e. g.*, the 'Modern Greek Grammar' of Prof. Sophocles, and the 'Selections from Modern Greek Writers' by Prof. Felton. He is fortunate who can find a copy of the old Romaic Grammar of Prof. Sophocles, with its excellent chrestomathy and vocabulary.

—The third volume of the ninth edition of the 'Encyclopædia Britannica' has just come to hand (Boston: Little, Brown & Co.) Though not comprising the number of long articles of agreeable reading matter contained in the first and second volumes, it is decidedly richer and more varied in its contents than either of its predecessors. The preference accorded to the treatment of technical subjects (a circumstance which, while raising the scientific standard of the work, adds but little to its value as a book of general reference) is equally apparent in the present volume as in the first two. Among the more important contributions of ordinary interest may be enumerated those on Athens, Austria, Francis Bacon, Baking, Banking (by L. H. Courtney, successor to the late Mr. Cairnes as Professor of Political Economy at University College, London), Basilica, Bee, Bengal (by W. W. Hunter), Bible and Bleaching. The article on the Atlantic Ocean, by Dr. Carpenter, embodies the very latest deep-sea investigations of the *Challenger* expedition. Professor Clerk Maxwell, who has gained an enviable reputation by his researches in molecular physics, treats the subject of Atoms at great length, his notice occupying no less than thirteen pages. Biology is, of course, mainly from the pen of Mr. Huxley; that portion of the subject relating to botany has been entrusted to Professor Thiselton Dyer. The article, however, which more than any other particularly demands the attention of the specialist, is that on birds, the joint production of Professors W. K. Parker and A. Newton. This highly comprehensive treatise, dealing solely with the structure and distribution of birds, would, if reprinted in common book-form, make a small octavo volume of about 250 pages. It is strictly of a scientific nature, and is profusely illustrated throughout. The essay on Bacon is very exhaustive; but it contains no allusion to the pretensions made in his behalf to the authorship of Shakspere's works. The four full-page maps appended to this volume, representing the distribution of currents in the Atlantic; Australia; the Austro-Hungarian Empire; and Bengal, are with one exception of tolerable execution. We may properly call attention here to the fact that on the cartoon-map of Alabama (Vol. I.) Pensacola is located wholly within the limits of that State.

BOCCARDO'S DICTIONARY OF POLITICAL ECONOMY.*

PROFESSOR GEROLAMO BOCCARDO of Genoa, the editor, and apparently the almost exclusive author, of an important general dictionary of political economy and commerce now in course of publication at Milan, is one of those men of encyclopædic learning, versatile talent, and indefatigable industry of whom Italy numbers many more than foreign scholars are usually willing to admit. One reason why so few Italian literati and scientists of the present day have acquired a European reputation is, that they habitually employ in their writings a language perhaps in itself not so well suited as English, French, or German to the discussion of themes of cosmopolite interest. Italian, too, is little cultivated abroad, because the people whose proper tongue it is has but recently won recognition as an independent member of the great body politic of Christendom, and has yet scarcely made itself felt as, at the same time, a living and individualized force in the intellectual commonwealth of our day. The Italians of the Renaissance gained the ear of the contemporary world not through their vernacular, but through the Latin, then the general language of high culture, which they used far more skilfully than any other people; and Dante and Petrarch expected European renown from their Latin compositions rather than from their productions in a dialect which they thought too trivial to engage or to merit the attention of strangers. When Latin ceased to hold predominance as the proper vehicle of intellectual expression, Italy lost her relative position in the republic of letters, and political and religious influences have since concurred to prevent her from regaining it.

A better reason for the purely *national* reputation of many Italian scholars and publicists who desire a wider fame is, that in Italy the sentiment, *Spartam quam nactus es hanc orna*, dictates to the man of letters, as well as to the devotee of physical and especially economical science, both a choice and a treatment of subject which adapt his works rather to native interests, taste, and judgment than to foreign standards. The new conditions of the awakening national life of Italy have imposed new duties on her educated sons. The reorganization of the political, the civil, and the social system of the nation, combined with the overthrow of the priesthood as a governing element, has created an absorbing demand for all the available legislative, economic, and administrative talent of a large portion of what Coleridge calls the *clerisy* of the nation. This is now the ruling class in Italy, and we are acquainted with no country where a greater proportion of men in official life are persons of wide and thorough intellectual culture. The members of the national legislature have almost without exception enjoyed an academic training. University professors, eminent medical men, jurists, journalists, engineers, naturalists, and physicists, educated soldiers in actual service, are very largely represented in the Senate and in the Chamber of Deputies, and many of them are very assiduous in the discharge of both parliamentary and of professional duties—duties which with us are regarded as practically incongruous. In fact, the statesmen who have controlled the destinies of Italy for the fifteen years of her existence as no longer a geographical expression, but as both a nation and a state, have belonged chiefly to positions in life which, with the exception of the law, would in the United States exclude them from occupying a seat in the national legislature; and it is a point especially deserving of notice, that the number of deputies, even senators, who have not won their spurs by achieving some personal distinction, and who owe their election solely to birth, wealth, or social position, is very small.

But although the professor, the lawyer, the scientist does not usually withdraw from the exercise of his special vocation because he has accepted a seat in Parliament, yet the calls of public life on those who prove eminently fitted for its duties often gradually weaken the ties which have bound them to the pursuit of science, of the learned professions, of public instruction, or of industry, and they end by devoting themselves exclusively to the service of the state as legislators or as cabinet ministers.

Italian scholars who do not enter into public life have comparatively little inducement to pursue the career of authorship. They cannot hope to secure a foreign public unless they write in a foreign tongue, and the circle of reading Italians is far less numerous than that of English, French, or Germans—so narrow, indeed, that a remunerative demand hardly exists for the productions of native writers. Hence Italian publishers must content themselves with the small gains yielded by small issues, and it is only fortunate authors who receive any pecuniary compensation for their labors. Italian writers, indeed, are often obliged to guarantee their booksellers against loss or to contribute a part of the expense of publication. The Turinese bookseller Pomba published, in the course of thirty years, five editions of a Conversations-Lexikon, or popular encyclopædia, in twelve large 8vo volumes, and a sale of 12,000 copies in all was thought a remarkable success. What would the publishers of English and American encyclopædias and their contributors say to such a success as this?

For these reasons there are hundreds, not to say thousands, of learned and able men in Italy who have never printed a line, but who are known to their own private circle and to their official associates as scholars of much native ability, of wide general attainments, and often of curiously varied and minute knowledge.

Prof. Boccardo gave early promise of success in political life, but, unlike most Italians who attain to official position, he has retired from active participation in national affairs, and devoted himself to his country's service in the field of public instruction, not only as an academic teacher, but more especially as an author of works designed less for scholastic use than for general circulation among educated men of all conditions, and especially of the mercantile, the industrial, and the professional classes. Besides many useful works devoted chiefly to the propagation of his views on various branches of public economy, we may mention his 'Fisica del Globo,' or Physics of the Earth, published in 1868, favorably noticed in these columns in 1869 as a very meritorious, comprehensive exposition of the subject indicated by its title; a new 'Italian Encyclopædia,' or general dictionary of science, literature, and art, in 25 volumes quarto, which he is carrying on almost single-handed; and the 'Dictionary of Public Economy and Commerce' which we have already mentioned. This valuable work, now advanced to the letter M, will make two royal octavos, of at out 1,500 pp.

* 'Gerolamo Boccardo. Dizionario Universale di Economia Politica e di Commercio.' 2da edizione. 2 vol. grande in-8vo. Milano, 1875-6.

each, and will probably be completed in the course of the year 1876. This is not a dictionary of merchandise, like the excellent 'Waaren-Lexikon' of Merck, but a series of condensed essays on important topics connected with the theory, the law, the practical exercise, and the statistics of national finance, of credit, of commerce, of navigation, and of monetary circulation and exchange, besides numerous special articles containing a great amount of information on the objects, the history, and the geography of international trade and of domestic industry, as well as on many subjects of both moral and material interest.

The first volume of this important work contains carefully elaborated articles on Abandonment, Abundance, Beggary, Waters, African Commerce, Agriculture, Brokerage, Aliment, American Commerce, Public Administration, Silver, Arts and Trades, Commerce, Average, Banks and Banking, Bankruptcy, Beneficence, Bank Bills, Balance of Trade, Blockade, Exchange (*Borsa*), Bills of Exchange, Canal, Cargo, Paper Money, Savings-Banks, Codes, Colonies, Consuls, Legal-Tender Money, Public Credit, Rivers, Customs, Exportation, Importation, Expropriation, Railways, Fairs (commercial), France, Commerce of, Fire, Industry, Interest, Mortgage, Public Instruction, besides many others of scarcely less importance.

Of course the opinions of critics on the doctrines of Prof. Boccardo will be modified by their own theories of political economy, but disputed questions will be found fairly presented, and none will deny the general accuracy of the statistical details and of the great amount of miscellaneous information contained in this work. The writer is acquainted with no equally condensed, convenient, and trustworthy source of instruction on the subjects treated in the English language; and in its specialties this dictionary is hardly less complete and satisfactory than our most voluminous encyclopædias. In our age, so prolific in word-books, few have appeared better suited to their purpose than Professor Boccardo's 'Dictionary,' and a translation of this lexicon, with such modifications as may be needed to adapt it to English and American use, would be a valuable addition to our commercial and economical literature.

GEORGE P. MARSH.

ROME, Dec. 18, 1875.

Winter Sunshine. By John Burroughs, author of 'Wake-Robin.' (New York: Hurd & Houghton. 1876.)—This is a very charming little book. We had noticed, on their appearance in various periodicals, some of the articles of which it is composed, and we find that, read continuously, they have given us even more pleasure. We have, indeed, enjoyed them more than we perhaps can show sufficient cause for. They are slender and light, but they have a real savor of their own. Mr. Burroughs is known as an out-of-door observer—a devotee of birds and trees and fields and aspects of weather and humble wayside incidents. The minuteness of his observation, the keenness of his perception of all these things, give him a real originality which is confirmed by a style sometimes indeed idiomatic and unfinished to a fault, but capable of remarkable felicity and vividness. Mr. Burroughs is also, fortunately for his literary prosperity in these days, a decided "humorist"; he is essentially and genially an American, without at all posing as one, and his sketches have a delightful oddity, vivacity, and freshness. The first half of his volume, and the least substantial, treats of certain rambles taken in the winter and spring in the country around Washington; the author is an apostle of pedestrianism, and these pages form a prolonged rhapsody upon the pleasures within the reach of any one who will take the trouble to stretch his legs. They are full of charming touches, and indicate a real genius for the observation of natural things. Mr. Burroughs is a sort of reduced, but also more humorous, more available, and more sociable Thoreau. He is especially intimate with the birds, and he gives his reader an acute sense of how sociable an affair, during six months of the year, this feathery lore may make a lonely walk. He is also intimate with the question of apples, and he treats of it in a succulent disquisition which imparts to the somewhat trivial theme a kind of lyrical dignity. He remarks, justly, that women are poor apple-eaters. But the best pages in his book are those which commemorate a short visit to England and the rapture of his first impressions. This little sketch, in spite of its extreme slightness, really deserves to become classical. We have read far solider treatises which contained less of the essence of the matter; or at least, if it is not upon the subject itself that Mr. Burroughs throws particularly powerful light, it is the essence of the ideal traveller's spirit that he gives us, the freshness and intensity of impression, the genial bewilderment, the universal appreciativeness. All this is delightfully *naïf*, frank, and natural. "All this had been told, and it pleased me so in the seeing that I must tell it again," the author says; and this is the constant spirit of his talk. He appears to have been "pleased" as no man was ever pleased before; so much so that his reflections upon his own country sometimes become unduly invidious. But if to be appreciative is the traveller's prime duty, Mr. Burroughs is a prince of travellers. "Then to remember that it was a new sky and a new earth I was beholding, that it was England, the old mother at last, no longer a faith or a fable but an actual fact, there before my eyes and under my feet—why should I not exult? Go to! I will be indulged. These trees, those fields, that bird darting along the hedgerows, those men and boys picking blackberries in October, those English flowers by the roadside (stop the carriage while I leap out and pluck them), the homely domestic looks of things, those houses, those queer vehicles, those thick-coated horses, those big-footed, coarsely-clad, clear-skinned men and women; this massive, homely, compact architecture—let me have a good look, for this is my first hour in England, and I am drunk with the joy of seeing! This house-fly, let me inspect it, and that swallow skimming along so familiarly." One envies Mr. Burroughs his acute relish of the foreign spectacle even more than one enjoys his expression of it. He is not afraid to start and stare; his state of mind is exactly opposed to the high dignity of the *nil admirari*. When he goes into St. Paul's, "my companions rushed about," he says, "as if each one had a search-warrant in his pocket; but I was content to uncover my head and drop into a seat, and busy my mind with some simple object near at hand, while the sublimity that soared about me stole into my soul." He meets a little girl carrying a pail in a meadow near Stratford, stops her and talks with her, and finds an ineffable delight in "the sweet and novel twang of her words. Her family had emigrated to America, failed to prosper, and come back; but I hardly recognized even the name of my own country in her innocent prattle; it seemed like a land of fable—all had a remote mythological air, and I pressed my enquiries as if I was hearing of this strange land for the first time." Mr. Burroughs is unfailingly complimentary; he sees sermons in stones and good in everything; the somewhat dusky British world was never steeped in so intense a glow of rose-color. Sometimes his optimism rather interferes with his accuracy—as when he detects "forests and lakes" in Hyde Park, and affirms that the English rural landscape does not, in comparison with the American, appear highly populated. This latter statement is apparently made apropos of that long stretch of suburban scenery, pure and simple, which extends from Liverpool to London. It does not strike us as felicitous, either, to say that women are more kindly treated in England than in the United States, and especially that they are less "leered at." "Leering" at women is happily less common all the world over than it is sometimes made to appear for picturesque purposes in the magazines; but we should say that if there is a country where the art has not reached a high stage of development, it is our own. It must be added that although Mr. Burroughs is shrewd as well as *naïf*, the latter quality sometimes distances the former. He runs over for a week to France. "At Dieppe I first saw the wooden shoe, and heard its dry, senseless clatter upon the pavement. How suggestive of the cramped and inflexible conditions with which human nature has borne so long in these lands!" But in Paris also he is appreciative—singularly so for so complete an outsider as he confesses himself to be—and throughout he is very well worth reading. We heartily commend his little volume for its honesty, its individuality, and, in places, its really blooming freshness.

An American in Iceland. An Account of its Scenery, People, and History. With a description of its Millennial Celebration in August, 1874, etc. By Samuel Kneeland, A.M., M.D., Secretary and Professor of Zoölogy and Physiology in the Massachusetts Institute of Technology. (Boston: Lockwood, Brooks & Co. 1875.)—If Dr. Kneeland's book is compared with previous tourist volumes on Iceland not only in English but also in other languages, it is fair to say that it contains more truth and less fiction than the most of them. But if we are to measure it according to its intrinsic value, then it must also be admitted that it is in many instances open to criticism. Still, there are whole chapters and numerous passages which are very well written, as, for instance, chap. xix, which treats of the new constitution of Iceland and her probable future (pp. 294–313); likewise chap. xi. (pp. 162–179), headed "The Old Norsemen"; and, among many others, the passage on pp. 20, 21 in which the author eloquently criticises the sectarian zealotry within the Christian church, and the one on pp 131, 132 in which he gives his own reflections on his departure from Thingwall, the celebrated place of Iceland's old general congress ("Althing"), will be found to possess decided merit. A book on Iceland written by one who, able scholar as he may otherwise be, does not understand the language of its inhabitants, cannot as a whole be of any permanent value. Even the Scandinavian languages do not possess any single reliable work on the present Iceland, and the study of its history by foreigners has as yet been limited to the republican period of the country, and for the most

part only to the so-called Saga-age ("Sögu-öld"), which ended in 1031. The eminent German scholar, Konrad Maurer of Munich, is in this respect an almost solitary exception. This being understood, it is easy to imagine how Dr. Kneeland, with his second-hand knowledge, on p. 40 asserts that "at the present day poetry and literature have ceased to be characteristic of Iceland"; and though in a note at the end of the book he does say that this statement should be modified so far as the present century is concerned, he still seems to think that all the centuries, from the loss of independence after the middle of the thirteenth to the end of the eighteenth, are quite blank pages in the history of Icelandic literature. On p. 213 he also says that when "the formal meeting" of Althing at Thingwall "ceased" in the beginning of the nineteenth century, and was transformed into the present high court of Reykjavík, "the spirit of the nation fell," whereas the fact is that this event was accompanied by an almost radical change of public and private life in Iceland into one more in harmony with that form of modern civilization which the author seems to adopt. From the end of the eighteenth and the beginning of the nineteenth century date the copious and learned writings of Hannes Finnsson (d. 1796), Magnus Stephensen (d. 1833), Jon Espolin (d. 1836), and many others; Jon Thorlaksson (d. 1819), too, the only one of modern Icelandic authors whom Dr. Kneeland mentions, belongs to the same time. The ecclesiastical writings of Hallgrim Petrsson (d. 1674), Jon Vidalin (Iceland's "Chrysostom," d. 1720), and Finn Jonsson (d. 1789), besides a great number of secular productions, such as the works of Arngrim Jonsson (d. 1648), Paul Vidalin (d. 1727), Halfdan Einarsson (d. 1785), etc., are all standard works of no less value or interest than the best of the old sagas, of which, indeed, many were written after the close of the age of the Sturlungs ("Sturlunga-öld") in the latter part of the thirteenth and even in the fourteenth century.

We do not think it necessary to point out all the misstatements found in this book, yet we must name a few instances. On p. 65, we read that "very little idea of the native population can be obtained at the capital (Reykjavík), where Danes and other nationalities constitute a large part of the residents," but the truth is that there are only three or four foreign (Danish) families living in Reykjavík. On p. 94, we find that the "deeds" of "demons, giants, and wild men," who, in the opinion of "the superstitious Northmen," inhabit the "mythical" desert of Central Iceland, "have been chronicled in the sagas," and on p. 236 the "sagas" are simply called "myths," against which opinion we seriously warn the reader. On the other hand, the reports of wild-looking men living in the "fertile districts" (!) found in the upland plateau of the country, on p. 95, asserted to be well authenticated, must be considered as myths or fables, and nothing else. Nor is the statement of a colonization of Iceland by the Celtic people on p. 194 (cf. pp. 202, 205, and 212) correct; and the selection of Mackenzie's list of Icelandic words (p. 240), in order to show the resemblance of that language to English, only serves as a warning example against borrowing anything from tourist-books on Iceland without submitting it to a thorough examination.

The Voyage of Verrazzano: A Chapter in the Early History of Maritime Discovery in America. By Henry C. Murphy. (New York; 1875; 1 vol. 8vo.)—France was the last of the great European powers to engage in maritime discovery. Columbus, the Cabots, Vespucci, had all run their brilliant careers and set up the flags of Spain, Portugal, and England in the New World before the lilies were seen on the western horizon. Then, as for three hundred years the story has run, another Italian—for almost all these great discoverers were Italians—taking service in France, discovered the American coast under the auspices of the French king. The name of this bold navigator was Giovanni da Verrazzani, and his birthplace was Florence, where his family was still in existence in the first half of the present century. Concerning his life there are wide differences of statement from its beginning to its end; one class of writers representing him as a successful discoverer, another as a successful corsair. Both, however, agree that he sailed under the French flag in the reign of Francis I.

Those who recognize him as a discoverer found their belief upon a letter first published by Ramusio some thirty years after the events which it relates. Upon this letter the whole question turns. We have called this document a letter. We should have called it an official report, which professes to have been addressed to Francis I. about the time of the battle of Pavia. We have already said that it was first published by Ramusio, the great collector of voyages, and, like most of the men of his class, more industrious than critical. His copy, he tells us, was obtained from Florence, and was the only record of the navigator which had survived the disasters of that unhappy state.

A question that here forces itself upon the attention is, why should there be no French copy or original of it in the French archives; and why should no French contemporary historian have taken note of an enterprise so honorable to France? All the references to it are made to Ramusio's Italian text. Of this text the only manuscript known is in the Magliabecchian Library of Florence, in one of those volumes of miscellanies which abound in Italian libraries and have preserved so much valuable matter for the industrious historian. It is written in the running hand—*carattere corsivo*—of the sixteenth century, and seems to have been the work of some collector of the day who had no doubt of its authenticity. For three hundred years, indeed, its authenticity was never called in question. Historians quoted it from Ramusio as they quoted the other narratives of that worthy and industrious collector. The only addition to our knowledge of the navigator was made some thirty years ago by the writer of the present notice. Little did he dream, while making his dusty way through the alcoves of the Magliabecchian in search of some new light upon this attractive subject, that he was upon the brink of a discovery which would deprive his hero of his glory for ever. But it so chanced that among the papers of that miscellany there slept unheeded a letter written by a certain Fernando Carli of Lyons to his father in Florence, to announce the return of their countryman Verrazzano from his successful voyage. This letter, if authentic, throws some, though a very feeble, light upon the early life of the navigator. We eagerly seized upon this new testimony, and by its aid constructed a plausible story, which was generally accepted as all that we were ever likely to know upon this obscure subject.

"All that we know with certainty"—so read the closing sentences of our monograph—"is that one great action distinguished him from the mass of adventurers in an age which had produced a Columbus and a Cabot, while doubt and mystery have enveloped the rest of his career, leaving us doubtful whether we should lament the untimely fate which gave him a prey to the barbarous appetite of cannibals, or execrate the ingratitude which compelled him to sacrifice to a struggle with the daily necessities of life a mind formed for daring and successful adventure."

And here, and not without a certain measure of complacency, we rested our pen, firmly convinced that we had brought a valuable side-light to bear upon a historical question of no inconsiderable interest. We had written a life of Verrazzano, founded upon documents. And thus the question stood for more than thirty years, fairly outlawed in every court in Christendom, till two daring iconoclasts—the late Buckingham Smith of St. Augustine, and Henry C. Murphy of Brooklyn—stimulated by what they doubtless regarded as historical conscientiousness, and not having the fear of criticism before their eyes, boldly reopened it, condemning the ingenuous Carli as an impostor, and barbarously sending the bold discoverer himself from the jaws of the cannibal to the garrote. Mr. Smith is dead, and his rash thesis is now represented by Mr. Murphy alone, whose elaborate monograph is before us.

We shall not attempt to follow him through the details of his argument. The weight of it lies, as we have already hinted, in the conclusion which we come to concerning Fernando Carli and his letter. Now, Carli is a person wholly unknown to the writers of that age. Ramusio says nothing about him. Peter Martyr, one of the greediest of newsmongers, makes no mention of him. The only authority for his existence is his letter to his father, and this loses its verisimilitude in the ordeal of historical criticism. If Carli's letter falls, Verrazzano's report falls with it. How, under any other conclusion, can we explain that thirty years' silence of his? According to our iconoclasts, the letter and the report are both ingenious forgeries, made, like some of the writings attributed to Vespucci, in order to add a new chapter to the annals of Florence. Bitter rivalries of glory embellish or deform the history of the Italian Republics. Genoa had her Columbus, who bore the flag of Spain to the New World; Venice her Cabots, who bore the flag of England; and Florence had already claimed the continent as the discovery of Vespucci: why should she not go a step further, and produce a Verrazzano to bear to unknown regions the lilies of France?

What, then, becomes of the great navigator? The archives of Simancas, which have already unveiled so many historical secrets, have revealed this also. Juan Florin, a French corsair, was put to death at Colmenar de Arenas, by order of the Emperor Charles V. Juan Florin and Giovanni da Verrazzano Florentino were one and the same person. Thus far for the present. But there are some who still believe in the original Verrazzano, the Verrazzano of Ramusio and Carli. We wait with interest, if not with an absolutely suspended judgment, for their answer to Mr. Murphy's essay.

Lettres à une autre Inconnue. Par Prosper Mérimée, de l'Académie Française. Avant-propos par H. Blaze de Bury. (Paris: Michel Lévy;

New York : F. W. Christern.)—Our readers have probably not forgotten the review of Mérimée's 'Lettres à une Inconnue' which appeared in these columns some year and a half ago. The book had been largely read, but it was variously appreciated. Some people thought it very trivial, others deemed it very deep ; upon its being entertaining, however, most people were agreed. Amid the criticism to which it gave rise, there was not a little animadversion upon the audacity of the lady to whom the letters were addressed, who, when her admirer had passed away, had not scrupled to make public some thirty years of their common very private history. We hardly know if it makes this lady's frankness more surprising or more natural to find another person capable of the same intrepidity. Here is another "unknown" with another bundle of confidential epistles. She has apparently very sagaciously reflected that to have been a correspondent of Mérimée is just now a remunerative situation, and that since the ice has been broken there is no harm in making a few more holes. About Mérimée himself everything worth saying seems to us by this time to have been said ; he has received his dues, and more than his dues. So small an investment of talent has certainly never brought in a higher interest of fame. He wrote a dozen tales which will last, but there is something really paradoxical in talking much about them—so very reticent, and spare, and frugal of eloquence are they themselves. M. Blaze de Bury, a writer who is a great talker (and it must be added a very entertaining one), has endeavored in a long preface to the present volume to say something new about the author of 'Colomba,' but most of his novelties are of a sort that would evaporate in quotation. He has made one good point, however, on the subject of that masterly reserve for which Mérimée has been so much praised. Mérimée never describes, he only narrates, and there is certainly often something very eloquent in his studied sobriety. It has always been assumed that if he did not describe it is because he would not, and not because he could not ; but M. Blaze de Bury reminds us that there is another side to the question, and that there is such a thing as glorifying negative merits too highly. In the 'Chronique de Charles IX.,' when the king comes in, the author, who is apparently about to give a sketch of his person, suddenly stops short. "His portrait ? —wait. Really you had better go and see it in the Museum at Angoulême ; it is in the second room ; number 98." "This is a convenient way of getting out of it," says M. Blaze de Bury ; "is it the best way ? Mérimée was a sly fox, depend upon it, and he had no need of La Fontaine and his fables to characterize the grapes that one cannot reach." It is certain, with all deference to what is called economy of effect, that the phrase above quoted could not have been written by a man of a rich genius, and Mérimée decidedly was not a man of a rich genius. There is fortunately a golden mean between bathos and blankness.

It is not, however, for their undue reticence that these new letters are remarkable. Mérimée's pen, in addressing his fair correspondents, was neither prudish nor cautious, and there are several passages in this little volume which seem to belong to a date much earlier than our modern prôprieties. They will afford an extra satisfaction to those connoisseurs who consider Mérimée the last of the French writers who has to some extent preserved the last-century traditions of style. These letters are fifty in number ; they are very short ; and they are really not valuable. Persons seriously interested in the author will find in them something to complete their mental image of him ; but those who should read them without having been otherwise introduced to Mérimée, would scarcely suppose them to be the productions of a superior man. They run, at wide intervals, through a space of five years, from 1865 to 1870, and the person to whom they were addressed is less of a mystery than the first unknown. She was a Polish lady of high rank, who seems to have been, like her correspondent, on a footing of familiarity at the court of Napoleon III. The Empress, during those laboriously brilliant years that preceded the war, had established certain "courts of love" for the entertainment of her social circle, and Mérimée's correspondent was "president," or judge, at one of these. Whether she had ever had to pass sentence on Mérimée as an offender is more than we can say, but it is in this character that he always addresses her. He deals chiefly in court gossip, and alludes to the trifles of the hour. Such slender value as the letters possess belongs to the fact that the Imperial court, having become so thoroughly a thing of the past, a theme for the historian and the moralist, Mérimée's anecdotes and *cancans* have a sort of historical savor. "We have the happiness occasionally of seeing the Empress of Mexico. She is a *maîtresse-femme*, and as like as two peas to Louis Philippe. She has some ladies of honor with flaming eyes, but complexions like gingerbread, and a sort of look of orang-outangs. We expected to see the houris of Mahomet ! It is supposed that her majesty has come to ask for money and soldiers ; but I fancy they will give her nothing but fêtes, for which she seems to care little." That seems very far away from the present moment in France. Most of the proper names have been retained ; the reader may judge of the practical results in some cases. "The Princess of Metternich is, on the contrary, all grace and amiability. Only, she has thrown herself into painting. I mean the *Samojivopistro* (the painting of one's self) ; and how this science has progressed ! She has lips of the most delightful flame-color, with which she can drink tea without leaving them on the cup." Here is another specimen, from Biarritz : "We have here the Grand-Duchess Marie of Russia, and the Grand-Duke of Leuchtenberg, who is a very handsome fellow, and who would make ravages on this shore if there were a few beauties less thoroughly known than those we possess. Madame de Talleyrand, whose hair has become blond, the Duchess of Frias—such are the highest temptations we can offer. I don't speak of Madame Korsakof, in a yellow dress and a black jacket, black stockings, and boots with yellow rosettes, who leads about a great black dog (without any yellow), and a gentleman to protect her. She has still a charming figure, and with her back turned makes a great many conquests." The following is more interesting : "We have brought back the Emperor in very good health. He took long tramps on foot with us, which quite used us up. In truth, the more I see of princes, the more I perceive that they are made of another paste than common mortals. For myself, I have no fitness whatever for the profession, and I abstain absolutely from all pretension to sovereignty—even to that of Greece or the Moldo-Wallachian Principalities."

On the whole, the unprejudiced reader may conclude that, if these letters add nothing to Mérimée's reputation, they were at least good enough for the person to whom they were addressed, and who has seen fit to give them to the world.

Glimpse at the Art of Japan. By James Jackson Jarves. (New York: Hurd & Houghton.)—After the opening of Japan to modern commerce, and the consequent importation to Europe and the United States of decorated objects of utility such as the Japanese were found to excel in, an interest was excited in this newly discovered manifestation of the spirit of design at once more profound and more widespread than had been called into being by any other recent development of the fine arts. There had existed many pieces of Japanese art in the museums of Europe, and in royal and private collections, and these generally of the more splendid and costly kind, such as would naturally survive from the time of Louis XIV. to our own on account of their costliness of material and decorative effect ; but it is probable that but few of the collectors, and fewer still of the savans, distinguished between the quality of art shown in those objects and the art of other Oriental nations. It happened, however, that the fresh influx of works of art from Japan was contemporaneous with a rapidly-growing interest in decorative art as well as in archæology and in ethnology ; moreover, the porcelain and pottery which was brought by the shipload, the modern lacquers, the simple bronzes, the books of wood-cuts, the fans printed in colors or painted by hand, the small carvings in ivory, the prettily designed boxes covered with straw and the like, with which the markets of Europe and America were suddenly supplied, were so cheap as to be within everybody's reach, and so tempting, from their neatness and quasi-utility, as to tempt many persons who would hardly have bought an article merely for the sake of its beauty or for what might be learned from its make and ornamentation. There was then a general desire to know all that could be known of this distant and almost forgotten race, whose unusual and elaborate civilization was vouched for by the uniform delicacy and refinement of their simplest manufactures. But this was as nothing to the longing of the students of art and of ornamentation to learn something of the people with whom there was found still to remain a universal, traditional, and inherited fine-art, not dissimilar to that which had existed in Europe at a time not so long gone by, and yet gone, as it seemed, for ever. If one could have slept and waked up in Italy or in France in the fourteenth century, he would have found himself living among designers in whose hands art was much as it was found among the Japanese ; simple, easily understood, easily taught, and in the hands of a large class of workmen, among whom there were masters and pupils, strong and weak, superior and inferior, but none devoid of that thing so rare to the moderns—the power of decorative design. The bygone age of art, so much lamented and so little understood, was found in living shape in the islands of Japan.

During the twenty years that have elapsed there has been much writing about the empire of Mikado, its history, politics, manners, and customs, and its extraordinary and sudden change of government and policy. The curiosity of artists to know something of the mythology and legends upon which so much of Japanese art is founded, and to know something of the

perfected processes which make it so remarkable, has had some slight satisfaction ; but there is still so much unknown that every book which, like the book before us, undertakes to explain something of these mysteries, is an acquisition and worthy of study. In the absence of positive evidence, it is as well to have plausible rumor. As we examine an interesting scene in which supernatural beings are represented, if we have no certain knowledge derived from literature of the meaning of the scene, the attributes of the personages, or the legendary history in general, it is well to have a good guess at all this, which may at all events stimulate our own imagination. In like manner, if we find it impossible to be sure of the epoch or of the province of a piece of porcelain or lacquer or bronze, if there is, as usual in Japanese work, no inscription upon it, and if documentary evidence does not exist, it is as well to have an approximately correct statement in regard to it from a person who has seen and examined many such pieces, as an authentication which will answer at least for a time. Mr. Jarves's account of the gods and goddesses, of the dragons and fabulous animals, of the sacred plants, and of the popular stories of the Japanese, and his brief notice of their working in earthenware, porcelain, and lacquer, is well enough to read and to credit until further and more exact information can be obtained. The most serious fault that we have to find with the book is that it is a little difficult to obtain from it the information it is expressly intended to convey : the book is very hard reading because of its faults of style, and the author's meaning is not always made clear even to the reader who overcomes that first difficulty.

The illustrations are far from being satisfactory ; they are chiefly or altogether reproduced by some photolithographic process from the pages of the Japanese books which are ascribed to Hoksai (called in the work before us Hoffksai) and other designers of whom as little is known as of him. Mr. Jarves calls attention to the difficulty which he has found in having made adequate representations of porcelains, bronzes, and the like ; he points out shrewdly enough the difficulty of getting European draughtsmen to render the art of Oriental nations with fidelity and without exaggeration of its peculiarities. In limiting his illustrations to mechanical reproductions of prints and drawings he has done wisely perhaps, but it is greatly to be regretted that the illustrations are not more distinct and more intelligible to the reader who may not have access to any of the original books.

Goethe's Märchen : ein politisch-nationales Glaubensbekenntniss des Dichters. Von Dr. Hermann Baumgart. (Königsberg : Hartung ; New York : L. W. Schmidt. 1875.)—There is evidently a growing disposition among cultivated Germans to rehabilitate Goethe as a political thinker and sincere, if not always outspoken, patriot. The outrageous defamation of Goethe practised by democratic radicals such as Börne, Scherr, and Menzel, is, in Germany at least, a thing of the past, although there are traces of its lingering existence in America, in places where we might least expect it. The reconstruction of the German empire in a dynastic form, and the indefinite adjournment of all dreams of a republic, have demonstrated the ideas of 1813–1849 to be fallacies, and their champions to have been visionaries. It is but natural, then, that the nation, wiser by experience, should now render tardy justice to Goethe and his contemporaries, who had the courage to abide by their principles in the face of obloquy. The evidences are multiplying year by year that Goethe's insight into German character and the German future was in the main correct. The critic of to-day has to disregard the prejudices that prevailed fifty years ago, and commence the study of Goethe's political opinions anew. Dr. Baumgart's pamphlet is a step in this direction. The 'Märchen,' has always been a puzzle to the interpreter. Written in Goethe's best prose style, it was attractive as such, yet no one could detect the precise point of the story, although opinions were agreed that it symbolized German politics. Dr. Baumgart is the first, we believe, who has undertaken to read the riddle in all its parts. The Ignes Fatui are the German pamphleteers who introduced French ideas into Germany in the eighteenth century. The Serpent is German literature ; the Youth is the genius of the German nation ; the Lily is the cult of æsthetic ideals ; the Old Man with the Lamp is German scholarship ; his wife is the German church. The story symbolizes prophetically the blending of the real and the ideal in Germany, the regeneration of political institutions, the transformation of the church. The three kings are the three factors of monarchical power ; the fourth king is the decaying German-Roman empire. The Serpent, *i.e.*, literature, in sacrificing itself to build the bridge over the swollen river of events, makes the garden of the Lily, *i.e.*, the ideal, accessible to all. Read in the light of this interpretation—and we see no reason for doubting its accuracy—the 'Märchen' becomes a singular revelation of Goethe's sagacity. It proves that Goethe had faith in the resuscitation of his country, and an intuition of the means whereby it was to be effected. Dr. Baumgart's pamphlet, therefore, will be acceptable to those who wish to understand Goethe aright.

PUBLISH THIS DAY

Pres. Finney's Autobiography.

MEMOIRS OF

Rev. Charles G. Finney,

WRITTEN BY HIMSELF.

WITH PORTRAIT ON STEEL.

This volume presents the experience and labors and thoughts of the eminent

EVANGELIST, PREACHER, AND TEACHER,

covering a period of fifty years. It gives the history of great revivals in which he labored in the principal towns and cities of the

Middle and Eastern States—in Rome, Utica, Rochester, Auburn, Buffalo, Syracuse, Troy, New Lebanon, Wilmington, Del., Philadelphia, Reading, Penn., New York City, Providence, Hartford, Boston, and many other places.

It gives an account of his evangelistic labors in ENGLAND, continuing a year and a half in 1849-1850, and again, a year and a half in ENGLAND and SCOTLAND in 1859-60.

It also presents his work in connection with OBERLIN COLLEGE during a period of forty years.

The book is full of personal incidents illustrating the power of the Gospel upon the hearts and lives of men, and of practical suggestions for the promotion of revivals. It is also rich in its exhibition of personal religious experience, and of the nature and the efficacy of prayer.

Every pastor and preacher, every Christian worker, will find in the book valuable suggestions, and a helpful stimulus in his work.

Will be sent, post-paid, by the Publishers on receipt of prise, $2.

111 and 113 William Street, New York;
113 and 115 State Street, Chicago.

Princeton, Mass.

The Nation.

NEW YORK, THURSDAY, FEBRUARY 3, 1876.

The Week.

THE Presidential campaign has already begun behind the scenes in good earnest, and even on the public board some moves are being made. Senator Sherman has come out for Governor Hayes of Ohio, and Mr. Kerr announces that Indiana will go for Mr. Hendricks. In this State the Conkling movement continues, with how much force it is difficult to say. The whole campaign has, however, as yet, a slight air of unreality, for nobody who knows anything about the way conventions are managed supposes that the names now put forward mean anything decisive. The bargains, the exchange of vote for vote, and State for State, and the arrangement of first, second, and third choices, have all as yet to be made. If we knew, for instance, that when Senator Sherman says he is going to support Hayes he meant to support him to the bitter end, and as it were die voting for Hayes, or if we felt certain that Mr. Kerr would do as much for Mr. Hendricks, we should feel that the situation was deeply interesting. But we know perfectly well that Mr. Sherman and Mr. Kerr need not do anything of the kind, and that they may even now, in their secret hearts, believe Hendricks and Hayes to be impossible candidates, and may be now chiefly considering whom they will vote for as a real candidate when it shall have been demonstrated to their party friends as conclusively as it already has been to themselves that neither Hendricks nor Hayes has a ghost of a chance.

The Senate has been occupied during the past week with a discussion of the rights of settlers on railroad land-grants, and has passed, by a vote of 44 to 9, a bill to confirm pre-emption and homestead entries within land-grant limits in cases where the entries have been made under the regulations of the Land De partment. The House joint resolution authorizing the payment of the 3.65 February interest on the District of Columbia bonds came up, and the House amendments, providing that nothing in the bill should bind the Government to pay interest or principal of bonds illegally issued, and prohibiting any further issues, were struck out—the objection on the part of the Republican senators being that the latter amendment assumed wrong when none was known to exist, while the former would prevent the payment of honest claims already audited and convertible but not converted into bonds. During the debate it appeared that these bonds now amount to something like $15,000,000, and Senator Oglesby of Illinois declared that Senator Dawes (who made a long speech on the subject) had made it plain to him that the extravagance in the District "would never stop until God in his wrath put his foot upon it" (a statement which caused a good deal of laughter among the senators), and followed this by a prediction that unless Congress stopped the manufacture of bonds now going on, the Commissioners would not stop until they reached "a hundred millions." This prediction caused "renewed laughter," though no one explained what there was to laugh at. An amendment was finally adopted limiting the issue to $15,000,000. Pinchback's prospects have been advanced by a report of Senator Morton from the Election Committee on Mr. Eustis's adverse claim, to the effect that there is no vacancy, as Pinchback was duly elected for the term commencing March 4, 1873. What with back-pay and mileage, poor Pinchback has lost now, we believe, about $20,000, and this, with the damage to his character caused by the attacks of a malignant press, must make up a very pretty sum; but we have no doubt he will substantially reimburse himself sooner or later.

In the House, the West Point debate has been the principal subject of interest. The general result of the debate, as far as can be made out from the newspaper reports, seems to be that the reductions proposed in salaries have been generally carried, though, as to the cadets' pay, a compromise has been effected, by which it is fixed at $540. The debate was wound up by what is known as a "tilt" between Messrs. Hale, of Maine, and Cox, of New York. Mr. Hale declared that Mr. Cox was unable to resist the orders of his "masters." Mr. Cox denied having any masters, and further retorted by urging that Mr. Hale had been known in the last three or four Congresses as Mr. Blaine's "little pup," on which Mr. Hale retorted by reminding his adversary that Mr. Butler had likened his political career to the buzzing of the domestic fly. The whole affair, however, passed off quite pleasantly in the end, the Chair reminding the House that dignity and decorum were absolutely essential to the proper conduct of business, and that if honorable gentlemen insisted upon turning the House of Representatives into a bear-garden, they could not expect it to remain at the same time a dignified parliamentary body. He also sharply reproved the galleries for the noise they made—a device always resorted to by shrewd Speakers when they lose control of the House. Mr. Morrison has brought in a bill to revise the tariff. The bill abolishes the present double system of duties and substitutes specific duties throughout; reduces the duties on many articles, and puts tea and coffee on the list at four and ten cents respectively; the estimated revenues at these rates being—from coffee, $12,718,800, and from tea, $6,485,600. The chief articles put on the free list (it embraces over a hundred) are: bituminous coal, which produced a revenue in 1874–5 of $327,537 50; aniline dyes and colors ($304,266 12); and caustic soda ($565,048 29). The bill seems to be designed as a compromise measure, and intended to pass the Senate. The House also has had before it a bill to prevent the sending of obscene matter through the mails, which the newspapers will have to look after. Though introduced by a Republican, it was opposed by Messrs. Hoar and Garfield, and recommitted. There seems to be some doubt whether its sweeping provisions may not furnish the means for new attacks upon the press.

Mr. Nordhoff's book on the "Cotton States during the Spring and Summer of 1875" has, on page 55, some statistics about murders which throw useful light on the charlatanry—we can hardly use a milder word—of speeches like Mr. Morton's about "Southern outrages," and particularly the special device of all these speeches which makes all Southern murders political, and blacks or Republicans the victims. The fact is that during the years of carpet-bag government crime went practically unpunished, and there were, therefore, many murders; but how absurd it is to ascribe them, or even the majority of them, to political causes is well illustrated by Mr. Nordhoff's figures with regard to thirteen parishes in Louisiana in which he obtained the statistics of crime. In these there were, from 1868 to 1875, 313 murders. Of these, 93 were of whites by whites; 143 of negroes by negroes; 28 of whites by negroes; 32 of negroes by whites; 3 of negroes by officers of justice; 5 negroes by persons unknown; 7 whites by persons unknown; 5 whites by mobs, and 5 negroes by mobs. This is no doubt a shocking state of society; but what can Congress do about it? How is it worse than the state of society at Mauch Chunk or in New Mexico?

Governor Chamberlain has been writing a letter to Governor Morton as to the election of Moses and Whipper to South Carolina judgeships. In it he says that "unless the universal belief among all classes of people in this State is mistaken, he [Moses] is as in-

famous a character as ever in any age disgraced and prostituted public position," and adds that if there is anybody in Washington who shall happen to deny this, he will prove it. As a specimen of his villany, he declares that Moses, in order to secure his election when running for Governor, sold out the commissioners of elections, of whom he had the sole appointment, for $30,000, of which $15,000 was paid to him in cash, and the rest made contingent on success. There is not a man in South Carolina, he says, who would "trust Moses with $10." As to Whipper, he describes him as "ignorant of law" to such an extent as to disqualify him for "the intelligent discharge of any judicial duty," "ignorant of morals, a gambler by open practice," and an embezzler. Moses, he says, is quite as ignorant as Whipper, and Whipper has "lacked only opportunity to prove himself the equal of Moses in infamy." He implores the Northern Republicans to "unload" Moses and Whipper, and declares that if they do not the party in South Carolina is doomed.

The Texas and Pacific Railway Company continues to hope for success in obtaining Government aid to secure its construction. The line of road which this Company proposes to construct is what is best described as the thirty-second parallel line, which passes through Arizona and New Mexico in close proximity to the Mexican border, and terminates at San Diego, the most southerly seaport of California. This road was among the earliest Pacific-railroad projects, and is substantially identical with the lines which have been known as the Memphis, El Paso and Pacific, and the Southern Pacific railroads, and in which at one time General Frémont figured conspicuously. The main line of this road starts from Shreveport on the Red River and extends to San Diego, a distance of some 1,500 miles. Of this only about 200 miles are now completed, and trains are run only to Dallas in the State of Texas; the Company, however, owns a branch seventy-four miles long extending to Texarkana, where it obtains its eastern outlet through the St. Louis, Iron Mountain and Southern Railway, and has partly completed a line parallel to that already built running directly west from Texarkana. This Company has received a land-grant from the United States Government, but has failed to construct its road with the rapidity required by the act conferring the grant; they now propose to relinquish all claim to the land, but ask the Government to guarantee five per cent. interest on their bonds, of which not more than $40,000 are to be issued for each mile of road. In brief, the request is the guarantee of five per cent. interest on $60,000,000—an annual charge of $3,000,000.

This railway must not be confounded with the present Southern Pacific Railroad, which is building by a California corporation, and whose projected line lies entirely within the limits of that State. This road is intended to run from San Francisco to Fort Yuma, at the extreme southern corner of the State, where it would connect with the Texas and Pacific Railway, and form the San Francisco outlet for a thirty-second parallel line; its general direction is from southeast to northwest, and it reaches over nearly six degrees of latitude. About 150 miles of the main line of this road have been in regular operation for a considerable time, 500 miles are now reported as done, and work is being diligently prosecuted among the mountains of Southern California. Though owned by a separate and independent corporation, the capital for the construction of this road is being supplied very largely by the capitalists who control the Central Pacific Railroad. The President of the Southern Pacific Railroad, Mr. C. P. Huntington, of New York, has recently published a letter, in which he offers to extend his road eastward from Fort Yuma to the eastern boundary of Texas, or to a meeting-point near the one hundred and third meridian, provided the Government will transfer to his company the land-grant which the Texas and Pacific Railway has forfeited. About one-half of the uncompleted portion of the Texas and Pacific Railway, from its present water terminus to the proposed connection with the Southern Pacific Railroad at Fort Yuma, lies within the State of Texas, and the proposed extension of the Southern Pacific Railroad through Southern Arizona and New Mexico would connect the mineral lands of that section with San Francisco, but would by no means complete the thirty-second parallel railroad; it can hardly be doubted, however, that capital could soon be found to supply the missing link. The effect of the subsidy would be to open a new transcontinental railway, under an independent management, to an undeveloped port in Southern California. The eastward extension of the Southern Pacific Railroad, for which a land-grant is desired, would probably secure at an early date the completion of a second line to the Pacific, and develop a country which is now virtually inaccessible; but it would leave the railroad system of the Pacific coast and the Western outlets of both transcontinental lines in the hands of the men who already control the railway system of California, and in whose hands the San Francisco outlet of the thirty-second parallel line must in any event remain.

Mr. Bristow has met with another success in the conviction of McKee, one of the proprietors of the St. Louis *Globe-Democrat*, and this result has not encouraged General Babcock's friends. The whiskey trials in St. Louis have been remarkable for the skill with which they have been conducted by the Government, and the intelligence shown by the juries in following the evidence. The standing and position of many of the defendants was such that there was every reason to anticipate a disagreement, particularly when we reflect that they were tried in a community in which the defrauding of the Government of its whiskey tax had almost become an established custom, so that it was rapidly becoming impossible for honest manufacturers to continue their business without joining the Ring.

The extreme minuteness of the religious question, as it is called in those States in which it has shown itself at all, will, we suppose, be taken by some people as proof that there is nothing in the dispute worth disputing about, and by others it will be maintained that the fury of the combat about mere trifles shows how deep-laid the trouble is. Everybody has heard of the Geghan law in Ohio, which has just been repealed by the Republicans, and against which such a fearful denunciation was raised during the last campaign in that State. It was talked about on the stump as if it had been drawn up by Cardinal Antonelli at the request of the Pope, and rushed through by a straight Jesuit vote, and as if its object had been the establishment of an Ohio branch of the Inquisition. The law really forbade compulsory attendance on religious worship in State "institutions" in the case of conscientious scruples against the form of worship, and made it the duty of the trustees to furnish "ample and equal" religious "facilities." There may have been something very bad behind all this, but we believe an exactly similar law has existed for years in Massachusetts without objection. The measure which in this State has been playing the same part as the Ghegan bill in Ohio, has been the "Gray Nuns Act." The mysterious name of this measure has had so powerful an effect on the imagination of the Legislature at Albany that a repeal has been carried through with great vigor, Morrissey playing an amusing part in the farce by making a tremendous speech, in which he declared himself willing to sacrifice anything on the altar of American liberty. The act presented the Gray Nuns with an exceptional privilege of obtaining certificates as public-school teachers at the discretion of the State Superintendent. Mr. Tilden declares that the act had really been repealed by subsequent legislation when the Legislature met. This seems at any rate to have been done now, and the Gray Nuns may as well give up the game.

The *World* is a very clever paper and an able expounder of the faith of the true Democrat, not necessarily as it is but as it ought to be, and indeed would be, were it not for the fact that, like other faiths, it has to be evolved from the acts and opinions, hopes, fears

illusions, and prejudices, of imperfect and erring men. It has, however, the peculiarity of giving its readers the impression that journalistically it is somewhat latitudinarian, and sometimes that each column is edited independently of every other. Notably is this the case with regard to the column contributed by a gentleman who calls himself "Piccadilly," and whose duty seems to be to explore and reveal the secrets of English current opinion as to current American politics. While the *World* editorially is denouncing the iniquities of the republican worship of Baal, the faithful "Piccadilly" is doing service in the good cause at the British capital. Lately he has been sending home "English opinion on Grant's latest campaign dodge" (for such, we are sorry to say, are the terms in which the Ishmaelites of the *World* characterize General Grant's bold onslaught upon the Bishop of Rome and his myrmidons); and this opinion comes from persons of no less importance than Mr. Gladstone, the Duke of Argyll, Archdeacon Denison, the Rev. James Martineau, and Mr. W. E. Forster. We cannot say that the replies of these gentlemen are conclusive, inasmuch as they almost all say that they know too little about the subject to venture an opinion. "Piccadilly's" method, however, is worthy of notice as an indication of the growing power of the press. He does not "interview" anybody. He writes a letter, and invariably draws a reply of some kind. Whether this epistolary method is to take the place of the now obsolescent interview it may be too early, as "Piccadilly's" conservative friends on the other side of the water would say, to express a decided opinion.

The week has been uneventful in the financial world. As was expected, the Bank of England reduced its discount rate to 4 per cent., but without effect on the discount rate of other banking institutions in London, which continued 3½ per cent., and without important effect on the London market for securities. Here the tendency of loans to lower rates was arrested by an enlarged demand for money from the Stock Exchange, where there was a rampant speculation in shares, which culminated, however, before the close of the week. The New York banks are each week becoming stronger in reserve, and now have a surplus reserve of $15,500,000, against $15,994,000 at the corresponding time last year. These banks chiefly have borne the contraction of Treasury-note circulation during the year, and have consequently about $9,000,000 less of this kind of currency than a year ago. Gold and sterling exchange have advanced slightly during the week by reason of the importations of United States bonds from London and the German markets, where prices, because of the unusually large demand for bonds from banks, insurance and trust companies here, continue much below this market. The final settlement between the Rothschild Syndicate and the United States Treasury takes place on the 15th instant, and bankers calculate that it will result in a diminution of the stock of gold in this market.

The mercantile situation calls for no special comment. The number of failures occurring is not alarming, and although there is not the utmost confidence in what constitutes the wholesale grocery trade, there is in dry goods a degree of confidence not witnessed for the past two years. The movement of Western staples has been somewhat checked by the unseasonable weather, which has made it impossible to haul grain over the dirt roads to the railroads. Western railroad receipts have therefore been unfavorably affected in important sections. The gold price of $100 greenbacks during the week has ranged between $88 30 and $88 59.

Mr. Albert Grant has written a letter, or pamphlet, of which a summary is given by the London correspondent of the *Tribune*, in which he offers to pay fifty thousand dollars to the Company in atonement for his share in bringing the Emma Mine on the London market if the legal proceedings against him—for which Mr. MacDougall is preparing—are abandoned. Mr. MacDougall is, however, a man of war, and is not disposed to compromise, particularly as he has his eye on Grant's confederates, Park and Stewart. The story Grant gives of his connection with the scheme is directly opposed on material points to Schenck's own and to Mr. Reverdy Johnson's. Indeed, Grant asserts that Schenck's name as a director was used many weeks or some months before Schenck says he first saw Park, as an inducement to Park and others to go into the mine, thus flatly contradicting the Schenck story that the proposal that he should become a director was only made to him after November 1, when he signed the agreement with Park. What the reporters call "rich developments" are still looked for. The fact is that the theory that Schenck was the dupe of Park has always been a hard one to swallow. In this "Emma Mine" discussion he has usually been treated by his friends as if he were a country minister who had been imposed on by a set of Wall-Street sharpers. He is, however, a politician sixty years old, who spent eight of the most corrupt years in the history of the Government—1863 to 1871—in Congress, and in the last of these served as chairman of the Committee of Ways and Means, when he was, of course, surrounded by the most hardened lobbyists and speculators of the time, and even among them was a renowned poker-player. The idea, therefore, that when he saw Park and Stewart he could not make out what kind of men they were, and that when Park offered to lend him $50,000 he thought it was out of patriotism, is one to which it is difficult to give serious consideration.

The Judicial Committee of the Privy Council in England has given judgment in the case of the Methodist minister whom an ill-conditioned country vicar refused to allow to call himself "Rev." on his daughter's tombstone. The vicar was sustained both by the bishop, the chancellor of the diocese, and the Arches Court, but common sense prevailed in the court of last resort, which decides that "Reverend" prefixed to a clergyman's name is and always has been a mark of courtesy simply and never an official title, and that under the law of England every man may take it who can get it. This—so strange a creature is man—has grieved some of the Anglican clergy so much that they are issuing circulars requesting their friends to call them Rector This or Vicar That, in order not to expose them to the imputation of being Dissenting ministers. Another very amusing illustration of the low state of the humorous faculty in the English Church has just been afforded by the public protest from "A Magistrate in Two Counties" against a speech of the Bishop of Winchester, in which he said he was prepared to accept a republic in England "if Providence so ordered it." This concession on the Bishop's part the magistrate considers atrocious on the part of a man who has twice sworn allegiance to the Queen, and says it would at one time have brought his head to the block. There are cases evidently in which he expects the Bishop to resist even the Divine decrees.

There are various statements telegraphed from the French "arithmetic men" about the composition of the Senate. The *Journal des Débats* gives the Conservative-Republicans 100, the Monarchists 70, the Bonapartists 41, and the pure Radicals 10. The *Siècle* strikes the Radicals out altogether, and gives the Republicans 101, the Legitimists 38, the Bonapartists 45. The *Paris Journal* makes a different division, taking away 17 from the Republicans and obliterating the Radicals, and distributing them among the Conservatives of the three sections: Orleanists, Republicans, and Bonapartists. These divisions are worthy of notice as showing the extreme faintness of the lines by which the various sections of French political opinion are divided, but have hardly any other importance. The fact seems to be that the Conservative-Republicans, meaning by that those who are disposed to give the new constitution a fair trial, are in a majority; but that the Bonapartists and Legitimists can, by combinations, play many disagreeable tricks.

MR. FISH'S FACTS.

IT appears from Mr. Fish's letter to Mr. Cushing (which is dated November 5, and therefore was written at about the same time that the very able expositions of international law contained in the President's message were being prepared) that the view taken at Washington of the Cuban difficulty is that the island is in a condition of anarchy, in the strict sense of the word. Spain is of course, in the eye of the law of nations, charged with the duty of providing a government which shall protect property, enforce order, punish crime, and, in short, maintain the machinery of society in such a condition that not only natives but foreigners may enjoy life, liberty, and the pursuit of happiness. According to Mr. Fish, however, she does not do this. She sends troops to the island, but they do not put a stop to the "ravages of war." She establishes courts, but they do not repress crime; she makes decrees, but is unable to enforce them. American property is seized without process of law; the orders of the home government are treated with contempt. Spain does not any longer, properly speaking, govern the island, and yet no native Government has arisen to take her place. Cuba, therefore, is in a state of anarchy, and as American commercial interests and the safety of the lives and property of American citizens are bound up with the preservation of order on the island, there is a growing feeling in this country that the time is coming when, to use Mr. Fish's words, "it may be the duty of other governments to interfere, with the view of bringing to an end a disastrous and destructive conflict." This, as Mr. Fish's note proposing representations to European governments shows, means intervention either singly or in combination with European powers.

It would certainly be a singular spectacle to find ourselves, ten years after requiring the withdrawal of the French from Mexico in obedience to the Monroe Doctrine, inviting all the European governments to repeat the Mexican experiment in Cuba, and we are sorry not to have had as yet any intimation of the view taken by the French Government of the proposal. But, leaving this out of view, intervention involves the provision of a remedy for the evils of which we complain, and of what this remedy is to be Mr. Fish gives no intimation. The American system of government offers no room for dependencies governed by the army; and Cuba as a state with universal suffrage would be so broad a farce that it cannot be seriously considered. The alternative suggested by Mr. Fish in his despatch of a year ago, that Cuba's manifest destiny is to become one of the family of American republics, is not a whit better, there being no reason whatever to suppose that American lives and American property would be safer under a Cuban Republic than they are under Spain. Nevertheless, we have assumed a very threatening attitude, and have informed Spain that if she does not govern Cuba she must leave it, or we cannot be answerable for the consequences. What, then, is to be the next move? Spain evidently has no stomach for fighting, and we have declared that the present state of things cannot continue. Spain cannot govern the island. The island cannot govern itself. We cannot allow a European protectorate. What can be done?

The whole difficulty in the case arises, we believe, simply from the mistake made by Mr. Fish in drawing upon his imagination for the postulates upon which all his arguments and threats are based. He brings forward no facts to prove his case, and we venture to say that every intelligent man who has watched the course of the Cuban question and the drift of public feeling upon it here for the last three or four years, knows that his whole foundation is pure assumption. The impulse which republicanism, bad and good, all the world over, received from the success of the North in the war of the Rebellion, did for a time furnish an unhealthy stimulus to the so-called Cuban Rebellion. A Cuban Republic was established in New York, Cuban bonds were put on the market, and Cuban filibusters sailed from our ports to reinforce the volunteers on the island. There was even a Cuban President, and a show of an army in the field. Within the past three or four years the condition of affairs has wholly changed. The Cuban Junta in New York is disorganized and in a moribund condition, the Cuban bonds have degenerated to the level of non-negotiable claims upon a non-existent promisor, the filibusters have been put down, the *Virginius* is at the bottom of the ocean, and her only remaining imitator, the *Edgar Stewart*—if indeed she was designed for a descent on Cuba—has been caught and stopped. The Cuban army has apparently disbanded, and does not any longer engage even in bloodless battles, such as it formerly fought; and the Cuban President is an official whom it requires a good deal more knowledge than we pretend to possess to identify.

These facts are so undeniable that, although Mr. Fish in his despatch talks about a "disastrous and destructive conflict," and represents the state of affairs to be getting continually worse and worse, General Grant, in his message, announces that there is no war going on. Mr. Fish declares that the state of affairs has grown so bad that we must be thinking about intervention. Yet, if we are to take General Grant's declaration as authoritative (and in these matters the Secretary of State is not supposed to have a "policy" of his own), we are forced to the conclusion that they have grown so much better that there are no Cuban belligerents and not even a *de-facto* Cuban Government. As to the drift of public opinion in this country, it is difficult to read what Mr. Fish says without a smile. He represents the Administration as engaged in an almost hopeless struggle to repress the fury of the American people, justly aroused by the repeated outrages of the Spaniards. Like the master of ceremonies in the well-known story relating to the fabled Giascutus, he tells the expectant audience that "he hopes" to get the animal "under," but is unable to express a confident opinion on the subject. When we look for evidence of this fury, where do we find it? Where are the public meetings; where are the newspaper articles; where are the petitions to Congress? Since the *Virginius* war-meetings of three years ago, there has not been the faintest ripple of excitement in favor of Cuba anywhere in the country.

Mr. Fish lays particular stress on the decline of commerce with Cuba; but here again the facts utterly fail to support him. The commerce is increasing and not decreasing, as the following figures, which we reproduced the other day from the *Commercial Bulletin*, show:

EXPORTS FROM THE UNITED STATES TO CUBA.

1868–9	$12,643,000	1871–2	$13,168,500
1869–70	13,091,000	1872–3	15,231,000
1870–1	14,200,000	1873–4	19,597,000

IMPORTS INTO THE UNITED STATES FROM CUBA.

1868–9	$58,201,000	1871–2	$67,720,000
1869–70	54,056,000	1872–3	77,469,000
1870–1	58,240,000	1873–4	86,272,000

In the face of these figures, Mr. Fish's assertion that the "ravages of war" have "well-nigh ruined" the relations of Cuba "to the commerce of the world" read very queerly, particularly as he gives no figures of his own.

With regard to the *Virginius* massacre, Mr. Fish states the only existing grievance to be that General Burriel and the other principal offenders have not been punished for their part in the tragedy. But an isolated affair of this kind is hardly a sufficient cause for intervention. The *Virginius* was an armed war-vessel, which our Government let loose on a Spanish colony in defiance of international law and our own neutrality laws, through culpable negligence. The Spaniards caught the ship and put her commander and crew to death. The objection to the execution was its haste and brutality. But, though this butchery was in itself shocking to the feelings of civilized mankind, violent death, after all, is no more than the ordinary risk of the filibuster's trade, and to undertake to govern Cuba because Spain has been dilatory in the performance of her promise to punish General Burriel, would be going rather far. Mr. Fish, going the rounds of Europe inviting the kings and emperors over here to do what his predecessor drove one of them out for doing, has already approached Great Britain on the subject, and, strange to say, there is no evidence of any desire in England to interfere in any way. Now, England is in the same position with regard to the *Virginius* massacre that we are. Her

citizens have been butchered as well as ours, and money damages have been paid in both cases. Her shocking indifference is, we suppose, to be explained by her stingy shabit of balancing expenses against results.

If any foreign government were to threaten intervention in the affairs of the United States, on the ground of the existing anarchy in the State of Mississippi, we should be, no doubt, justly surprised; yet any foreign government could make up quite as good a case for such intervention as we have against Spain as to Cuba. It could produce a speech made by a prominent senator of the United States, accompanied by a vast amount of sworn evidence, showing conclusively that it is as much as a man's life or property is worth to venture within the confines of the State; it could produce any quantity of evidence that the Government in many parts of the State is nothing but organized plunder, and that trade and commerce have almost been brought to a standstill; and it could prove from the Constitution of the United States that the Federal Government has no power to interfere. This is precisely the kind of anarchy which Mr. Fish declares exists in Cuba.

There would, we believe, be no serious difficulty with Spain if Mr. Fish would, in his discussion of the subject, confine himself rigidly to the actual facts. These are simply claims such as we have had against all governments, arising out of injuries to American citizens; in such cases, when the obligation of a government to protect foreign property is violated, the usual remedy is to demand money, and the ease with which we compelled Spain, at a time when we were utterly unprepared for war, to pay the *Virginius* damages, and even to promise, in a certain contingency, to perform a public act of contrition by a salute to the flag, shows that this remedy is available. But if, at the very time the head of the Government is explaining to Congress that there is no state of war on the island, and when commerce with the island is steadily improving, the chief cabinet officer is calling all Europe to witness the fact that "the ravages of war" have "well-nigh ruined" the commerce of the island; if, when there is no evidence on the subject, he will insist on the public feeling in the United States being so excited that it may "force events"; if, in short, he discovers facts where none exist, and suppresses those in existence when they become inconvenient, he can hardly expect his conclusions to be binding either upon the public mind or his successors in office. The true way out of the dilemma in which he seems to have placed us lies not in assaulting the imposing diplomatic superstructure he has raised, but in attacking the foundation, the extreme shakiness of which threatens already to bring the whole edifice down about his ears.

PROFESSORIAL PAY.

THE debate on the West Point appropriation, while it revealed in a gratifying way a desire among some of the members to let the School alone, or at all events to deal fairly with it, suggests some possibly useful reflections as to the condition of the popular mind about the pay of professional teachers. Teaching is one of the three or four callings for which it is ordinarily believed and said no man can be too good. No combination of mental powers and moral excellence is, in popular opinion, thought sufficient to raise a man above the position of an instructor. A first-rate man may be unfit for it, but he cannot be superior to it. The literature of the day, moral, political, and religious, is indeed full of magnification of the teacher's office, and of comment on its awful sacredness and importance. Now, it is a remarkable fact, in view of all this, that there is the greatest reluctance to apply to it the standard by which the value of nearly everything else is estimated—the money standard. A teacher cannot get in school or college, anywhere in the country, more than the pay of a clerk in a store or counting-room. In the very highest places in his calling he seldom receives the pay of a good book-keeper in a commercial house of moderate pretensions, and his salary is fixed, on the whole, in accordance with the popular view of fitness and expediency. The estimate is arrived at in two ways. Under one view, he ought not to get any more money, because his place can always be filled at that rate. According to another, he ought not to wish for more, and more would be injurious to him morally. His work is of such a lofty character that, if he is worthy of it, he will not care about money; if he does care about it, it shows he is not the man for his place. The answer to all objections to these views usually is: If teaching be underpaid, how does it happen that there are so many teachers in the market? Then, as in the recent debate in Congress, many people are satisfied that it is good for teachers and professors and people of that class to be economical. Economy is not ordinarily agreeable; few persons practise it themselves if they can avoid it, and, indeed, life to most persons in the United States is passed in an arduous struggle to escape the necessity of it. But everybody, while disliking it himself, thinks it would be good for his neighbor, and likes to see his neighbor practising it, and all, or nearly all, are agreed that, whatever doubt there may be about its usefulness in other cases, all schoolmasters and professors are the better for it, and would be seriously injured by being enabled to avoid it. A moderate anxiety about the food and clothing of his family is, in fact, considered by a large proportion of the public a kind of wholesome and indispensable stimulus to the scholar. It is thought injurious to the lawyer, doctor, or merchant, but somehow it purifies and elevates a minister or college professor. All through the debate in Congress, it was evident that the majority of the members would have considered a professor in easy circumstances something in the nature of a scandal.

Now, the effect of money on the character of the teacher is something we do not mean to discuss; but we think it is desirable to point out one way in which the teaching profession is seriously damaged by the prevailing opinion that its pay ought to be low. It is not possible in these times to set apart any profession, class, or calling as one needing a special regimen, nor is it possible to prevent the prevailing desire for money from reaching any class or calling. You may refuse to give its members money, but you cannot prevent their wishing to get it. The ascetic spirit is comparatively dead among us. We have various ways of using money, but we all want to use it. The man who would scorn to spend it in horses, or wine, or fine cookery, or furniture, would like to spend it in books, or pictures, or travel, or charity. In fact, everybody secretly feels that he would be improved morally by being rich, and that there are certain noble traits of character in him which nothing short of a million would bring out prominently. The ministers and teachers and professors cherish these convictions, in varying degrees of strength, as well as the merchants and manufacturers, and the worst of it is that the money-making people, in spite of their lofty view of the teacher's vocation, take it for granted that the professorial people cherish them; therefore, the common rough, popular view of a teacher is not that he is a saint or devotee who likes poverty, but that he has, like other men, gotas much money as he could and as much as he is entitled to. To "the average man," therefore, a minister, schoolmaster, or professor is not a hero, sacrificing himself for his fellows, but a "fifteen-hundred-dollar man" or a "three-thousand-dollar man," who has got into a poor business and cannot get out of it.

There are some shrewd people who think it well that the community is able to secure the services of able and conscientious men at starvation wages, and that having once got into the harness they cannot escape. But then, inequality and injustice are things that are pretty sure to defeat their own objects sooner or later. It is not possible in our day, when so little jurisdiction is left to custom and tradition, to keep any callings requiring exceptional mental and moral qualities underpaid. The effects of scanty remuneration in any profession we rarely detect. They are seen not so much in any diminution of zeal or activity in the men already in it as in the repulsion of the younger men who have not yet chosen their profession. Every calling is constantly making a silent, invisible draft on the talent and energy of the country, which is strong

or weak in proportion to the attractiveness of the prizes which it offers, and men make up their minds whether to enter it or not at an age while choice is still free, and when ambition and hope are still strong. They do not, however, publish their reasons for going into any particular calling or put them on record anywhere; but everybody who knows young men knows what they are. Men beginning life do not ask for certainties, but they do ask for a fair chance of pecuniary ease and social consideration if the prospect of wealth be wanting; and year by year and generation by generation the ability of the community turns away from professions in which this chance is small. At the present moment, the difficulty which every college finds in getting men of a high grade for the leading professorships is great, and grows steadily, and the cause is obvious. When a young man sees a first-rate man teaching the rudiments of French or German, or correcting the grammar or spelling of freshmen's themes, on $3,000 or $4,000 a year, he secretly resolves that he will not commit himself to any vocation in which such a waste of great gifts is possible; and in like manner, when he reads a debate in Congress approving of an attempt to discover the exact sum on which a military instructor can keep body and soul together, he determines that the service of the Government in any such capacity shall never be his business. In short, we have in our whole educational machinery done what we could to discourage the ambition and energy and capacity of each generation from entering the very callings in which energy and capacity are of most importance to the State, and we drive them into the already overdone work of material production. The only exception to this rule is the work of legislation, in which the legislators have taken care to make their own pay keep pace with the depreciation in the value of money.

THE BRITISH ARMY.

LONDON, January 16, 1876.

ENGLAND has periodical fits of her old military spirit. They are brought on mainly by an uncomfortable feeling of insecurity, but partly by an undercurrent of energy which, though latent, wanders about uneasily seeking for an outlet. The military class, as distinguished from the civilian class, is small, but it exists. It is represented, as it ought to be, near the throne, but it is not influential in the country. It might clamor from one year's end to another for increased armaments, but no one would listen to it. The military note must be struck much lower down the social scale. It must reverberate round and among the comfortable people who make up the middle classes of the community before it makes impression upon Parliament or upon the country. Panic, or something approaching to panic, finds its way into the breasts of the comfortable classes more rapidly and more effectively than a fit of energy or a desire for military glory. But when, whether by panic or, it may be, by a sense of indignity offered to the flag or the honor of the country, the great middle classes are roused from their inertness and their excessive desire for an easy life, the energetic and military classes are not likely to lag behind, and then we come face to face with the phenomenon of the military spirit of old England rising up to assert itself and to show that it was only dormant while men thought it dead. We went through a phase of this kind in 1852, when Louis Napoleon struck down the liberties of France and menaced England. Then we resuscitated our defunct militia, and entered on a career of expensive shipbuilding which has cost us many millions. We had another bad attack some years later when the French colonels made themselves ridiculous by calling upon their emperor to lead them at once across the Channel, and the Parisian gamins began to call out "à Londres" as they cried "à Berlin" in 1870. Then it was that we commenced an hermaphrodite military system by organizing our volunteer corps. The first symptoms of what threatens to be a serious attack are beginning to show themselves in the body politic at the present time, and, before the summer heats come on, we shall be in a tolerably advanced stage of the military fever.

People are awakening to the fact that this "money-logged island" is in what might turn out to be a defenceless condition. In the good old days we trusted to "the silver streak of sea" which separates us from Continental nations, and to our wooden walls. But the silver streak is not so formidable as it was when the first Napoleon chafed and fretted over the futility of his Boulogne flotilla seventy years ago, and Lebrun-Pindar sang, in anticipation, the dirge of London—

> "Tremble, nouvelle Tyr, un nouvel Alexandre
> Sur l'onde où tu régnais va disperser ta cendre;
> Ton nom même n'est plus!"

and the wooden walls have given way to steam and iron. We have, I suppose, as good a fleet of the new kind as any other nation—perhaps as any two other nations—and we have the old material out of which our sailors have been formed. But the conditions of naval warfare are completely changed. No one can predict the issue of a naval war between two first-rate powers. No one can say whether, under the new conditions, the old superiority of our men would avail us much. The chances are that British seamanship and British pluck would tell on board an iron-clad as they used to tell on board a wooden ship. But the comfortable classes do not like to trust to chances. The disasters of our "submarine fleet" during the last five months, and the fatuous incapacity which revels for the nonce at the Board of Admiralty, have startled the comfortable classes and made them feel about uneasily. What are we to fall back on, they say, if our navy were to fail us? Suppose, for the sake of argument, that we were at war, and that, by a series of misfortunes and unforeseen eventualities developed by the new conditions of naval warfare, our fleet were unable to resist a successful landing on our shores, what is there to prevent the enemy from marching from the coast to London, from London to Liverpool, and from Liverpool to Glasgow? The argument is suggestive of a bad nightmare produced by a city-corporation dinner where all the comfortable classes of the county dined together. But once stated it is difficult to answer, and it raises up a mountain of speculation, interesting perhaps to lookers-on, but grievous to surmount.

We have, I believe, an army numbering some 188,500 men; a militia numbering 116,000; some 172,000 volunteers, and 12,600 yeomanry cavalry. We have also 31,000 pensioners and reserves, and a great many honorary colonels. The total strength, therefore, appears not inconsiderable—on paper. It approaches a force of 500,000 troops, and if all these troops were efficient and available I do not think that the most timid of the comfortable classes would have much reasonable ground for alarm. But, unfortunately, we have not much confidence in their efficiency or availableness. The militia and the volunteers would prove of little value, authorities tell us, against trained troops: I am not competent to form an opinion upon this matter, but if I may judge by the appearance of an ordinary militia regiment out for three or four weeks' annual drill, I should not be without anxiety for the welfare of my country if even one battalion of regular troops were pitted against the entire body of 116,000. As for the volunteers, I should be the last man to disparage the physical benefit which shopkeepers' apprentices and city clerks derive from the movement, but I should imagine that a prudent general would reserve the period of their baptism of fire until every other resource had failed him. That the material of the volunteers, and of the militia too, is excellent I do not doubt, but time would be required to bring both branches of the service into working order. Recent wars, however, do not encourage the notion that time would be allowed for preparation. Wars are short, sharp, and decisive. While our militia and volunteers were practising the goose-step in barracks, the enemy might have overrun the country, reduced us to submission, and gone home again.

Our regular army is, of its size, most excellent, but nearly one-half of it must always be in India and on foreign service, and what we have at home it is not easy to keep together. The old recruiting system, under which smart non-commissioned officers, with long ribbons streaming from their caps, frequent likely street-corners in the vicinity of public-houses, for the purpose of picking up male waifs and strays who are willing to enlist, does not seem to answer. Even Mr. Gathorne Hardy, the present War Minister, and a steadfast believer in old institutions, expressed some anxiety as to the success of this time-honored system. Nearly 4,000 men deserted, he said in introducing the army estimates two years ago, in 1873, and the percentage upon recruiting was about 33 per cent. of the whole. In the infantry of the line it was 30 per cent., in the foot-guards 51 per cent., and in the army-service corps it had attained the extraordinary proportion of 146 per cent., so that if the corps were not recruited a little more assiduously the whole of it would soon melt away. We could not, I suppose, muster 100,000 regulars all told for home defence, and even this handful of men would be scattered all about the islands. This, it may be frankly admitted, is not satisfactory.

There is a good deal of talk about the state of the army just now, and the impossibility of securing an adequate number of recruits by the present methods of enlistment. Everybody has a remedy to propose. The Commander-in-Chief, the Duke of Cambridge, has publicly asked for more money

and that means an additional penny or twopence on the income-tax. The Conservative Government may grant his request, but, inasmuch as we spend more than thirty-two millions sterling each year upon our Home and Indian armies—or about the same amount as the armies of Germany, France, and Austria cost collectively—they will incur a dangerous amount of unpopularity by doing so. The War Office has published a scheme of mobilization of such troops, regular and auxiliary, as we have, but (though it looks well on paper, and is admitted generally to be a step in the right direction, and an indication of activity at headquarters) competent critics consider it faulty in detail and unnecessarily costly. The veteran Lord Grey has a prescription, which he has offered to the country through the *Times*. And now Mr. Holmes, the member for Hackney (best known as Mr. Fawcett's colleague), is addressing audiences nightly and expounding his remedy, which is neither more nor less than a subversion of some of the most cherished traditions of English military life. Mr. Holmes, unfortunately for the success of his scheme, is a cotton-spinner, and consequently the kind of animal that military authorities despise. But the public are not more prejudiced against a cotton-spinner than they are against a colonel, and they would give the cotton-spinner a fair hearing even on military matters, provided he showed ability and moderation. Mr. Holmes has, on the whole, answered the test, and he has succeeded in exciting a good deal of attention. His supporters, however, have not exhibited so much wisdom. They have shown a tendency to interweave their political crotchets, such as the abolition of the Contagious-Diseases Acts, into the web of military reform, and thereby damaged a good case. Mr. Holmes's system, so far as he has expounded it, is shortly this. He would abolish the militia because it is a sucker rather than a feeder of the army—the best men being always recruited into it, and being imperfectly trained when they are there. He would have only one force for home service. This force would not consist of one large army, but of several small ones decentralized and localized each in its own native district. The men would be enlisted for seven years, but would remain only two years with the colors. The remaining five years they would be in the reserve, earning their living as civilians, receiving a small portion of their pay when they come up for drill each year, and the bulk of it at the expiration of their time. For foreign service the pay would be higher, and the recruits who elected to go on foreign service would be required to enlist for the full seven years' active service. Considerable reductions would be made in the unnecessarily large number of officers, and a considerable saving would be secured, Mr. Holmes thinks, by knocking the centre War-office on the head. This system its author calls a modification of the Prussian system, of which he approves. But speaking, as he does at present, to Radical audiences, who have been taught by their leaders to regard conscription as a "blood-tax," Mr. Holmes seems to think it necessary to suppress the fact of conscription in the Prussian army. But conscription, or compulsory service, is the cardinal point of the Prussian system and the keystone of his own, and this is precisely what Mr. Holmes will not face. If he proposes to remodel the British army on a new system, he must have the courage to follow where his system leads. Short service can only answer in combination with compulsory service. As soon as Mr. Holmes is prepared to carry out his principles to their logical conclusion he will find attentive audiences, but I am not sure that those of Sheffield and Manchester will cheer his dry logic as lustily as they did his warm invectives against the existing system and the annual expenditure.

Though an amateur physician, I too have a cure for the military ills which oppress us, but I fear you will hardly give me space at the end of this long letter to prescribe it. Put very shortly, it is this: Let us face the necessity of compulsory service if we wish to feel secure at home and to exercise some little influence abroad, but let us make our compulsory service as light as possible. Let us begin it early; take it when we are young, like measles, and be all the better for it. Compulsory military training should be enforced at every elementary school as strictly as reading, writing, and arithmetic, and no boy should be permitted to leave his elementary school until he has satisfied the authorities of his proficiency. Such training could not be otherwise than of physical benefit to the recipient, and, once thoroughly acquired, it would never be forgotten. One year's regular service with the colors—say at the age of twenty—would then be sufficient to make the stupidest man effective, and a fortnight or three weeks' drill each year thereafter during the period of service in the reserve would be all that was necessary to preserve efficiency and to qualify the soldier to meet on equal terms the best-trained army in the world, and to give a good account of it if it should be rash enough to land on these shores. Compulsory service to this extent would not be grievous, and every male who was not physically disqualified should be compelled to undergo it. If Mr. Holmes would engraft this proposal upon his own scheme and persuade the public to accept of it, I believe he would render real and valuable service to his country. Some years would necessarily elapse before the scheme would take root and come to maturity. Our descendants would reap the benefit of our forethought, and the comfortable classes of the future, after the male members of them had served their time, would rest in peace, and sleep in their beds with a conscious feeling of security.

MADAME GEOFFRIN.

PARIS, January 14, 1876.

THE confusion of classes and of ranks did not begin with the French Revolution. It would be very interesting to study what may be called the democratic spirit in the French theatre, especially in the theatre of Marivaux. Read, for instance, the 'Fausses Confidences,' and you will find in it a curious sort of equality, not the equality arising from justice, the equality of right; it might be called the equality of sentiment. The eighteenth century was the century of *sensibility*; Rousseau was the doctrinaire of the heart.

A curious instance of the new equality which was assuming its rights in the eighteenth century may be found in the famous Madame Geoffrin, the so-called "mother of the Encyclopædia" and the patroness of the philosophers. If you look at the facts, and if you try to find the secret of her great influence, you are astonished to discover that she was of obscure birth, the daughter of a valet-de-chambre of the Dauphin. At fifteen years of age she was married to a manufacturer; Geoffrin was one of the founders of the first establishment where glass was made in France; it was formerly imported from Venice. He made a good fortune and left it to his young wife. He does not seem to have ever been noticed by anybody. A gentleman who returned to Madame Geoffrin after a journey, asked her once: "What has become of the old gentleman who always sat silent at your table and never said a word to anybody?" "Oh! I know whom you mean; he is dead." "What was his name?" "He was my husband" This conversation would not give a correct idea of Madame Geoffrin. She was not *légère*, indifferent; her peculiarity, on the contrary, was to be serious in a light age. She did not rise to fame by her love-affairs, like Mademoiselle de L'Espinasse; she had no *friend*, like Madame Du Deffant; her reputation always remained quite intact; she had no disposition for what was called *galanterie*; she was sociable, and nothing more. She had all the sterling qualities of true sociability; she was eminently discreet; she could keep a secret; she was faithful to her friends, constant; she took unremitting pains to bring people together, and to match them with art; she was not brilliant in conversation, but she could make her visitors talk; she knew how to keep a *salon*—an art which will soon, I am afraid, be extinct, thanks to the progress of civilization, to politics, and races, skating-rinks, operettas, pantomimes, extravagance of dress, and general absurdity and costliness of life.

Madame Geoffrin was left, at the death of the good and silent glass manufacturer, with a good income, but surely her dinners could not be compared to the most frugal repasts of one of our speculators in Peruvian or Ottoman funds. Otherwise, she could not have had, every Wednesday, at her table the philosophers—such men as Montesquieu, Voltaire, Diderot, Helvetius, D'Alembert, Raynal, Grimm, Marmontel, Maupertuis, Gibbon, Hume, Horace Walpole; every Monday, the artists, Bouchardon, Vanloo, Vien, Latour, Boucher, Cochin, Vernet, Soufflot, the Comte de Caylus. The philosophers were not fed with the black broth of the Spartans, and the artists have in all ages had the reputation of being *gourmands*; but the dinners and suppers of the last century were not at all the luxurious repasts of our time.

Madame Geoffrin had some points in common with Madame Récamier. This last lady was married very young to a gentleman who might have been her father; she had more beauty than Madame Geoffrin, but she kept her friends enslaved chiefly by the charm which distinguished people found in a *salon* where they could always meet each other; she had refined and cultivated tastes, she spoke very little herself except in the *tête-à-tête*, but she knew admirably how to *draw* people and how to place her literary diamond in the best possible light. She also found adorers among princes, and the Prince Augustus of Prussia was to her what Prince Poniatowski, who became King of Poland, was to Madame Geoffrin. The only Poniatowski now universally known in France is the unfortunate general who served in the great army of Napoleon I., and who was drowned in the Elbe River after the battle of Leipzig. The Poniatowskis were not originally Poles; they were Italians, like the Gondis and the Broglios, who became the Broglies. The family came from Lombardy, and

bore the name of Torelli. One of them married, in the seventeenth century, the daughter of Albert Poniatow, and took the name of Poniatowski; the father of Madame Geoffrin's friend, Count Stanislas, married a Princess Czartoryska, and by this alliance found a place in the highest nobility of Poland. He was one of the companions of Charles XII., whose adventurous life has been narrated by Voltaire. After having been a soldier, he became a diplomat, and was sent in 1753 to the court of Louis XV., accompanied by his fourth son. This young nobleman was very handsome, and the Duchess of Brancas wrote on this subject to Madame Geoffrin: "No foreigner ever came to us under greater advantages." At that time, Madame Geoffrin was already more than fifty years old. Count Stanislas-Auguste was introduced to Madame Geoffrin, and found much amusement in her *salon*. He took a great interest in art and literature, and quite adopted the tone of the philosophers. You shall judge of it by his somewhat coarse imitation of the allegorical style of the time. I find these lines in a letter he wrote on the subject of the family of the Sirvens, who had become, like the Calases, the *protégés* of the great philosopher. "I have seen," he writes to Madame Geoffrin, "in the letter which Voltaire sends to you *Reason* addressing itself to *Friendship* in favor of *Justice*. If I ever make a statue of Friendship I shall give it your features. This *Divinity* is the mother of *Benevolence;* you are mine since some time." Madame Geoffrin had become the "mother" of this foreign prince; she gave him his second education, and, though we may laugh now at the letters he wrote her, there was something rather touching in this devotion of the proud and handsome Pole to a French "bourgeoise."

Something extraordinary was expected from him; a magician had predicted that he would some day wear the crown. At an early age he was named ambassador to the court of St. Petersburg, and he became the lover of Catherine, the niece of the Empress Elizabeth, who was married to Peter of Holstein-Gottorp, accepted by the Empress as heir to the crown. Poniatowski was only then twenty-five years old; he was intoxicated with the favor shown him by the Princess Catherine, and little suspected that this favor would be the cause of all his misfortunes. The future Empress had taken his measure. She saw in him the vanity, the credulity, the generosity, the weakness which could make him an easy prey. Her vices were the covering of a deep-seated ambition; she resolved to make a king of Stanislas-Auguste, so as to become the mistress of his kingdom. He became her candidate for the throne of Poland, and, as he had the support of the Czartoryski faction, he was elected. He gave his French "mamma" an account of the election—"there had never been such a tranquil, such a unanimous election." This tranquillity will be better explained if it is added that Catherine had sent ten thousand of her troops into Poland, and that Frederic II. stood ready with his army at the frontier. "The principal ladies of the kingdom," writes our vain Stanislas-Auguste, "were presented to me in the midst of the electoral field, in the midst of the squadrons of the nobility, and I have had the satisfaction to be proclaimed by the mouths of all the women as well as by the mouths of the men present. . . . Why were you not there? you would have voted for your son!" Madame Geoffrin must be pardoned if she felt a little over-exultant at this triumph of her affectionate and devoted son. "My dear son, my dear king, my dear Stanislas-Auguste"—she gives him all these names together. She saw herself the distant Egeria of a new Numa Pompilius. It was the fashion of the time to ask the philosophers for constitutions. J. J. Rousseau had made one; every friend of Madame Geoffrin thought himself able to conduct the affairs of a great empire; why should she not herself be afflicted by this innocent mania? She did not spare her advice to the new king; she offered to send him secretaries, men of letters, philosophers, who could assist him in his new duties.

The king often pressed Madame Geoffrin to make him a visit, and she finally decided to go to Poland, not a small enterprise in those ante-railway times. The Parisians admired the courage of "the Queen of Sheba, who went to admire the wisdom of a new Solomon." Marmontel called her "Truth on her journey." At Vienna, on the Prater, a carriage stopped hers; a gentleman alighted, and, bowing to her at the door of her carriage, said, "The King of Poland is very fortunate in having a friend like you." This gentleman was no other than the Emperor. In Poland, Madame Geoffrin was not long in discovering that the royalty of her "son" was merely nominal. There was a "great general of the crown," who disposed of all the brevets in the army, much more powerful than the great Constables had ever been in France. The noblemen were all-powerful; Frederic II. and Catherine of Russia had their partisans, and their ambassadors kept the king in constant awe. Madame Geoffrin had left Paris in June, 1766; she left Poland in September of the same year. It may be inferred that Poland and perhaps the king had disappointed her. Her parting letters are cold; nobody knows, as yet, not even any member of the Poniatowski family, what came between the "mamma" and her crowned "son." Madame Geoffrin preserved a discreet silence, she never complained of the King of Poland, she continued her correspondence with him, but it became formal, and "your majesty" was now visible in every letter. The moralist can easily understand that a clever "bourgeoise" of Paris, spoiled by the conversation of the cleverest men of her time, could not like the chains of a semi-Asiatic court. "Gratter le Russe et vous trouvez le Cosaque," says a French proverb, which probably can be applied to many Poles.

Madame Geoffrin had more pride than Stanislas-Auguste. When the first partition of the kingdom took place in 1772, he resigned himself, while she told him to abdicate. He was contented with a nominal royalty, and took a childish interest in works of art, pictures, statues; his heart was always in Paris. He told Madame Geoffrin to send him Diderot to console him in his misfortunes. Madame Geoffrin did not encourage him. "Diderot," she wrote him, "is a good and honest man, but he has such a *mauvaise tête*, he is so badly organized, that he never sees what he sees, he never hears what he hears exactly; he is like a man in a dream. Who believes in the reality of his dream? It is not so with Grimm, who is wise, who sees well, who has much *esprit*." She sent him Grimm in 1774. Her letters became rare from that time; she was becoming old and sick, and she died in 1777. She had enjoyed for fifty years a sort of intellectual power which was more solid than the power of Stanislas-Auguste. It is impossible to read the volume of correspondence just published without seeing her real superiority to her royal correspondent. Stanislas-Auguste did not fall with Poland, he waited too long, and at the second partition he was thrown away with contempt. Madame Geoffrin died, so to speak, on the throne.

If she has left no great literary work, not even a correspondence worthy to be compared with the letters of a Sévigné or of a Madame Du Deffant, she will always, in the literary history of France, hold a respectable place among the great men whom she helped with her great fortune, with her excellent advice, with her faithful friendship; she is worthy of respect for her unimpeachable morality in a corrupt age, and for her genuine love and admiration for intellectual greatness.

Correspondence.

THE DUTY OF PREACHING.

To the Editor of The Nation:

Sir: A few words only as to the propriety of clergymen's writing for papers conducted by scoundrelly publishers. I cannot say with Dr. Bacon that I sell my articles in the market and write for pay. I am sometimes paid, oftener not.

Do you insist that when the opportunity is offered to a clergyman to speak, as he supposes, important truth to many thousand readers, he should refuse because another man [in and by the same sheet is propagating lies and perpetrating frauds and swindles?

I have been wont to preach for years in a theatre, sometimes all a-reek with Saturday's vulgarity. Was I wrong?

I preach summer after summer in a park owned by a generous man whose morals I disapprove, and whose example, in some respects, I deplore. Am I wrong?

I know of no newspaper or other periodical that does not at times shock me. Shall I cease writing wholly?

I know of no church or meeting-house from which evil influences do not at times exhale. Shall I cease preaching?

I pray you reconsider your incisive and, to me, painful condemnations of the clergymen who write for papers of questionable reputation. My own sense of duty leads me to offer my words where they seem to be most needed. Accordingly, I send this to the *Nation*. Thos. K. Beecher.

Elmira, N. Y.

[This obfuscation of the clerical mind on questions of morals which used to be considered plain is an alarming sign of the times. If Mr. Beecher's preaching in the theatre has helped to draw audiences for vicious and vulgar plays, of course he was "wrong." If his preaching in the generous but immoral man's park stimulates his immorality, and aids its gratification, and increases the influence of his example, of course Mr. Beecher is wrong. Whether Mr. Beecher ought to cease preaching or writing is a matter on which we cannot,

with our present light, offer an opinion; but we think if he keeps on, his head ought to be cleared on certain fundamental questions. We must also pronounce the notion that the importance of any one man's preaching is so great and its influence likely to be so beneficial that any opportunity of preaching ought to be seized, no matter what the circumstances or conditions, a most absurd and immoral doctrine, hatched in a conceit which is quite out of date. The first duty of all of us is to live rightly and to avoid giving direct aid or countenance to rascality; preaching comes afterwards, but is not always an imperative duty. If a man cannot find a good place to preach in, silence is a lawful and honorable resource.—Ed. Nation.]

PROFESSOR BONAMY PRICE ON CURRENCY.

To the Editor of The Nation:

Sir: I beg to express my strong sense of the great obligations under which I am placed towards you by your kind notice in your number of December 30 of my little book on 'Currency and Banking,' and more especially by your criticisms on a portion of its contents. It is hard for me to express in words the value which I attach to any comments on my statements on these subjects which proceed from high intelligence and a sincere desire of discovering the truth. I court this in every way; and I hope I am not deceiving myself when I add that I feel the most perfect readiness to modify or abandon any opinion shown to be erroneous.

But here I must ask for your indulgence to allow me to advance a claim which you suppose I do not make. Do not charge me with conceit when I say that I did intend my book to be strictly "a scientific treatise." If it is not, then I do not know what other book is in this region. I have studied these matters for years; it has been my most eager desire to search out every element of the subject, to face it, and to pronounce upon it, whether rightly or wrongly. If I have omitted any fundamental point, pray inform me of it, and I will thank you sincerely for the instruction; and, on the side of the matter given, will you forgive me for asking whether the radical questions, What is banking? what is a bank? have been looked in the face more fully and have received more essentially scientific treatment than in the work which you have been so good as to notice?

You describe my "creed as that of the extreme orthodox English school, from which I do not tolerate the slightest dissent." That is perfectly true in respect of the convertibility of the bank-note by specie payment—only for the word "extreme" you might almost have substituted the expression "universal." There are few Englishmen who advocate inconvertible notes for which coin cannot be procured on demand. But pray do not imagine that in these matters of currency, and especially of banking, I am regarded by English authorities as an orthodox person. There are few writers on banking who are looked upon by the oracles of the money-market and the writers of City articles as more hopelessly heterodox. This reputation does not disturb me. I have given the most complete and the most careful explanations of the positions I take up which were in my power, and no one answers me, though my writings have appeared in not a few of the leading periodicals of England as well as in the public press. I am pronounced unsound and heterodox, and the wise ones pass by me as one crushed by the awful shaking of their heads. Be it so; only I will pretend to be right till I am shown to be wrong. But what I here say must not be understood as applying in any way to America. In your country I feel that I have always had a fair field. The sting of my heresy, which wounds so sharply the great ones of banking in England, has no play in the United States. The trade of your great country, in its relations to banking, is not delivered over, to its endless injury, to the supreme discovery of banking genius that the charges for interest to be paid by merchants on discount must be governed by the Bank of England having a million or two of more or less gold in its reserve. No American journal or writer, as far as I am aware, lays down the movements of gold in the till of a single bank as the scientific principle that rules the rate of interest. You have not reached that point yet, and I hope you never may. If you feel any interest in the discussion, will you allow me to refer you to letters which I wrote to the *Daily News* on the 3d, 17th, 27th, and 31st of last December?

I hope I am not guilty of "that forgetfulness of the fact that bank-notes and bank deposits are in all essential particulars the very same in their nature and effects which seems to affect the economists and legislators of all countries." I fully accept the assertion in respect of the ordinary issues of private banks. It is as you say: these notes and the deposits are debts alike. They have incidents each of their own; but those are only details not affecting their essence. Deposits differ from one another in many particulars; some are much more exposed to the danger of being suddenly demanded, others, like many accounts at the Bank of England, may be reckoned upon as likely to remain undisturbed for long periods of time. So with the issues of private banks of unblemished credit; a large portion of them is permanently needed by the community, and will remain out in circulation if the issuer's credit receives no shock. But in both cases these notes and deposits are debts due on demand.

But the case is wholly different with the bank-notes which circulate under the name of the Bank of England, and which are those of which I chiefly spoke in reference to England. They are entirely different in nature from deposits. They are exposed to no danger, to no uncertainties, to no thought or watchfulness in dealing with them. They scarcely fall under banking. For all the issue of our fifteen millions, there is gold in the Issue Department, given for these notes by the public, and to be had for the asking; for the fifteen millions gold is not actually stored, but the Bank is required to invest these fifteen millions in Government securities. The notes then are made perfectly safe, and there is not the remotest chance of a single one of these notes being presented for payment, except in the event of an invasion or of civil war. Every feeling, therefore, associated with deposits is absent from the notes of the Bank of England.

But I am sorry to say that I cannot agree with you in holding that bank deposits ever circulate or constitute any part of the currency of a nation, unless you comprise under the term currency every form of the tool of exchange. In that case, all the items in the debts set down on the books of every shopkeeper become currency, as also the slips of paper on which insurance brokers bind themselves, and even the words uttered by the lips which effect so many commercial transanctions. Under such a definition, the word currency would acquire a vagueness which would destroy its value for scientific and practical purposes alike. It is true that I have not brought out in express terms that "a banker can increase the volume of the currency by writing figures in his depositors' pass-books in precisely the same way as if he could issue notes at pleasure," because I do not think that there is any currency in such writing, and because I have given the significance of both acts in other words. By handing over notes and by placing figures to the credit of his customer's account, the banker does the same thing; he bestows means of buying, he enables his borrower to buy. But in saying this, I "overlook no important class of cases in which artificial debts are created by the simple exchange of evidence of indebtedness between two parties." There is nothing artificial in these acts. In both alike the banker says: Go and buy, and I will pay. That the borrower borrows in order to buy is shown by your own illustration—"he goes forth and purchases a piece of property." But how does the banker mean to pay? with what resources? Clearly with what his depositors placed in his hands, or the public who hold his notes. The public and the depositor get these means by selling goods; there is no other possible way. If the banker chooses to tell another man to buy goods, and he—the banker—will pay for them before he is put in funds by a depositor or the public, then of course he performs an artificial act, and by so doing may place himself in insolvency.

But legitimate banking does not increase the price of property. A bank is only an instrument of exchange, like a sovereign, and the use of a sovereign adds to the price of nothing. But illegitimate banking may easily raise prices. If a banker bids a customer buy goods which he, the banker, does not possess the means to pay for, the banker performs an act of speculation, and all speculators may raise prices by purchasing what the market will not take off their hands except at a loss. The banking I spoke of was sound, good banking, which transfers means of buying derived from a seller to a man who wants to borrow in order to buy; but banking that makes no reference to wealth placed at its disposal by depositors, but simply authorizes purchases, without any reference to the means which banking by its very nature obtains from others, is not banking, but speculation without means, carried on by two persons acting in concert.

With your permission, I will endeavor to explain in a second letter the question of suspensions.

Bonamy Price.

Oxford, January 14, 1876.

Notes.

Harper & Bros. have in press an Homeric Dictionary for the use of schools and colleges. It will be based on Autenrieth's, and will be edited by Robert P. Keep, Ph.D., late U. S. Consul at Athens. With a

view to giving a correct idea of ancient costume, armor, navigation, sacrifice, etc., a number of illustrations of Grecian antiquities will be inserted in the text. The dictionary, though filling about 300 pages, will be of a size convenient for carrying in the breast-pocket.——J. B. Parker, Hanover, New Hampshire, has published in pamphlet form the very interesting address delivered at the last Dartmouth Commencement by Nathan Crosby. It is entitled 'The First Half-Century of Dartmouth College: being Historical Collections and Personal Reminiscences.' Nothing in the history of education in this country is more romantic than the foundation of Dr. Wheelock's missionary school in the wilderness, and no incident was of more vital consequence to the cause of education than the famous "case" which decided the inviolability of Dartmouth's charter. Pending the decision, Mr. Crosby was a student at Dartmouth, and his reminiscences of the exciting days of the "college" and "university" duality are highly graphic.——The pamphlet report of the 'Centennial Anniversary of the Pennsylvania Society for Promoting the Abolition of Slavery, etc.,' is chiefly remarkable for the list of members since its organization, which is given in the appendix. Drs. Benjamin Rush and Benjamin Franklin were among its presidents, and its honorary membership included the names of Granville Sharp, Thomas Clarkson, William Wilberforce, Lafayette, William Pitt, the Abbé Raynal, John Jay, Noah Webster, Samuel Hopkins, Moses Brown, Elias Boudinot, Ezra Stiles, Samuel Dexter, etc., etc. Many of these American celebrities were officers of similar societies in the neighboring States, and the eminent English and French philanthropists and statesmen doubtless regarded the honor as not an empty one.——The twenty-second annual report of the State Historical Society of Wisconsin shows the usual solid progress. The library now numbers about 32,000 volumes and as many pamphlets: there are 2,467 newspaper volumes alone. A particular account is given of the way in which the recently-acquired Perkins collection of prehistoric Wisconsin antiquities was amassed. Among the miscellaneous "additions to the cabinet" we remark "a set of cards of the three-card monte game, by which a passenger on the Union Pacific Railroad lost $1,500"!——Hurd & Houghton announce 'Glen Ridge Orchids,' a manual of the culture of orchidaceous plants, by Edward Sprague Rand, jr.——The Women's Centennial Executive Committee of Philadelphia is endeavoring to obtain information concerning the various forms of religious, philanthropic, and patriotic work organized or conducted by women in America and in foreign countries. A printed report will be the result. Brief accounts may be forwarded to Mrs. Aubrey H. Smith, 903 Walnut Street, Philadelphia.——The heirs of the late L. Rosenthal, whose famous library of Hebraica and Judaica ranks next after the Bodleian of Oxford and that of the British Museum (see the *Nation*, Vol. XX., p. 275), have resolved to dispose of it *en bloc* on condition that it shall always be kept together and shall bear the collector's name. Mr. M. Roest, Amsterdam, the accomplished bibliographer of this library, is charged with the negotiations for the sale of it.

—We are glad to learn that steps have been taken by some of the alumni of the Boston Public Latin School residing in this city to raise a memorial fund in honor of the late Dr. Francis Gardner. The application of it will, if the responses are sufficiently liberal, probably be towards founding a scholarship at Harvard in aid of deserving Latin-School graduates. All of Dr. Gardner's pupils (whether recent or of long standing) who desire to contribute to this object, are requested to send their addresses to Edward B. Dickinson, Secretary, 206 Broadway.

—The Society of Painters in Water-Colors opened on Monday, at the Academy, their ninth and best exhibition. A number of paintings showed unusual effort and novel dimensions, being intended for future use at the Centennial. Messrs. Coleman, Tiffany, Richards, Smillie, Nicoll, La Farge, and Magrath have particularly distinguished themselves. Many pictures were sold at the private view, even resold among the purchasers themselves at an advance, and the most gratifying evidences of public support were offered in every kind.

—Five numbers of the *American Archit ct and Building News* have now appeared (Boston: J. R. Osgood & Co.), and these show that the enterprise is in good hands, and that the profession is to be congratulated on having so respectable and well-conducted an organ. In its general appearance it resembles the London journals of the same class. Each number is accompanied by two full sheets (four pages) of heliotype reproductions, partly of original designs by American architects and partly of selections from foreign work—the subjects in the latter case being often drawn from architects' note-books. Thus far, these reproductions have been only of line-drawings, but we hope that occasionally the publishers will show what can be done with their process from nature, especially in giving interior effects. This has been tried to some extent, and with good success, in the *Sketch-books* which preceded the *Architect*, and which, we imagine, can hardly escape being now merged in it. The editorial matter of the new journal has seemed to our lay judgment sensible and intelligent, and the selections, both of topics for comment and of professional news, such as to interest not merely architects but also the general reader. The fourth number, especially, is full of instruction to building committees. It gives an abstract of a projected tract on competitions, showing their advantages and their necessary and needless disadvantages, and when competitions are likely to be useful, and when they are certain to be disappointing. It is a tract which, for the sake of a higher architecture and the *carrière ouverte aux talens*, ought to be speedily completed and widely distributed; nor is it the only tract which is required to place architects in true relations to their clients, and to make their profession seem to have the same excuse for being that the lawyer's and the doctor's professions have.

—One sees on entering the New York office of Wells, Fargo & Co. a huge map of the United States, painted roughly on one of the side walls, and showing at a glance the railroad system of the continent. The example deserves to be imitated by our railway companies in their stations, where it ought to be a canon of the mural decoration that the geography of the road and its branches should be clearly spread out for the benefit of travellers. Tourists in France will readily recall instances of such treatment in the great depots of Paris. We learn from the last *Polybiblion* that the subject was lately brought before the Paris Geographical Society in a communication from the French consul at Rio. He called attention to the fact that the Brazilian Government obliges railroad companies to post in their stations certain geographical particulars concerning the locality, the province, and the whole territory of the empire. It appears that the Geographical Society of Lyons had already taken the initiative in a similar movement for France, with a view, however, to voluntary action on the part of the companies. We wish the American Geographical Society might bestow a little energy in the same direction over here, where large and costly stations are constantly going up. The architects themselves could do much if they would only take the idea to heart.

—Mr. Spofford's annual report on the condition of the Library of Congress possesses unusual interest. The total number of bound volumes is 293,507 (exclusive of bound pamphlets), and the annual rate of increase is from 16,000 to 18,000 volumes, about half of which are derived from the working of the copyright law. As many as 2,315 pamphlets were thought worth copyrighting in the thirteen months ending Dec. 31, 1875. In the same period the cash receipts from copyright were $13,151 50. This department of the library, if no other, will soon have to be housed elsewhere. As for ordinary book-room, it was long ago exhausted, and when books had been placed in double rows on the shelves the fresh accumulations had to be piled upon the floor. Mr. Spofford once more asserts the pressing need of a library building apart from the Capitol, fire-proof, and capable of indefinite extension. Until that is provided, the riches of our national collection will never be available. Mr. Spofford instances the vast store of unbound maps and charts, and of bound but unshelved periodicals, as being inaccessible for practical use. He shows that a library of Congress, properly so-called, could be left on the spot whenever the main body was removed; and he might have added that the means of annihilating space and time are now such that a book could be almost as readily procured a mile off as within the walls of the Capitol. The cataloguing force of the Library has been employed on the new general catalogue to be issued this year, and now passing through the press, and also on a complete index to the documents, debates, and laws of Congress. In this latter work they were partly anticipated by the Boston Public Library, which had made an approximately full index to the documents alone. Mr. Spofford recommends the adoption of this as a basis to a more complete index, and that it should be published not separately but as a part of the more comprehensive scheme, which, with proper clerical aid, can be finished in two years. The publication of selections from the French archives relating to the discoveries and explorations made in our Northwestern Territory from 1614 to 1752 has been begun. They will fill six octavo volumes of six hundred pages each.

—The *Gazette des Beaux-Arts* for January 1 (F. W. Christern) gives a number containing three hundred pages and one hundred pictures, all devoted to Michael Angelo. The best article is one by M. Guillaume, a professor of sculpture at the École des Beaux-Arts, on "Michael Angelo's Statues." There is point as well as novelty in his observation that the great sculptor reinforced his carved work with resources borrowed from his knowledge of painting. The unfinished parts of the Medici statues, for instance, improve the whole in feeling. "We should think of these *impastos*

not as a superfluity, but as a sort of condiment strengthening the mass, substitutions for black cavities that would have been too large, and as acting for the sculptor like backgrounds for the painter." "The body of Christ (in the St. Peter's Pietà) sinks by its heaviness into the draperies of the Virgin, and takes an appearance of bas-relief which is of the highest art."—The new French journal, *L'Art*, may now be had of Mr. Bouton, in the three bound volumes which cover the past year for little more than two-thirds of the subscription price. It is perhaps an improvement on the *Gazette* in audacity and critical independence; the rival journals might be defined as of the Ingres and anti-Ingres parties. Certain faults of opinion are patent, and it is not exempt from padding, but the owner of a year's numbers finds himself possessed of a mass of curious and live criticism and a fine collection of etchings—pictures which the large page of 13 by 18 inches enables to interpret most capably the paintings from which they are copied.—The *Portfolio* for January (same publisher) gives for a new year's present a frontispiece copied from Raphael's "St Catherine," in an etching by Le Rat; the style is in the austere hard-lined manner of Marc Antonio—a most appropriate treatment, and thoroughly able.

—We have in previous years referred to the efforts making to place the medical corps more nearly on an equality, as regards rank and pay, with the other branches of the army, and we regret to find that they have not yet succeeded. Congress, indeed, authorized examinations to be held for the junior assistant-surgeoncies, but, at the same time, abolished one-sixth of the surgeoncies, thus leaving those actually in service so much the worse off, and entirely failed to provide any higher grade than that of major. A memorandum that we have received shows that Congress is now asked to allow the four senior surgeons to rank as colonels, and the next eight as lieutenant-colonels. These seem little things, and less, not more, than justice. Among others, the paper makes these statements, which, we believe, cannot be gainsaid:

"The duties of a medical officer require for their proper discharge as much intellect and culture as those of any other branch of the service. And it may be asserted, without fear of contradiction, that the officers of that corps, as a body, have for many years past been recognized, both in the army and out, at home and abroad, as men who, in character, education, and scientific attainments, are in every way the peers of their brother-officers, with whom they have shared the fatigues of every march and the perils of every battle." "The inducements to engage in private practice are the prospect of increased income and reputation with advancing years. In the army these are represented by rank, not only because increased rank carries with it an increase of emolument, but also because to the army officer rank is well and properly understood to enhance the dignity of the person holding it, as well as the respect in which he is held by his compeers and subordinates." "If it is to be understood that these advantages are to be perpetually denied, it is vain to expect that medical men of talent will be willing hereafter to devote their lives to the arduous and unrequited duties of the medical corps."

The medical officers, as such, are powerless to influence directly the legislation that is necessary to meliorate their condition. They can create no lobby, and there is no ring to profit by the enactment. But we can commend their appeal to the sympathy and interest of good citizens, whether physicians or others.

—That the persistent reader of novels has often to look to foreign lands for supplies to keep himself occupied is a well-known fact. This has certainly been the habit with us Americans, while the Germans have given even more marked example of what may be called free-trade in fiction, for they have translated almost every novel from almost every language as soon as it has appeared. France and England, having a good supply of domestic manufacture, have preyed less upon their neighbors. Recently, however, the French have shown a slight modification of their former exclusiveness, and, to take the most prominent instance, the *Revue des Deux Mondes* has helped itself largely from outside sources, and a good many American authors within the last two or three years have had an opportunity to improve their French by translating their own stories from the classic pages of the *Revue* into their own more or less classical English or American. The number for Dec. 15 shows the existence of this interest in foreign literature, for it contains an article on Thomas Hardy's 'Far from the Madding Crowd,' and another on the novels of M. Sacher-Masoch. What is said on Mr. Hardy's story is very good, and the article is a capital example of the excellence of French literary handiwork, but it may be worth while to utter a word of warning against the praise given to Sacher-Masoch, while at the same time we express our gratitude for the information given us about his life. He was born in Galicia, in Little Russia, in the year 1836, and as a child he saw many of the horrors of the Polish insurrections of 1846 and 1848, which he afterwards made the subject of some of his stories. At first, while a professor at Grätz, he wrote short tales and plays with moderate success, but afterwards, when he devoted himself more exclusively to writing about the peculiarities of life in Little Russia, he became better known. Some of the best of his sketches have appeared in the *Revue* within the last three or four years. He is an open imitator of Turgenef, but he is a man of far less talent than his model. He, to be sure, like Turgenef in his 'Récits d'un Chasseur,' represents himself as wandering about the country, and so collecting material for his stories, but he always keeps himself well in the foreground. Almost all of his stories are marked by the blackest pessimism, by the side of which Turgenef's melancholy is almost jovial. His principal theme is the unloveliness of love, and certainly he manages to draw it in a very unattractive way. His discovery is this: "Love is the war of the sexes; each strives to subject the other, to make it a slave, a beast of burden—for man and woman are naturally enemies." It will be seen that he is an advanced thinker, far ahead of most of his contemporaries. It may be said, by the way, that this number of the *Revue* promises the beginning of a new story by Cherbuliez in the number for January 15. It is to be called "Le Fiancé de Mlle. Saint-Maur."

—The literary activity of the year 1875 in the field of history has perhaps been most marked in the histories of special nations. The old Heeren and Ukert series (now edited by Giesebrecht) is represented by the continuation of the 'History of Sweden' (Carlson), and 'Poland' (Caro), and the commencement of a history of Greece since the extinction of ancient life, by Hertzberg; the volume published comes down to Justinian I. The series of recent histories ('Staatengeschichten der neuesten Zeit') has witnessed the second volume of Mendelssohn-Bartholdy's 'Greece' (to the year 1835) and the second part of the second volume (to 1815) of Bernhardi's 'Russia,' from the year 1813; the present volume is devoted mainly to the earlier history of the country, while the first volume contains what is pronounced to be a remarkably valuable and instructive sketch of general European history since the time of Napoleon. The third volume of Pauli's 'England' since the Peace of Vienna embraces the period from 1840 to 1852. An important publication in this class is Meyer's 'Austria,' with especial reference to the history of civilization. We have also Capponi's 'Florentine History' and the conclusion of Guizot's 'France.' Of particular periods, the most noteworthy are: the conclusion of Arnold Schäfer's 'Seven Years' War,' no doubt the standard work upon this subject; the first volume (1376 to 1387) of Lindner's 'Germany in the Fifteenth Century'; Gardiner's 'England under the Duke of Buckingham and Charles I.'; the fifth volume of Kinglake's 'Crimean War'; the second volume of Michelet's unfinished 'History of the Nineteenth Century'—a work possessing many of the author's best and most characteristic qualities; and Taine's 'Origines de la France contemporaine'—a study of the *ancien régime*; 'Der Fall des Hauses Stuart,' by Onno Klopp, is from a strongly Ultramontane point of view; two volumes have appeared, reaching to the death of Charles II.

—In ancient history, a very important treatise upon Egyptian chronology is Riel's 'Sonnen- und Siriusjahr der Ramessiden.' The 'Records of the Past,' issued by the Society of Biblical Archæology, furnishes students with most valuable and authentic authorities for the early periods of the Oriental nations. The 'Histoire de l'Economie Politique des Anciens Peuples,' by Du Mesnil Marigny, has reached a second edition. Two English works are instructive for special aspects of Grecian history—Lloyd's 'Time of Pericles' and Mahaffy's 'Social Life of the Greeks.' Gaston Boissier, author of 'Cicéron et ses amis' and 'La Religion Romaine,' has just published a new work, 'L'Opposition sous les Césars.' Two writers of some distinction in this field have died within the year. Bishop Thirlwall had long finished his work, but Prof. Clason of Rostock was engaged in a continuation of Schwegler's 'Roman History,' the interruption of which will be a real loss. The completion of Smith's 'Historical Atlas for Classical and Biblical Geography' is, in spite of shortcomings in some respects, an event of importance. A series of 'Epochs' for ancient history, edited by Mr. Cox, is announced. Mr. Cox himself undertakes a period of Greek and Dr. Ihne of Roman history.

—On the border-line between ancient and modern times belong Ebert's 'Geschichte der Christlich-lateinischen Literatur' (to Charles the Great), forming the first volume of a history of mediæval literature (this is pronounced a model work); the first volume of Kremer's 'Kulturgeschichte des Orients unter den Khalifen,' which has also received the very highest commendation; Coulanges's brilliant 'Institutions politiques de l'ancienne France,' an admirable but somewhat one-sided study of the origin of feudalism; Arnold's 'Ansiedelungen und Wanderungen deutscher Stämme,' an ingenious and successful attempt to extract historical knowledge from local names; and Ficker's 'Forschungen zur Reichs- und Rechtsgeschichte Italiens.' In the line of modern biography may be mentioned Stubbs's 'Dunstan,' Odillon Barrot's 'Memoirs,' Köstlin's 'Luther'—pronounced a

biography of the first rank, although rather neglecting the political side of Luther's career—and the 'Life of Lord Shelburne.' Documentary collections are represented by Böhmer's 'Regesta of Charles IV.' (1346–78), published from his remains; Ritter's 'Briefe und Acten zur Geschichte des dreissigjährigen Kriegs,' bearing upon the author's history of the German Union; Steindorff's 'Jahrbücher of Henry III.'; and, perhaps most important of all, Prof. Rogers's collection of Protests of the Lords, invaluable for the study of English constitutional history. Roscher's 'History of Political Economy in Germany' is a most important contribution to the history of civilization. Under the head of constitutional history we have some important works: the second volume of Stubbs's 'Constitutional History of England'; the second volume of Mommsen's 'Römisches Staatsrecht'; and the fifth and sixth volumes of Waitz's 'Deutsche Verfassungs-Geschichte.' Lastly, we will mention Digby's 'Introduction to the History of the Law of Real Property,' and Sir Henry Maine's 'Early History of Institutions.'

—Francis Deák, the Hungarian statesman, who died on the evening of January 28, was born of a noble Catholic family, October 17, 1803. Having studied law, he was elected by his native county, Zala, a member of the Hungarian Diet of 1832–36, at a period when the patriotic agitation of Count Széchenyi and the tragic fall of Poland had roused in the nation a lively spirit of reform. But the legal nation of Hungary then consisted only of the nobility. Gradually to transform it so as to embrace the whole people of the country, and at the same time to preserve and extend the constitutional rights which the nobility had possessed and defended for centuries, was now the task of the reformers. Among these Deák, by his eloquence, close study of constitutional law, tact, and moderation, rapidly rose to the foremost rank. Re-elected to the Diet of 1839–40, he was the leader, without a rival, in the House of Deputies, while Kossuth, released from state-prison, instituted a more radical political movement as a journalist. To the Diet of 1843–44, which opened amid stormy party conflicts, Deák was unanimously elected in Zala, but the reactionary party soon after carried a resolution instructing the two representatives of the county to vote against the taxation of nobles. Deák, the champion of this measure, refused to take his seat, and remained firm in his resolution even when the instruction had been rescinded, this having been achieved by party means of questionable fairness. The county, throughout the Diet, remained represented only by one deputy. Impaired health prevented him from accepting a seat in the Diet assembled in 1847, in which Kossuth rose to leadership. The revolution of February, 1848, made the radicals masters of the field, and Deák accepted the portfolio of justice in the Batthyányi-Kossuth cabinet. This position was offered him, in fact, by a kind of national acclamation, he being even at that early period of his career universally considered a modern Aristides—a distinction which no act of his later years ever tended to impair. When the contentions between the Slavs and Magyars and the cabinets of Vienna and Pesth finally led to open war and the virtual dictatorship of Kossuth, Deák withdrew with Batthyányi and others, and during the further course of the fatal contest only once figured publicly in a vain attempt to end it by negotiation. He lived in retirement when the independence of Hungary was proclaimed in Debreczin, and consequently remained unmolested when Russian intervention had reinstated the Hapsburgs. The following ten years he spent in great part on his country estate, from which throughout his life he drew a small income, devoting a considerable portion of it, as he never married, to objects of benevolence and public utility. Repeatedly sounded by the statesmen of Vienna as to a possibility of restoring harmony between the court and the Hungarian nation, he refused to treat on any other basis but that of re-established constitutional legality, and firmly expressed his opinion that the nation had time to wait. Solferino, in 1859, finally convinced Francis Joseph that *he* had little time to lose, and during the six or seven years which elapsed in negotiations, while the Hungarian Diet was opened, dissolved, reopened, and prorogued, until Sadowa forced a settlement on the dynasty, Deák, then a deputy of the city of Pesth, was the oracle of the people, of the Diet, and ultimately of the court itself. His advice was far from being ambiguous. All he had to say to both sides was, unequivocal return to legality as it existed in 1848. Beust accepted this basis, the dualism on which the Austro-Hungarian monarchy now rests was organized, and Francis Joseph was, in 1867, crowned constitutional king of Hungary. Deák declined the honor tendered him of crowning the king, as well as the task of forming a cabinet. He continued till his death a member of the Diet, counselling moderation, reform, and the total separation of church and state. As an orator he was logic personified, and has been best compared with Canning and Bright. He was plain, cheerful, and fond of good jokes and anecdotes. Among the sketches of him is one by Laveleye, written for the *Revue des Deux Mondes* (1868). Though historically correct, it reads like a panegyric—naturally so.

THE INFLUENCE OF INDIA ON ENGLISH OPINION.*

SIR HENRY MAINE'S lecture suggests an enquiry which must have occurred to observers of modern England: Is it not probable that the possession of India may in the long run modify the course of English opinion? Various circumstances seem to justify an affirmative answer. It is certain that the apathetic indifference to Indian affairs which has for a long period characterized the English public, is rapidly becoming a matter of the past. During the last twenty years India has begun to excite the keen interest of Englishmen. The constant publication of works like Hunter's 'Orissa'; the avidity with which such books are read; the popularity of Professor Maine's own later writings, filled as they are with references to the customs of the East; the excitement caused by the Baroda trial; the reception of Chunder Sen; the increasing frequency with which distinguished Englishmen visit England's Oriental Empire; the journey of the Prince of Wales, wearisome as are its details and unimportant as it is in itself—are all signs of the set and current of popular feeling, and prove that the "proverbial dulness attributed by Englishmen to Indian topics," of which Professor Maine so justly complains, is a reproach which will be soon undeserved. For the changed attitude of the English nation towards the affairs of the East is not the result of a mere fashion or sentiment which, arising without cause, may any day pass away without reason.

The causes which have turned the attention of Englishmen towards the East are in part at least not hard to discover. The progress of mechanical invention has, for all practical purposes, diminished the distance between Great Britain and her Eastern possessions. The abolition of the East India Company, again, was much more than a mere change in administrative arrangements. It was the opening of a new career to the whole body of educated Englishmen. It made Indian affairs and Indian customs at once a matter of interest to every energetic young gentleman in want of a career. Much may be said in praise of the limited class of persons who, under the government of the Company, practically monopolized the administration of India. With the question whether the destruction of their monopoly was expedient or not we have no concern. What needs notice here is that the Company's system of government tended to make Indian topics interesting to a special class and uninteresting to those who did not belong to this class. The destruction of this system renders Indian affairs matters of interest to a large number of Englishmen to whom they were before indifferent. It also effects another change, which has not received much notice—it transfers the government of India in a great measure to the literary class. The young men appointed to the civil service under a system of competitive examination may have great merits or great defects, and may, for aught we know, compare in sterling worth either most favorably or most unfavorably with their predecessors appointed under a system of patronage. What is, however, certain, is, that the men who owe their appointment to success in examinations will have far keener literary interests than the hard-headed Scotchmen who, at the beginning of the century, were appointed by the influence of ministers and directors. The modern Indian civil servant must be, to a certain extent, a literary man, and influenced by the literary culture and sentiment of modern England. This is a matter of considerable importance when it is taken in combination with the fact that, as Professor Maine points out, India and the East are exciting the attention of all the scholars and students of the Continent.

It should further be noted that the whole progress of Continental politics makes it probable that England will not again play, or wish to play, a leading part in the contests which may arise between the great Continental powers. But the less part she performs in the conflicts which harass the Continent, the more certain she is to turn her energies and her interest towards the East. It is further natural to suppose that the gradual settlement of the questions of internal politics which have hitherto interested the minds of Englishmen will, while it lessens the acrimony of party spirit, diminish at the same time the attraction of domestic politics, and thus turn the attention of Englishmen more and more to the sphere in which there is still a free scope for all the administrative and political talent of the nation. The mere fact, indeed, that India will almost certainly become, as each year passes on, of more and more interest to the British public, might, it would seem at first sight, lead to the extension of English ideas throughout India, but would scarcely be ground for anticipating the production of

* 'The Effects of the Observation of India on Modern European Thought. The Rede Lecture delivered before the University of Cambridge, May 22, 1875, by Sir H. Sumner Maine.' London: John Murray.

any appreciable effect through the influence of India upon England. It must, however, be remembered that one race or nation cannot affect another without itself being affected by that other's influence. England may diffuse "that bundle of influences which we call progress" from one end of India to the other, but it were vain to suppose that English opinion would not itself be affected by contact with the ideas and habits of a different kind of civilization. A very slight observation either of the men who return from India, or of the books that they write, is sufficient to show that experience of the East affects the imagination of individuals who have felt its force. Take, for example, Mr. Fitzjames Stephen's 'Liberty, Equality, and Fraternity'—you can hardly pick out a writer who exhibits more strongly the vigor and the principles or prejudices of a genuine Englishman; yet his book bears on its face a fact which he does not try for a moment to conceal, that his stay in India has, we will not say modified, but certainly given a color to his opinions. If this is the effect of Indian experience on a thinker of the power and individuality of Mr. Stephen, it is not rash to assert that the same experience will, directly or indirectly, influence with tenfold greater force the large class of modern Englishmen who seem mainly distinguished by the facility with which they surrender established convictions, and adopt with easy sympathy any belief or opinion that commends itself to their sentiment or imagination. For, after all, the most substantial reason for anticipating considerable effects from the influence of India is to be found in the present condition of English opinion. The existence of unrestricted freedom of discussion, and the prevalence of the so-called historical method, combined with other causes, have for a time undermined the strength of all the fixed dogmas, beliefs, or prejudices, whether political, religious, or social, on which modern society has reposed. This chaotic state of opinion affords exactly the field in which new or strange views are certain to spread. Let the mass of educated Englishmen once realize the facts of Indian civilization, and their "way of looking at things," if not their actual opinions, is certain to undergo a revolution.

Nor is it hazardous to predict that the first though not the ultimate effect of lessons gathered from India will be to shake still further the already tottering fabric of received belief. Sir Henry Maine calls attention to the difficulty of making the dogmas of utilitarian philosophy which form the basis of English legislation, or the axioms of political economy which form the most certain part of the science of politics, square with the facts of Indian life. It may be true that the object of government "ought to be the greatest happiness of the greatest number," but the application of this principle is difficult when the sovereign and his subjects form diametrically different estimates of the nature of happiness. The principle that every one pursues his interest is again a fruitful axiom when applied to societies whose members take on the whole the same view of their individual interest; but an Englishman must find it hard to draw legitimate deductions from it when called to rule a race governed by custom rather than by habits generated by free competition, or to calculate what will be the conduct of men who think it their "interest" rather to starve than to eat food which might involve a loss of caste. Professor Maine is, we believe, perfectly right in maintaining that even the peculiarities of Indian society can, by a process of thoughtful investigation, be shown to confirm the great principles, though they may modify the minor rules, both of political economy and of scientific law; but men who are for the first time introduced to a state of society which seems inconsistent with received rules, are certain to doubt the soundness of the principles on which received beliefs depend. It should further be noticed that while the whole effect of modern European development is to increase the political power of the people and diminish the influence of individual rulers, the necessities of the case compel Englishmen to rule India in a mode which may be benevolent but is undoubtedly despotic; and it cannot be expected that administrators imbued with the principles of autocratic government should readily sympathize with the democratic spirit of modern England. India will constantly foster among Englishmen a feeling of aversion towards the very principles which are assumed as the foundation of English constitutional government.

If India is likely to influence English views of politics, she is still more likely to affect English theology. No one, of course, supposes that Englishmen will adopt the specific beliefs of their Eastern fellow-subjects, but Indian religion may for all this tell on English theology. It is possible, though perhaps not likely, that experience of India may in some cases produce strange views of Christianity. A religion which itself came from the East may wear a new aspect when brought into contact with Eastern life. It is, however, far more likely that the study of strange religions may, as its immediate effect, intensify scepticism. Indian experience certainly throws a remarkable light on some of the curious phenomena of the ancient world. No fact, for instance, seems less comprehensible to modern students than the deification of the emperors, yet Professor Maine believes that modern India exhibits a condition of popular feeling under which such deification might easily take place. "I am persuaded," he writes, "that nothing would be easier for the British Government than to obtain that deification and worship which have seemed to some so monstrous when they were given to the Roman emperors. . . . One brave soldier and skilful statesman is remembered in India not only for his death at the head of the storming-party which had just made its way into Delhi, but for having found himself the centre of a new faith and the object of a new worship, and for having endeavored to coerce his disciples into disbelief by hearty and systematic flogging." The knowledge that an Eastern race can even in the midst of modern civilization deify a living man will, when appreciated by ordinary Englishmen, tell on their mode of considering the whole history of religious dogma. In the domain of theology, as in the domain of politics, thought and research may finally reconcile new experience with old beliefs, but the first effect of startling experiences is to encourage scepticism. When the Roman world met the East face to face, the first result was the growth of strange creeds and an alarming unsettlement of opinion. The aspect of the relation between England and India inevitably suggests analogies (possibly delusive) drawn from the history of Rome. It is at least possible that within the next century the effect of India's influence may at least teach Englishmen to understand the terror with which the noblest of the Romans looked on the spread of strange religions, and the tenacity with which ancient thinkers clung to the dogma that every state ought to cherish a special tone of belief and feeling suited to its constitution, and that a change in the fundamental sentiments of its citizens was the certain herald and minister of revolution.

RECENT NOVELS.*

MR. JOAQUIN MILLER has written a characteristic allegory, entitled 'A Dream of Italy,' as an introduction to the novel of 'Mae Madden.' His verses describe his meeting his "affinity" in Venice, and his vain pursuit of her "through the surge of the salt-flood street," but the real introduction of the book is crowded into the last lines, in which he says of the author, Mrs. or Miss Mary Murdoch Mason, that

> "By the windy waters of the Michigan
> She invokes the gods. . . . Be it bright or dim,
> Who does his endeavor as best he can
> Does bravely, indeed. The rest is with Him.
> Let a new star dance in the occident
> Till it shakes through the gossamer floors of God
> And shines o'er Chicago. . . . The Orient
> Is hoar with glories. Let Illini sod
> Bear glory as well as the gleaming grain,
> And engines smoking along her plain."

Miss Mae Madden had less difficulty about finding her "affinity." She went to walk one day in Rome with her brother Eric, "when they caught sight, down the pathway, of two approaching Piedmontese officers. 'Oh!' cried Mae, . . . and clasped her hands, and sprang to her feet—'Oh! Eric, are they gods or men?' The Piedmontese officer is godlike. . . . There is a combination of half-indolent elegance and sensuous languor, with a fire, a verve, a nobility that puts him at the head of masculine beauty." Mae is to be seen travelling with a party of friends and relatives, but their hold upon her is very slight, and she makes the acquaintance of the godlike officer, who finally proposes to her to share his villa on the shore of the Bay of Naples. She refuses him, however, and marries Norman Mann, her American lover, after she has disported herself in a way that French novelists and dramatists consider to be customary with all of our fellow-countrywomen. M. Alexandre Dumas may read this story, and disarm any hostile criticism of his new play by pointing to 'Mae Madden' as a novel written by an American woman about an American woman, and as probably true. Even he would find it hard to invent a bolder disregard of conventional decorum than fills this little book, of which the main characteristic is its innocent silliness.

'Owen Gwynne's Great Work' describes rather tediously the misery brought upon a family in the nineteenth century by one of its members undertaking to write a history of the fifteenth. This was the great work undertaken by Owen Gwynne, and its prosecution kept him up late and brought him down early to pore over books and write, while Mrs. Gwynne made copies and translations when they were necessary, kept up her husband's varying spirits, managed the household affairs, and sacrificed her children to her husband's chance of fame. One of these children is Lance, a promising painter in Rome, who is called back to England to take a lucrative position in a bank, and the other, a hopeless cripple, Mary by

* 'Mae Madden. By Mary Murdoch Mason. With an Introductory Poem, by Joaquin Miller.' Chicago: Jansen, McClurg & Co. 1876.
'Owen Gwynne's Great Work. By the author of 'Effie's Friend,' etc.' New York: Macmillan & Co. 1875.

name, is left to lie alone on a sofa for the greater part of every day. The main point of the story is the sacrifice made by Lance from a feeling of duty; his painting he really cares for, while his clerkship is odious to him, but he plods on at his dull work until his business sends him again to Rome, when he has a great deal of idle time on his hands and takes up painting again. By a curious combination of incidents this nearly embitters the whole of his life, for Mary is left to grow more ill while all are away—Mr. and Mrs. Gwynne had gone to the Escurial to hunt up authorities for the great work—and the young woman engaged to Lance, who is anxious that he shall resume painting, suppresses a letter from his young brother calling for his return. Then we have a sight of Lance's proud and unforgiving nature, and a great gloom is cast upon the reader by a pitilessly full account of Mary's dying, which makes the book one that susceptible people would find hard to read aloud. It is written with considerable power, but there is not a ray of humor in it to brighten the heavy pall of domestic tragedies. Very cheerful people may like to read it; others will not.

'Pretty Miss Bellew' is a novel of rather light weight. The reader gets interested in the heroine and in the book in spite of the frequent and tiresome digressions and the perpetual vulgarity of a great many of the characters, but it is impossible not to regret that the writer—who sets up for a man, but who, we cannot help thinking, is a woman—had not blotted a great deal of very idle matter. Miss Bellew herself is cleverly drawn, but there is a touch of the melodrama in the mysterious, omniscient young lawyer, Bernard Clive, as well as in McKenzie, whose past was so obscure. On the other hand, the description of the family life of the Bellews bears much more surely the mark of being the result of the writer's observations than do other parts of the tale. The coldness of Bernard Clive's wooing is of a sort that often racks the readers of novels.

Mrs. Augusta Evans Wilson has taken for the preface of her novel, 'Infelice,' those lines from Mr. Disraeli's 'Lothair' in which he brands with infamy a hard-working race of men—namely, critics—by saying that they are the men who have failed in literature and in art. This fact would seem to imply that Mrs. Wilson has already had some trouble with the reviewers of her books, but nothing in this novel shows that she has either taken warning from the failures or followed the advice of those who have noticed her previous stories. The plot of this one is somewhat as follows: Minnie Merle at the age of fifteen marries the young aristocrat, Cuthbert Laurance, the son of a wealthy planter in one of the Middle States. The father is very angry, and makes Cuthbert part from his young wife, and then poisons his mind by false reports of her faithlessness to him. In time he, imagining his first marriage illegal, marries again, choosing, or rather letting his father choose for him, a great heiress. Minnie meanwhile studies for the stage, and leaving their daughter Regina in this country, goes to Paris, and in one of the theatres of that city acts plays that nearly represent her own sufferings, and so fascinates again her husband and charms his father that the latter wants to marry her and the other is wild in love with her, although neither of them knows who she really is. Regina, after living in the South until she is fourteen years old, comes to this city at that age and lives with her guardian, Mr. Erle Palma, a lawyer, who is like an exaggerated copy of Bernard Clive in 'Pretty Miss Bellew.' At this point the plot becomes very complicated, and the tender passion, with its retinue of jealousies and misunderstandings, introduces a good deal of discord into Mr. Erle Palma's palatial residence, to say nothing of his stony heart. At the end all comes out right; Minnie conquers, after a struggle, the temptation to marry her father-in-law, and for this she is rewarded by having the second Mrs. Laurance and her daughter lost at sea, while Cuthbert is rescued to take her once more to his home, and Regina marries Erle Palma. This outline reads like the dull routine of ordinary life in comparison with the ingenious inventions of some of the incidents, especially the play "Infelice," in which Minnie dramatizes her whole life and brings it out on the theatre with the scenery painted after photographs of the real places, in order to confound Cuthbert before a large Parisian audience. It is not every woman who can bring back a faithless husband in this way. As for the talk of the people, it is simply incredible. Here is a gem from the lips of a girl of this city; it outdoes even New York caricatures of conversation at the Boston Radical Club: "My dear, civilization is a huge cheat, and the Red Law of Savages in primeval night is worth all the tomes of jurisprudence, from the Pandects of Justinian to the Commentaries of Blackstone and the wisdom of Coke and Story. O halcyon days of prehistoric humanity! when, instead of bowing and smiling and chattering gracefully with his deadliest foe, drinking his Amontillado and eating his truffles, people had the sublime satisfaction of roasting his flesh and calcining his bones for an antediluvian *déjeuner à la fourchette* (only, to escape anachronism—*sans fourchette!*)" etc., etc. They all, brilliant lawyers, clergymen, women, men of the world, blackmailers—the whole band—talk in this style of airy elation. On the whole, it is high time that Mrs. Wilson should turn her attention to writing criticism. She might continue quoting bits of poetry at the end of savage notices, like music at the touching or alarming scenes in a melodrama, as she does in the most thrilling chapters of her novel.

'The Loves of a Lawyer' is a frank bit of autobiography which narrates some of the romantic chapters in the life of a lawyer who was so fatally attractive as to have two young women in love with him at once. They are both jealous, and have the fascinating habit of confessing their jealousy to him. He becomes engaged to one, and the other tells him how much she had herself loved him, and so on monotonously. The sub-title of the book is 'His Quandary, and how it came out.' The quandary was which of the two should he marry. He chose Laura, and their married life "became literally a reciprocity of idolatry." But soon Laura died, and then Lawyer Sam married the other. The only alternative would seem to have been the divorce of Laura. If anything could add to the fatuous silliness of the book it would be the fact that the whole story is represented as being told by the hero to a stranger whom he meets when travelling by rail. The grammar is like the taste displayed in the story. Almost every page is adorned with such gems as "between the Deacon and I," "Is he or I right?" etc., etc.

To say of 'The Bertram Family' that it is by the author of 'Chronicles of the Schönberg-Cotta Family' makes unnecessary any description or criticism of its contents. It shows all the qualities, especially the simplicity and gentle religious tone, which marked its well-known predecessor, and those who liked that will surely read with pleasure this peaceful tale.

Mr. B. L. Farjeon is an industrious writer who is supposed to have succeeded to some part of the late Charles Dickens's skill in drawing charming characters in the humbler ranks of life, and in investing everything he touches with a sort of winning geniality. How this notion arose it is easy to see from reading 'An Island Pearl,' in which our old friend the tarry, bearded, and honest sailor is robbed of the girl he loves by the pale-faced, beardless money-lender, who, when embarrassed, "gave his body such a remarkable screw that it appeared . . . as though all in one moment he was buttoning himself up from top to toe." This imitator of Uriah Heep manages to do a good deal of mischief; but he comes to a bad end, while the other characters, after straying into one of Jules Verne's maritime stories, return to England and the old-fashioned observance of Christmas day.

'Ralph and Bruno,' although by no means a remarkable novel, is yet somewhat superior to the great mass of those that are offered the reader. It is marked by a certain wise condensation which is agreeable, and the story, although a trifle tedious, is well told. The two heroes, whose names give the title to the book, were cousins, one of whom was educated in England and the other in France. The Englishman is heir to large estates and the Frenchman has to work for a living, and his spare hours he devotes to instructing workmen. Bruno, the Frenchman, marries a heartless girl with a pretty face, and is shot by the Versailles soldiers for being a Communist. Another character, Hervé, is first shot by the Communists for being a priest, so that there is some monotony in the way the end of the book is reached. It turns out after all that the suspicions of the reader, which are aroused at almost the beginning of the book, are justified, and that Ralph is Bruno and Bruno Ralph, so that this somewhat complicated story becomes even more complicated. It will be found readable.

It would be hard to find a more unequal writer in her limited field than Miss Braddon, who acquired a certain amount of contemporary fame with 'Aurora Floyd,' and has since written as poor novels as any unknown and speedily-forgotten beginner at the art or trade. Her 'Hostages to Fortune' is one of her successes. It tells the story of an easy-going, self-indulgent London *littérateur* who, tired by his work and his social duties, flies for rest to a distant spot in Wales, where he falls in love with a very charming country girl. Although he had already decided the question of mar-

riage in the abstract unfavorably, he was led to break his resolution, and he married her and brought her to London. There he fitted up a house for her in a very extravagant manner, and wasted his hard-earned substance in little dinners, old china, etc., until bankruptcy stared him in the face. The wicked people are a Mrs. Brandreth, an actress, who had formerly been engaged to him but had thrown him over to make a better match, and who, being now a widow, is anxious to marry him, but who becomes a fury on account of her scorned love, and the other is a wealthy pursuer of pleasure who falls in love with his wife. These two come to bad ends; the wicked voluptuary dies of heart-disease and the actress is attacked by softening of the brain, while the man of letters resumes domestic life in Wales, well out of the way of the dangers of the metropolis. Is it satire on Miss Braddon's part that causes her to represent her hero as nothing but an adapter of French and German plays?

In comparison with the foregoing, a story like Wilhelmine von Hillern's 'Geier-Wally' stands out as a masterly production. This author had already written novels of the usual kind, in which a tepid imitation of life was made to do duty, and her stories bore great resemblance to hosts of others which are as tiresomely alike as if they were made by machinery. In this one, however, she has struck a vein of originality and poetry which is as rare in current works of fiction as it is delightful. It would be very unfair to her to condense in a meagre sketch the problem which forms the plot. It is only justice, however, to call attention to the admirable way in which the heroine's bold, independent character is drawn, and to the unceasing vigor of the narrative. The translation has been carefully done.

It is necessary to speak in cooler terms of 'The Chevalier Casse-Cou,' by Fortuné du Boisgobey. This is a story filled with every ingenious device to alarm the reader, who meanwhile knows that when everything is apparently in the most despairing state he can feel most sure of the hero's safety. It is the calm, peaceful novels that contain the really harrowing incidents. The publisher has kindly prefixed an announcement, to serve as a preface, in which attention is called to the various beauties of the book. "Graphic are the pictures," he tells us, "of 'Frascati's' with its crowd of gamesters and of courtesans," and of "Maître Allanic, a striking type of a Breton gentleman of an expiring school." We are further told that "the translation has been committed by the publisher into the hands of a well-known gentleman of established literary reputation, whose long residence in France has rendered him familiar with the language of that country. His aim has been to preserve the literal spirit of the original, so that at times, should sentences appear harsh and phrases obscure, these presumptive imperfections are to be attributed to an earnest desire to present to the American reader a reproduction of the tone, temper, and style of the author in corresponding language." We have not the French original by us, so that we cannot compare it with the translation, but it would seem as if the literary gentleman had stayed so long in France that he had forgotten his English. There are many "presumptive imperfections," as, for instance, p. 243, "Cambremer distrusted not to bring an elucidation forthwith from this erudite man, who regarded explanation of the living tongues of the East mere boys' play"; p. 247, "One would have been tempted believing her to have recited a lesson"; p. 73, "I beg pardon, sir, to derange you so early"; p. 23, "The unknown lady was laying on the floor"; p. 24, "My diagnostic"; p. 149, "'Pierre, taste that!' interrupted the housewife, placing on the table a smoking dish. 'It embalms,' quoth Morillon, attacking the corned pork." The publisher's apology does not cover imperfections like these nor disarm hostile criticism; nothing but a large bribe could do that.

If the wild plot of 'Off the Rolls' could have been omitted, the novel would have been much improved, or—should this statement seem paradoxical—if the rather ingeniously-drawn characters had been put in less artificial circumstances, the reader might have been more pleased. Mrs. King knows something about army life, and she has a tolerable knack at representing a flirtation or even more serious love-making, but she gets out of her depth when she tries her hand at severer work.

'Brought Home,' by Hesba Stretton, is really nothing more than a sensational tract about a clergyman's wife who becomes a drunkard, so that her husband has to take her from England on account of her disgraceful conduct. On the voyage to New Zealand she learns to resist temptation, and she becomes a useful citizen of that distant colony.

Round my House. Notes of Rural Life in France in Peace and War. By Philip Gilbert Hamerton. (London: Seeley, Jackson & Halliday. 1876.)—Mr. Hamerton is a surprisingly productive writer, but he is a very entertaining one; and to those who retain a friendly memory of his 'Painter's Camp' it will not seem that he has exhausted his welcome. He is capable of talking agreeably and philosophically about an extraordinary variety of topics, and if he is sometimes frank to confidingness on the subject of his domestic and personal affairs, he is so sympathetic and good-humored that one never thinks of calling the tendency by so harsh a name as egotism. He inspires his reader with a sort of personal regard. In the volume before us his personal affairs are the admitted text of his discourse. He proposes to relate what sort of a time he and his wife have had of it in attempting to live in a small French provincial town. They appear to have had a very comfortable time, and the story makes a very pleasant book. He begins it at the beginning, and enumerates the reasons why he determined to take up his abode in France—the need for mild winters and yet for a climate that made a summer residence possible, subjects for a landscape painter, moderate prices, etc. He describes various houses, in different provinces, which he did not take; but he finally found the desired advantages in a town which he does not designate by name, but which, from his description, we suppose to be Autun, near Macon, in Burgundy. Under the somewhat unduly trivial title which he has affixed to his book he gives an account of his neighbors and their manners and customs. His criticism is decidedly shrewd, but it is on the whole very friendly, though it fails to eradicate the impression with which most readers will take up the book, that "rural life in France" is but a dreary affair for the natives, and that for a foreigner to thrive upon it he must possess an exceptional store of domestic resources. This indeed appears to be Mr. Hamerton's case; it is evident that between painting and etching, editing, camping, writing, and boating, he is too well occupied a man to find time to be bored. He has very little that is disagreeable to say of anything or any one. He confirms a great many of the usual notions about French life—the thrift, frugality, love of "order," etc.; at other points, as with regard to the rigidity of class-differences, the pervasiveness of gallantry, etc., he is at variance with them. He found his neighbors at first very "inhospitable" in the English sense of the term, and it does not appear that even with the lapse of time they earned a reversal of judgment. It is a community in which, according to Mr. Hamerton, an invitation to dinner is not lightly given. And yet this reserve is not generally owing to small means, for the author gives an even brilliant picture of the state of fortune of the people about him. He has also some felicitous remarks about the difference between the French and English ways of estimating wealth. "In France, the idea of wealth begins with the first savings, and you meet with such a phrase as, Il est riche de mille francs de rente. . . . The Frenchman has greatly the advantage in the mental enjoyment of a moderate fortune. I had an English friend who, with £900 a year of his own and £600 a year with his wife, constantly talked of his poverty; whereas a Frenchman would have compared his £1,500 a year with nothing, and felt himself as rich as a little Rothschild." Mr. Hamerton relates a number of striking cases of French thrift, of the native talent for laying by money under any circumstances whatever, and of people with considerable incomes derived from property—$2,500, etc.—drudging as teachers and small clerks for the sake of the extra resource of a beggarly salary. The importance of noble birth in France, Mr. Hamerton thinks, cannot be exaggerated; it matters far more than in England what a man's name is. The *de*, misappropriated, purloined, dishonored as it has been, is still of the highest value—and hardly less, odd as it may seem, when it has been usurped than when it is rightfully worn. The only point is that it shall have been accepted. If a family have smuggled it into their name only ten years back, it has very much the same practical value as an approved pedigree. For a young man who possesses it, it is quite fortune enough; whatever may be his personal qualities, it will make it easy for him to marry a fat dowry.

Mr. Hamerton has some entertaining pages upon French servants, whom he thinks the best and most sympathetic in the world when they are treated with frankness and geniality. So in France they generally are treated, but Mr. Hamerton affirms that in certain high-pitched establishments, where it is the tone to keep the domestics at a distance, they are addressed with a curt contemptuousness much more inhuman than the English defensive reserve. He mentions a gardener of one of his friends who, falling fatally ill, sent him a message from his death-bed, having taken a fancy to him as a visitor at the house; and such conduct, he says, even in the presence of the "great hereafter," would have been impossible in an English servant. He gives a charming portrait of a certain gardener of his own, who appears to have combined, in an admirable manner, all the best French virtues

'Geier-Wally': A Tale of the Tyrol. By Wilhelmine von Hillern.' New York: D. Appleton & Co. 1876.

'The Chevalier Casse-Cou. By Fortuné du Boisgobey. Part I. The Red Camellia. Translated from the French original, by Thomas Picton.' New York: Robert M. De Witt. 1876.

'Brought Home. By Hesba Stretton.' New York: Dodd & Mead. 1875.

with all the best English ones, and whose acquaintance—quite apart from his services—the reader greatly envies him. Mr. Hamerton has, of course, a good deal to say about the ladies of the society under his observation, but his gallantry cannot avail to conceal the fact that he has not found them signally interesting. French provincial women are divided into the two unvarying classes of the *femmes du monde* and the *femmes d'intérieur*. The latter are housewives pure and simple, with great skill in this department, great virtue, great piety, and no culture; the others are silly and frivolous, but with nothing to contribute to a society in which men and women may meet, in the English fashion, on common ground. The young girls know absolutely about nothing but church matters and embroidery. The consequence is that the separation of the sexes is extreme; the men live in clubs and cafés, and even in drawing-rooms they form knots and groups by themselves. This is one of those curious anomalies and self-contradictions of which French civilization is so full. France has been prominently the country of great and accomplished women, the country in which the social part played by women has acquired a development unknown elsewhere, and yet a moderate degree of observation is sufficient to indicate that, on the other side, the mutual segregation just mentioned is in form, if not in spirit, almost Quakerish. Mr. Hamerton has some very cursory remarks on French matrimonial morals; he apparently considers the topic much overdone, and affirms that conjugal fidelity is just about as inveterate as it is in England. He denies that Frenchmen marry mainly for the young lady's *dot*. They never take a young girl without a portion, but they very frequently take one with a portion hardly more than nominal. Thousands of young lawyers and engineers will marry girls with portions of four thousand dollars. This cannot be called cynically mercenary. The author talks to good purpose about the peasantry, whom he has seen, closely observed, and on the whole thinks well of, desiring for them chiefly only instruction; and about the clergy, for whom, especially in their more humble functions, he has a great kindness. The French country *curé*, with his poverty, his laboriousness, his devotion, his cheerfulness, his starvation diet at home, and his privileged voracity when he is invited out to dinner, is very pleasantly sketched. Mr. Hamerton holds that a French bishop is practically one of the most exalted potentates in the world. The honors that are rendered him are infinite (he is addressed as "*Votre Grandeur*"), he is at liberty to act, civilly and ecclesiastically, exactly as he chooses, and he is altogether an immense personage. The book closes with an interesting account of the occupation of Mr. Hamerton's neighborhood by the Prussians, and of the sojourn in the town itself of Garibaldi and his heterogeneous army. The author admires the General, but not the corps. His book is all entertaining, and not the less sagacious for being very unpretentious and easy in form.

God and the Bible. By Matthew Arnold. (New York: Macmillan & Co.)—Mr. Matthew Arnold's reply to the criticism called forth by his 'Literature and Dogma' has at length appeared in a book form under the above title. For some half a year it has filled the pages of the *Contemporary*, and in that ill-chosen method of publication it seemed to lack incisiveness and condensation, but the complete volume is more attractive. The attempt to regard the Bible in the spirit in which it was written, and thus to so illuminate its contents that the overlying errors and dogmas shall fade in the light of the great truths disclosed, is one with which the plain man, to whom Mr. Arnold appeals, will heartily sympathize. All the beauty of style, the fine irony, the delicate taste, that his readers know of old they will find here, with a careful avoidance of the harshness that sometimes annoyed in 'Literature and Dogma.' Occasionally some word or phrase like "vigor and rigor" will catch his ear and be repeated something too often. Sometimes directness attracts him more than sweetness, as, for instance, when, in speaking of John xvi. 27, he says, "We need hardly say that here the Tübingen professors smell *Tendenz*, and affirm that a piece of Greek Gnosticism must have got thrust into the Gospel of the old Jewish Evangelist"; but in general the mellow ripeness of his culture is very pleasantly apparent. Even his opponents will appreciate his defence of the much-abused Fourth Gospel, and find many a rich suggestion in his rearrangement of the sayings of Jesus. That opponents there would be, Mr. Arnold naturally anticipated. An attempt to reconstruct the Bible with miracle and dogma discarded could not hope to obtain the support of the conservative churchman. Declaring the idea of an Infinite Immutable Essence, underlying all the changing phenomena of life, to be an unintelligible abstraction of the metaphysician, he could not expect the support of idealists of any school. Styling it "surely ridiculous" to treat God as unknowable, he places himself in point-blank opposition to the school of Spencer and Fiske, which takes that unknowable as its basis; and the only other prominent division of thinkers, the English Positivists, are hardly more in accord with him. From their point he has fallen back from the positive to the metaphysical stage, and is holding up a mere mental abstraction to our worship, a "Power" which is not a faculty of the mind or a force of matter, a "stream of tendency" which, when separated from the things which tend, is a mere creation of the mind.

Indeed, the looseness of Mr. Arnold's treatment of abstractions is much to be regretted. The adequate conception of absolute substance, of infinite first cause, is the key to the best thought of the past, and is as necessary to the avoidance of its fallacies as the appreciation of its truths. Had Mr. Arnold devoted a little more time to the examination, he might have been more clear in his own conceptions and less airily contemptuous to those of others; and he would not have been driven to explain the arguments of Descartes and the appeals of the Jewish prophets by the substitution of etymological curiosities for ideas that to them were full of vital meaning. Descartes' famous argument—*cogito, ergo sum*—may be unsound, but it is a mere travesty of it to render it "I think, therefore I breathe." A little more of such consideration would have protected him also from himself repeating the error which he had just spent pages in exposing in Descartes, the assumption of a real existence corresponding to every universal idea. Yet this very assumption seems to be tacitly made when he rejects the miracles on account of the universal belief in invariable law, and again when he "verifies" the Eternal that makes for righteousness by appealing to our invariable belief in him. These ideas, he says, "prove themselves . . . . and the idea of their truth is in human nature," etc. He is not alone in this kind of argument; he can count cosmists and idealists alike among his comrades, so slowly and fitfully do the great fallacies of the past die out.

To Mr. Arnold, however, these considerations may not after all seem very important, for he only addresses himself to the plain man, unbiassed by metaphysical jargon. But such a man will find it difficult, we fear, to grasp this idea of a power that is not a person, this stream of tendency that neither thinks nor feels; and the more he attempts to realize it, the more indistinct and elusive it will appear. What can he make of an immortality that is neither of body nor essence, but only an immortality "in the eternal order, and the eternalo rder never dies"? Is it possible that Mr. Arnold has given us a figure of speech for a Deity, an empty phrase for an immortal hope? It seems incredible, yet we cannot but recall Mr. Arnold's favorite quotation from Homer: "Wide is the range of words; words may make this way or that way."

English History for the Use of Public Schools. By the Rev. J. Franck Bright, M.A. Period I.: Mediæval Monarchy, from the Departure of the Romans to Richard III.—449-1485. With maps and plans. (London, Oxford, and Cambridge: Rivingtons. 1875. 16mo, pp. lii. and 374.)—One would hardly think that there was room for a new short history of England so soon after a work of such superlative merit as Mr. Green's, and yet Mr. Bright's will undoubtedly find its place, all the more as it does not attempt to rival Mr. Green's in its points of special excellence. In reviewing the latter about a year ago, almost the only feature to which we objected was its discarding familiar forms and divisions. This gave great freshness and continuity to the work; it brought out the development of English society and institutions as it had never been brought out before; but persons at all familiar with the old landmarks experienced some difficulty in finding their place and way in the new arrangement. The book before us observes the usual arrangement and divisions. Neither is this so unscientific a method as it may seem. Under any form of government in which the chief-magistrates have any power or influence at all, changes in these must react strongly upon the social and political development of the nation, and must at the same time be affected more or less by these. No great subdivisions of English history are more vital than, for instance, the Norman Conquest, the accession of the House of Tudor, and the Revolution of 1688.

It results from the same feature that certain points which require a single, connected treatment will be found more clearly and compendiously given in this volume than in Mr. Green's. The Anglo-Saxon constitution is such an one; Mr. Bright's short account of this is admirable, although we have noted a few inaccuracies. He has, for instance (p. 29), in describing the primitive Germanic institutions, made use of Anglo-Saxon terms which, if used anywhere in Germany, were found only in the extreme north; *eorl* and *ceorl* were terms identical with the Danish *jarl* and *karl*—not with the German *edeling* and *friling*. The term *manor* is used (p. 31) for Anglo-Saxon times; while the name certainly did not come in until the Conquest.

On the following page the "twelve chief Thegns" are described as belonging to the moot of the shire, instead of the hundred; indeed, the hundred, as a whole, is very inadequately treated. On page 36, the condition of England, in respect to its feudal elements, is stated to have differed from that of the Continent in "that there still existed a certain number of freemen whose land was their own." The sentences which follow modify this assertion, and contain an excellent statement of the extent to which feudal elements existed at this time; still, so loose an expression as the above cannot fail to mislead the learner. All these errors may easily have arisen from an excessive effort to compress.

The maps are very good, as is also the index. The most original feature is the genealogical tables of noble families, twelve in number, which will be very serviceable in the study of this period. Mr. Bright is in general so good on points of genealogy that we are surprised to find (p. 307) the famous Earl of Salisbury (killed before Orleans, 1428) spoken of as simply "son of Sir John de Montecute," with no direct intimation that the father, too, was Earl of Salisbury, and with no reference at all to his being the one whose execution by Henry IV. is described, p. 277. In the table of the Nevilles (p. xlv.) it would not have been amiss to introduce these two Montecutes: it is interesting to note that the "King-maker" was grandson of the distinguished soldier, and great-grandson of the beheaded Lollard, from whom he may have inherited his hostility to the House of Lancaster. We should have been glad of a table of the Hollands and Percies, and perhaps other families. The royal family, by the way, is hardly treated so well as the nobility; at least for the period before the Conquest.

The German Element in the War of American Independence. By George Washington Greene, LL.D., etc. (New York: Hurd & Houghton. 1876.)—Among the numerous minor contributions to the literary celebration of our centennial, few will be more acceptable to readers at large than the present volume. The author modestly disclaims in his preface all "pretension to original research." In the strictest sense of the word "original," we may accept his disclaimer. The statements of facts are based upon the researches of Dr. Friedrich Kapp, which have been already noticed in our columns; but the adaptation of them to the American reader, the treatment of them from the American point of view, the lessons and inferences drawn or suggested, are distinctively the work of Professor Greene, and for this he is entitled to ample praise. Furthermore, he has produced an exceedingly readable book. Those who have not the time or disposition to study Dr. Kapp's original monographs will find here, in a volume of two hundred pages, all that they need know about the life and labors of Steuben and De Kalb and the employment of German mercenaries. The more we consider the services of Steuben, the firmer becomes our conviction that they marked the turning-point in the fortunes of the American army. But for the spirit of discipline infused by this enthusiastic disciple of the great Frederic, it is safe to say that Washington and Greene would have planned in vain. By the side of Steuben the services of De Kalb lose somewhat of their importance. The latter was a good general, and perhaps more fascinating in appearance; but the former was indispensable. In fact, De Kalb does not deserve, in strictness, a place among the German elements of our revolution. Although German by name and birth, he was a thorough Frenchman in every respect—a child of the *ancien régime*, with many of its nobler qualities and also with a trace of its weaknesses. He was a good officer, but without creative genius; yet he served us generously and faithfully, and we can scarcely cherish his memory too warmly. Upon the employment of the Hessian, Brunswickian, and other mercenaries—by all odds the darkest stain upon the English management of the war—it is no longer necessary to dwell. We have only to warn our readers against fastening any share of the blame upon the German people. The *Volk* was completely under the yoke of despotism, and the poor hirelings who shed their blood to no purpose were passive victims. They certainly suffered more than did our ancestors. The then rising German spirit of freedom in letters, science, and politics looked upon the sale of human life with abhorrence as a national disgrace; but "public opinion" hardly existed then.

MRS. ALEXANDER'S NEW NOVEL.

Her Dearest Foe.

By the author of 'The Wooing O't,' etc.

Leisure-Hour Series, 16mo, $1 25.

TREASURE TROVE. Cloth, 278 pp. An Illustrated Poem. Price $2 25. Sent free on receipt of price. E. L. FREEMAN & CO., Publishers, Central Falls, R. I.

The Reader.

THE CUSTOMS AND LEGEND OF ETON COLLEGE.

Vivacious writers have sometimes satirized the "College of the Blessed Mary" at Eton. Among the venerable towers in the vale of the Thames, they say, Science still adores her Henry's holy shade; but she does very little else. Incited by the rumors of inefficiency in English secondary education, a Commission was formed not long since to report upon the management of nine principal schools, of which Eton was supposed to be the chief culprit. Mr. Matthew Arnold, who quotes and sides with the satirists above mentioned, went over to the Continent, authorized by the Royal Commission; and returned with an idea that what English schools like Eton want is "supervision, not explorative only, but also to a considerable extent authoritative."

A most important contribution to such enquiry is made by H. C. Maxwell Lyte, A.M., who has just published in a handsome, illustrated volume the history of this college from the beginning. To Americans, who are not concerned with the question of Royal intervention in English schools, the work comes with a purely narrative interest, divested of the harshness of a struggle for reform, and strange as a chimney-corner tale with its sequence of legendary incidents.

Mr. Lyte's work seems to omit nothing, and out of its wealth of incident but a very few specimens can be here accommodated. Eton College was founded by the pious Henry VI., of whom Fuller says that "he might well have exchanged a pound of patience for an ounce of valor." It was opened in 1442, and immediately began to have a very close connection with English literature. Chaucer's 'Man of Law's Tale' was depicted in the church. One of its earliest fellows, Weye, having obtained leave of absence for three pilgrimages, left his 'Itineraries,' a curious picture of Europe in 1456, now reprinted. Some of William Paston's letters describe the life of an Eton schoolboy in 1478. The earliest English comedy now extant, 'Ralph Roister Doister,' must have been written by an Eton head-master, Udall, about 1551. A continuous succession of British scholars and writers have emerged from the school down to the present time. Gray is a traditionary name of Eton. Charles James Fox, a Paris-bred debauchee of fifteen, was flogged there. Canning was an especial ornament. Praed wrote profusely in 'The Etonian.' Shelley was tortured there as a fag. Tennyson celebrates an Eton heroine in 'The Nioue of Swine,' whose litter was abstracted, it appears, for a succession of sucking-pig suppers.

The conservation of British valor was a specialty of Eton. At first the proper influence was derived, as among the Romans, from the torture of animals; but this yielded in time to the torture of boys, a spectacle frequently praised by old Etonians as equally improving. Bull-baiting came down from the earliest times, and continued almost under the eye of the authorities until 1833. In 1747 the Eton boys were compelled to give up their old custom of beating a ram to death along the street at election-tide. So late as Charles II. a live cock was tormented by suspension on Shrove-Tuesdays, in memory of Peter's sin. In our own time badger-fights, dog-fights, and cat and duck hunts, were organized especially for the Eton boys, just outside the grounds. Queen Charlotte, in 1778, caused the suppression of the custom of kicking down hill a boy dressed like a clerk by another dressed like a bishop—a game almost sacred, as referring to the suppression of Catholicism by Henry VIII. "Shelley-baits" were a regular pastime of Eton boys during the poet's youth, because the young reformer refused to fag. They consisted in "chasing up town." His comrade, Sidney Walker, another genius, was similarly persecuted. From Mr. Lyte's universal tone of condemnation we infer that like tastes are now expended upon cricket and boating.

The Nation.

NEW YORK, THURSDAY, FEBRUARY 10, 1876.

The Week.

EVERY one who looks over, as every good citizen at one time or other is forced to do, the reports of Congressional proceedings, knows how difficult it is to make out from day to day exactly what is being done. This is due, of course, in a great measure to the disconnected way in which business is conducted, no one bill or resolution being necessarily discussed continuously until it is disposed of. But there are other causes too. It may seem preposterous to say so, but we know of no absolutely accurate report of Congressional proceedings. The *Record* is supposed, of course, to be such a publication, but the practice of tampering with speeches has now been carried so far that it is not an uncommon thing (indeed, it has been done within the past week) for one member of Congress to taunt another with an anticipated diversity between what he is actually saying and what he will probably appear to have said when the record has been altered. This throws us back on the newspapers, and yet no newspaper in New York publishes anything more than a meagre abridgment of Congressional proceedings. These abridgments are by no means accurate, and even in such an important debate as that on the West Point Salary Appropriation Bill, the other day, it was almost impossible to make out from the press reports exactly what had been done. The theory prevalent twenty years ago, that the progress of modern civilization had carried us beyond the point at which it was important to know what Congress is about, is, we suppose, pretty well exploded now, and we beg leave to call the attention of the Associated Press—which is, we suppose, the source of all our woes on this head—to the subject.

The debate in the Senate on the payment of the 3.65 February interest of the District of Columbia bonds resulted in bringing that body to pretty much the same conclusion that the House had reached before—viz., that in some way the manufacture of 3.65s must be stopped. The resolution as finally adopted by the Senate provides that there shall be no further issue; that the total amount of bonds (covering claims outstanding and audited, convertible into bonds) shall not exceed $15,000,000; that there shall be no increase "in the present amount of the total indebtedness of the District of Columbia"; that any one who shall "knowingly increase or aid or abet in increasing" this debt shall be punished by imprisonment (not to exceed ten years) and fine (not to exceed $10,000)." It abolishes the Board of Audit, directs a report of proceedings by it to the Commissioners, and provides against any construction of the resolution itself into a recognition of the liability of the United States for either principal or interest of any bonds issued on or since the 27th of January. With regard to the February interest (which had been defaulted on while the debate was in progress), the resolution provides that the District Commissioners shall transfer to the Treasurer of the United States the funds in their hands subject to this charge. Instead of the cumbrous phrases, "the Board of Audit" and "the Commissioners of the District of Columbia," it would have been simpler, though not perhaps so parliamentary, to have inserted wherever they occur the words "Boss Shepherd." It is extraordinary to reflect that within six months the Assistant Attorney-General of a great commercial State was obliged to resign his position because his superior officer insisted that these bonds were proper securities for savings-banks to invest the money of the poor in. The resolution has now been sent to a conference committee. Besides a Pinchback debate, and the passage of a bill to pay the *Alabama* claims awards already made, nothing else of importance has been done by the Senate.

The House has finally disposed of the one-term amendment by 144 to 106, two-thirds failing to vote in the affirmative, and has in great haste passed a bill repealing the Bankrupt Act by a vote of 186 to 57. The Judiciary Committee has reported the bill to reorganize the judiciary, the provisions of which we have discussed on another page. Mr. Kasson, of Iowa, tried to get the Democrats to vote on two specie resolutions, the first denying any authority in Congress to issue paper-money in time of peace, the second declaring that in any scheme of currency legislation redemption must be kept steadily in view. The House, however, refused to suspend the rules so as to allow their introduction. On motion of Mr. Pierce, of Massachusetts, a resolution was adopted directing the Committee on Foreign Affairs to find out what the Executive Department has done about the connection of General Schenck with the Emma Mine and the Machado claim. Several new investigations have been ordered, and the Diplomatic Appropriation Bill discussed.

The Committee on Foreign Affairs of the House has received a long reply to certain enquiries put by its chairman to the State Department, which makes the position taken up by Mr. Fish, in his recent circular despatch inviting European powers to join this Government in bringing pressure to bear on Spain in relation to Cuba, seem more singular than ever. It says that in pursuance of an agreement entered into with the Government of Spain in February, 1871, the claims of American citizens, native and naturalized, on account of damage to property and illegal arrests or imprisonment or personal violence, are now before a mixed Commission provided for by the agreement, which is holding its session in Washington. One hundred and fifteen cases have been submitted to it, of which nine have been already decided in favor of the claimants, involving the sum of $878,050, and fifty-eight cases are still before it. This being the case, it is extremely difficult to understand the necessity for the interference of Great Britain, France, Germany, Russia, Austria, and Italy. As to the extent to which American citizens in the island are guilty of slaveholding, Mr. Fish is unable to give much information, beyond suggesting that any American engaged in sugar-planting in Cuba is presumably a user of slave labor.

It is pleasant to see how frank and outspoken the leading politicians are getting to be as the Presidential campaign draws near. Ordinarily, as is well known, the business of politics does not train a man to the public exhibition of his private hopes, ambitions, fears, prejudices, and hates. As to the last, he is particularly trained from his earliest entrance upon the arena—his critics harshly say—to dissemble, to feign friendship with those whom he really detests, and to simulate hostility to those with whom he really divides the profits of statesmanship. That this is not always true may be seen from the frank and natural behavior, according to the Washington despatches, of all the leading Presidential candidates. As a natural man, each Presidential candidate must hate every other; but if politicians were always what they are accused of being, Grant, Bristow, and Conkling would just now be more than ever courteous and conciliatory to each other. So far is this from being the case that it is almost impossible for Grant to meet Bristow, or for Bristow to meet Conkling, without oaths and curses filling the air. The precise words used at these rencontres are not given, nor does it seem clear that any of them has as yet ended in a knock-down fight, but it is getting to that point very rapidly. Till within the past week or two, the quarrels have generally been between Grant and Bristow, on the subject of the whiskey indictments. The case of General Babcock, whose indictment has done a good deal to endear him to the Presi-

dent, is usually at the bottom of the quarrel, and the proceedings are of a stormy character. They almost always end in a total cessation of conversation, and the relations of the President and Secretary of the Treasury are such that it is almost impossible to conduct the public business at all. There is now a difficulty between Mr. Conkling and Mr. Bristow. On Thursday last, the Senator went to see the Secretary, as the reporter cautiously observes, on behalf of "an officer or employee" who "had been or was to be discharged" (a pretty safe statement as to the object of the visit), and the interview which ensued was so "furious" that the Senator said he would never enter the office of Mr. Bristow again. The reporter adds, rather enigmatically, that "the office-hours of the Department have been changed in consequence." What we like particularly about these quarrels is the manly openness which leads to the immediate communication of the facts to the press.

Mr. John Morrissey, the head of the Reform Democracy, has got a bill passed unanimously by the State Senate providing that all persons employed as laborers by this city shall receive a uniform rate of compensation, to be fixed from time to time by the Common Council, but not to exceed two dollars a day. As the act is purely declaratory, and has no sanction attached, there is no objection to its passage except the objection to humbug in general, and it will doubtless go through the House also by acclamation. We believe another bill is about to be or has been introduced making it a penal offence to pay more than the market rate for city labor, which will also pass, and so the good work of reform goes on. In the meantime, Mr. Campbell, Mr. Fitzjohn Porter's successor, is paying the market rate and no more, and no outcry has as yet arisen against him. The probable result of the whole affair will be the general substitution of contracts wherever possible for all other modes of doing city work. There does not seem to be any other way to meet the constant and growing tendency of the lazy, the vicious, and the improvident to live on the taxpayers. A few weeks ago, a candidate for the Legislature from one of the city districts met and was warmly greeted by a well-dressed man on Randall's Island, whom he recognized as one of his own inspectors of election, and found that, his "political duties" no longer requiring his attention, he had retired for the winter to the House of Refuge.

There has been a good deal of agitation for some weeks back over the privilege granted law-schools in this State to admit students to the bar without other tests of fitness than such as the schools themselves impose. These tests differ widely in different schools, and they all give their graduates considerable advantages, as regards time, over those who are admitted by examination in court after due service in a lawyer's office. The bar is now seeking to have the privilege withdrawn or modified, and the law-schools are offering a stout resistance before the Legislature, and one of them at least—that of Columbia College—with a good show of reason. But it is obvious that tests of admission to such professions as the bar, if they exist at all, ought to be uniform. Study in a law-school may fairly be allowed to take the place of service in an office, and might even be fairly exacted of all candidates for admission, but it is difficult to defend the removal from the jurisdiction of the bar or the courts of the process by which lawyers are made, and the relegation of the duty of passing on their fitness to professors whom the courts can neither appoint, remove, nor in any manner control, and who, though they may be excellent and conscientious in one school, may in another be inefficient and careless. To our minds, the proper use of a law-school would be the preparation of candidates for an examination by the courts, and the diligence and ability of professors in any particular school might be proclaimed by a system of marks and honors, which would not only glorify the school, but furnish a young man beginning practice a most useful and gratifying certificate of fitness.

The Granger movement has left in some of the Western constitutions, as a relic of its brief existence, a provision expressly recognizing the right or duty of legislative regulation. This has been done, for instance, in Nebraska, one of the most undeveloped of all the Western States, and therefore most in need of railroads. The Burlington *Hawkeye* points out that even this assertion of an abstract right or duty is likely to prove objectionable, as it is held *in terrorem* over one class of enterprises and not over others. Such a constitution as that of Nebraska practically says to all kinds of trade and manufactures, "we want you to come to us," and at the same time warns the only kind of industry that can make trade and manufactures flourish that it comes at its peril. The dreadful agitation which possesses the Granger when he pictures to himself the extortionate profits of the railroads, is comical when we remember that, as a matter of fact, railroad-building is a precarious and unprofitable business, and the principal fear of the investor in railroads is lest he lose his entire capital.

In addition to other investigations this winter, Mr. John Jay, in a letter to the *Herald*, has put the Democrats on the scent of a new branch of the Vienna Exposition scandal. When the Senate investigated and vindicated Mr. Van Buren, they had before them, it is said, not the original evidence, but an abstract prepared by the State Department. Now, in regard to some important particulars, the abstract seems to have garbled the evidence. For instance, with regard to a payment of $1,000 by a firm, the abstract says "it is not proven," when the official report, from which the abstract purports to have been made, says "$1,000 is next proven to have been paid." Besides, much evidence is said to have been suppressed. Mr. Jay says that an unpleasant impression was created abroad by the appointment of Mr. Van Buren, after his suspension on account of the Vienna affair, to a consulship. This only shows how stupid the Austrians are. His suspension was the reason of his appointment, not an objection to it. If faithful men could have no offices because a newspaper clamor was got up whenever they became involved in a scandal, the Government could not go on for a week.

The events of the week tend to confirm the opinion before generally held by men in business, that there will be no important legislation at Washington this winter either in respect to financial or fiscal affairs. Merchants, therefore, are making their calculations on existing conditions, and even with these are looking forward to a more satisfactory business than they had last year. It is true that Secretary Bristow has been before Congress asking for authority to issue 4½ per cent. bonds to the amount of $500,000,000—this to facilitate refunding operations; and that Dr. Linderman, Director of the United States Mint, has also urged that he be given authority to buy more silver bullion to coin. The latter officer supports his request by this argument: as silver bullion can now be bought at the lowest price ever known ($1 08 per ounce 900 fine), the Government should buy it and pay it out at its "coining rate" or artificial value, $1 24$\frac{4}{10}$, thereby making sixteen cents and four mills, less the cost of coining, which is not above two cents. Dr. Linderman does not point out that this is an unheard-of seigniorage for the Government to take, nor, what is important for the good name and good faith of the Government, that this silver coin would be worth less in gold than the fractional currency which it is proposed to redeem with it; that, in short, the plan, so far from bringing the currency nearer to a gold standard, absolutely does the reverse. And yet there are people who talk about this silver resumption as if it were part of a comprehensive plan to secure the payment by the United States Treasury of its notes according to original promise. In the money market, the rates for demand and time loans, as well as mercantile paper, have been lower, notwithstanding that there was a falling-off in the surplus reserve last week of $700,000. At the Stock Exchange, there has been a lively speculation in shares, resulting at the end of the week in few changes of importance; investments have been in strong demand, and the gold market has been lifeless. Sterling

exchange during the greater part of the week was dull, but at the close became more active and strong, both on account of freer importations of United States bonds and because the price of cotton—our principal export—in Liverpool was so much below the price here that exports were checked and this source of bills momentarily dried up. The gold price of $100 greenbacks ranged during the week between $88 30 and $88 69.

The *Tribune* has published its answer in the suit brought against it by Trenor W. Park, in which it repeats the story of the Emma Mine sale in London, with additional allegations, showing how Park kept secret the news of the collapse of the mine long enough to enable his confederates in London to sell out their stock. It further tells the story of the fraudulent sale of the Mariposa Mine, which is probably the worst transaction Park was ever engaged in, and the easiest to expose by proof, and also of his connection with the New York, Boston, and Montreal Railroad, which was a peculiarly disgraceful piece of business. In fact, Park's career has for many years been that of a mining and railroad speculator engaged in doubtful transactions, which gives a very comic air to Albert Grant's description of him in a recent letter as an eminent lawyer, and makes his offer to go into court about his character as a mining operator a piece of immense audacity.

Mr. Henry C. Bowen, in reply to "grievances" of a fellow-member of Plymouth Church, has sent a very rhetorical letter to the Examining Committee of that body, in which, after some rambling accounts of interviews, solicitations, and conversations, he says that years before the Tilton charges he had heard from "dear friends," presumably other members of the church, accusations against Mr. Beecher of "betraying the sanctity of home," but that he "never could or would be base enough to allow a single name to be bruited before the world," and he closes with a peroration in which he declares it to be his "unwavering opinion, in view of all the facts and evidence presented to him, that the Rev. Henry Ward Beecher, without even the shadow of a doubt in his [my] mind, is guilty of the awful crimes of adultery, perjury, and hypocrisy." As nothing can be alleged with any certainty with regard to the state of the Brooklyn mind, it is just possible that this extraordinary epistle may have a certain weight as evidence. But in other parts of the country it will be remarked that Mr. Bowen's declaration in advance that he will never tell whose the homes were of which Mr. Beecher "betrayed the sanctity," makes this charge all but worthless; that Mr. Bowen's unwavering opinion on facts and evidence will have no weight with anybody, inasmuch as he has no reputation as either a judge or a logician; and that his declaration in the tripartite agreement, made fully and without reserve, that "he knew nothing which should prevent him from extending to him (Beecher) his most cordial friendship, confidence, and Christian fellowship," shows either that he uses the words "friendship, confidence, and Christian fellowship" in a sense peculiar to himself, or that he has been guilty of gross falsehood either in the present letter or in the tripartite agreement. But the precise points on which Mr. Bowen has gone astray will, we imagine, interest the public very little.

The "Letter Missive," by which Plymouth Church summons the Advisory Council, has been published. The points on which advice is sought are the propriety ("according to the Word of God") of the church's procedure in the matter of dropping members; the proper mode of dealing (1) with members who stay away from public worship because the church has not done certain things not affecting them personally which they think it ought to have done, but which they have never asked it to do, (2) with members who stay away because in like case the church has not done what they did ask it to do, (3) with members who absent themselves because they believe the pastor guilty of offences of which the church on investigation has pronounced him innocent, and (4) with members who have made gross charges against other members, but refuse to substantiate them; whether the church ought to have called a Mutual Council to investigate the pastor, at the request of a member who has never made charges against him, and when such request is made a year after the church has investigated him; whether the church has acted properly in its dispute with Mrs. Moulton, and whether its general behavior is such as to entitle it to the confidence and fellowship of Congregational churches. It will be observed that the points are all fine, and need not, if well handled, carry the enquiry anywhere below the surface of things. We suggest, respectfully, a seventh point, which we think will make the enquiry full, final, and complete—viz., whether there is any truth in the charges made against the pastor in connection with Mrs. Tilton.

It appears certain that Count Andrássy's note, or the five principal points in it, will be accepted by the Turkish Government, but there is no present prospect that any special guarantees for execution will be exacted beyond supervision by a mixed commission of Christians and Mussulmans, which is in a measure exercised already by the consuls. The regulations for the organization and government of the Grand Council which the Sultan has decreed have been published, but they are very vague in character, and prove nothing except that the Council will be summoned, and will contain various high dignitaries, and will have great powers of investigation; but whether the investigations ever come to anything of course will depend on the general character of the civil service, which the Council will not control. The reorganization of the police service, which is also announced, is a more important matter, and promises to assimilate the police to that of Christian countries, with strictly defined powers as to arrest and detention. But it is doubtful whether any good police ever existed without a good public opinion to watch and check or stimulate it, and in the absence of this in Turkey new regulations are not likely to do much good. The January coupons have, contrary to the general expectation, been (half) paid.

The situation is likely to be still further complicated by the refusal of the Roumanian Principality to pay the customary annual tribute, which it defends by alleging that the consideration of the tribute is the promise of defence by the Porte against armed invasion. This pledge, it says, the Porte is now unable to fulfil, inasmuch as it is unable to put down one small insurrection in Herzegovina. The tribute is hardly worth fighting for, but the Sultan is extremely sensitive about anything which looks like a sign of decadence, and probably nothing but sheer weakness will prevent his trying to bring the Roumanians to reason by force. The air is, of course, full of rumors of outbreaks in other provinces and of fresh troubles with Montenegro; but rumors are in that part of Europe one of the chief weapons of rebels and their sympathizers. It may be taken for granted that the three Northern Powers, now that the Andrássy note has been accepted, will not allow the insurrection to spread further, or even run into the summer.

The news from Spain is, as usual, confused and contradictory, but in so far as anything positive can be detected in it, it seems to point to a somewhat rapid decline in the Carlist means of resistance. The weather is bad, and in the mountains this naturally delays and impedes the Alfonsists, but they are evidently better led and in better spirits than in any of the previous campaigns. There are wonderful stories of fraud and intimidation in the election of the Cortes, which probably mean that the Ministry have been "organizing" universal suffrage on the French plan, or, in other words, are determined to have a manageable assembly, and not a chaotic gathering such as poor Señor Castelar had to contend with. Of course the result will be a Cortes of creatures of the Government, like the Corps Législatif in France, but it will probably be as good a one as Spain in its present political and moral condition can supply. The peculiarity of the present state of the country is that any Government which proposes to stay in power has to be unscrupulous and high-handed.

"FIRST CHOICES" AND "FAVORITE SONS."

A LONG-ESTABLISHED usage has reserved the title of "Son" to candidates for the Presidency. As long as a man is simply a politician, with vague and indefinite aspirations, he is simply Mr. Smith of Indiana, or Mr. Jones of Illinois, but as soon as he begins to be positively spoken of as a candidate for the White House he becomes a "Son of Indiana" or a "Son of Illinois," as the case may be. The agitation among the Sons now begins to be great. Every State is producing a pair of them, one of whom the delegation in each of the party conventions will be bound to present as the "First Choice" and the "Favorite Son" of the State. As a general rule, no mention is made of a Son's personal appearance, either in praise or blame, though unpleasant allusions to his age or debility are not uncommon; but this year we seem likely to have in Mr. Conkling of New York a Son whose claims will be pushed on the ground of his physical beauty. Clubs for the advocacy of this gentleman's nomination have begun to spring up—mostly, it is true, in his own county—and we notice that in the speeches and articles which these organizations call forth, his great attractions of figure and feature are put in the forefront of the battle, showing that the female correspondent of the religious paper who dwelt on the "magnificence" of his "torso," and the fine shape and adjustment of his neck, had a true prescience of the main source of his political strength. There is, however, a certain vagueness in their description of his mind, though one local paper indirectly intimates that it is an instrument of extraordinary power and accuracy by declaring that his "conclusions are always correct."

The work of pushing the various Sons into prominence is, of course, going to furnish considerable interest and excitement to the professional managers from now until the conventions meet, and it is carried on with as much show of earnestness as if the public had no inkling or experience of its farcical character. There is something by no means complimentary to the popular intelligence both in the pains which some of them take to conceal, and in the pains which others of them take to avow, who is their "first choice," inasmuch as it implies in both cases that the first choice is a real man to whom they honestly and soberly mean to adhere. Mr. Kerr's chagrin, for instance, at having his letter published in which he pronounces Mr. Hendricks as his "first choice" and Indiana's "favorite Son," is something which, with all our respect for Mr. Kerr, we must pronounce a gross piece of affectation. Mr. Hendricks is, from our point of view, a very poor politician, whom we should be sorry to see in the Presidential chair, but as a "first choice" or a "Son" he is surely as good as anything in the field, and something of which nobody need feel ashamed. In fact, one of the peculiarities of "Sons" is that they bind nobody to anything, and reflect neither credit nor discredit on anybody.

In mentioning these "little games," however, what we wish to call attention to more particularly is that the utterances of the men and papers more immediately connected with the management of party machinery show little, if any, evidence of perception that there is any desire on the part of the public that things shall not go on in the old way; that a change of some kind is absolutely necessary; and that what the country is looking for, even if vaguely and blindly, is not a fresh batch of the old kind of Sons, but a complete change of system. For instance, it is only very rarely that in the discussion about the third term its opponents venture to remark, that even if a third term were allowable General Grant is not the kind of man for whom it would be well to establish the precedent; and yet this is by far the most important point in the controversy. It is of vastly more moment that the people should, after their experience of him, declare their unwillingness to leave the Government any longer in his hands, than that they should declare their unwillingness to allow any man to fill the Presidential chair for twelve years. There is, of course, a great deal to be said against the third term, but a movement to give a third term to a President who had reformed the civil administration, raised the standard of official honor and morality, magnified the value of knowledge and character in the public service, and made an honest and successful stand against the hindrances to the control of the Government by public opinion now interposed by the political machinery, would be by no means an alarming sign of the times or a dangerous precedent. What is dangerous and alarming in the present crisis, if anything be, is that we are really threatened either with a continuance of General Grant or of the system on which he has administered the Government, in the person of some of his adherents. In other words, the first term of such a Son as Morton of Indiana, or Conkling of New York, would be for all practical purposes a third term; that is, it would have all the injurious effects on public life, and on political morals, and on the popular feeling about the Government, which the re-election of Grant would have. We confess that we, for our part, see far more danger to the Government in popular familiarity with or indifference to the evils which General Grant's Administration has fostered, than in the possibility of the election of any man for three terms. It must not be forgotten, in estimating or in criticising his political career, that it is the very fact of his strong claim on popular gratitude which has made his two terms so demoralizing, and it is almost always by men with claims on popular gratitude that the seeds of political ruin are sown. If he had not been a successful general in dark days, he would have become odious before 1872; but with the halo of the war about him, not only have a terrible number of faults been forgiven him, but they have come to lose the appearance of faults, and to take on that of virtues. No ordinary President could, for instance, have been allowed to give a Government like this a Mussulman flavor, by appointing high public functionaries through pure personal caprice. When President Grant first began to make extraordinary and, as it seemed, scandalous selections for places in the civil service, his friends maintained that we must not reproach him, that he was a simple-minded man, who was necessarily in this matter in the hands of the senators and representatives; but he speedily dissipated this theory by appointing Simmons of Boston in defiance of the representative of the district, and McDonald of St. Louis in defiance of the whole State delegation. In short, he has administered the Government neither on the old American "spoils" system nor on the new "civil-service reform" system, but on the Sultanic or Turkish system, which says, "I like Mustapha; put the Vizier's robes on him, and give anybody who says he is a thief one hundred blows with a stick."

Now, this system has sunk deep into the habits and ideas of the politicians who have during the last eight years surrounded the White House. What with their mode of maintaining order at the South, and their mode of distributing the offices at the North, and the strength of the President's prejudices and his audacity in gratifying them, and his love of reforming by semi-military *coups* rather than by steady adherence to rules, and his way of "sticking to his friends" through thick and thin, a considerable change has been effected both in their notions and in those of a large mass of their followers about the methods of constitutional government. They have contracted a reliance on force, on the individual will of the executive officer, an estimate of the importance of ends and of the insignificance of means, and a dislike of criticism and of investigation and of all change, which are far more dangerous to our political system than any third term can be. If these things get worked into the habits and morals of political life, a change will have taken place of a very serious character. The "Senatorial Group," as *Harper's Weekly* has happily designated it, which has stood by the President in all his false steps, and perhaps instigated a good many of them, is a dangerous body, which needs to be broken up and shorn of its power, and the Republican Convention will therefore only half satisfy popular expectation by refusing to renominate General Grant himself. It must not attempt to foist on us any of his "favorite choices," because we must somehow have an end to the system which, owing to his faults or his inexperience, has grown up about him. That a vigorous effort will be made to prepare the Convention for its perpetuation there is little doubt. The work of "subsoiling" is going on now. The "pre-primaries" have been held

long ago, and nothing but very strong and positive indications of popular sentiment will prevent the nomination of an Administration candidate. The bold declarations which we hear from some opponents of the third term, "that while entertaining the highest respect (or 'yielding to no man in respect') for General Grant," or, "while fully recognizing the value of his services to the Union, we must adhere to the unwritten law which limits, etc.," are all that the Group desire. They at once present you with a "First Choice" or a "Favorite Son," who positively is not General Grant, and has never served before in the Presidency; you can examine him for yourselves and see whether they lie; nevertheless, if you elect him, you vote to continue the Grant system, which may be described, in one sentence, as a system which encourages corruption by its normal action and represses it by occasional bursts of rage.

THE PROPOSED FEDERAL JUDICIAL SYSTEM.

THE "Bill to reorganize the Judiciary of the United States," prepared, it is understood, by Mr. McCrary with the approval of the judges of the Supreme Court, is designed to remove a crying evil which was pointed out by the *Nation* as long ago as October, 1872 (No. 383). Commenting then upon the almost imbecile attempts of Congress to reform the evils in the Federal Courts, we said: "It is obvious that Congress should have *merged the district and circuit courts*, and *united the district judges of each circuit into a court of review*. Requiring them to hold court in each State of their circuit, *prohibiting the judge who tried the case from sitting to review it*, and *paying them liberally for their expenses*, would have made each circuit much like one of the courts of Westminster Hall; while *the occasional presence of a judge of the Supreme Court* would have tended toward the uniform action of all." The passages italicized above almost completely define the general principles of the new bill. The circuit and district courts are practically merged by establishing a circuit "at the same time and place at which a district court shall or may be held," and by taking away the present appellate jurisdiction of the circuit courts, except in bankruptcy proceedings. A final appeal from the new court of review lies to the Supreme Court, but it is restricted to cases above $10,000, and to cases involving a construction of the Constitution, of a treaty, or of a "law of the United States." There is also a saving clause, "when the court shall certify that the adjudication involves a legal question of sufficient importance to require that the final decision thereof should be made by the Supreme Court."

For some years the Supreme Court has been drifting steadily, and of late rapidly, into what may be termed a condition of official bankruptcy. It has not been able to pay off its obligations of duty, and adjourn owing nothing to its suitors. The obligations, too, are accumulating more rapidly than the payments can be made, so that, if things go on as they are going, it is absolutely certain that instead of being a "fountain of justice," the court will become a grand barrier to legal redress. At the beginning of the present term there were 666 cases upon the docket; at this time there are upward of 900. In less than twelve years it has published twenty-one volumes of reports; and, without disrespect, it must be said that no inconsiderable portion of these volumes is for the legal profession so much worthless matter, the decisions dealing with the facts of the case, the questions being of no earthly interest to anybody but the particular John Doe and Richard Roe who were contesting them, and the cases being of a kind that should never have found their way to a tribunal charged with the final determination of graver questions than were ever before confided to a court. It must also be said that too many of the important decisions have been unsatisfactory to the bar, the court treating legal subjects in a hasty manner, not going down "to the bottom of a case," and failing in that comprehensive generalization of principles which sheds light upon other cases and forestalls needless litigation. Notably, too, the court has fallen off from the patient research that made the opinions of Story a valuable repository of legal learning, and from the careful reasoning with which Marshall built up the structure of his decisions. There has been too much of that dangerous and superficial element called *ipse dixit* —"we think this"—"we are of opinion that"—without the court designating the principle upon which it acts. Such decisions dispose of cases but shed no light upon the disposition of future cases. They also create uncertainty, which is the great source of appeals. But beyond this it is the cardinal principle of our Anglo-Saxon system of jurisprudence that our judges shall be men who can render a reason for what they decide. The integrity of our judicial decisions rests upon an honest statement of every case, and a clear exposition of the principles supposed to govern it. Our matters of jurisprudence are not confided to an Eastern kadi to decide as to him may seem best. We of the Anglo-Saxon stock have been for centuries striving to make the law a science which can be intelligently understood and rationally administered. Under our system a judge has no more right to state the facts of a case and say, "The plaintiff should have judgment, because I think so," than an astronomer to say, "It is 95,000,000 miles to the sun, because I think so." The theory according to which English and American jurisprudence has endeavored to proceed is that a decision shall be a demonstration. When the moral sense of the American bar allows our courts to render final decisions on the crude conclusions of the judges without an exposition of the processes by which the conclusions were reached, and through which alone we can determine whether they be right or wrong, it will be a long stride toward committing matters to individual discretion and abandoning the scientific generalizations of the law. The Supreme Court has also fallen into the way of deciding cases upon points which have never been argued. A court not overladen with waiting cases could order a reargument; but with its immense and ever-growing docket behind it, our court of last resort cannot afford to give its suitors two days in court. Every lawyer knows what this means, and what a sense of injustice it generally arouses, and how ill able a judge is to decide upon the soundness of a point when the point is his own. Finally, there are too many "ear-marks" in these twenty-one volumes of too great haste in deciding, of rules laid down in one case without due reflection as to how they will affect a thousand transactions, of conclusions pronounced one year which the court was obliged to take back the next.

It is therefore not surprising that this bill to reorganize the judiciary of the United States is primarily a bill to relieve the Supreme Court. There is no doubt that it ought to pass; no doubt indeed that some such measure ought to have been passed long ago. The former legislation to relieve the judges partially from circuit duty has proved even more incommensurate with the difficulties of the situation than we predicted; for the chief evil, singularly anomalous though it be, was retained. So long as suitors in the circuit and district courts have substantially but one court to appeal to, just so long that one court will be overwhelmed with all the appealable cases of the Federal tribunals. It is absolute ignorance of the American character to suppose that the average suitor will surrender, if he believes himself in the right, on the decision of any one man. When a second tribunal composed of a number of judges decides against him he will ordinarily confess himself mistaken, lay the blame on the law, and give up the contest. But it is a folly which none but a member of Congress could be guilty of to suppose that in this country the court of first resort would be made voluntarily the court of last resort. This vast mass of cases has gone to the Supreme Court *ex necessitate rei*, because Congress provided no other appellate tribunal where they might go.

Appreciating and commending what might be termed the motive of this measure, we must nevertheless object to two of its provisions. The $10,000 restriction on appeals is an enormous advance in a very bad direction. It practically makes the Supreme Court a tribunal exclusively for wealthy litigants. All of our traditions, American and English, and our sense of justice and our theory of legal rights, are opposed to a restriction which will close the doors of any court to ninety-nine in a hundred citizens. The

problem must be to keep out petty litigation, but not to keep out poor suitors. When we read in every English newspaper of actions brought before the Superior Courts of Westminster wherein the damages are laid at not more than £50, we cannot avoid thinking that the Judiciary Committee of the House has travelled a long way from the old idea that all men are equal before the law.

We must also object to the provision which allows the right of appeal to be dependent upon the discretion of the tribunal whose judgment is to be reviewed. The less we have of discretion in our American jurisprudence, and the more closely legal rights are measured by fixed rules, the better both for the judiciary and the citizen. The less, too, that the administration of justice depends upon the skill, or ability, or personal influence of the advocate, the more certain and honest and cheap it will be. If a case be represented by very eminent counsel, it will be found "of sufficient importance to require that the final decision thereof should be made by the Supreme Court"; if it be represented by the young or undistinguished lawyer, the judges will shake their heads and say "the public welfare requires that there be an end of litigation." The only sound criterion to be applied to any such class of appeals is that of a divided court. "Of sufficient importance" sounds well in a bill, but means nothing. Of sufficient importance to whom—the plaintiff, the defendant, the public, the profession, the learned counsel, or the court which wishes to be reviewed? Of sufficient importance in what—the amount, the principle, the effect on other cases, the intricacy or novelty of the questions involved? In short, these two words constitute one of those openings through which, as a learned judge once said, "a man might drive a yoke of oxen." On the other hand, if the members of a Circuit Court of Appeals were to stand three to two and the judge of the Supreme Court and the circuit judge formed the minority, could there be any propriety in allowing the right of appeal from such a decision to depend upon the discretion of the three district judges?

Some opposition to the bill, we are informed, is likely to arise, coming from an unexpected source—the judges of the already overworked circuits. Having already more to do than they can perform, they are opposed to new duties which must inevitably retard the existing administration of justice in their courts. And this suggests a defect in the bill as being too exclusively designed for the relief of the Supreme Court. We have in the United States districts where there is not two months' court work during the year; and, again, districts where there may be said to be thirty-six months' work to be disposed of in a year. The "penny-wise, pound-foolish" parsimony of Congress has shrunk from sending the idle judges to help the overworked and paying their expenses. Before the bill gets through Congress there should be engrafted upon it a comprehensive and liberal provision to this effect; for it is in the highest degree desirable that the new system be well balanced at the outset, and that in relieving the Supreme Court it do not erect a new dam farther up the stream.

To us Americans the judiciary is relatively a more important element of government than the judiciary of any other people can be to them. Yet does any one know what the Federal judiciary costs? It costs less than our light-house keepers; less than our diplomatic service; less than the "salary-grab." The annual pay of members of Congress would support the judiciary for four years. If the pay of every soldier during the war had been docked only a dollar a year, it would have been more than sufficient to carry on the judicial branch of the Government. All of the salaries of the United States judges, clerks, marshals, district-attorneys, and reporters cost the people of the United States about one cent for each inhabitant. Yet there are demagogues possessed of so little intelligence themselves that they really suppose the intelligent portion of the people prefer, for economy's sake, a weak and defective judicial system, which must directly and indirectly occasion delay, uncertainty, business derangements, insolvency, and that demoralization which cannot be measured in money.

ENGLISH PRONUNCIATION.

IN due course, after having become familiar, through literature, in England, our spelling-bees have at last been practically introduced there, and are contributing to while away the long winter evenings. Reports of them have appeared in the newspapers; these reports have given rise to comments by correspondents; and, in culmination, editorial dignity itself has condescended to mount the oracular tripod in the interests of spelling and pronunciation. Some of the results, in the way of facts and opinions, which have consequently emerged into publicity, are instructive, and some of them are not void of amusement. As to the facts, we learn, for instance, that, at least in select circles, Walker guides our English contemporaries on questions of orthography, just as he guided our grandfathers. Among the statements which the newly-imported diversion has educed, one is that, out of every ten educated Londoners, nine say *peninsu'ar* instead of *peninsula*, and similarly append *r* to all words ending in *a*. To this assertion, however, a self-complacent Scotchman insists on an amendment by declaring that the style of barbarism thus exemplified is all but as widespread as our very language. For so saying we may, no doubt, give him credit for correct information as regards the elocution of rather numerous low cockneys; but the remaining basis of his induction he has simply supplied by conjecture. More especially his own compatriots, he seems to think, constitute, from among all who have to do with English, the sole homogeneous body of articulate men which does not herein offend. Another position of his is even more hardy than this, and, indeed, grazes the heroic very nearly. He asks us to believe nothing less than that "a Scotticism is not necessarily a vulgarism, while an Anglicism is." To reckon up and formalize the swarming corollaries which logically attach to this humiliating proposition would call for more space than we can consent to spare. Keeping to pronunciation, it is demanded of us, according to this, to admit that an Englishman's way of disposing the accents, etc., of his mother-tongue is coarse and ignoble so long as North Britons—people speaking largely only a dialect of English—abstain from ratifying it. *Advertise*, as not having supplanted, in Scotland, the old-fashioned *advarti'se*—its *i* turned into the rustic *ai*, withal—must needs be plebeian; and so must be *commit'tee*, instead of *com'mittee* or *committee'*, which Englishmen have long abandoned, but which Scotchmen are pleased to patronize still. On another interpretation of the dictum just quoted, there is an innate elegance in Scotchmen which forbids that they should originate, in speech, anything unquestionably vulgar, whereas miserable South Britons, owing to their unfortunate organization and unhappy instinct, are, on the contrary, never led to devise any form of utterance which is not vulgar intrinsically. The author of the cruel and depressing maxim on which we are remarking laid his account, we may surmise, to kindle an outburst of British wrath and reclamation which it might be hard for even a Scotchman to stand up against. It must be disappointing to him that he has only been laughed at. That an Englishman should not be more likely than any one else to utter aright his own native speech is naturally placed by his answerers on a par with the contention that the sum of two and two is not four. There remains to add that, abstraction made of the misaccentuation of a few well-known words, and of the mismanagement of the aspirate, Englishmen are, as a rule, exceedingly tolerant as to the pronunciation of our language. The reason of this, or one of the reasons, may be possibly that, with rare exceptions, all the energy which they choose to spare consciously in connection with the niceties of vocalism is exhausted in mastering the longs and shorts of Latin and Greek.

Not many months ago, one of our correspondents spoke of the words *glass*, *last*, and *pastor* as perilously near being vulgarisms if sounded with their *a* like that in *father*. The late Mr. B. H. Smart, an orthoepist of the highest authority, had gone even further than this in referring *ass*, so uttered, to "a vulgar mouth." At the time this was his judgment he named the *a* of *at*, prolonged, as furnishing the proper vowel-sound in *ass;* but he is quoted as having subsequently written: "It is no longer affectation to say *dss;* and *grānt*, *grāft*, etc., at present indicate the pronunciation of well-educated London people under sixty-five or sixty years of age." It is interesting to hear what Mr. Alexander J. Ellis has to say on this head. In a letter to the London *Daily News*, he states that "the words *ass*, *pass*, *path*, *staff*, etc., have each six different pronunciations, each of which would pass muster before the most fastidious audience; but *gas* has only one," etc., etc. This averment, the truth of which it might be hazardous to doubt, strikingly corroborates the conclusion we have come to, that, in regard to pronunciation, Englishmen, within defined limits, some of them rather capricious, are, for the most part, ready to allow a very liberal margin of choice.

Dealing in generalities, Mr. Ellis ventures the opinion that there "is no

existing standard of the pronunciation of any literary language." He continues: "The distinction *literary* must be strongly insisted on. A literary language is entirely artificial. It never has been spoken naturally, although it is generally founded on the governmental or ecclesiastical predominance of some local habits." In passing, while there can be no question that the jejune articulations of an unlettered boor are, just as much as the elaborate rhetoric of a Johnson or a Gibbon, acquired, we wish that even every one given to "rushing into newspapers," as Mr. Ellis puts it, could be compelled to peruse and ponder Mr. J. S. Mill's criticism on "Nature" in his 'Three Essays on Religion.' Quite possibly, as a consequence, we should have less of unmeaning talk about language "spoken naturally," a language "entirely artificial," and the like, than now helps to dilate the pages and becloud the brains of conventionally nebulous thinkers.

To say "there is no existing standard of the pronunciation of any literary language" is a statement of that description which we ought not to expect from one who, like Mr. Ellis, acknowledges that the letter *r* "has engaged his attention for more than thirty years," and who, therefore, must presumably have reflected much on language. The real facts of the case are, we conceive, as follows: Take English for an example. Subject, as everything else is, to the law of unintermittent change, it has no more absolute fixity than that which may be predicated of the present moment. Without cessation, it evolves or borrows new expressions, drops or modifies old ones, and ousts established senses of words in favor of others, or else accumulates the latter on the former. Further, that which obtains touching words obtains, and often as inexplicably, touching their pronunciation. But few lines of Shakspere, as they came out of Shakspere's mouth, would be immediately understood by a modern audience. This we know for certain; and yet science owns itself baffled when challenged to render a reason for so seemingly strange a phenomenon. Even now, when we adopt a word from the French, it does not at all follow, any more than it ever did, that we accept it to the ear as well as to the eye precisely as we found it. Then, as to terms from the Latin, Greek, etc., every generation shifts the accents of a number of them, generally to the producing of increased uniformity. Still, the words thus altered in enunciation are never very many within the compass of any one man's conscious experience. We repeat, that a strict parallel to what any one personally observes regarding the changes in our vocabulary, one observes as concerns pronunciation. In order to stereotype either of them in permanence, the human mind must first come to a complete deadlock. Room for option, alike in the one and in the other, there must, further, be to some extent, until we all get into and keep within one and the same groove of associations, enlightenment, and taste; a consummation awaiting what our far-off forefathers quaintly designated as nevermass. Why we demur to the precept that "there is no existing standard of the pronunciation of any literary language" will now be patent. Of literary English there undoubtedly is a standard of pronunciation, or, rather, as near an approach to a standard as seems attainable. However, in the estimation of Mr. Ellis, not only there is none, but, "in fact, there is no such thing as educated English pronunciation. There are pronunciations of English people more or less educated in a multitude of other things, but not in pronunciation."

Conformity with the pronunciation of the educated is not, then, good enough for our theorist. And so the secret at last is out, revealing to us a reminder of that visionary order which holds that the right and the wrong in the province of language is not determinable by good usage. Such wildness as this we emphatically protest against. Among the legitimate functions of a lexicographer are those of collecting genuine words, of defining them as in use, of tracing their etymology, and of spelling them as they are spelled after the consensus of the most intelligent writers. And no less the main service appropriate to an orthoepist is that of a mere explorer and recorder, that of ascertaining and registering the pronunciation which is agreed upon by a majority of the most cultivated speakers. Let the orthoepist additionally speculate on ideal improvements, by all means, if he will; but, inasmuch as the English-speaking peoples, at their best, are not barbarians, if, ignoring the actual and blind to all but theory, he says that "there is no such thing as educated English pronunciation," he might as well say that educated Englishmen and Americans are as yet non-existent. Right pronunciation is one of those things which are best acquired by unconscious imitation of one's right-pronouncing constant associates; and it is rarely acquired in any perfection otherwise. Place a ploughboy among lads of a higher social grade than his own, and keep him there, and he will sooner or later pronounce as they do. If, however, instead of being confined strictly to such companionship, he goes on herding with other ploughboys, no inculcation of rules, though ever so diligent, will avail to work much improvement in him as a pronouncer. Nor, since it leads up to a part of our conclusion, is the giving expression to a fact so obvious as this entirely needless. On the one hand, orthoepy, being considered, and rightly, as an attribute of thorough culture, should be studied privately by grown-up people whose bygone neglect requires it, and should in schools be taught professionally, if only to counteract the contamination of prevailing bad example. On the other hand, it behoves those who offer to teach orthoepy to deal honestly by their subject, and to teach real orthoepy. Not unusually, we suspect, if not universally, their own predilections and private fancies are, as to this, that, and the other, the sole foundation of what they put forth as unoptionally correct. As a sample of what we mean, Mr. B. H. Smart directs that the *h* of *wheat, which, whip*, etc, should be sounded; and he had endless vexation about these words with his pupils as a matter of course, for it may be doubted whether he ever heard them without the *h* silent from any Englishman whatever, high or low, who was unaffected by Scotch or other un-English influences.

We have contended that there is a standard of English pronunciation. As an existing thing, it must have a local habitation; and this there is no difficulty in discovering. Should any one demonstrate that London is not the grand focus of civilization of us who speak English, it will then be time to seek for the standard of our language, and of the way to pronounce it, somewhere else. In no other one spot are so many educated English-speaking persons permanently congregated; and in no other one spot are the fruits of the varied learning dispensed by the great universities of Oxford and Cambridge so numerously represented. Nor is this all, or near it. We have there, more specifically, the headquarters of Great Britain, literary, scientific, legal, ecclesiastical, military, legislative, aulic. Each of the groups here enumerated has, doubtless, for occasional use, its minor professionalisms of speech; each, however, bearing with any of the others, when these professionalisms escape involuntarily or are obtruded wittingly. But essentially they all agree at any given time, and their general agreement is a thing which an attentive observer may make out with very little pains. Such an observer will soon satisfy himself, also, that a certain scope is left for choice of pronunciation, and that nothing but unmitigated vulgarity of utterance is thought to warrant injurious impressions. An ancient gentleman is not blamed for keeping up the *bale'ny, goold*, and *obleege*, which he learnt seventy years ago. An Oxford man and a Cambridge man will say, respectively, *nī̆ther* and *nee̊ther*, the one to the other, perhaps unaware that they do so; and bystanders, if they notice the difference, and are questioned on it, will allow that both are right enough, and so will the contrarient pronouncers themselves. An uncompromising college don, to whom classical syllabic quantity is as sacred as the Thirty-nine Articles, will signify his profound erudition by his *medi*ē̆*nal* and *Alexandri*ă, varied with *O'hi*ō and *Pot'omac*, and his hearers are not appreciably aggrieved. An affected guardsman drops all his *r*'s, and no one, even mentally, proposes to pick them up and beg him to utilize them. A nobleman pronounces *volcano* with the so-called Italian *a*, and he may therein consult his pleasure, though he finds no imitators. Yet, in one respect all Englishmen harmonize as speakers. We refer to their tone of voice; and this, we apprehend, no adult foreigner can ever school himself into, or can so much as mimic successfully.

To sum the matter up, pronunciation, provided one avoids that of the confessedly illiterate, is an affair of only subordinate importance. Perpetually undergoing mutation, and its fashions not being so readily transmissible as the changes in written language, no one living at a distance from the centre where it is determined should be severely censured if ignorant of its present standard. Viewed rationally, it is the most ephemeral of modes; and, under any but an historical aspect, as between the decisions of veracious professors of it, those which were given last year may be of no more value, in comparison with those given this year, than a superannuated almanac. Excessive anxiety, or a habit of finical and superpunctilious exactingness, as with reference to dress, so with reference to pronunciation, is, moreover, an unfailing index of frivolity and little-mindedness. For the rest, nowhere on earth, we suppose, is correct pronunciation necessarily a concomitant of good breeding, except in so far as good breeding is assumed to include good education. A different opinion has, of late, been industriously promulgated; but we submit that it stands on much the same footing with the transcendental notion that the essence of gentlemanhood is wholly irrespective of both knowledge and morality. Pronounce as a man may, at any rate let his attitude towards pronunciation be that of common sense, and free from an inflated egotism. Whether we exert ourselves, or do not, to follow the English in their utterance of the language which we share with them, we shall, most assuredly, do well in deferring to their example

of good-natured tolerance of those whose elocution is not exactly to their own liking, and of checking a disposition, if it should arise, to draw censorious deductions from peculiarities which may, perhaps, be more than compensated by merits we can ourselves make no pretension to.

Notes.

A. S. BARNES & CO. will publish 'The Battles of the Revolution,' by General Carrington; and a reprint of 'Principles and Acts of the Revolution,' by Hezekiah Niles, famous in our political history as the editor of *Niles's Register*. The work has been thoroughly revised and chronologically arranged, with a classification of the contents under the respective colonies, by his grandson, Samuel V. Niles.——Mr. James E. Munson, 34 Park Row, announces that on March 1 he will begin the publication of a semi-monthly *Phonographic News*. Each number will contain eight medium octavo pages, all (except the title-page) printed entirely in phonographic characters, reproduced by the *Graphic* process from short-hand manuscript written by the editor. The reading matter will be adapted both to beginners and to experienced writers of short-hand.——The *Publishers' Weekly* for Jan. 29 contains a new and useful kind of advertisement, showing the number and titles of all the works issued by any given house in 1875. Another year we may hope to see the representation more complete, and some discrimination made typographically between home products and foreign reprints.——*Bulletin* No. 36 of the Boston Public Library (Jan., 1876) continues its suggestions for Centennial reading under the head of "Literature of 1776," with the sub-headings: In general; the Canada expeditions; Fort Moultrie, Sullivan's Island; Independence declared; Battle of Long Island; New York, White Plains, Fort Washington; Arnold on Lake Champlain; Retreat through the Jerseys, Trenton, Princeton; naval operations. It also contains a very full bibliography of music, and the beginning of an important "Check List for American Local History" (Abington—Boston).——The American series of A. B. Auerbach, Stuttgart, which we have already described as in progress, now embraces a translation of Franklin's Autobiography ('Benjamin Franklin: sein Leben, von ihm selbst geschrieben'), with a preface by Berthold Auerbach and an historic-political introduction by Dr. Friedrich Kapp, who gives a general sketch of the whole of Franklin's career. He finds a physical and psychological resemblance between the author of 'Poor Richard' and the Westphalian folk, or the Mecklenburgers whose homely wit and wisdom Fritz Reuter has made familiar to us in their Plattdeutsch dialect. Mr. Kapp instances as quite Franklinesque the remark of one of these about a neighboring advocate whose reputation was unsavory: "He is an honorable and worthy man, my boy, but you could not prove it on him"—a form of libel for which Mr. T. W. Park would perhaps not seek to recover damages.—— Dr. Kapp, we may notice by the way, contributes to the January number of the *Deutsche Rundschau* an interesting article on the "Centennial Celebration of the American Declaration of Independence," in which he enumerates the reasons why Americans may revert with pride and gratitude to July 4, 1776. The *Rundschau*, we are informed, has a circulation in this country of not less than 800 copies.——In our review of the historical literature of 1875 last week we neglected to speak of Maspero's 'Histoire ancienne des peuples de l'Orient,' which would seem to be the best and most recent statement of the results of scholarship in this field.——J. B. Lippincott & Co. have in press a 'History of the Philadelphia Brigade' (69th, 71st, 72d, and 106th Reg. Penn. Vols.), by Chas. H. Banes; and 'Centennial and Other Poems,' by R. S. Pollard.

—The fiftieth annual report of the President carries the history of Harvard College along another year, and the appended report of the Dean gives a number of statistics showing the effect upon the class of 1875 of their release during the senior year from enforced attendance upon college exercises other than morning prayers and examinations. The Dean sums up the result briefly by saying "that the average number of absences from recitations was between two and three times as great as it would have been under the system of enforced attendance, and that the influence of the change upon the average scholarship of the class was imperceptible either for good or evil." "Of the students, forming just one-half of the class, who obtained 75 per cent. or more of the maximum mark, three-fourths were absent not more than sixty times in the course of the year, or not more, on an average, than twice a week; while a considerable number of scholars of high grade took advantage to this extent of their freedom." By one of the Dean's tables it appears that the first ten, in point of scholarship, of the class were absent on an average twenty-four times. The rank of these ten ranged from 98 to 92 per cent. of the maximum. The fourteenth and last ten, who obtained from 53 to 48 per cent. of the maximum, were absent on the average one hundred and twenty-four times—the total number of exercises to be attended by each senior being about three hundred and sixty. If the experiment of freeing the seniors from enforced attendance upon recitations stood unrelated to the general discipline of the college, one year's trial of it might not be considered decisive of the result, but it is not an isolated experiment; it marches with the policy of the college in making almost all the work after the freshman year elective, and it depends upon observations of the effect of elective studies upon the student which extend back a good many years beyond the present college administration, so that it may be supposed that the trial of 1874–75 has gone a good way towards making the new arrangement permanent. The friends of the change, whose number was revealed by the applause that accompanied Dr. Hedge's triennial address on "University Reform" in 1866, ought to feel gratified. There may occur some abuses of privilege; but the Faculty are not likely to allow the effect of an improvement in educational methods to be spoiled by a few idly disposed persons. Notwithstanding the negative result of one year's trial, we do not know why some advance in general scholarship may not be looked for eventually under the new arrangement.

—The Dean's report gives the number of students in the different classes attending different studies, but does not calculate the percentage of attendance in these studies. We have done this, as somewhat interesting in the present state of learning at the college. We find that in the three upper classes, reckoned as one, where these studies are not required, 32 per cent. elect Greek, 68 per cent. Latin, 41 German, 33 French, 9 Italian, 5 Spanish, 48 History, 25 Mathematics, 50 Physics, 23 Chemistry, 34 Natural History. From the Freshman Class, of which Greek, Latin, etc., are required, 2 in number took advanced Greek, 4 advanced Latin, 2 German, and 2 French. In the year 1875, French or German was required for the first time in the examination for admission. Of 318 examined, 294 presented French, and 24 German. Of those offering French, 41 per cent. failed in this requisition, and 21 per cent. of those offering German. In the year 1874–75, French was not taught in the freshman year, but was taught as a prescribed study to 89 sophomores out of 208. At the same time, German was a required study of the 195 freshmen. Philosophy, not including Political Economy, as the table does, was taken by 37 per cent. of the three upper classes. This includes 42 sophomores with whom Philosophy is not a required study. Philosophy, however, is a required study in the junior year, and was then taken in the prescribed exercises by 138 out of the class of 159. Political Economy is a required study in the sophomore year; advanced Political Economy was taken by 42 per cent. of the juniors and seniors. The 48 per cent. of students in advanced History (mediæval and modern) included 51 sophomores, in which class History is also required. The 25 per cent. of advanced students in Mathematics does not include 15 freshmen who were associated with them. Of the 197 freshmen, 184 appear in "Mathematics, Class I.," and 185 in "Class II." Advanced, in addition to prescribed, Physics was taken by two sophomores. Attendance upon lectures in Physics is required of all the juniors. Advanced Chemistry was taken by 1 freshman. Two freshmen also elected studies in natural history. Music was elected by 3 per cent. of the whole college; Fine Arts (principles of design in painting, etc.; history of the fine arts and their relation to literature) by 12 per cent. of the sophomores, juniors, and seniors. About 6 per cent. of the same elected English, including Anglo-Saxon, and the comparative grammar of the Teutonic languages. Exercises in Rhetoric with six themes were also required of all the sophomores; the same, with four forensics, of all the juniors; and four forensics (a noun not recognized by the dictionaries—the thing meant is a variety of theme) of all the seniors. Two seniors studied Hebrew, two seniors and one freshman Sanskrit. It is necessary to say further, in explanation of some of these figures, that for the past three years sophomores and juniors "have been at liberty to present themselves for examination in advance upon any of the prescribed studies of those years, and upon passing a satisfactory examination in any subject have been exempted from attendance at exercises in that subject, receiving their mark from the anticipatory examination." In 1874–75, of the 159 juniors 17 thus anticipated the prescribed Logic, 21 Psychology, and 88 Rhetoric; and of the 208 sophomores 104 prevented (to employ a convenient archaism) their prescribed Political Economy, 83 Constitutional History of the United States, 31 History, and 43 Physics. Of the 25 freshmen admitted at the last examination, 7 passed on the Latin of the freshman year, 8 on the Greek, 9 on the German, and 10 on the whole or a part of the Mathematics, and took in their room electives.

—Harvard College is now the only college in the country—at least, the only one of the leading colleges—which makes a full and complete and public annual report of its work and condition, a fact to which President Eliot in the document before us calls attention. Harvard has now for fifty years laid before the country this yearly statement of its affairs. Every college, great and small, in the country ought to do so, and we think it would not be amiss for the legislature to compel it to do so. The funds of the various colleges now form a sum of enormous amount, constituting a trust of the highest importance to the public welfare, and there is, therefore, every reason why those charged with its administration should render a periodical account of their stewardship. At present, many of the colleges—and some of the richest—carry on their work with far greater secresy than if they were private money-making corporations. An annual report would not only do a great deal to abate or remove any popular hostility to their accumulation of property, which may before long show itself in an attempt to tax them, but would convey invaluable information, both to the officers of other colleges and to parents and guardians. It is not by way of casting any imputation upon any college in particular that we add that there is no body of men, however conscientious or able, which does not in the administration of a great public trust need both the stimulus and check which comes from the knowledge that they will have, at short intervals, to lay before the world an account of what they have been doing, their reasons for doing it, and the results.

—In the *American Law Review* for January is an article on German Legislation which illustrates that curious fancy for foreign follies that our over-modest American citizens are so apt to acquire when exposed to the baleful influence of benighted Europe. The author explains how the drafting of the laws is there done in the most elaborate manner by experts of the highest ability. The laws are not intended to be revised by the courts of law; and "they not only contain a brief statement of the special rule, but also set forth the principle on which it is founded, and by which it is to be construed." The legislation "here described is not done in a hurry, and is meant to last. Certain laws have been years in preparation. In these cases the draft is printed and put in circulation, so as to obtain the weight of opinion long before it is put on its passage, or they are submitted to permanent committees. By these means a general and satisfactory understanding is apparently arrived at, so that at the end bills of great extent and importance are rapidly passed, not without opposition, but so as thus far to have saved the German legislature from that appearance of weakness and indecision which has been fatal to some parliamentary governments. . . . One has to confess to a new sensation at finding it [the law] prized for intelligibility, and at detecting no suspicion that it is not to be understood like other matters by the unaided human faculties." Our readers will remember that Mr. Mill once suggested the application of skilled labor to law-making, by entrusting the formal shaping of statutes to professionals of high standing; but this has been regarded as one of those curious vagaries in which the soundest minds will sometimes indulge. He obviously did not know how we make laws in this country; and we turn with a sigh of relief from this foreign red-tape to our simpler system. Taking up the blue-books of one of the leading New England States, we find that in the last two years 816 laws, general and special, were enacted, and of these about two-thirds were private laws, most of which extended the powers of corporations. The remaining two hundred odd were all amendments of previous general statutes. Of the general laws passed in 1874, twenty-five (about one-sixth of the whole) were amended or repealed at the same session, and twenty-one at the next session, some of them being amended a number of times, so that these hundred and fifty laws have required some sixty alterations during a little more than a year from their passage. The general statutes of 1873 were fewer in number (less than 130) and the amendments now number 44. The general statutes of 1872 have been less leniently dealt with. Numbering about the same as those of 1873, they have already received 64 amendments. A little more than three years has elapsed and the amendments already number half as many as the original statutes of that year. It would be tedious to go over in such detail the legislation of previous years; but the reader will notice that the ten years, 1860–1870, doubled the bulk of the statute law of the State, and the next decade promises to be much richer. Some subjects have received an attention worthy of remark. Thus, the divorce laws have been amended nearly every year in the last fourteen, only five legislatures leaving them untouched; and amendments are now before the present Legislature. This subject is no doubt regarded as especially fit for the experimental methods of modern science, the fixity of domestic relations being of so little comparative importance. We hope the commonwealth of M——tts will send a set of its blue-books to the Centennial Exposition. It seems a pity to lose so fine an opportunity of showing the effete and semi-barbarous tyrannies of Europe how to make laws.

—In the death of Mr. John Forster literature has suffered a considerable loss. His contributions to letters during the last forty years not only have been numerous and various, but distinguished by thoroughness of research, accuracy of statement, generous feeling, and masculine common-sense. He had a high estimate of the dignity of his calling, and though his literary style had little of splendor or of grace, it was that of a man who had made good English his study, and who had learned to express his thought in general with vigor and precision. His books are not works of genius, but they display a strongly-marked character, and secure for their author the respect of his readers. His 'Lives of the Statesmen of the Commonwealth,' and his more extended 'Life of Sir John Eliot,' have taken a secure place in the small library of English histories that will not need to be rewritten as time goes on and opinions change, while his lives of Goldsmith, of Landor, and of Dickens will always remain the chief and best sources of information concerning their respective subjects. His 'Life of Swift,' of which the first volume is but fresh from the press, must, it is to be feared, remain a fragment. He wrote it under conditions of depression and illness. It was the work, he said, of his "sick leisure," but it shows no marks of feebleness or weariness. It is the fruit of long studies and of carefully accumulated material, and it gives proof of the same literary zeal, the same fidelity of research, the same painstaking and minute accuracy, and the same cultivated faculty of appreciation which are characteristic of his earlier productions. In reviewing his literary career, the fact is prominent of a prepossession in favor of biography, and the list of the lives he has written exhibits the breadth and variety of his sympathies This was in truth the ruling characteristic of his nature and his life. It is strikingly illustrated by his having been the chosen biographer of men of genius so diverse, of temper so opposed, of lives so unlike, as Landor and Dickens; and Forster will be remembered hereafter not so much for his services to literature as for his friendships. To have been the chosen, lifelong friend of Landor, Dickens, Carlyle, and other men not unworthy to be classed with these, is the proof of a genius far rarer than any which wins mere literary celebrity. "The only way to have a friend is to be one," says Mr. Emerson, and this was Forster's prime quality. It is this which makes his death a deep personal loss to many persons known and unknown to the world. Mr. Forster was born at Newcastle in 1812. He studied for the bar, to which he was admitted, but his literary tastes soon withdrew him from the practice of the law, though he long retained his chambers in Lincoln's Inn—pleasant chambers, always hospitably open, and a frequent meeting-place of the best spirits of the time. He was for many years editor of the *Examiner*, and made its influence felt in politics and in letters. He was a Liberal in politics; and, deeply interested in American institutions, he followed the course of contemporary history in America with unusual intelligence and appreciation. His knowledge of English literature was extensive and thorough, and he collected a library such as few men of letters have had at command. For a long period he was, first, Secretary to the Commissioners, and then one of the Commissioners in Lunacy, and he discharged the responsible and often laborious duties of his office with exemplary fidelity. He married comparatively late in life, and became possessed of ample means; but ease of outward circumstance did not abate his industry or diminish the activity of his cordial sympathies. His latest years were saddened by the death of friends and by the failure of health; but even in the depression of sorrow and illness the strong vitality of his nature displayed itself in the quickness of his interest in affairs and in his ready social animation. In personal intercourse, the sturdy traits of his character were conspicuous. He was thoroughly English in the build of his body and his mind. His dislikes were as hearty as his likes; his prejudices were often indulged to humorous extravagance. An impetuous and vehement manner covered or disclosed the almost womanly tenderness of his heart. His memory was excellently stored, and he used its stores easily. His talk came from a full mind. He knew his books, and his library became by degrees one of the best in its kind. The room was a delightful one, and the volumes on its crowded shelves were the true surrounding for one whom their authors would readily admit on even terms to spiritual companionship. Swift, Addison, Fielding, Smollett, Goldsmith, Johnson, seemed but little less familiar with him than their living successors; and now that he is dead, Forster, as he would have liked, has become to thought the contemporary of them all.

—Frédéric Lemaître, born a month before Déjazet and dying a month after her, had not, like her, preserved his powers unimpaired; he had long been little but a ruined relic of his former self. Perhaps the greatest of the

four great artists of the romantic period of the French drama, he had survived for years Bocage, Mlle. Georges, and Mme. Dorval. After playing in "Trente Ans, ou la Vie d'un Joueur" with Mme Dorval, he created—and here the use of the French idiom is exact—"Robert Macaire," transmuting the cheap melodrama, of which he was one of the authors, into a colossal caricature almost Aristophanic in its grandiose buffoonery. Perfected by the wit of Philipon and the pencil of Daumier, "Robert Macaire" has remained a type. In 1835, after playing *Gennaro* in "Lucrèce Borgia," and *Richard Darlington*, he visited England, where he was well received. It can hardly be doubted that his powerful but occasionally vulgar acting exerted a visible influence upon Dickens (then only beginning to be known as "Boz"), with whose nature his had much in common. Upon his return to France he appeared in "Kean," a piece of tawdry bombast by the elder Dumas, unworthy of criticism, but effectively contrived to show off the varied genius of the actor. To Edmund Kean, from whom the play borrowed only its name, the French critics frequently likened him. Gautier called him "the only actor who reminds us of Garrick, Kemble, Macready, and especially Kean"—a conjunction of names which must appear absurd to any one who knows the unlikeness to each other of the actors thus grouped together. Mr. Lewes says that to "speak of Lemaître as a rival of Kean or Rachel seems to me like comparing Eugène Sue with Victor Hugo—the gulf that separates prose from poetry yawns between them." M. Hugo himself thought otherwise; in the note appended to "Ruy Blas," in which Lemaître acted the hero, the author declares that "for the old, he is Lekain and Garrick in one; for us he has the action of Kean united to the emotion of Talma." He was often called "the Talma of the boulevards." It is related that, at the first reading of "Ruy Blas," Lemaître supposed that he was to play, not the hero, but *Don César de Bazan*, an incident which perhaps suggested to that skilful playwright the setting of *Don César* in a separate play of which Lemaître should be the protagonist. After this, his next important part was the *Chiffonier* of M. Félix Pyat. In Balzac's "Vautrin," his make-up to resemble Louis Philippe caused the suppression of the play. It is inaccurate to say—as it has been said since his death—that of late, or after his failure in "Les Saltimbanques" in 1832, he played no new parts; for in 1838 he acted the old schoolmaster in M. Barrière's "Crime de Faverne" with much of his old effect, if we are to believe M. Claretie ('La Vie Moderne au Théâtre,' first series). Again, in 1870, he played in "Le Portier du No. 15." The well-known "Contennaire" was written for him, although he never acted it. In the last years of the Empire he received a small pension from the Government, and in the summer of 1873 a general benefit was arranged for him at the Opéra, which fell through, owing to the anonymous intermeddling of a composer and critic who would not allow the desecration of the stage of the national opera-house by the "Fille de Mme. Angot." Mr. Lewes, whose temperate opinion seems more just than the enthusiastic eulogies of the French, thought Frédéric Lemaître "singularly gifted" and of "exceptional genius," but he detected in him (as we lately had occasion to remark) "something offensive to good taste," "a note of vulgarity, partly owing to his daring animal spirits, but mainly owing, I suspect, to an innate vulgarity of nature."

—Encouraged apparently by the success of the excellent "International Scientific Series," the publisher, Reinwald of Paris (F. W. Christern, N. Y.), announces a "Bibliothèque des Sciences Contemporaines," of which two volumes, 'La Biologie,' by Ch. Letourneau, and 'La Linguistique,' by M. Hovelacque, have appeared. The prospectus contains a list of good subjects and names; but reading it makes one wonder after all whether the number of compendious repetitions of the same given material which the public really needs be not overestimated by publishers. The Biology of this series, for example, which we have received and read, is assuredly a skilful and learned compilation, well written, and not without original suggestions and expressions. But for whose use is it? For that of studious youth? of leisurely eld with a taste for smattering and desultory dilettanteship? or for busy middle-age in men of other sciences who, having no leisure to look at the details of biology, yet need to know its more general results and tendencies? Not for the use of youth assuredly, for the English fashion of popularizing science by describing in full detail a concrete instance or two, and knitting a few general results to this as a text, is far better for beginners than a book like this, where the whole treatment tends to the abstract, and where the breadth of the "laws" disguises the physiognomy of the instances. We incline to think that the best function of such a book as this (and, *mutatis mutandis*, of its fellows) is to give medical practitioners, and persons who have studied anatomy and physiology sufficiently to supply from their memory some concrete particulars to give body to the author's generalities, a notion of the way in which biological science is to-day tending. But surely for these readers the need is not pressing, considering how many other manuals are within their reach; whilst for *beginners* in science the abstract-general-result method of exposition can only be regarded as a muddler of the imagination and an inspirer of conceit.

—Our objections to M. Hovelacque's book are not less decided, though of a somewhat different character. It has far too much of fact and too little of inference and reasoning for a manual of science. Of its 350 pages only about 50 are devoted to the discussion of general questions; and of the 50, a good part are wasted on the establishment of distinctions which would, with a better method, take care of themselves, or on what is worse. Nothing can show more strikingly the author's inaptitude for sound theorizing than his crusade against "etymology," which he declares to be the antithesis of linguistic science, the latter being the systematic historical study of a language and of its laws of development, as if these ends could possibly be reached in any other way than through etymology, the study of the history of words! M. Hovelacque would apparently have us get our principles and laws *à priori*. His general views, too, bear pretty clearly the marks of such an origin. His main authority is Schleicher, than whom a more untrustworthy guide in these matters could not well be found; and he adopts and puts nakedly forward, without any attempt to establish them or to refute the reasoning by which they have been repeatedly overthrown, such dogmas as that the study of language is a natural and not a historical science; that languages are born, grow, decay, and die, like all living creatures; that man became man by learning to talk, the faculty being the unique characteristic of humanity; and that languages have necessarily a variety of origins. In the purely descriptive work which constitutes the bulk of his volume, and which is, therefore, carried into far greater detail than in any other similar manual, M. Hovelacque is, of course, much more to be trusted, and a good deal may be learned from him if sought with some caution and independence of criticism. Yet here he does not always go to the best sources; for instance, for the American languages his authorities are the old ones, Pickering and Duponceau, with the modern addition of Friedrich Müller of Vienna—a man of great but very unequal merit, of too wide range and too great oddity of judgment to be safely followed. The Dravidian languages and the Basque are those which the volume before us treats most fully and with most originality. It rejects vehemently the "Turanian" family. It repels all idea of relationship between Indo-European and Semitic, but allows the connection of Semitic and Hamitic. As to the real character of Etruscan and of the "Accadian" of the cuneiform monuments, it expresses no decided opinion.

—In the hot theological controversies of the present day it is hard to treat any subject even remotely connected with ecclesiastical history without betraying a "tendency." This tendency is frankly avowed by August Werner, "Evangelisch-Protestantischer Pfarrer," in the very title of his 'Bonifacius, der Apostel der Deutschen, und die Romanisirung von Mitteleuropa' (Leipzig: T. O. Weigel; New York; L. W. Schmidt.) He reminds his readers that twenty years ago, at the eleven-hundredth anniversary of the death of St. Boniface, all classes and creeds in Germany hastened to pay honor to this greatest of missionaries; but that Archbishop Ketteler, his successor in the see of Mentz, cast a chill over this generous enthusiasm by harshly chiding the German people for its heresies and predicting its speedy downfall as a nation. Mr. Werner has a sense of satisfaction, we may be sure, in quoting the prelate's words, and comparing them with the present order of things in Germany. For the rest, while admitting that his work is a contribution to the present religious controversy, he asserts for it a scientific basis, in studies and authorities. He has produced a really instructive and readable book, and has shown with great clearness and fulness the nature of the ecclesiastical claims of Rome and the results of the mission of Boniface. He is not one of those—and here we agree with him—who accept historical movements, even on so large a scale as this, as necessary and therefore salutary; he can regard the Romanizing of Germany as essentially only a calamity, from the effects of which the world has not yet recovered. The political bearings of Boniface's career are very well analyzed, and the character and policy of Charles Martel are admirably described; the secularizations of Pepin are, on the other hand, inadequately treated. The style is animated, but there is at times too much detail for common readers. There is a great lack of dates and, as it seems to us, of references; neither is the index a very good one.

—It is now about ten years since Domenico Berti's 'Life of Giordano Bruno' threw a new and lurid light on one of the earlier tragedies which have marked the conflict between theology and science. The well-merited distinction which it conferred on the author has been maintained by a recent

work of even wider interest. On the fourth centenary birthday of Copernicus, Signor Berti pronounced a discourse in his honor, and this he has now published with considerable additions, including inedited documents illustrating the struggle through which a paternal Church preserved the purity of the faith by sending Bruno to the stake and condemning Galileo to silence. The Copernican theory was the field on which was fought out the battle between intellectual slavery and freedom of thought, and no one can fully comprehend the vicissitudes of the momentous struggle without referring to the labors of Signor Berti. In addition to the main subjects of interest in the volume, the author has collected much material which illustrates graphically the social and intellectual condition of Italy during the Renaissance. For instance, one of the curious incidents of the revival of letters, amid the ignorance and corruption of the Church before the Reformation, was the spread of unbelief and paganism among the learned—unbelief which found its way into the Vatican itself. In sketching the university life of Copernicus at Bologna during the closing years of the fifteenth century, Berti gives us vigorous portraits of some of the notable teachers of that mother of learning. Among these is conspicuous Codro Urceo, the Professor of Greek, who carried his learned fanaticism so far that he was wont to declare that the gods would pass away and fall, but that Homer never would; and it is related of him that once he turned to an image of the Virgin and addressed it: "Hear, O Virgin, these words that I utter from the bottom of my heart, and with full self-knowledge! If on my death-bed I implore thy help, take me not to thee, for I have resolved to pass my eternal life with the infernal gods!" No one can fully understand the development of our modern civilization without taking account of all the currents of thought which have contributed to it, and among these the neo-paganism to which we have alluded is not the least important. During the period between the suppression of Hussitism and the rebellion of Luther, the Church was wonderfully tolerant. Secure in the possession of its temporalities, it cared little what men might think or say so long as its revenues and immunities were not threatened. Savonarola might disregard a Papal excommunication and proclaim the foulness of the Papal court with impunity, but when he crazily sought to league together the sovereigns of Christendom against Rome, his doom was sealed. The extraordinary spectacle of a teacher of youth in the renowned University of Bologna thus openly indulging in blasphemies is, therefore, only a sign of the times; and the contrast between this and the severities exercised against the upholders of the Copernican theory marks the changed attitude of the Church wrought by the dangers of the Reformation, when it had learned by experience that thoughts were as formidable as armies.

AN HISTORICAL DETECTIVE.*

MR. CHARLES WENTWORTH DILKE was not a critic. His papers treat of Pope, Junius, and Burke, but they contain not a line which analyses the style or illustrates the thought of these three masters of the English language. He deals with historical personages, but he has no claim to the title of an historian. He does not narrate the events of as much as one year; he does not depict a single character; he does not propound any historical view or theory, and he exhibits an absolute incapacity for appreciating the character either of men or of ages. Nor, again, can Mr. Dilke be justly termed an antiquarian. He probably possessed a minute knowledge of certain periods, or at any rate of certain topics, but he was, to judge from his works, deficient in the capacity for profound or extended research. Mr. Dilke, nevertheless, was a genuine historical student, who did good service within a narrow field. He possessed faculties not of a high but certainly of a rare description. He worked, in short, at the kind of enquiries which excited his interest, much after the manner of an acute attorney who grudges no labor in getting up his case, and brought to the study of history the tastes, the faculties, and the method of one of those ingenious and successful detectives who are rarely to be found in a police station (for your ordinary policeman is a dull fellow who does not know his own business), but who abound in the pages of Dickens. Mr. Dilke could "mole" in his search for curious facts with the industry and success of Mr. Pancks. He noted down stray bits of information and pieced them together with the astuteness of Mr. Nadgett, and kept his eye upon "parties" who aroused his suspicion with the unwearying vigilance and sublime self-confidence of Inspector Bucket.

It was characteristic of his genius that he should choose as the main field of his labors the Junius controversy. It is still more characteristic that in dealing with this topic Mr. Dilke should have taken up an almost entirely negative position. He ventures indeed on a conjecture of his own as to the identity of the great unknown with Mason, the friend of Walpole. But Mr. Dilke himself attaches no importance to his own hypothesis, and devotes to it not a tithe of the 227 pages in which he sifts the claims put forward in favor of various pretenders by different theorists. It is in exposing the errors of others that all Mr. Dilke's really considerable power is displayed. It is scarcely an exaggeration to say that he looked upon every man who wrote upon Junius as an arrant humbug, who was certainly a fool and probably a knave. Mr. Dilke's eye was in a moment fixed on the offender; and Mr. Dilke's knowledge, industry, and acuteness were all brought into play to show that the man who was daring enough to think that he had solved the unsolvable literary enigma had proved nothing but his own incompetence and ignorance. Mr. Dilke, it must be admitted, did the work of exposure thoroughly well. He knew the details of his subject with the thoroughness of a skilful counsel who has studied all the ins and outs of a difficult brief. He had, further, thoroughly mastered the principle which many writers of greater pretensions have failed fully to appreciate, that no one should ever be content with second-hand evidence when original evidence is obtainable. Thus he shattered at one blow a whole mass of hypotheses by showing that the dates affixed to the private letters of Junius cannot be relied upon, since they depend in many cases merely on the conjecture of their first editor. So, again, he shows conclusively that a particular speech of Chatham's, which it has been assumed must have been heard by Junius, might have been known to him through a report which certainly appeared in some of the London papers. Some writer again asserts that the sale of the *Public Advertiser* rose immediately on the appearance of the celebrated letters. This assertion, which is credible enough in itself, seems to have passed entirely unquestioned till for some reason it roused the suspicion of Mr. Dilke, and he took the obvious but neglected precaution of examining the day-book of the newspaper. The result is rather curious. "Neither the first, nor the first dozen, nor the first two dozen letters had any effect whatever on the sale of the paper. Then, indeed, on the 19th December, 1769, came forth the letter to the king. This created an effect and an extraordinary demand. Dr. Good, who cannot be right even by accident, states that 500 copies of the *Advertiser* were printed in addition to the usual number, whereas the evidence before him—this day-book to which he might have referred—would have proved that 1,750 additional copies were printed." It may be said that these and like facts are not worth the labor with which they are ascertained. But Mr. Dilke clearly held that if men wrote about Junius at all they ought to write accurately, and the tenacity with which he clung to this belief is characteristic of the best side of his intellect and of his work. The characteristic expression, "who cannot be right even by accident," betrays an acerbity which rendered him not only a bitter but also a narrow-minded controversialist. As regards Junius and some other kindred topics, he was, no doubt, while he lived, "the scourge of impostors and terror of quacks." He has left no one, we fear, behind him who can deal with anything like the same thoroughness or severity with ignorant rogues who venture to think that the letters signed "C." are the work of the man who held up George III. and his ministers to immortal obloquy.

Mr. Dilke delighted in the detective's work of exposing imposture, and unfortunately his delight in this pursuit led him to confine his labors to topics in which the talents of a detective have full play. He writes about great men, but he never interests himself in the great side either of their work or of their character. Thus he devoted a great deal of attention and labor to the subject of Burke's biography. What is noteworthy is that the statesmanship, the oratory, and the political speculations of Edmund Burke possessed no interest for the mind of Mr. Dilke. He looked upon all the "Burkes" with intense suspicion. He noticed with truth that there is something mysterious, or at any rate not fully explained, about the early life and career of the man who rose from being the son of an unknown Irish attorney to a place in the foremost rank of English orators and politicians. Mr. Dilke seems to have been really harassed by the fact that it is not very easy to account for the steps by which Burke made his fortune. Here was an enigma worthy of his talents. What was Burke's parentage? What did his fortune amount to, and how did he get it? What was his religion? Was there any truth in the tale that he was once in America, or in the still more mysterious report that his brother was head of a Roman Catholic monastery? These and other enquiries like them, which amused the scandal-mongers of the last century, are the questions which occupied Mr. Dilke's really vigorous mind, and which he labored with indefatigable energy to answer. The results in this case scarcely repaid his labor. It would, however, be unfair to deny that he has contributed several facts to our knowledge of the early

* "The Papers of a Critic. Selected from the writings of the late Charles Wentworth Dilke. With a biographical sketch by his grandson, Sir Charles Wentworth Dilke, Bart., M.P." London: John Murray.

career of Burke, and has suggested trains of enquiry which any future biographer will be bound to follow up. It is impossible after reading Mr. Dilke's pages not to suspect that the earlier years of the great statesman's career were probably not a period to which he himself looked back with satisfaction. The strange rumors as to the mode by which the estate which Edmund Burke inherited from his brother came into Garrett Burke's hands; the curious lawsuit of which Mr. Dilke ferreted out the authentic details; the fact, which he seems to have established, that Burke's connections suffered severely from losses in India stock, are, each and all, matters of which satisfactory explanations enough could perhaps be given if it were possible to recover the whole details of Burke's life; but they certainly give countenance to the idea that Burke, like other great men who have risen from obscurity, may have suffered more from pecuniary and other difficulties than those who knew only his later years may have conjectured. Mr. Dilke, however, considerably weakens the effect produced on his readers by his careful research through the display of an inordinate and almost insane tendency to suspicion. The suggestion that Burke may have been induced to write his diatribes against the French Revolution, in part at least, by the wish for a pension, is just one of those suggestions which would never have been made by a man of Mr. Dilke's ability unless he had become for the moment a dupe to his own passion for detection. He exerted so much vigor in hunting up the secret history of the "Burkes" that at last he came to look upon them in the same way that a policeman regards a gang whom he knows to be rogues and has not yet been able to bring to conviction.

The inherent defects of the detective's view of history become apparent enough to any one who reads carefully the 'Papers of a Critic.' The subjects investigated are in themselves not worth investigation. The question, for example, who wrote the letters of Junius is one of no more essential importance than the enquiry who was the man in the iron mask. It is scarcely conceivable that, could the author of the letters be ascertained, the knowledge of his name would throw any real light either on the history of the last century or on the character of any man of first-rate celebrity. The letters themselves will always have a certain importance, since they give expression to the fierce indignation aroused among the English people by the incompetence and corruption of statesmen who in a critical period were leading the nation to ruin; while to know the name of the writer who gave expression to this indignation would gratify a natural curiosity, it would add next to nothing to our knowledge of the last century. The private character of Burke is a matter of more consequence, yet even here it is easy to overrate the importance of knowing all the details of a great man's life. Could it even be proved that Burke was influenced in his view of the French Revolution by considerations of private interest, the merits and demerits of the "Letter to a Noble Lord" or "The Regicide Peace" would be neither lessened nor increased. What men like Mr. Dilke never can understand is that a great man lives in his works. Were every slander which malignity has suggested and credulity has swallowed established as truth, the thoughts of Burke would not lose their weight, nor his language be deprived of its eloquence. Another defect of Mr. Dilke's method of enquiry is that it is, to speak plainly, ignoble. Great men have their weaknesses and their vices, and it is well that their weaknesses and vices should be known; but the man who occupies his mind mainly in exploring the weak sides of heroic characters directs attention to exactly that portion of biography which is unworthy the permanent contemplation of liberalminds.

The defects of Mr. Dilke's treatment of history are patent. It is of some consequence that its less obvious but real worth should not be overlooked. Patient enquirers who search diligently for facts deserve some praise even though the facts for which they search may be of slight importance, and their mode of investigation may argue a certain defect in taste. Every period of history is apt to become gradually misunderstood through the growth of a mass of errors and misrepresentations. Every now and then a man of genius cuts down at one blow the crop of confusion which hides the character of an age or of a man from the eyes of later generations. But more generally errors are removed one by one through the careful research of men who combine insatiable curiosity with a delight in exposing mistakes. Their labors are not always dignified, but they are always useful. The detectives of history, like the detectives of the police office, hardly deserve or look for admiration, but they serve, though in a humble sphere, the cause of truth.

TWO MILITARY WORKS.*

GENERAL GORDON'S "Third Paper" is a handsome volume of 230 pages. The first and second papers were pamphlets, of like print and size of page, and told the story of the regiment, from its organization in the spring of 1861 to February, 1863. The present continues the story through Banks's retreat from the Valley of the Shenandoah and his defeat at Cedar Mountain.

It would be well if the history of every regiment that saw actual service in our war could be written, but there were very few that deserved a permanent record so well as, and it is doubtful if there was one that deserved it better than the Second Massachusetts Infantry. Governor Andrew was at first extremely stiff in his recognition of the right of enlisted men to elect their officers, and was always extremely tenacious of his constitutional right of commissioning; but at the outbreak of the war such exceptional and powerful influences were brought to bear upon him that he yielded to the gentlemen who projected the formation of his second regiment the rare privilege of officering it as they saw fit. It was arranged that the colonelcy should be given to Gordon, the lieutenant-colonelcy to George L. Andrews, the majority to Wilder Dwight. Gordon was a graduate of West Point, and had seen service in the Mexican War, and had afterwards become a member of the Boston bar. He was a man of vigor and determination, a stern disciplinarian, self-confident, and unyielding, especially to his superiors; upon the whole, unusually well adapted to the task of turning into soldiers a mass of men drawn from a community accustomed for nearly half a century to the profoundest peace. Andrews had been the first soldier in his class at West Point, and had seen peaceful service in the Engineers. He was a man of the highest integrity, but a precisian, and trammelled by the qualities of his mind and of his training. Dwight, the prime mover in the formation of the regiment, was a young lawyer, of excellent standing and of brilliant promise. Well born, well educated, full of ardor, intelligence, and activity, he was rapidly making a name for himself, and was already honored with the friendship of such men as Judge Hoar and the present Chief-Justice Gray. The very best of the young men of Boston and its neighborhood sought eagerly for commissions in the regiment, and from them the whole list of officers was selected with great care. Men offered themselves with like alacrity, and the companies were rapidly filled with the cream of the real volunteers of Massachusetts. A fund of some thirty thousand dollars was raised by subscription for the uses of the regiment.

It would be a pleasant task to describe in detail the formation and career of this almost peerless organization, but the purpose of the present notice is less extensive. We must content ourselves with telling the reader what he may find in General Gordon's book. Those who know anything of the Second Massachusetts will turn to it with lively interest, and will not lay it down till they have read to the end; but they seem to us doomed to a good deal of disappointment. It is far too much a history of what General Gordon thought, said, and did. It contains a good deal of valuable information, but an excess of husk in proportion to the corn. It tells us altogether too little of the daily inner life of the regiment, of the processes by which its thousand men were changed from citizens into thoroughly-disciplined soldiers; of the constant application of intelligent force by which its high character was sustained amid all the trials of active service, and in spite of the dangerous influence of inferior discipline all around it. One looks in vain in it for such glowing tribute to the soldierly carriage of its men in action as Napier pays to the fusileers at Albuera, and which is fairly expected of officers writing of their own soldiers, no matter how far inferior in literary ability and accomplishment they may be to the consummate historian of the Peninsular War. Especially is it strangely silent as to the merits of its gallant officers who lost their lives. Savage, Goodwin, Cary, Abbott, and Perkins fall almost unnoticed in the disastrous day of Cedar Mountain—a list of names whose death in one field will long make that day sadly memorable in the annals of Massachusetts. The book comes too near to being an autobiographical sketch. If it were only a private, regimental affair, its character would be a matter between the regiment and its author; but it is sold in the bookstores, and so it comes within the reach of general criticism. It is fair to add here that the fact that the book was prepared to be read by the author to his old comrades goes far to prove that its egotism must be unconscious.

Of the value of the book as bricks for the builder, it is not easy to speak without a really close study of it, because it leaves a confused impression upon the mind when it undertakes to describe the retreat of Banks from the Valley and the battle of Cedar Mountain, the only two affairs of importance in which the regiment was engaged before the battle of Antietam. The author tells us a great deal of what he did and said and saw and heard upon both of these occasions, but he so tells his story that we feel when we finish

*'History of the Second Massachusetts Regiment of Infantry. Third Paper. Delivered by George H. Gordon, Major-General of Volunteers and Colonel Second Massachusetts Regiment of Infantry in the late War, at the Annual Meeting of the Second Massachusetts Infantry Association, on May 11, 1875.' Boston. 1875.

'Reminiscences of Forts Sumter and Moultrie in 1860-61. By Abner Doubleday, Brevet Major-General United States Army.' New York: Harper & Bros. 1876.

it as if we had a less clear idea of the operations than we had when we began. It is probable that, if he had been able to forget himself a little, he would have made his account more comprehensible ; but as it is he leads us about with him, forward and back and right and left, until we feel ourselves compelled to stop for a moment and bring our minds to the fact that there must have been somewhere, in the Valley and at the base of Cedar Mountain, a Southern and a Northern line of battle, a right, a centre, and a left, a line of advance and a line of retreat. It is easy to find fault, and the mood of mind induced by disappointment may tend to turn the pen of the reviewer unduly in that direction. To guard against that possible error we will abandon adverse criticism, and seek in what more we have to say to do justice to the real merits of the book. And it may be declared with emphasis that it is really interesting and very entertaining. It is not only the work of a man of sense and intelligence and knowledge of his business, but of a man who was largely instrumental in forming the regiment of which he writes, and who was actually present with it in all the scenes which he describes. His command was never, during the period embraced in this volume, larger than a brigade, of which the Second Massachusetts formed a part, and so he was not far from his own men at any time. Whatever facts he states as of his own knowledge we accept as authentic. We give him not only the credit of meaning always to tell the truth, but of being very free from that tendency to brag which disgraces so many of the books on military affairs, and makes them so untrustworthy.

One thing of especial value in his book is the fearlessness and fulness with which he contributes material for the military history of General Banks. The Valley should have taught Banks that he was unfit to exercise military command, and Cedar Mountain should have enforced and completed the lesson, but unblushingly and callously he proceeded to the crowning disaster of Red River. If there was a man in our war around whose head the "ghosts of those who in battle were slain" should assemble, that man was General Banks. To his leaving undone those things which he ought to have done, and to his doing those things which he ought not to have done, in the Valley and at Cedar Mountain, General Gordon bears full and fitting testimony.

Our war was fought by volunteers, and it was the common lot of all the regiments to be short-lived. The Second Massachusetts' term of service was a little over four years. There is something deeply pathetic in the thought of a noble regiment ceasing to exist. In other lands, officers and men lay down their lives and their places are filled by promotion or enlistment, but still the regiment lives, and its traditions go on collecting perhaps from century to century. But to our volunteer regiments the day came soon when the last roll was called and the colors were wrapped around the staffs never again to be unfurled in battle, or surrounded by loving and loyal hearts. The place of the Second Massachusetts regiment is secure in the affectionate and proud admiration of all who knew it, and we are grateful for every printed word that shall make its high desert known to the reader in distant places and in coming days.

Gen. Doubleday was, in 1861, the captain of one of the two companies of artillery which were besieged in Fort Sumter ; and in the little book named above he has undertaken to give his reminiscences of the daily events of the garrison life from the time Major Anderson came to take command at Fort Moultrie in November, 1860, to the evacuation of Fort Sumter on the 14th of April, 1861. Reminiscences of those exciting times are always interesting, and his are well told ; but they would seem to bring forth two classes of important facts which it is safe to say were hitherto almost unknown: first, that Doubleday was a noted Abolitionist, and that the mob of Charleston was howling for his head ; that the transfer from Moultrie to Sumter, and in fact every other successful move, was made upon his advice ; and that the lost opportunities of asserting the Federal supremacy were the result of discarding that advice ; secondly, that Major Anderson was at that time very wavering in his devotion to the Union. This last allegation Gen. Doubleday supports by certain remarks of Anderson—as, that he thanked God when told that no one in the rebel forts had been hurt during the bombardment, and afterward wrote that "his heart was never in this war"—and by the inaction which he maintained until actually fired upon. From the tone in which his accuser writes, one would suppose that Anderson's duty was as plain as the routine of a parade ; and yet, by his own showing, four members of the Cabinet were in sympathy with the South, Horace Greeley had proclaimed the right of secession, Gen. Scott was in favor of "letting the wayward sisters go in peace," and Yancey was delivering secession speeches at the North without molestation. In such troublous times as these the duty of a simple major in the army in command of a fort near the hot-bed of secession was by no means clearly defined, and yet upon his action the gravest results depended. His position became still more difficult when, on reporting the facts to Washington and asking for orders, he received nothing but indefinite replies. What, then, was he to do when he saw the preparations being made on all sides to reduce his fort ? Was he to remain passive or to open fire on the new batteries ?

The latter seems to have been Captain Doubleday's advice ; but it was extremely fortunate for the country that it was not accepted, for it must be remembered that what fired the Northern heart was not altogether the question of secession or slavery, but the fact that a deliberate act of hostility had been committed in opening fire upon the United States flag ; it might have been far different had Anderson fired the first shot and thrown the initiative on the North. And how could a major in the artillery take the responsibility of opening the war, when so many people clung to the idea that the whole matter might yet be settled amicably ? Gen. Doubleday might have thought more carefully on these difficulties before he cast reflections on his commanding officer after his death. And not only are these reflections ungracious at this late day, but many of them are contradicted by the book itself. On p. 75 we learn that when Anderson found that Georgia would secede, "he seemed to lose all interest in the Union, and merely desired to become a spectator of the contest and not an actor. His efforts thenceforth were simply confined to making his fort secure against an assault. Hardly any amount of provocation could induce him to become the assailant." How could he become the assailant when, as we are told on p. 50, "Major Buell bore written orders, which were delivered on the 11th Dec., directing Major Anderson not to provoke hostilities, but in case of immediate danger to defend himself to the last extremity, and take any steps that might be necessary for that purpose" ? These instructions were doubtless in Anderson's mind when, on the 9th of January, the *Star of the West* appeared and was turned back by the fire from Fort Moultrie. Doubleday had his men at the guns, "but Anderson would not allow us to return this fire" ; and he was quite right, for he was in no immediate danger, and his instructions forbade him firing until he was. But that there might be no mistake in another case, an officer of the garrison was immediately sent to Washington with a report of the affair, and a request for specific instructions. He returned in ten days with the reply that the Administration "had the utmost confidence in Major Anderson, and left everything to his judgment."

It is difficult to see how in such a trying case, without precedent or instructions, an officer could have pursued a different course from that adopted by Major Anderson, namely, to remain passive until his fort was attacked, and then to defend himself as well as his small force and scanty supplies would allow; meanwhile, to leave politics to the Administration at Washington. Few officers have departed from this safe rule without coming to grief. As for Anderson's personal feelings, they have nothing to do with the matter, except so far as they influenced his conduct. He must be judged solely by his actions, and any reference to his private opinions—or, more properly, what Doubleday supposed to be his private opinions—is out of place. It is a pity that these ill-timed reflections occur so often as seriously to injure an otherwise very readable and interesting book.

THE WIFE OF JOHN ADAMS.*

WE welcome this volume as called for by the needs and the spirit of the times : on the one hand, by its faithful portrayal of a New England wife ; on the other, by its illustration of the part which such a wife plays in the life of her husband. Abigail Smith was born in 1744 and died in 1818. Of these seventy-four years, fifty-five were passed in wedded life. She married a man who was fast rising into distinction in law, his profession, and who was to be still more distinguished in statesmanship, the profession of all true men of those days. Her education was such as home could give her ; she never went to school. With such means, and none other, she was to pass through life with John Adams, partly leaning, partly leaned upon ; softening the asperities of his temper by her gentle words, ἀγανοῖς ἐπέεσσιν, and strengthening his higher aspirations by her intelligent sympathy.

"You have this day," she wrote, when he had reached the summit of an American statesman's legitimate ambition, "to declare yourself head of a nation. And now, O Lord, my God, Thou hast made Thy servant ruler over the people. Give unto him an understanding heart, that he may know how to go out and come in before this great people ; that he may discern between good and bad. 'For who is able to judge this Thy so great a people ?' were the words of a royal sovereign, and not less applicable to him who is invested with the chief magistracy of a nation, though he wear not a crown nor the robes of royalty.

* 'Familiar Letters of John Adams and his Wife, Abigail Adams, during the Revolution. With a Memoir of Mrs. Adams. By Charles Francis Adams.' New York : Hurd & Houghton. 1876. 1 vol 12mo.

"My thoughts and my meditations are with you, though personally absent; and my petitions to heaven are that 'the things which make for peace may not be hidden from your eyes.' My feelings are not those of pride or ostentation upon the occasion. They are solemnized by a sense of the obligations, the important trusts, and numerous duties connected with it. That you may be enabled to discharge them with honor to yourself, with justice and impartiality to your country, and with satisfaction to this great people, shall be the daily prayer of your A. A."

These are the words which make men ardent and resolute in duty, and firm and confident in trial. She had cheering words, also, when the occasion called for them. "I am a mortal enemy," she writes her husband, apparently in an anxious moment, "to anything but a cheerful countenance and a merry heart, which Solomon tells us does good like a medicine." What a glimpse of herself she gives us in these lines: "I have taken a very great fondness for reading Rollin's 'Ancient History' since you left me. I am determined to go through with it, if possible, in these my days of solitude. I find great pleasure and entertainment from it, and I have persuaded Johnny to read me a page or two every day, and hope he will, from his desire to oblige me, entertain a fondness for it." That Johnny, conning history at his mother's knee, was the John Quincy Adams of after fame.

She applies her history, and quotes Polybius to enforce a practical lesson:

"Did ever kingdom or state regain its liberty when once it was invaded without bloodshed? I cannot think of it without horror. Yet we are told that all the misfortunes of Sparta were occasioned by their too great solicitude for present tranquillity, and from an excessive love of peace they neglected the means of making it sure and lasting. 'They ought to have reflected,' says Polybius, 'that as there is nothing more desirable or advantageous than peace, when founded in justice and honor, so there is nothing more shameful and, at the same time, more pernicious when attained by bad measures and purchased at the price of liberty.'"

John Adams is surprised by his wife's statesmanship: "Pray where do you get your maxims of state? They are very apropos." We might fill pages with passages like these, and see her still growing wiser and stronger under the discipline of events, while John Adams also unveils himself in this commerce of the heart. It is not probable that she ever expected to see her letters in print. But he had been too long before the public to be troubled by the thought of publicity; had taken too large a part in great affairs not to know that history is never more truthful than when made up of materials like these. "I write you this tittle-tattle, my dear," he writes her from York, July 2, 1774, "in confidence. You must keep these letters to yourself, and communicate them with great caution and reserve. I should advise you to put them up safe and preserve them. They may exhibit to our posterity a kind of picture of the manners, opinions, and principles of these times of perplexity, danger, and distress."

Here is one such picture:

"I believe I forgot to tell you one anecdote. When I first came to this house it was late in the afternoon, and I had ridden thirty-five miles at least. 'Madam,' said I to Mrs. Huston, 'is it lawful for a weary traveller to refresh himself with a dish of tea, provided it has been honorably smuggled, or paid no duties?' 'No, sir,' said she, 'we have renounced all tea in this place; but I'll make you coffee.' Accordingly, I have drunk coffee every afternoon since, and have borne it very well. Tea must be universally renounced, and I must be weaned, and the sooner the better."

Compare this as an expression of public opinion with the following, written the very next day:

"A notion prevails among all parties that it is politest and genteelest to be on the side of administration; that the better sort, the wiser few, are on one side, and that the multitude, the vulgar, the herd, the rabble, the mob only, are on the other. So difficult is it for the frail, feeble mind of man to shake itself loose from all prejudice and habits."

Of Mrs Adams's letters, that of November, 1775, is certainly one of the most remarkable:

". . . Colonel Warren returned last week to Plymouth, so that I shall not hear anything from you until he goes back again, which will not be till the last of this month. He damped my spirits greatly by telling me that the Court had prolonged your stay another month. I was pleasing myself with the thought that you would soon be upon your return. It is in vain to repine. I hope the public will reap what I sacrifice.

"I wish I knew what mighty things were fabricating. If a form of government is to be established here, what one will be assumed? Will it be left to our assemblies to choose one? And will not many men have many minds? And shall we not run into dissensions among ourselves? I am more and more convinced that man is a dangerous creature, and that power, whether vested in many or a few, is ever grasping, and, like the grave, cries 'Give! give!' The great fish swallow up the small, and he who is most strenuous for the rights of the people, when vested with power is as eager after the prerogatives of government. You tell me of degrees of perfection to which human nature is capable of arriving, and I believe it, but at the same time lament that our admiration should arise from the scarcity of the instances.

"The building up of a great empire, which was only hinted at by my correspondent, may now, I suppose, be realized even by the unbelievers. Yet will not ten thousand difficulties arise in the formation of it? The reins of government have been so long slackened that I fear the people will not quietly submit to those restraints which are necessary for the peace and security of the community. If we separate from Britain, what code of laws will be established? How shall we be governed so as to retain our liberties? Can any government be free which is not administered by general stated laws? Who shall frame these laws? Who will give them force and energy? It is true your resolutions, as a body, have hitherto had the force of laws; but will they continue to have it?

"When I consider these things, and the prejudices of the people in favor of ancient customs and regulations, I feel anxious for the fate of our monarchy, or democracy, or whatever is to take place. I soon get lost in a labyrinth of perplexities; but, whatever occurs, may justice and righteousness be the stability of our times, and order arise out of confusion! Great difficulties may be surmounted by patience and perseverance.

"I believe I have tired you with politics. As to news, we have not any at all. I shudder at the approach of winter when I think I am to remain desolate. I must bid you good-night; 'tis late for me, who am much of an invalid. I was disappointed last week in receiving a packet by post and, upon unsealing it, finding only four newspapers. I think you are more cautious than you need be. All letters, I believe, have come safe to hand. I have sixteen from you, and wish I had as many more.

"Adieu. Yours."

We would call particular attention, also, to the descriptions, so full of life and of graphic power, of the closing days of the siege of Boston, and the unconsciousness with which both husband and wife paint themselves for posterity. This volume takes its place by the side of the most valuable documents of our Revolutionary history.

THE JEWS IN ENGLAND.*

THE author of the book before us has undertaken to narrate the history of the Jews in England from their return to the British Isles in 1656 down to the present time. The history of the English Jews previous to their banishment in 1290 is but shortly treated in an introductory chapter. It is interesting to follow Mr. Picciotto in his records, and to be informed by him of the endeavors of Menasseh ben Israel for the revocation of the decree of banishment; of the establishment and growth of congregations and synagogues; of the rise of charitable and religious institutions; of the genealogy of many families now or formerly Jewish; of the achievements of eminent Israelites in mercantile, political, literary, and other fields; of the beginning of the reform movement among the English Jews, and so forth. It must also be admitted that the author has gleaned some new material, hitherto not generally known, from the archives of certain London congregations, so that these sketches somewhat enlarge our knowledge of this segment of history. But it is greatly to be regretted that he in no instance refers to his sources. The value of his statements would be very much enhanced, and the statements themselves would carry greater conviction, if they were sustained by references to documentary evidence, and if the reader were enabled to corroborate and verify, as far as possible, the authenticity of the facts narrated. No historian has a right to demand that his narrative be accepted *prima facie* as entitled to full credence, and particularly not an historian like Mr. Picciotto, who, with almost childlike credulity, and without the least attempt to make a critical sifting of his materials, records as true even the supposed miracles of a Falk Baal Shem, believed in by superstitious people in their time. In short, his sketches leave the impression of being an uncritical compilation of anecdotes and stories, accidentally found here and there, and loosely strung together. Moreover, a great many of the facts stated by him are very irrelevant, and of no sort of consequence. A narrative which thus lacks the unifying spirit of organism cannot be honored with the name of history.

One branch of Anglo-Jewish history Mr. Picciotto has almost totally neglected, or at least has treated in an unsatisfactory manner: we mean the legal status of the Jews in England at different periods. A most interesting chapter might have been written on the development and application of the laws concerning them. Can Jews be competent witnesses? Can they make bequests to synagogues and Jewish charities? How about their marriages and divorces? In all these aspects the English Law Reports are rich mines of information. The author, however, seems to have had but a dim idea of the valuable historical materials to be found in them if properly worked. Otherwise he would not have failed to set forth that, according to Lord Coke, Jews must be ex-

* 'Sketches of Anglo-Jewish History. By James Picciotto.' London: Trübner & Co. 1875. Pp. xii., 420.

cluded as witnesses altogether, but that Lord Hale's views were a little milder, for he thought that a Jew might be admitted as a competent witness to prove a murder, etc. Even in comparatively recent times, as we learn from the Law Reports, there was a prevalence of narrow legal views in regard to the Jews; and it has happened in the present century that a court of chancery arbitrarily transferred a sum of money which had been bequeathed to found a synagogue to a foundling hospital, because, in the eye of the law, a Jewish synagogue was considered an institution to foster superstition! As a curious point in English law, which had no parallel in the German or other Continental *Judenrecht*, it deserves to be mentioned that some privileges and rights from which the Jews were debarred for ages could not be purchased even by apostasy. Not till 1828 were baptized Jews received as freemen of the city of London. What changes in less than half a century! Since then two Jews have dispensed justice as Lord Mayors of London. On the other hand, it would have been not more than proper if the author had shown how far the science of Judaism was fostered by non-Jews in England. Hebrew, rabbinical, and kindred studies had been favorite ones for a long time, and as early as the seventeenth century we meet with the eminent Hebraists Selden, Lightfoot, Pococke, Hyde, etc. A grateful Israelite should not have failed to render acknowledgment and praise to these great scholars.

Regarding Jews in Dublin, Mr. Picciotto is unable, he says, to ascertain positively whether any Jew dwelt in Dublin in the middle of the last century. Here he might easily have been led astray by so great an authority as Leopold Löw, who, in his 'Graphische Alterthümer der Juden' (I., p. 34) twice alludes to the Rabbi Zebi Hirsh ben Ezriel as of Dublin, by a singular and not immediately obvious typographical error for Lublin. We should be glad if we could regard the many misspellings of names to which Mr. Picciotto treats us—*e.g.*, *Netto* for Nieto, *Ziwy* for Zebi, *Phaibul* for Phoibos, or Phoebush—also as printer's mistakes; but they are repeated too often to admit of such a supposition and such an excuse. To another point we may be allowed to call attention before we conclude. It used to be thought that the designation "Star Chamber," given to a certain court of law, was derived from the name of the apartment where the *Shtars* (the Hebrew documents of the Jews) were deposited for safe keeping. Our author adopts this etymology, but the erroneous character of it can hardly be questioned when we consider that, as we learn from Gregorovius's 'Geschichte der Stadt Rom,' there was also a *camera stellata* in the Vatican While acknowledging the diligence and the good intentions of Mr. Picciotto, we must nevertheless assert that the historian of English Jews and English Judaism has not yet made his appearance.

A Course of Practical Instruction in Elementary Biology. By T. H. Huxley, LL.D., Sec.R.S., assisted by H. N. Martin, B.A., M.B., D.Sc. (New York: Macmillan & Co. 1875.)—The lack of a suitable series of elementary text-books on zoölogy, designed to lead the student step by step from the study of the simpler forms of animal life to the more complex, and calculated at the same time not merely to furnish what may be vaguely termed a descriptive survey of the animal kingdom, but to impart a clear and specific knowledge of the structure, physiology, and affinities of the various objects brought under observation, has been long felt by the scientific public. Professor Huxley's treatise is of an essentially practical but at the same time decidedly popular nature. Written in that familiar and vigorous style so characteristic of most of the author's writings, concise in statement and accurate in definition, it leaves little in the scope of the work to be desired. Though not sufficiently elementary in certain portions, and perhaps a little too abstruse in others, it is, on the whole, clear enough to be handled by any one pretending to but a slight knowledge of the first principles of the science. Taking the common yeast-plant (*torula*) and *protococcus*, as forms exemplifying the simplest stage of vegetable existence, and *amœba* as equally illustrative of the lowest type of animal organism, we follow the professor in a minute examination of the microscopic cell and cell-contents, observe their mode of growth, reproduction, and decay, and note the interesting changes which they undergo under the direct influence of heat and light, or through the action of chemical agents. From the investigation of these primitive particles of organized matter—matter which may be almost said to be leading a passive or rather mechanical existence—we proceed to the consideration of the more highly constituted moulds (*penicillium* and *mucor*), plants consisting of an aggregation of homogeneous cells, and which, though showing a true differentiation into organs, still bear a strong affinity to *torula*. *Chara* and the bracken fern (*pteris aquilina*) illustrate a bi-sexual mode of reproduction among the thallogens and acrogens respectively, while the bean affords a familiar example of an exogenous phænogam. Appended to the brief but well-sifted descriptive text which forms the reading matter of the work is a course of instructions intended to carry the student through a series of microscopical researches into the anatomy and physiology of each subject, and which will, in the words of Professor Huxley, enable him "to know of his own knowledge the chief facts mentioned in the account of the animal or plant." The section devoted to zoölogy is treated in pretty much the same manner as that on botany. A number of well-known objects, easily obtainable in most localities (such as the fresh-water polyp, mussel, and frog), serve to typify some of the leading modifications of animal structure, and to represent at the same time the several principal classes into which the animal kingdom has been divided. Great space is allotted to the description of the frog, the details about that worthy subject occupying no less than one-third of the entire volume, or more than 100 pages.

What is especially noticeable in the character of the present work is the complete absence of anything approaching a tendency to speculative theorizing, a remarkable circumstance in view of the number of important questions with which the author's name has been prominently connected. In one instance only do we find an allusion that may be regarded as having any bearing on one or other of the great biological problems of the day—namely, under *bacteria*, where a direct refutation is given to the experiments frequently brought forward in support of the theory of spontaneous generation. Objection might be made to the summary and positive manner in which this interesting question is disposed of, but the author had already fully stated his views on that point in his presidential address before the British Association in 1870. In the chapter on the bean, we are surprised to find no mention of that fact of primary signification in vegetable morphology, the correlation of the different organs of the plant—in other words, the intimate relation which the various parts constituting the flower and fruit bear to the leaf.

It is unnecessary to add anything further in praise of this treatise. The want of illustrations only is to be regretted, as their presence, we are convinced, would add materially to the value of the work.

History of the Modern High German Language. [Geschichte der Neuhochdeutschen Schriftsprache. Von Heinrich Rückert.] Vol. I. (Leipzig: Weigel. 1875.)—This work, like so much that is good in German, will remain, we fear, a torso. The author, professor at Breslau, was overtaken by death just before the opening of the present semester. Unless he has left his manuscript in a state that permits of posthumous editing, we shall have to content ourselves with volume one, which treats of the period prior to Luther. A second volume, according to the author's intent, was to treat of the sixteenth and seventeenth centuries; a third, of the eighteenth and present centuries. Should this first volume be indeed all that we are to receive, we have reason to regret exceedingly the author's sudden death, for a history of the Lutheran and of the Lessing-Goethean periods, as Rückert had conceived and elaborated them in his mind, would probably have started a new era in our study of the influences under which modern German came into being. The present volume indicates clearly the author's method of treatment. It was not his object to write a methodical grammar, nor even to sketch the mutations of German phonetics and inflection in their main features, as Schleicher has done in his 'Deutsche Sprache.' Rückert has rather undertaken to point out the politico-historical, literary, and ethnographical influences that have helped to make the language. He takes up, we may say, what Schleicher has passed by. His work is a history of German culture in its relations to linguistics. Although written by a professed philologist and based upon a thorough knowledge of the principles and results of philological investigation, it is not a technical treatise, but a popular essay—popular in the legitimate sense—and may and should be read by every student of German. It is interesting; but for a certain slipperiness and complication of style, we might almost call it more than interesting. Without attempting to go into a detailed statement of its contents, we may say that we have never met with a juster appreciation of the literary significance of Charlemagne and Otfrid of Weissenburg, or a clearer statement of the character and functions of mediæval classic German (*Mittelhochdeutsch*). The chapters upon the fortunes of the language in the Merovingian period, and upon the great eastward reflux that re-Germanized Lusatia, Prussia, and Silesia under and after the Hohenstaufens, are also masterly. Part second, which treats of phonetics, vocabulary, and syntax at the dissolution of the mediæval system, will probably be less interesting to the general reader, and also more difficult, inasmuch as it presupposes some practical familiarity with mediæval grammar. Taken altogether, we commend Rückert's work as the companion-piece and complement to Schleicher's.

American Engravers and their Works. By W. S. Baker. (Philadelphia: Gebbie & Barrie. 1875. Pp. 184.)—The purpose of the compiler of this little volume has been to put into a convenient form such facts as he has been able to collect concerning American engravers and their works. His list contains the names of eighty-nine persons who have practised the art of engraving in this country in the course of the last and the present century. Most of them are known even by name only to such indefatigable collectors as Mr. Baker, and it cannot be said of any one of them that he has made a place for himself in the first ranks of the art. Mr. Baker admits in his preface that we can lay no claim to a national school of engraving, though "we can point with reasonable pride" to some plates that have been produced here. He attributes the lack of importance of American engraving to the fact that the artistic talent, which might have been directed to the higher ends of the art, has been, since the first quarter of this century, "completely engrossed in bank-note work." This is, however, but a partial explanation of the deficiency of first-rate work in engraving in this country. The conditions of American society and the temper and aims of our civilization have not been favorable to the arts, and are not likely speedily to become so. Mr. Baker's "reasonable pride" in American work leads him in his notices of special engravers to an estimate of their merits which does not err on the side of critical severity, or display a delicate critical discrimination. Thus, out of his list of eighty-nine, we find ten spoken of as "admirable," and a still larger number qualified as "excellent," which would indicate so remarkable a percentage of excellence that we might well wonder at the paucity of good works. Indeed, the truth is that not a single plate has been engraved in America that can stand comparison with contemporaneous work in Europe, and very few which deserve to be prized for the sake of their artistic worth.

Mr. Baker has done his work with care and with general accuracy, and has rendered a service to all those interested in the history of the arts.

The Early Coins of America, and the Laws governing their issue, comprising also Descriptions of the Washington Pieces, the Anglo-American Tokens, many pieces of unknown origin of the seventeenth and eighteenth centuries, and the first Patterns of the United States Mint. Profusely illustrated. By Sylvester S. Crosby. (Boston: Published by the author. 1875, 4to, pp. 381.)—With the publication of Parts 11 and 12 Mr. Crosby has completed his elaborate and thorough work on early American coins. The book gives proof of long and careful research, of unwearied pains, and of great accuracy. For the collector it must be an indispensable manual, while to the general student of American history it affords many curious illustrations of the economical conditions of the colonies, as shown in prevalent theories of currency, in varying standards of value, and in numerous practices of trade. The general absence of artistic beauty in American productions is exhibited in the common ugliness of the coins. No one of them will be prized two thousand years hence for beauty such as makes the coins of Greece and her colonies still precious to the lovers of art. No woman will ever wear one set like a gem for her adornment. The plates in Mr. Crosby's book are suggestive, not so much of the superiority of modern culture as of its inferiority to that of the ancient world. The lack of beauty in common things is an absolute loss. Mr. Crosby's volume is very handsomely printed and amply illustrated. Its author seems to have relied mainly upon its merits to make it known, and we are glad to have the opportunity to bring it to the knowledge of our readers, and to commend it to all who desire information on the subjects which it treats.

*** Publishers will confer a favor by always marking the price of their books on the wrapper.*

BOOKS OF THE WEEK.

150,000 articles, 3,000 engravings, and 18 splendid maps. The best book of universal knowledge in the language. Now in course of publication. Specimen with map sent for 20 cts.
BAKER, DAVIS & CO., Philadelphia.

FOR any Book Desired or Information respecting Prices and Editions, address LOCKWOOD, BROOKS & CO., Boston, Mass., who will promptly reply. Books carefully forwarded, post-paid, on receipt of advertised price. Send for catalogue of our own publications.

F. W. DEVOE & CO.,
Manufacturers and Importers of
Artists' Materials.
Wax-Flower Goods, Varnishes, White Lead, French Zinc and Colors.
115 and 117 Fulton Street, New York.

B. F. STEVENS, AMERICAN Library and Literary Agent, 4 Trafalgar Square, Charing Cross, London, England, supplies Books and Periodicals of every sort by mail or express at lowest London prices. Full particulars of terms and mode of remitting United States currency are given in his priced List of English Newspapers and Magazines, which may be had free on application to him direct in London, or to his Custom-House Brokers, Messrs. Tice & Lynch, 84½ Pine street, New York.

School Material: Kindergarten Material:
Furniture, Stationery, Apparatus, Blackboards, and Liquid Slating. Catalogue sent free.
F. W. MARTINI & CO., 112 William Street, New York.

Interlinear Classics:
LATIN AND GREEK.
Circulars Free. Illustrated descriptive Catalogues of all our publications sent for 5-cent stamp.
CHARLES DE SILVER & SONS,
Philadelphia, Pa.

BOOKBUYERS will find their orders executed with intelligence and promptness by GEO. E. STEVENS & CO., Booksellers, Cincinnati, O. Letters of enquiry as to prices, etc., are invited. Any books will be carefully forwarded on receipt of their advertised price.

The Nation.

NEW YORK, THURSDAY, FEBRUARY 17, 1876.

The Week.

THE evidence which the prosecution has thus far introduced in the trial of General Babcock proves the existence of the Whiskey Ring, while as to the connection of the defendant with it they have proved, by Major Grimes, a quartermaster stationed at St. Louis, that last autumn, after the indictment of MacDonald, he was employed by Babcock to carry on clandestine communications with the indicted man. Besides this, the Government has offered, and the court has admitted, after a long argument, a number of telegrams between Babcock and the Ring going to show that he had been actively at work in their interest at Washington; and a distiller, Bevis, has testified that Joyce persuaded him to resume making "crooked whiskey," by showing him a telegram from Babcock giving assurance that the revenue agents had been kept back. Everest, the Ring paymaster, has sworn that he saw $500 put into an envelope for Babcock by Joyce. On cross-examination, however, he did not appear to be positive as to this fact.

The Senate has passed the Centennial Appropriation Bill by a vote of 41 to 15, and a bill extending the time for completing the Northern Pacific Road until 1885 by a vote of 35 to 18, and also a bill to prohibit the transportation of cattle by rail without a proper amount of food, water, and rest. The machinery provided for the enforcement of this bill is somewhat peculiar, inasmuch as it authorizes United States marshals all over the country to appoint deputies at the request of any corporation for the prevention of cruelty to animals, with power to make arrests. The Democrats generally voted against it, and in the House will no doubt defeat the bill. On Tuesday the Senate passed the Pension Bill, and a bill relating to the disposition of public lands at the South. The principal event of the week in the House has been the passage of the Diplomatic and Consular Appropriation Bill by a vote of 191 to 2. The appropriations are fixed at $914,000, or $470,000 less than last year, a result obtained in a great measure at the expense of missions and consulships. It would be hardly worth while as yet to discuss the items of the bill, as it will have to pass the ordeal of the Senate. A still greater and almost ludicrous reduction of the estimates was made on the passage of the Fortifications Bill, by which $315,000 was conceded in place of the $3,500,000 asked for by the Department. Besides listening to Mr. Blaine's financial speech, the House has accomplished little with regard to the finances. Mr. Hale, however, has succeeded in forcing the Democrats to a vote on his hard-money resolutions, declaring it to be the sense of the House that early steps should be taken to bring about resumption. The resolution received 86 votes, while 137 were cast against it. The hard-money Democratic explanation of a vote like this always is that it indicates nothing, except that the Democrats do not wish to commit themselves in advance of the settlement of the party policy on the currency by their caucus. The caucus is meanwhile, we presume, doing a good deal of hard reading in the works of Henry C. Carey and other leading economists.

Mr. Blaine has made a speech on the currency question in which he goes over a good deal of well-trodden ground, though in a masterly way. He confessed that there was no warrant for the issue of paper-money in the letter of the Constitution, and that the legal-tenders were put out, to use the words of Senator Fessenden, on "the ground of absolute, overwhelming necessity," or under the law of self-preservation; and castigated the Democratic party for not only failing at the close of the war to urge upon the Government the restoration of a sound currency, but for conceiving a violent love for the paper-money and demanding that sixteen hundred millions of bonds should be paid off in it—though we are sorry to remind Mr. Blaine that, in this matter, that great Republican, Senator Morton, was as bad as Mr. Horatio Seymour, and so was that other great Republican, Mr. B. F. Butler, for whom Senator Dawes stumped in 1875, and that neither of them lost their standing in the party; and that that other great Republican, Mr. Boutwell, on whom the responsibility really rested, never once during his four years' administration of the Treasury called the attention of Congress or the country to the necessity of any action about the currency. Chastise the Democrats, by all means, but let us have "equal and exact justice." Mr. Blaine showed once more that the depression of trade is in large part due to the uncertainty as to the value of the currency; that inflation would not cure it; that the substitution of more Treasury notes for the national-bank circulation would not cure it either; that the national banking system is the best one ever devised, and is the best and only necessary source of all the paper-money we need; that the true course is not to increase the power of the Government over the currency, but to put an end to it completely; that a worse body than Congress to "adapt the volume of the currency to the demands of trade" could hardly be contrived; that coin is the only true standard of value; that all attempts to substitute any other have failed and must always fail; that a return to specie payments is all that we need to revive our industries; that Democrats are bad fellows, and need watching; that the true policy of the Republican party is to get back to specie payments, by a "firm, considerate, and conclusive policy," as fast as the Democrats will let them; that with an annual income of $6,000,000,000 we shall have no difficulty in maintaining specie payments after we have resumed; that one of the great obstacles to this return is the general and growing disposition of the people to regard the legal-tender note of the Government not as a debt but "as something never to be paid," which he ascribed in part to the repeal of the provision making the notes convertible into bonds. He opposed the repeal of the legal-tender clause, on the ground that it would force the banks into severe contraction, and "thus disturb credits, embarrass payments, derange business, and create widespread distress among the people."

As we read Mr. Blaine's speech, we looked with much interest in every paragraph for his plan of returning to specie payments, and expected without doubt to find it at the close, where he admits that additional legislation is needed to give the act of last year, providing for resumption in 1879, any value, and says "it is the paramount duty of Congress to provide a process." But we have been disappointed. This is as near as Mr. Blaine comes to telling us how to resume:

"And in all legislation looking to that end, it must be borne in mind that unless we move in harmony with the great business interests of the country, we shall assuredly fail. Specie payment can only be brought about by wise and well-considered legislation, based on the experience of other nations, embodying the matured wisdom of the country, healthfully promoting all legitimate business, and carefully avoiding everything that may tend to create fear and distrust among the people. In other words, what we most need as the outgrowth of legislation is confidence, public and private, general and individual. To-day we are suffering from the timidity of capital, and, so long as the era of doubt and uncertainty prevails, that timidity will continue and increase. Steps toward inflation will make it chronic; unwise steps toward resumption will not remove it. We will have discharged our full duty in Congress if we can mature a measure which will steadily advance our currency to the specie standard, and at the same time work in harmony with the reviving industries and great commercial wants of the country."

Now, this tells us absolutely nothing, and suggests nothing. It is about as useful to us as what one hears from old gentlemen of "approved" sagacity in hotel-parlors and street-cars. There is nothing magical about Congress. Congress is a collection of gentlemen, most of whom are far inferior in ability and attainments to Mr. Blaine, and a considerable number of whom know little more about the laws of currency than about the calculations of the *Nauti-*

cal Almanac. To say that Congress ought to provide a bill, therefore, if it means anything, means that Mr. Blaine ought to provide a bill. He and men like him ought to understand that the time has come for them to tell us in black and white, and in detail, how to resume. We have heard enough about the necessity of "wise and well-considered legislation"; we now want to see it in sections and clauses. Does Mr. Blaine, for instance, recommend an accumulation of gold sufficient to redeem our present volume of legal-tenders? If so, how much does he think would be sufficient? If not, is he prepared to contract? If so, to what extent? Does he not think that a contraction of greenbacks until they were brought down to par would be the best preparation for resumption? Does he think that a contraction of $90,000,000 would destroy the discount? and if so, what objection does he see to it? Now let us by all means have a bill, and bill on bill, until we get the great measure which is to lead us back to coin, "in harmony with the reviving industries and great commercial wants of the country." In saying this, we fully admit—to save time—the badness of the Democrats, and their general hostility to the Beautiful and the Good. One has to say to Republican politicians about the Democrats as Sydney Smith said to Lord Melbourne, who was a great swearer: "Let us assume everybody and everything to be damned, and then go to business."

The Democrats, as might have been expected, have found in the archives of the State Department a perfect arsenal of weapons for their attack on the Republican estimates for the ensuing year. A very slight examination of the correspondence carried on with the State Department by our ministers abroad has shown that they have been drawing their salaries in nine cases out of ten for doing nothing, while, in order to keep up appearances, they have been at the pains to convict themselves of their idleness by writing long letters to Mr. Fish giving an account of the way in which they spend their time. Mr. J. Meredith Read, for instance, who has been representing us at the court of Greece at a salary of $7,500, writes home long despatches about the "imposing ceremonies at the cathedral" on Easter eve, the "state carriage" in which the king and queen arrived, the uniform of the king, the "white satin" robes of the queen (which, he says, "seemed to steal the color from her cheek"), the "magnificent embroidered garments" of the church dignitaries, and a great deal more of the same kind of stuff, the style and matter being that of a flunkeyish reporter of the doings of "society" in town for a country newspaper. The despatches prove conclusively, 1st, that Mr. Read would be better employed elsewhere; 2d, that there is nothing to be done at his post; and, 3d, that the Government, in paying $7,500 a year for it, is paying so much money for the pleasure of preserving an empty form. In the same way, the Hon. John A. Bingham, whose salary as Japanese Minister is $12,000 a year, writes to Mr. Fish the cheering news that the Emperor, in his annual message, referred to friendly "Presidents" as well as "sovereigns"; while Mr. C. A. Logan has been getting $10,000 a year in Chili for writing home that General Grant's message meets with warm approval in that country, particularly the financial policy, which in his own judgment, he slyly adds, is "the only correct one." The question of consulates is of course distinct from that of embassies. As to the latter, we doubt if the Democrats could possibly abolish or consolidate too many.

The excitement caused by the forced resignation of the Clerk of the Ways and Means Committee affords a new illustration of the tendency of politics towards sensationalism. The striking feature of the case, to our minds, is not that a rascal like Hambleton, after a career of blackmailing and perjury, should have taken a fancy to name his child after Wilkes Booth, nor that after the fact was proved Mr. Morrison should have removed him, but that the "Hambleton incident," as they would call it in France, should have been possible at all. A very slight examination into Hambleton's past career would have sufficed to show that he was a person utterly unfit for the clerkship of any committtee, and had such an examination been made there would have been no need of the intervention of the press to prove that he had named his child after an assassin. But no such examination was made. Hambleton got the place in the usual way, through representations of "leading Democrats" that his appointment was necessary to the good of the party, and the chairman who nominally appointed him took him as part of the regular slate, and as if he was himself not a free agent in the matter at all. In fact, he was appointed exactly as postmasters, collectors, and assessors are appointed, and all enquiry into his fitness seems to have been thought in his case quite as irregular and preposterous as it usually is in theirs.

The death of Reverdy Johnson can hardly be said to be a loss to public life, as that career had been practically closed to him since his want of success in the *Alabama* Claims negotiation, but the bar loses in him one of its oldest and most respected members. He belonged to a past generation of lawyers, who made their entrance into life when the practice of the law was a better school for sound thinking, good breeding, and good morals than it is now, and he used his opportunities to such good advantage that he rose to a prominent position, which he held easily to the day of his death. Even his *Alabama* negotiations, now that the passions of the time are no longer active, must be acknowledged to have been creditable to him; and it requires a good deal of discrimination now to make out wherein the settlement obtained by him fell short of what was afterwards obtained by General Grant. The real objection to his treaty was that it was negotiated by a Johnsonian Democrat, who was too polite to the British aristocracy at a time when we hated the British aristocracy.

Mr. Henry C. Bowen has had some further correspondence with the Examining Committee of Plymouth Church, in which he partially rectifies what was faulty in the position taken in his first letter in reply to Mr. S. V. White's "grievances." Mr. Bowen's announcement that he would not reveal the names of the persons whose homes he alleged Mr. Beecher had betrayed, of course deprived any testimony he might offer in support of such charges of all value. But he now proposes to submit his charges and specifications and the evidence in support of them, including the names of Mr. Beecher's alleged victims, to a committee of three selected from such leading men of the Congregational Church as President Woolsey, President Asa D. Smith, President Fairchild, Alpheus Hardy, Judge Lafayette S. Foster, and Julius H. Seelye, under pledge of secrecy as to evidence. This offer the Examining Committee decline, on the ground that they are themselves the proper tribunal for the examination of such charges, and that if he refuses to submit these to them after ten days for preparation, it will only remain for them to discipline him. Mr. Beecher has also, in denouncing Mr. Bowen at the church meeting on Friday evening, said that even if he were disposed to go before such a tribunal on other grounds, he would not submit to any secrecy in the trial. On this point, therefore, this plan of investigation is likely to miscarry. But we must say that the Bowen charges are eminently ones for private examination as long as the tribunal examining them is one to command public confidence. The important point is not with whom did Mr. Beecher commit certain offences, but did he commit them? and if the latter can be settled without dragging in the names of other people, he ought to be the first to rejoice over it. The committee Bowen proposes would undoubtedly have the confidence of the public, and its discretion as to the revelation of names would be respected.

The scene in Plymouth Church on Friday evening, when Mr. Beecher, in a fit of terrible excitement, denounced Bowen as "a slanderer and a liar," amidst the tumultuous applause of the congregation, was a shocking one, and the whole Congregational body is undoubtedly deeply interested in finding some speedy means either of putting an end to these scandals or of putting Plymouth Church in a position in which it will have to bear the whole burden of its own shame. We are glad to see, therefore, that a movement

for a General Council has been initiated by the Andover Church, which, for various reasons, occupies a position of denominational pre-eminence, with a view to getting at the "bottom facts" of Mr. Beecher's case. We trust there will be no delay in acting on the suggestion. The Advisory Council which is now in session on the call of Plymouth Church can settle nothing of the least importance, and is already denounced as "packed." We believe there is little doubt that those who question Mr. Beecher's innocence will not be at all, or only feebly, represented in it, and the questions submitted to it will be mere points of procedure. As regards the interests of religion, the whole clergy of the denomination could hardly do better than suspend their preaching and praying for one month, jerk Brother Shearman and "the Examining Committee" aside, get Mr. Beecher and *all* the witnesses, without rules of exclusion, before some respectable tribunal, and have the whole thing out once for all.

There have been several failures of importance in the anthracite-coal trade, and these have certainly done nothing to strengthen the combination which controls the mining and transportation as well as the market price of coal. The principal members of this combination deny that there is a prospect of its disruption, and say that the trouble, which is confined to middlemen, and is only of indirect and slight importance to the combination, does not and will not weaken the latter. There have also been an unusual number of mercantile failures in Boston, traceable remotely to the losses by the great fire and to the panic. These failures, accompanied by the Winslow-forgery disclosures, have created in Boston a degree of distrust which, for the time being, seriously affects business there. Outside of New England there is what the market reports call "an improved feeling," this being most apparent in the Western cities. The foreign commerce, however, of New York and of the other Northern Atlantic ports during the expired part of the present year, shows an important gain over last year; the imports at New York alone having been about $5,000,000 more in January than in the corresponding month a year ago, and the exports, exclusive of specie, about $2,500,000 more. At the Stock Exchange there has been a further advance in securities which are bought for investment, as well as a considerable rise in shares which are chiefly, if not entirely, dealt in by speculators. The action of the Wisconsin Legislature (one branch of which has passed the bill repealing or modifying the Potter Act) has given a strong support to the upward movement. The gold price of $100 greenbacks ranged during the week between $88 20 and $88 69.

On Tuesday the interest on $17,785,350 5-20 bonds ceased, as that amount had been called in November 15. Of this total, $12,785,350 were called at the request of the Rothschild syndicate, which subscribed for an equal amount of United States five per cent. bonds. These five per cent. bonds the syndicate paid for in called 5-20s (six per cents), matured coupons, and gold. The payments for more than $8,000,000 were made before Tuesday, and of the $4,000,000 paid for on that day the greater part was paid also in called 5-20s and coupons, so that less than $2,000,000 gold had to be transferred from the market to the Treasury. This is a larger amount than came out of the Treasury, although much less than will come out as the called 5-20s which the syndicate were not able to obtain are presented to the Treasury for redemption. There are, of course, no bonds to be issued in the place of the $5,000,000 5-20s called for the sinking fund. It is not known what part of this $5,000,000 the syndicate succeeded in getting and in using in payment for new fives taken by them, but for the remainder the Treasury will be obliged to pay gold as they are presented. It is probable that the presentation of these bonds by holders will extend over several weeks, possibly months. With the closing of accounts between the syndicate and the Treasury, it deserves to be said that Mr. Bristow, if compelled to pursue the policy he has, has managed far better for the Government than his predecessors. His refunding has cost the Government less, and the work has been accomplished by the Rothschild syndicate with as little disturbance as possible to the various markets.

In England, the Burials question and the Suez Canal purchase occupy the public mind to the exclusion of nearly everything else. The Burials Bill now before Parliament provides for the performance of a burial service in the churchyards which are the national burying-grounds, over every person by the minister of his choice or denomination, and is vehemently resisted by a portion of the clergy of the Established Church as an invasion of their rights, one of which, it appears, in their eyes consists in prohibiting the performance of all services if the friends of the deceased person do not choose to have theirs. Some of the bishops, headed by the Archbishop of Canterbury, counsel submission and conciliation, and others deal in vague generalities, while some of the ministers are very bitter; but the feelings of the Dissenters have been so roused by hindrances at moments when people are unusually susceptible, that there is little doubt the proposed legislation will be carried. The spirit shown by the Vicar of Owston Ferry in the Keet case is unhappily very rife, and it does more to cloud the future of the Anglican Church than any hostility which exists to it on the outside. One minister writes to the *Spectator* that if the graveyards are to be invaded in this way by Dissenting ministers, "parents of means and position" will not bring their sons up for the Anglican ministry, and thus the clerical profession will decline in respectability, and this branch of the "national service" lose its dignity and value. The irritability is increased just now by the almost contemptuous way in which Lord Cairns, in delivering the judgment of the Judicial Committee of the Privy Council, disposed of the Keet case, which he evidently considered a trumpery affair, in that the minister would not even show the bereaved father the courtesy of stating his reasons for refusing to allow him to put his own inscription on his daughter's tombstone, but refused to hold intercourse with him except through the stone-cutter. The Rector of Little Petherick, in Cornwall, now announces that he will receive no letters with "Rev." on them.

Mr. Bright has made a speech which is attracting a good deal of attention as a possible programme of the Liberal party, who have been for some time sadly puzzled to know what they had better do or try to do next. Mr. Bright proposes that they should now occupy themselves with the extension of the franchise to the country residents, on the same qualification on which the townspeople now hold it. Nobody votes in the country who does not pay £15 a year rent or is not rated for the poor at £12 a year, and the townships or villages have no corporate existence nor have the counties, the most important part of their affairs, including taxation, being attended to by nominees of the crown—a departure of the widest kind, but one now of long standing, from the early English usage. He proposes to abolish primogeniture, which, however, only operates in case of intestacy, assimilate real to personal property in its legal incidents, give the counties and villages municipal governments, and redistribute the representation so as to make it accord more closely with the distribution of population. As this would deprive the landed gentry of powers of which they have now been in solid possession for over three hundred years, it would amount to a far greater revolution than has been achieved by the extension of the suffrage in the boroughs, so that the programme has at least the merit of promising a good long and tough job, which is perhaps what the Liberal party most needs. But then, as the *Economist* points out, Mr. Bright's notion, which is shared by many people in this country, that land in England is tied up and kept in particular families by primogeniture and entail, is fallacious. It is, in reality, transmitted in the main by "family settlements," which multiply greatly the number of people having an interest in it, and there is hardly any entailing or settling of land which does not have a parallel in the disposition, by bequest or settlement, of consols. In fact, the idea of effecting any considerable change in the structure of English society by any redistribution of the soil which does not interfere with testamentary freedom, is a chimera. Englishmen who wish passionately to own land, and have no money, will always emigrate.

THE THIRD-TERM BUGBEAR.

THE amendment to the Constitution restricting the Presidency to one term, and lengthening the term to six years, has been lost in the House, and will probably not be heard of again. This is the less to be regretted because it was really an attempt to escape the direct and thorough treatment of evils of which everybody acknowledges the existence, by a process which at best could only prove a palliative. The reason why it was proposed to confine every President to one term is to be found, as everybody knows, in the danger which people see, or think they see, in the present use of the civil service for electioneering purposes; and the peculiar circumstances of the country make the danger seem more than usually formidable just at present. General Grant has served for two terms. The great majority of the people think this enough, but he declines to say whether he thinks so too; and as long as he is silent the majority are in doubt whether he cannot, by the vigorous use of his administrative machinery, procure his nomination by the Republican Convention, and should he be nominated by the Republican Convention, whether he would not have to be elected in order to save the country from the Democrats. In short, one of those crises has arisen in which it is apparently possible for a man already in office and fond of power to keep himself in office, whether the voters want him or not. In casting about for a remedy, constitutional ineligibility for more than one term is the first thing that comes to hand, and it accordingly appears in Congress.

We are glad it has been rejected because, like the handing over of the Indian service to the missionaries, it seems a confession of helplessness for which there is no good reason. We can prevent any one man's serving in the Presidential office for more than one term by a constitutional amendment, but we cannot by this alone get rid of the evils which we fear from his serving two or three terms. A President in our day, and with our system, is not really one man, but a set of men. There has been no individual President since Jackson except Lincoln, and we doubt if we ought to make an exception even of him. Nominally, the President represents the party which elected him, and, constitutionally, he represents the whole people, but he is never very long in the chair without being merged in a group of managers, some in the Senate and some out of it, whom he consults and confides in, who keep him informed of the drift of opinion and advise him as to everything but the routine business of his office, who really control him in his official conduct, and who, in fact, form a real cabinet, as distinguished from the sham Cabinet composed of the Secretaries. They give the tone to the Administration—that is, decide to what influences it shall be most sensitive, and what classes of objects it shall seek most strenuously to promote; and to them is committed the management of the civil service. They determine in a general way what offences shall be punished with decapitation, what services in money or activity shall be exacted of office-holders, and what disposition shall be made of the most valuable places in the public service. It is especially their duty to have the civil service well in hand before the election of all important conventions, so as to be able to control them whenever it seems necessary or desirable they should be controlled. Now, as long as this state of things lasts the evils of a third term or a tenth term are not got rid of by providing that no man shall be eligible to the Presidency more than once. As long as we leave it in the power of the actual incumbent of the office and of his immediate adherents to exert a strong influence on the choice of his successor, we gain little or nothing by ousting him, because the régime of which he was the head would remain, and another man, of like temper and aims and ideals of government, would take his place.

Nor is there any argument worth examination against a third term in the example of Washington. When Washington refused to serve a third term the world was haunted by the fear of absolute power, and politicians in this country were still tormented by the dread of a monarchy. A president for a short term was still an unknown officer; the possibility of compelling the chief executive officer to lay down his office regularly and submit himself to the popular judgment at stated intervals was something over which many wise men, with the experience of many ages and nations before them, shook their heads as a dream, just as they would have shaken their heads over the notion that forty millions of people could be governed without the aid of a large standing army. These fears have been dissipated by actual experience. If there be any lesson in politics which the last hundred years have taught thoroughly, it is that the majority in this country is irresistible, and that when roused it is sure to have its way; and that the notion that any man can, by long continuance in the Presidential or any other office, make himself irremovable, or effect any change in the popular conception of the government, is a chimera. To listen to much of the talk about the danger of a third term, one might imagine that there were signs in popular opinion of a fondness for arbitrary power, though where they are to be found it would puzzle anybody to say. The fact is that what is most needed in the attitude of the people towards the Government is a deeper sense of the value and, indeed, of the necessity of greater stability in the administrative machinery; and if the increase of this stability would promote the frequent re-election of Presidents who had distinguished themselves by honesty and ability, so much the better. The very essence of civil-service reform is to be found in the doctrine that public servants should hold their offices during good behavior. We shall never have a good civil service worthy of a great civilized nation until this doctrine is converted into a rule. It is, within certain limits prescribed by considerations which we need not discuss here, as applicable to the Presidency as to collectorships and postmasterships. One of these considerations is the obvious one, that it is of the utmost importance to the political education of the voters and the real efficiency of the Government that no person who fills the highest place in the administration, whose discretion is wide and whose accountability is therefore necessarily vague and ill-defined, should acquire a feeling of certainty about his continuance in office; and continued re-election might, and doubtless would, produce this feeling. But, as a rule, the weightiest interests of the country require that if the people find a man whom they can trust they should, if they please, be able to keep him in his place as long as they find him useful; and the reform which most of all is needed in American politics is the creation of a disposition to apply this to all offices from the Presidency down, and the extirpation of the notion that in a highly organized society like ours anything is gained by change for the sake of change. In short, our whole civil service, from top to bottom, should be organized and administered on those principles which the experience of the human race has shown are best adapted to get from human nature the display of its highest qualities.

The only thing that needs to be done about third terms or sixth terms is to protect the people thoroughly against having their liberty of choice interfered with every four years by the Executive, and the proposal to confine each President to one term would, if accepted, simply entrap the public into a surrender of all hope of a reform in the lower branches of the civil service, and leave politicians to pursue the wretched arts by which such "statesmen" as Conkling and Morton make their reputation. If the arbitrary power of the President over the administrative officers of the Government were restrained within proper limits, and they were forbidden to "work" in politics, and the nominating conventions were therefore elected without official manipulation, no restriction whatever on the choice of the people would be necessary. Indeed, there is in any attempt to restrict this choice something like an admission of the very worst things that have ever been said against constitutional government; for if the people be not competent to select a candidate for an office so conspicuous as the Presidency, and if after he has served for four or eight or twelve years they are not competent to decide whether it is wise or safe to try him again, on what point of policy or legislation can the popular judgment be trusted?

THE BAR AND THE LAW SCHOOLS.

THE proposals of the Bar Association Committee on the subject of admission to the Bar have brought out a lecture from Professor Dwight, of Columbia, in defence of the present privilege of the Law School which he represents. Anything that comes from such a source is entitled to respectful consideration; at the same time, the turn which Mr. Dwight has endeavored to give the discussion strikes us as very unfortunate. The present state of the case is this. Four collegiate institutions, Hamilton College, the Albany Law School, Columbia, and the University of New York, have in this State the right to admit to the Bar without other examination than they see fit to require. Hamilton College is entitled to admit students to the Bar on their passing an examination by a committee appointed by the Supreme Court. At Albany the students must have studied three terms of twelve weeks each. At the University in this city the time is fixed at three terms of twelve weeks each, or two terms of twelve weeks each with one year elsewhere. In Columbia College eighteen months is required. In the case of Hamilton College, no fixed period of study is required. It appears from these details that there is in this State at present, with regard to admission to the Bar from the Schools, no system whatever. The acts entitling these colleges to admit were passed without reference to any common standard of reputation as regards the faculty, the time of study, or the nature of the curriculum. They were, of course, got through the Legislature by the exertions of the friends of the several institutions, without any consideration of the relation which ought to exist between the different parts of the system. In the case of any applicant who is not a graduate of one of these Schools, he must by the present rules of court pass three years in study and in an office, and then pass an examination under the direction of the courts.

The committee of the Bar Association propose that these special privileges of the Colleges be changed so as to prohibit the granting of diplomas except after a two-years' attendance, and that no graduate of the Schools shall be admitted except after a year in an office in addition to these two years. The chief practical effect of this would be to diminish considerably the attractiveness of the Columbia School, which can now secure for a student the right to practise after a period of study lasting two years; if the reform were adopted, the School would not offer applicants any extrinsic advantage. Under these circumstances, it is very natural that Professor Dwight should come to the defence of his School, and should endeavor to show that the privilege it possesses works no injury to the profession; but when he discusses the subject as if the question at issue was the relative advantages of legal education in Law Schools compared with that obtained in offices, he makes what seems to us a capital mistake. If there is anything settled with regard to legal education, it is that no such education is complete without both kinds of study. Practice may make up for the want of a thorough education, and no education, however thorough, will make up for the want of practice, but we take it that every intelligent man admits nowadays that no professional training is complete without both. Indeed, in all other professions this is not a matter which any one would think of discussing. No one, for instance, is allowed to become an army or navy officer without both kinds of preparation, and any one who attempts to practise medicine with a merely practical training usually passes for a charlatan. That it should still be considered by anybody an open question with regard to the law—so that a professor of Mr. Dwight's standing can even imagine himself under the necessity of gravely proving the value of theoretical legal training—can only be considered one more mortifying proof of the degrading effect which a system of wholesale admission to the Bar and the election of judges have had upon general professional opinion.

In considering the question what would be a proper test of fitness for admission to the Bar, we may set it down as certain that no man or institution should be allowed to prescribe it who has a personal or pecuniary interest in allowing candidates to pass. This is so plain a principle that what surprises us is not that the Law Schools should have obtained their present privileges, but that, when attention is directed to the matter, there should be any discussion whatever over the propriety of their retaining them. Their possessing the power of deciding whether the young men they have themselves prepared are really qualified is nothing less than an abuse, which may, in some cases, like that of Columbia College, be mitigated by the exceptional excellence of one or two professors. But this excellence is only a passing incident at best. It may exist to-day, and to-morrow cease to exist. The only terms on which the Law Schools should be allowed to grant admission to practise would be the concession to the Courts or the Bar of the appointment and dismissal of the professors, and the payment of the latter in the main by fixed salaries. Failing this, the proper function of the Schools, and the only ones which can be safely entrusted to them, is the preparation of students for an examination prescribed either by the Bar itself or by the Bar under the direction of the Courts; and the value of the instruction given at the Schools, and the honesty and efficiency of the professors, should be ascertained in this way and no other. The Courts might very properly prescribe a certain period of study at a School in lieu of a certain period in an office; but if the examinations were thorough and searching, in principles as well as in practice, it would hardly be necessary to exact attendance at the Schools. Young men would go to them of their own accord. The universities do not require that a boy shall, before admission, spend a certain length of time at a preparatory school. They simply require that he shall have a certain amount of knowledge, and as a matter of course he goes where he will get it. The examinations might, however, as we suggested last week, be made to give a most useful stimulus to good legal education, and to exalt good Law Schools in public estimation, by publishing the rank of candidates at the examination for admission, or awarding honors to special degrees of merit. A more valuable or honorable kind of éclat than this would give to a young man just entering on professional life, or one better calculated to bring into prominence the merits of particular Schools or tutors, it would be difficult to imagine.

At the same time, we acknowledge freely that owing to the present condition of the legal profession, both at the Bar and on the Bench, the difficulties of restoring or maintaining a high standard of admission are considerable. The mode in which the judges themselves are selected is not one calculated to give the Courts a very high sense of responsibility, without regard to the tone or efficiency of the Bar. There are only two good modes of choosing judges possible with the present constitution of the human mind—one the French or Continental system, in which judging is treated as a profession in itself, and a man is appointed to a low grade of the office at the outset of his career, and left to find his way up to the higher courts as he grows older, by a display of talent and integrity. The other is the English system, which may be said to be the only one adapted to our system of jurisprudence, in which judges are appointed by the government, but the appointing power is restricted rigidly, by a custom which has the force of law, to the candidates who have reached the front rank at the Bar by a long course of practice. Our plan of indiscriminate selection from lawyers of any age or standing by a political caucus, is too barbarous and absurd to admit of classification or characterization. It sometimes picks out good men, but always by accident. We believe one gentleman reached the Bench in this city at the last election who attracted attention as a candidate simply by his skill as a marksman with the rifle. The effect of this state of things on the Bar is known to all lawyers. The tone of the profession has been seriously lowered by it, and it constitutes one of the difficulties of reform in the matter of legal education. But then we have to reform with such materials as we have, and not with what we dream of, and we must take it for granted that the Courts will, if appealed to, do whatever is necessary to keep the profession tolerably clear, at least in its lower stages, of sharpers and ignoramuses. But the initiative must come from the Bar, and

the application of any tests that are devised must after all be committed to members of the Bar, and the Bar is really more directly interested than any other class in the community in keeping unworthy persons out of the profession. If the Bar of the State had any organization, we should urge the committal of the whole matter to their hands, without interference from the Courts, and organization enough for this purpose they certainly ought to have. The American Bar is, we believe, the only one in the world which does not concern itself about the qualifications of candidates for admission to its ranks and their manners and morals after they are admitted; and the resulting damage to the administration of justice and to that source of public morality which lies in general confidence in the administration of justice, is very great. The English Bar, which most resembles ours both in the nature of its duties and in its relations to the Courts, has always had charge of the qualifications and admission of its members; and, although it abandoned for two centuries all pretence of imposing any test of knowledge, the mere discipline proved sufficient in the worst times to maintain a high standard of honor, while the usage which governed the selection of judges and the tenure during good behavior kept up the character of the Bench. That the absence of any test of knowledge at the admission of candidates did not work mischief in England, was due to circumstances which have no parallel here. In England the profession of attorney is and always has been closed to all who have not passed a long apprenticeship in practice, and the clients always approach the barrister through the attorney, and the attorney performs a process of selection on the Bar, which prevents ignoramuses from getting any important business. The public was, therefore, constantly protected against the incompetency of untrained counsel by the watchfulness of trained attorneys. The system was clumsy, but on the whole it worked tolerably well, and was that which prevailed during the most brilliant periods of English legal history. The only one suited to our institutions and manners is a rigid examination by the Bar of all comers, combined with the exaction of a term of service in an office, and possibly of attendance at a Law School; but this last requirement may mean nothing. Whether it would prove a sham or a real qualification would depend mainly on the thoroughness of the examination. The whole subject is a more serious one than appears on the surface. One of the great dangers and difficulties of our time is that the public is too busy or too careless to notice any but the palpable and direct causes of social demoralization; but, as every thoughtful man knows, the dangers which most threaten the body politic are, in their origin, apt to be remote, obscure, and indirect. We hear a good deal about paper-money and speculation and the war as the causes or promoters of the scandals which now fill the papers and plunge patriotic people in dismal foreboding. But those who remember that law is in reality the embodiment of the morality of the community, the form in which it soberly and deliberately presents its notions of right and wrong, cannot but regard the committal of that application of morality to the common concerns of life which we call the administration of justice, to a Bench and Bar constituted as ours now is and has been for thirty years, as one of the most deadly and insidious attacks ever made both on the public and private conscience.

THE STATE OF CUBA.

HAVANA, February 1, 1876.

IT seems to be admitted on all hands that the insurrection here has greatly changed in character of late years. At first it was a political movement in a true sense; but now that can scarcely be said of it without explanations and reserves. At the outset there was an attempt, more or less successful, to organize a government and an army; but now, after so many years of conflict and with the disturbances actually covering more territory to-day than they have done at any previous time, there is apparently no political and scarcely even any military organization among the insurrectionists. As is well known, they have secured control of no port, and it is further true that they occupy no town in all the island. The disturbed districts consisted originally of a region mainly mountainous and wooded, and to this they were confined (with some exceptions) until about a year ago Since that time they have made their way into the rich sugar-producing country of the "Cinco Villas," where their bands seem to wander at will, burning the fields of sugar-cane, which, at this season of the year, and particularly with the prevailing drought of this year, catch fire like tinder. The bands of insurgents engaged in this work consist chiefly of negroes and Chinese. They cross the country (which is very thinly populated) by wood-paths and by-ways, and, on arriving at a plantation, they generally begin operations by stealing all the portable property which they can secure, taking watches, clothing, etc., from the superintendent and his subordinates, and even carrying off the clothes of the negroes and Chinamen who are on the plantation. Then they burn the cane-fields. This burning, however, in many cases does not effect as much injury as it seems to do; for the burnt cane, if ground within a fortnight, will yield sugar almost as well as if it had not been burnt. It is therefore customary for neighboring plantations to devote their mills for the time to grinding the cane of the burnt plantation. Thus, in some cases the whole crop, and always more or less, is saved. In one or two districts the cane-fields are not burnt, the planters preferring to pay blackmail to the insurgents, but generally they take their chances; and the whole number of estates burnt is so small that (considering the impunity which the insurgents enjoy) the inference is unavoidable that they are very few in number.

The Spaniards complain that they cannot find the insurgents, but, after making all allowances for the real difficulties of the case, there is no denying that such incompetency and such corrupt mismanagement as have prevailed here among the civil and military officials of the Spanish Government have seldom been seen anywhere. The truth is that the officers like "the war," as it involves no fighting, and they get active-service pay; while the commissariat and civil officers have ample scope for peculation and fraud, and they have improved the opportunity to the utmost.

Since the world began there never was a "war" in which so many men were engaged with so little bloodshed. There is scarcely ever even a skirmish. The soldiers who have been sent here in such numbers die not of wounds but of dysentery and of yellow fever. They are miserably fed and wretchedly sheltered, being defrauded of their supplies by their officers, to whom (as a class) this is a great carnival. All talk of "sanguinary warfare" and lamentations over the "bloodshed at which humanity stands aghast" are pure nonsense. There were at one time plenty of "outrages" here, of the sort which we in the United States know are to be expected in disturbed conditions of society and in a partially civilized population, and these outrages when they occurred were often barbarous enough; but that was mostly in the hot blood of the commencement of the struggle, and such occurrences are seldom heard of now, though doubtless they occasionally happen. In the cities and towns all is as quiet and peaceable as in New York. The volunteers are the local uniformed militia, and almost every other man in the streets wears the little cockade which shows that he is a volunteer. All guard duty is now done by them in Havana and most other places, and the regiments are sent in turn to the front for duty at the "seat of war." The volunteers wear a neat uniform, and are well drilled, soldierly, and good-mannered. All this cannot be denied. They are drawn chiefly from the ranks of the shop-boys and laborers, and, at the outset of the rebellion, there was a very bitter feeling between them and the upper classes of creoles in the cities, which led to many "outrages," such as the firing of the Tacon Theatre. But foreigners here say that in many of these cases the attack came from the creoles, and that, if the Spanish authorities had published to the world a true narrative of the number of volunteers assassinated, the sympathy of the world would not have been turned so strongly against the "volunteers." However that may be, it is certain that all this is far away in the past.

I have previously said that the insurgents seem to have no civil and scarcely even any military organization. It would be difficult or impossible to fix upon any visible head or controlling power among them with whom any negotiations could be consummated. At the moment, it is supposed that the chief leaders are two negroes or mulattoes from Santo Domingo, by name Maximo Gomez and Diaz. These men took sides with the Spaniards when the latter sought to conquer Santo Domingo, and, of course, they are now excluded from their native country. Besides these two, the other chief leaders are supposed to be an individual who was a dentist, and who is called "the Inglesito" (or "little Englishman"), and another known as "the Polaco" ("the Pole"). What military organization (if any) there may be, and how many men there are under arms, and what proportion of native whites are included in the forces, no one knows. The strong probabilities are that there are comparatively few whites of pure blood in the insurgent ranks, and that their forces have but little discipline

or coherence, while it is quite certain that in numbers they are immeasurably inferior to the Spaniards.

A leading fact of the situation here is, that the Spaniards form about one-sixth of the total population of the island. The remaining inhabitants consist in nearly equal numbers of native creoles (more or less of pure white blood) and of negroes and Chinese, the slaves being about equal in numbers to the free negroes and Chinese. Of course you are aware that gradual emancipation has been in progress since 1868. Now, the Spaniards seldom bring their women out here. They come as youngsters, and return to Spain before their old age begins. Hence, the Spanish population is composed almost entirely of able-bodied men, and they are nearly as numerous as all the able-bodied men of all other races in the island. They are, as a rule, active, hardy, industrious, and sober. You will thus see that the moral and physical ascendancy which they maintain is by no means wholly a matter of colonial authority.

The "Casino Español" is a sort of "Union League Club," with adaptations to local circumstances. It has large rooms where meetings are held, and public balls are given under its auspices. The Spaniards of wealth and position are generally inclined now to have little to do with it, as it is thought by them to be too democratic in a social (not in a political) sense. At times the managers of the Casino have exercised great political influence, but that time is past, partly owing to changes in the character of the men who have control, and partly to a modification in the views of the members of the Casino generally. This change is illustrated by the fact that, within a few days, the whole of its Board of Directors have resigned, in consequence of their failure to induce the members to bring the influence of the Casino to bear to secure the appointment of Intendente for one of their number. This attempted pressure was discountenanced by the members of the Casino, and the board has been led to resign.

The Spanish Government here certainly has been wretchedly bad—not so bad, perhaps, as was the government of the Tweed Ring in New York, but that was more tolerable to New Yorkers because, at least, it professed to be elected by them, and was not imposed upon them by external force. Spain is almost (perhaps quite) the only country of Europe in which the so-called "democratic doctrine" of *rotation in office* prevails as the rule. In Spain, every change of Ministry (and much more every revolution) implies a change of all the subordinates in office. Thus, with offices bestowed as the reward of political services, without security of tenure, and with very low salaries, the whole Spanish civil service is demoralized, inefficient, and corrupt. This applies both to the Peninsula and to the island of Cuba, but particularly to the latter, since, owing to its unhealthiness in summer, only the worst of the office-seeking class of Spain are willing to accept service in any of the subordinate places here.

Jovellar is trying to bring some order into the chaos here. Already he has dismissed several prominent officials, and has sent two new commanders to take control of active operations in the field. As to the probabilities of his success in bringing about any great increase of vigor and good management, opinions differ very much; but generally it may be said that even ardent Spaniards have only limited hopes. It is admitted, however, that Señor Rubi has accomplished wonders in the custom-house, where there was the greatest corruption and fraud.

The best parts of the local government here are the "ayuntamientos" or town-councils. They are chosen by the vote of the "mayores contribuyentes" or larger taxpayers. If the legislation and taxing power of the island were put into the hands of a body chosen by this constituency, I do not doubt that it would prove a most valuable reform, and I should hesitate long before proceeding to any more radical reforms at present. With such a heterogeneous population as exists here, a republic with universal suffrage would involve continued disorder *infinitely* greater than it ever was at the worst in any of our Southern States; it would even be far worse than it was for so long a period in Hayti and Santo Domingo; for here the population is far less homogeneous and far less manageable than was the population of that island. Even in Italy there never would have been the course of wise and gradual reform which the world has witnessed with admiration if the suffrage had not been limited by a high property qualification.

I see that the American press has exposed the untruth of the assertion that trade between the United States and this island has been diminished in consequence of the disturbances here. While it is true that in the districts harassed by the insurgents there has been a great diminution of production, especially of sugar, it is also true that this decrease is much more than offset by the augmented production of the greater part of the island. The drouth this year will cause probably a smaller yield compared with the best crop, but this reduction will be compensated, in part, by the increased area that has been planted.

THE GERMAN PRESS.

GERMANY, January 24, 1876.

"WE ought no longer to cherish the illusion that, in the whole field of intellectual, scientific life, with us everything is excellent, incomparable. For some time enemies, whom we may no longer leave unnoticed, have been gnawing at the very foundations of our national erudition (*Nationalbildung*)." Thus one of our most renowned historians writes in a recent very instructive treatise entitled 'Archives and Libraries in France and Germany.' If these sentences had been written at the time, I would have quoted them in my letter introductory to a discussion of the university question in Germany. I am enabled to say from personal knowledge that the author would not have thought them misapplied there, as he would willingly authorize their being used with regard to another question of hardly less importance—our daily press.

Some weeks ago Bismarck indulged in some remarks on "the fifth great power"—as Napoleon I. was wont to call the daily press—which have attracted considerable but hardly sufficient attention. He is reported to have complained in a conversation with certain members of the Reichstag that our press is haunted by an inordinate desire for important news, especially with regard to foreign affairs, and that it is prone to submit the concerns of other states to microscopical examination, while, in the huge complexity of our own problems, it sadly fails to come up to the mark either as a collector of facts or trustworthy teacher of the masses. Several leading papers have taken issue with the Prince upon these accusations, though they have been careful not to deny their truth *in toto*. The public, as it seems to me, does not wholly agree with the opinions of either, and it would indeed be strange if the views of either should be quite correct, both being parties in the case at issue. To judge fairly, one must not only speak of the actual condition of the German press, but also enquire how it got to be what it is. Our press is of much more recent origin than probably anybody not well versed in our history would suppose. Our neighbors on the left bank of the Rhine had furnished us ample materials for reasoning very wisely and with German thoroughness on every question connected with the press long before we ourselves got anything deserving this name. One of the best fruits of the national uprising against Napoleon was the first feeble attempts to create this organ of public opinion. And feeble enough they were. Two facts will suffice to show what the condition of the press was at that time. Its headquarters were neither in Vienna nor in Berlin, but in little Jena, for the simple reason that the friend of Goethe was by far the most liberal-minded and enlightened political thinker of all the German princes. Taking the spirit and the needs of the times into consideration, all the conditions necessary for the development of a high-toned and judicious press were given here. Only one little thing was lacking: there was no real political life, because all the good-will, patriotism, and judiciousness of the Grand-Duke could not make little Saxe-Weimar a real state. Treitschke, in one of his essays, ascribes the failure of "the most noble-minded and best-gifted" politicians of those days, the Gagerns, Wangenheims, etc., principally to the fact that "not one of them had gone through the severe schooling of the stern political life of a great state." And the very learned and very patriotic professors who were the editors of those renowned papers had not enjoyed the training of any political life whatever, and, in some cases, even their studies as professors had no connection whatever with politics. Perhaps the "best-hated" of all these well-hated liberal papers was Oken's *Isis*, which was properly not a political paper at all, but a scientific organ. There you have in one word what our press was at that time, and those were heydays. Then followed the days of Karlsbad (1819) with their gag-laws, and the days when Prince Metternich declared that "the liberty of the press" promised in the Bundes-Acte meant "uniform rules of censorship."

Twenty long years the silence of a death-like sleep reigned in Germany, only for a moment interrupted in 1830 by the effects of the French Revolution. The cradle in which our present press was rocked was the Revolution of 1848. I do not belong to the pretty numerous class of men who prove their own superior wisdom by belittling the men of 1848. The successes of 1866 and 1870 would not have been possible if they had not been preceded by the great *fiasco* of 1849. But though we have reaped a rich harvest from the seeds then sown, and therefore owe the highest gratitude to the men who shook Germany out of her fearful lethargy, yet they proved unequal to the task they had undertaken, and the immediate result

of their efforts was a pitiful failure after a first great success. It is characteristic that for a while the paper which did the best service was the *Deutsche Zeitung* of the arch-doctrinaire Gervinus. It is well-known how then, with leaden tread, reaction once more stalked over the country, and how, right before the "seven days' campaign" which changed the face not only of Germany but of all Europe, the Prussian Government could venture upon another attempt to rule and gag the press by "ordinances." If one keeps all this in mind, he will not feel inclined to throw stones at the press, but rather be astonished to find it what it is. But to maintain, therefore, as the Cologne *Gazette* does, that it does not compare unfavorably with the press of any other country, appears to me foolish. It will be a good while yet before it is equal to the press of either Great Britain or the United States, though it cannot be denied that, in some respects, it is even now superior to at least the latter.

I might mention, in parenthesis, that with regard to the press of the United States the kind arrogance of absolute ignorance reigns supreme. It is hardly an exaggeration to say that our gentlemen of the press know not a whit more about the press of the United States than they do about the press of the moon. The *New-Yorker Handelszeitung* is the only and infallible source for everything concerning the great Transatlantic Republic; only on special occasions, and these occur very seldom, the authority of the *Herald* also is consulted. As to correspondents, the *Augsburger Allgemeine Zeitung* is the only one that is generally pretty well served. The *National Zeitung* has lately received from time to time an article from a gentleman whom the Americans themselves have often acknowledged to be competent, but it seems not to have been able sufficiently to appreciate its good fortune. The Cologne *Gazette*, which for several years in succession has had very good correspondents, has learned so much by their reports that it is now ready to swallow anything one might send.

Our press is comparatively very free from what you term "journalism," though we have some very good representatives of what we call "the revolver press"; the *Eisenbahn Zeitung* (Berlin), for instance, could successfully compete in everything mean and dirty with the worst New York one-cent paper. Things and persons are talked about in a decent tone, but, as a rule, also in a pretty tedious manner. If the American journalist is often too racy, his German colleague is still oftener a "Philistine," who bores us with his long-winded, decorous sensibleness. There are some among them who might do better, but they write under a severe constraint, because we are so sensitive that what elsewhere would be considered a pin-prick is with us felt as a stab. Ministers and all the minor "public authorities" are severely blamed for making a great noise about the slightest attack, but the truth is that they are in this respect genuine Germans; we should do exactly the same thing if we were in their place. Twenty years more of the constant fighting that is consequent upon real political life will thicken our too tender skins. In the meantime we are very glad when our daily duty with regard to our own decent paper is done, and we may turn not only to *Kladderadatsch*, but also to the peppery paper of Mr. Sonnemann, the socialistic banker in Frankfort.

Another difficulty will perhaps be harder to overcome: the lack of competition. There are papers enough, but one could wish that there were and could be more papers on a sufficiently broad footing. What has so often been said with regard to books also applies to papers. We read much, but we buy little. Too often the "local cheese-paper" has to do for the family; the lord of creation finds the larger papers in the club. Under these circumstances, it is deserving of the highest praise that at least one paper, the Cologne *Gazette*, shows a spirit of enterprise which has something of American pluck and grandeur. Unfortunately, there seems to be no hope that in this it will soon find a single imitator, even on a smaller scale. It must be acknowledged that this spirit of enterprise in the Cologne *Gazette* is, in the main, directed to the internal affairs of Germany. Yet I think Bismarck is right in complaining that undue attention is paid by our press to other countries. It would, indeed, be strange if, in so short a time, we had quite overcome the evil consequences of our being only a parody on a state and a football for everybody who chose to give us a kick. It is, however, more the *what* than the *how much* that might be properly objected to. Everything relating to politics, in the narrowest sense of the word, is treated with great minuteness, while about all the rest we hear far less than would be desirable. Only England is, to some extent, an exception, partly because the tradition still prevails which makes us look upon her as the model constitutional state, partly and principally because she furnishes our journalists but seldom with such a fat morsel as the purchase of the Suez Canal stock, so that the correspondents have to talk about other things if they want to write about anything at all. And England, too, as I have said, is an exception only to a limited extent. Upon the whole, "international ignorance" is with us still very great—I am afraid much greater than foreigners generally give us credit for.

The most important question, however, evidently is whether Bismarck's complaints are well founded with regard to the manner in which the home policy—*i.e.*, all the infinite variety of subjects embraced in the life of a nation—is treated by our press. Just here the Cologne *Gazette* is forced to acknowledge that the criticism of the Chancellor is at least partly well founded, and I believe every impartial observer will have to admit that here the *quale* does not correspond with the *quantum*. There is yet much of the peculiar professor's tone in our press, though the professors have ceased to be the leading journalists. Their pedantry, doctrinairism, and the absolute turn of their minds have survived in a considerable degree, though the profoundness of their knowledge and their conscientiousness are gone, while, on the other hand, their successors frequently show a better capacity for observation, because they are not so entirely bound up in foregone conclusions. The Cologne *Gazette* is certainly right in saying that the genuine political animus of our press would be considerably improved if our statesmen would consent now and then to step down from their high pedestals to lend their pens to the papers, as their English colleagues do. And it is furthermore unquestionable that Bismarck could do much towards bringing this about, and, one might add, it would be much more worthy of him to exercise his influence in this manner than in the way in which he has thus far influenced the press. But it is still more certain that this alone could never suffice to mend the evils complained of. Time alone is the great physician by whom a cure can be effected. It is folly to demand a press of the first order from a nation which has not for several generations gone through the school of self-government and a vigorous political life; and though in the last ten years we have made headway with giant strides, it would be folly to claim for the Germans as a people the degree of political ripeness possessed by the nations which have enjoyed those blessings for a hundred years and more.

Correspondence.

GIRTON COLLEGE AND SMITH COLLEGE.

To the Editor of The Nation:

Sir: The account of Girton College in the *Nation* of January 27 contains many facts of interest to all who are watching the various experiments in female education. One cannot but admire also the pluck and enthusiasm of our young countrywoman who is seeking there a higher intellectual culture. Permit me, however, to correct the impression of your correspondent that there is in this country no similar institution which can offer young women equal educational advantages. In doing this, I have certainly no intention of belittling the work which Girton College has already successfully accomplished. But having recently visited that institution, and carefully examined its building and methods, I am persuaded that the college lately founded in Northampton, Mass., offers, with ampler funds, better buildings, and a more effective organization, an education for women as truly liberal and complete as that which your correspondent has so justly praised. Situated, as the two colleges are, in different hemispheres, a comparison may, I trust, be drawn between them without the imputation of any design of exalting the one at the expense of the other.

In material advantages, the contrast is decidedly in favor of the American institution. The whole amount of the subscriptions of the long list of contributors to Girton College, if my memory does not play me false, did not exceed $100,000. Miss Sophia Smith, of Hatfield, Mass., alone has given over $500,000 to found the college which bears her name. This fund has been so carefully husbanded and expended that all the buildings have been erected out of the income without taking from the original endowment. The fund of Girton College, if I am rightly informed, was barely sufficient to pay for its site and the one building upon it. That building, as your correspondent states, is in the midst of a dreary plain, far from good walks and social privileges. The Smith College at Northampton has merely for academic purposes a larger building than that at Girton, and finished in a style that seems palatial compared with the English college. From its site it commands a view, almost unrivalled in beauty, of the Connecticut Valley and the surrounding mountains. It is in the midst of well-paved walks, delightful excursions, and a highly-cultured society. Grouped around this central academic building are smaller dwelling-houses, in which young ladies may find the social advantages and comforts of a home. In this respect the American college has a very great superiority over its English rival. In fact, there is nothing of home-life at Girton. The build-

ing is not arranged for it; the atmosphere of the institution is not favorable to it. In the cottages connected with Smith College, every young lady may have not only the privacy of her own study and bed-room, but also the enjoyment and culture of a family life, organized and inspired by refined and intelligent women.

These things, we are aware, do not constitute a college. Its real worth, after all, is to be determined not by the value of its funds, the grandeur of its buildings, or its social advantages, but by the mental strength and growth which it secures. How, then, do the two institutions compare in their distinctive intellectual work? Both mark essentially a new departure in female education in adopting the same standard of intellectual culture which prevails in the higher education of young men. They require, also, the same amount of preliminary culture. According to the report of our Centennial Commission of Education, Smith College is the only female college in this country which has as yet insisted upon those requirements for admission which are common in our higher male institutions of learning. It demands that girls shall be as well prepared in the classics and English studies as boys are when they enter college. It has no preparatory course to serve as a receptacle for the great mass of its students. The preparatory work it relegates to the schools where it properly belongs. Not being dependent upon the income of students for its support, it is not obliged to lower its standard of culture for the sake of increasing its numbers. At Girton, one need not pass an examination until the twelfth term of residence; at Smith College, one must pass the common tests in Greek, Latin, mathematics, and English previous to admission. Both institutions, however, agree in maintaining that it is useless to attempt to educate woman as highly as man, except by requiring of her a similar amount of preliminary work. Girls are not to be expected to do in four years the work which boys can only do in six.

In the courses and methods of study, Girton conforms to English and Smith College to American usages. Smith College aims to give woman that broad and liberal culture which has characterized the best American colleges. It has not eliminated from its curriculum those studies which are most intellectual, in accommodation to any imagined deficiencies of the female intellect. Not only is the standard of admission the same, but its course of study is as thorough and complete, as it is at Harvard, Yale, Amherst, or Williams. During the first year, the young ladies pursue the studies which young men ordinarily pursue in freshman year, and their work, as far as one is able to make a comparison, is not inferior in quality or quantity. After the first year there are three elective courses, called the classical, literary, and scientific. In the classical course, greater attention is given to Greek and Latin; in the literary, greater attention is given to the modern languages, and especially to the English; and in the scientific, greater attention to mathematics and the natural sciences. In all these courses enough of the ordinary collegiate studies are retained to ensure the liberal culture which the college was designed to give. No student can receive the college diploma who has not done satisfactory work and passed satisfactory examinations, both in the common studies of the college course and in all the studies of one of the three optional courses.

In Girton College, according to English custom, the greatest stress is laid upon special examinations. These become the goal of student life. In Smith College, the rank of a student is determined far more by the regular daily work. Spasmodic cramming for special examinations is discouraged. The main effort is by daily instruction and examination, under competent teachers, to secure a healthy mental growth. It is not my purpose to discuss the comparative value of these different methods. Girton College, whatever it may be in the future, is not yet an appendage of Cambridge. It has neither teachers nor funds to carry on any extensive collegiate work according to English methods. Its teachers are mostly volunteers, who come out from Cambridge as long as it suits their convenience. Valuable as their instruction may be, their main work and interest must be in the college or university to which they belong; they cannot give to the students at Girton as great an inspiration and aid as they give to those associated with them in the same institution. Smith College has a faculty of its own selected for its work. Through its proximity to the colleges at Amherst, it can also readily employ their lecturers and enjoy many of their advantages; it is not, however, dependent upon them for instruction. It has an ample corps of teachers of both sexes, who are making it their chief employment to realize our highest ideal of an American college. It is duly incorporated and chartered by the State of Massachusetts, with full powers to confer such degrees and diplomas as are granted in any of our colleges and universities. With the same standard of admission and a course of study as thorough and complete as that in male colleges, may not its diploma be of equal value as an indication of scholarship?

Your correspondent describes very pleasantly the young ladies at Girton. It may be of interest to know the character of those who are seeking a liberal culture in the American college. To secure a more effective organization, Smith College opened last September with only one class, proposing to add each year a new class and the requisite teachers until the four classes and faculty should be complete. The members of its first class are generally daughters of liberally-educated parents who appreciate the worth of such an education and are anxious to secure it for their children. They represent the most refined and intelligent portion of our society. None of them seem to have entered the college as a stepping-stone to a profession or a "sphere." They are seeking simply a higher intellectual culture for its own sake, believing that intelligence is worth as much to a woman as it is to a man, and that a well-disciplined mind will be a joy and aid to her in any position in which she may be placed. N. N.

THE DISCOUNT ON SILVER.

To the Editor of The Nation:

Sir: If any argument could convince our legislators that money and its equivalents must, like merchandise, follow the inexorable laws of supply and demand, and that the only hope of bringing our paper currency to a par with gold is in reducing its volume, then the following facts from California may be a gleam of light to those wavering ones who may read your paper.

We are on this coast now laboring under an infliction of a superabundance of inconvertible currency—viz., silver half-dollars—and although we have not reached the extent of debasement current on your side of the country, yet the market value of silver coin being now at 4 to 4½ per cent. discount, the depreciation is serious enough to cause much loss and inconvenience. The cause of this is simply its superabundance. For some years, owing to the low price of bar-silver in the world's markets, it has been found profitable to turn silver bullion into coin, and our supply of this currency has therefore become excessive. A few years ago there was found no difficulty in passing from hand to hand at par rolls of silver halves containing twenty dollars each; but although our community is an easy one and indifferent to small matters, yet, as the years have passed, the accumulation in the safes of most traders and merchants became serious, necessitating sales in the open market.

The present rate of discount hardly represents the true value of silver, as there is scarcely a merchant on this coast but in whose bank balance will be found a sum of silver on deposit ranging from $100 to $5,000. We have the satisfaction of knowing that a depreciation of a few more "points" will permit the exportation of our surplus to South and Central America, when we may expect a return to a value more nearly on a par with gold.

Unfortunately for your paper-money, there is no point at which exportation will commence, so that your sole remedy is the calling-in by the Government and the cancellation of your surplus.

In further proof of the foregoing remarks, silver half-dimes, being quite scarce with us, bear a premium over gold of from one-half to one per cent., our people refusing the nickel substitute as having only a fictitious value.

I remain, yours truly,

Edward L. G. Steele.

San Francisco, Feb. 1, 1876.

A LETTER FROM GENERAL GORDON.

To the Editor of The Nation:

Sir: Your glowing tribute to the character and achievements of the Second Massachusetts Regiment, in the last copy of the *Nation*, fills my heart with such tenderness that I lay down your paper without an emotion of ill-feeling for the somewhat, as I think, unjust criticism towards myself. Unjust, because the first and second papers—which were in pamphlet form, and privately distributed to those who bore the expense of publication—were filled with a minute description "of the processes by which its thousand men were changed from citizens into thoroughly-disciplined soldiers." To have repeated the story of "the constant application of intelligent force by which its high character was sustained amid all the trials of active service, and in spite of the dangerous influence of inferior discipline all around it," would have been to weary the reader with an o'er-told tale, and lay the author open to the charge of inexcusable egotism, if not bad taste. The want you have found is not in the publication but in the place you searched for it.

Will you read again to whom credit is given for the salvation of Banks's command at Winchester on that Sunday morning of the 25th of May when

our diminutive force held back for three hours the overwhelming army of Jackson? to whom credit is given for the unyielding and heroic resistance to the enemy's march on the 24th? and then will you insist "that one looks in vain for the glowing tribute to the soldierly carriage of its men in action"?

Of Goodwin, Abbott, Cary, Williams, Savage, and Perkins, as well as of others who fell in action, I have spoken in my first paper, p. 23, in praise so ardent, with affection so warm, that repetition seemed to me unnecessary. I could not seem even to keep silence about these heroic men. They are recorded in that paper as among those "who remind us of a sacred companionship, born of patriotic devotion, nurtured in the fire of battle, and strengthened by a common sacrifice—a tender, a sweet companionship that admonishes us, as we bear the burdens of our daily cares, to be true, to be honest, to be brave, so that when

> 'At times unbidden notes shall rise,
> Confusedly bound in memory's ties,
> Entangling as they rush along
> The war march with the funeral song,'

we shall appreciate more and more, as time covers with its mosses the stones that mark the resting-places of our heroic comrades, that the proud record of our regiment would be a barren story without the history of all those noble souls—officers and privates—who gave up their lives for their country."

I have yet one more paper to contribute. The four parts then bound together, making about four hundred pages, will be illuminated by a map. Then, I may predict, it will not be found that the text "leaves a confused impression upon the mind, etc." I hope it will also be accompanied with sketches of battle-fields and positions, through which operations will be seen clearly. Is it not fair to ask if your criticism upon the inability of the reader to follow in the movements of both sides prior to and during an engagement may not be applied to every movement of hostile forces from the earliest history of wars? Besides, it should be remembered that this paper was read to those who had done the deeds whereof they heard; and this brings me to a last point—why this paper, turned into a book, was sold through the book-stores. It was simply to defray the cost of the making up of the book. Only two hundred copies were published. The types were then distributed. There now remain but about eighty copies; the remainder have been mainly distributed among the friends and members of the Association. If contributions and sales pay the bill to the publisher, it is all that has been required, all that is expected.

Perhaps you will think it just to publish this reply to your criticisms. If you have never seen the first and second parts, I could send them to you, if you would return them. Please give my letter as much prominence as your criticism. During many years a subscriber to the *Nation*, I have noticed its eagerness to be fair.—Yours very truly,

GEORGE H. GORDON.

BOSTON, MASS., 37 and 38 Sears Building, Feb. 11, 1876.

[We expressly acquitted General Gordon of any conscious egotism, and consequently of any conscious neglect of his comrades in arms. Before preparing our review we read his three papers in connection if not consecutively, and still received the impression which we frankly stated. On this subject, as in regard to the confusedness of his battle descriptions, we spoke deliberately and, as it seems to us on reflection, with substantial accuracy.—ED. NATION.]

Notes.

IT is proposed to publish a life of the late Dr. S. G. Howe in raised letters for the use of the blind—certainly a most fitting monument. The same biography will be printed in the usual manner in a memorial volume, together with the late memorial addresses at the Boston Music Hall. Subscriptions to the fund for defraying the expenses of these publications may be sent to the Hon. James Sturgis, Treasurer, Boston. Those to the amount of five dollars will entitle the donor to a copy of the memorial volume.——Lieut. Geo. M. Wheeler's annual report of his survey during 1875 has lately been issued from the Government printing-office. Without being popular reading, or meant for such, it contains many chapters of general interest. Prof. E. D. Cope's report on the geology and palæontology of N. W. New Mexico are illustrated by his sketches of the geological features of the region above-mentioned—features not so extraordinary as those of the Colorado country, but still curious. Commenting on the genera of Camelidæ peculiar to this continent, Prof. Cope remarks that until some of these forms are discovered in the Palæarctic region, "there will be much ground for supposing that the camels of the Old World were derived from American ancestors; while the presence of the llamas in the existing South American fauna indicates the absence there of the conditions which caused their extermination from North America."——The latest publication of the Hydrographic Office, No. 37, is Part I. of sailing directions for the coasts of the Mediterranean Sea, translated and compiled by Lieut.-Commander Henry H. Gorringe, U.S.N. It embraces the S. and S. E. coasts of Spain, from Mala Bahia to Cape Creux, Balearic Islands, and the N. coast of Africa from Ceuta to La Cala. The articles on the chief ports furnish a good deal of information for which not only mariners but merchants will be thankful. The coast-line is fully delineated in numerous profiles.——Harper & Bros. send us bound volumes of their *Weekly* for 1875 (xix.), *Bazar* (viii.), and *Magazine* (l. and li.), and request us to speak of them as their merits deserve. None of our periodical publications, however, stand in less need of being described or estimated. That each is first in its own field must, we think, be conceded, and all that it occurs to us to say about the bound volumes, rather than about the separate parts, is that they impress us more forcibly with the really vast amount of useful and accurate information which they all contain, and are designed to contain, over and above the mere amusement of illustrations and light literature. In regard to the *Weekly*, we share the general feeling that the duality which marks the political conduct of the paper is inconsistent with ideal journalism, and is not calculated to promote a sound political morality.——A summer school of zoölogy will open at Cornell University on Friday, July 7, and close on Thursday, August 17. The programme includes thirty-six day lectures and laboratory exercises, with nine evening lectures, the instructors being Profs. W. S. Barnard and B. G. Wilder, Mr. J. H. Comstock, and Dr. Elliott Coues. Prof. Wilder is to be the director, and will furnish all necessary information as to terms and requirements. The number of students is limited to fifty. Another offshoot of Penikese is the Summer School of Science and Physical Culture (not for youngsters, like Dr. Rothrock's), which will leave Indianapolis, July 11, on a six weeks' trip to Mammoth Cave and Lookout Mountain. The instructors in this case are Profs. D. S. Jordan (*Birds*, *Reptiles*, and *Fishes*), H. E. Copeland (*Botany*), and Mr. Ernest Copeland (*Insects* and *Taxidermy*). Prof. Copeland will be manager; he may be addressed at 320 Ash Street, Indianapolis. But twenty students can be admitted.

—Messrs. James R. Osgood & Co. have done a good service in reproducing, by the heliotype process, the complete works of Hogarth at a price that brings them within the reach of many who could not afford to buy a set of the original engravings. The plates are accompanied by letterpress descriptions taken from the London edition of 1820–22, and Thackeray's and Lamb's essays on Hogarth form the introduction to the volume. Hogarth's vigorous manner of engraving lends itself to reproduction by the heliotype, and the plates are, in general, rendered with satisfactory effect. Even a heliotype rendering is seldom a perfect fac-simile; but in these reproductions the essential spirit of Hogarth's compositions is well preserved. Hogarth's claims as moralist, satirist, humorist, and artist are so great, in spite of the exaggeration of them by some of his admirers, that his works deserve wide diffusion. The coarseness of too many of them prevents them from having a place on the drawing-room table. The refined modern woman is justly out of sympathy with them, and would not desire that her son, any more than her daughter, should be familiar with them. But the indifferent student of character, the lover of humor, the reader of Fielding and Smollett, will turn to them constantly, not only as the best graphic illustrations of the London of George II. and George III., but as among the best English delineations of human nature in its prosaic and often ugly aspects. Lichtenberg found all England and English character in Hogarth.

—*Lippincott's* for February has two excellent descriptive articles, one by Lady Barker, who tells of what she saw in three days at Cape Town, and tells it with all her usual grace and vivacity; and the other by Mr. Robert Wilson. This writer continues and, we regret to say, concludes his theme, "At the Old Plantation," and confirms our good opinion of him derived from reading his previous paper on the same subject. The present deals wholly with the huntsman's sport at the South, and in felicity of expression and artistic restraint, as well as in its intimate sympathy with nature, seems to us to take a very high rank in its kind of literature. Mr. Wilson's reminiscences are of twenty years ago. The second Centennial paper is better than the first, as we expected it to be, and the writer does not lack

for information, but his style is frequently open to criticism. Thus in his second paragraph he speaks of the "concentric mass" of influences "which combined to bring the colonies up to the precise ripening-point of their independence"; and of "the completed and symmetrical edifice of *separation* ready for its capstone," etc. The illustrations are effectively arranged in couples, to contrast the old buildings, machinery, vessels, etc., with the new. Mr. James Morgan Hart contributes a sensible and useful essay on "Professor and Teacher," in which he shows the fetters imposed on our professors (such of them as are genuine specialists), and holds up the German example as the true ideal. In proposing a remedy for their condition, he finds some encouragement in Michigan's University, or at least in the mode in which it was called into being and its effect on the higher education in the public schools of the State. One would rather have looked for some reference to the scheme of the Johns Hopkins University. Dr. R. A. F. Penrose comes to the rescue of the self-made man in replying to Dr. Wood's recent strictures on medical education in this country, but the editor is quite right in thinking that his arguments are not worthy of serious refutation.

—Female writers equally divide with male the current number of *Harper's Magazine*, and even preponderate if George Eliot be counted with her American sisters. The opening paper on "Lyme" (Conn.), by Mrs. Lamb, is interesting, but, for a so-called "chapter of American genealogy," is deficient in clearness. The writer was evidently embarrassed by the wealth of her material and by the necessity of maintaining her thesis that "Lyme has produced more lawyers than any other town of its size on this continent, or any other continent," besides "eminent judges, senators, and governors; its latest and grandest achievement being a Chief-Justice of the United States." She gives a long list of public or quasi-public characters who trace their origin to Lyme, and by a rather prodigal use of the adjectives "celebrated," "famous," and the like, she manages to keep up the level of excellence to a remarkable degree. Miss Anna Brackett's account of Vassar College we can commend to our readers, especially such as did not overlook our recent correspondence concerning Girton College. They will find her views feminine but independent, and devoid of fulsome praise of an institution which can be and doubtless will be bettered. Mrs. Mary Treat furnishes a brief and neatly-illustrated paper discussing the mode in which the utricularia captures its prey. The sixteenth of the series of essays on the First Century of the Republic is a first paper on American Literature, by Mr. Edwin P. Whipple. We should call his by far the most difficult task of the lot. He has chosen the chronological order instead of a division according to the various branches of literature; and as his survey ends here with 1840, and it does not appear how many papers he means to make of it, it is not easy to say just how well he has succeeded. In the main he deals with the theological writing of the period indicated, and by the biographical rather than the bibliographical method. Mr. Whipple could hardly help writing from the Boston and Unitarian standpoint. For all lovers of fiction, the most important feature of the February *Harper* is the first instalment of "Daniel Deronda." Its approaches are marked, or shall we say barred, by the ponderous scaffolding of suggestive mottoes and scientific whimsies to which the readers of 'Middlemarch' became accustomed, and which, however characteristic of the author, are certainly not the immortal portions of her work. The Gwendolen who is introduced to us abruptly, and who may or may not turn out to be the heroine, reminds us (of course with many differences) of the not over-agreeable Rosamond in 'Middlemarch.'

—The great question, "Who are you, where did you come from, and whither are you bound?" if not even in this age of the world in a fair way of solution, at least receives as much attention as it ever did. Mr. John Fiske has begun a series of papers in the *Atlantic*, under the title of the "Unseen World," discussing some of the answers to it. It is impossible in any short compass to discuss the article properly, but when it is said that it deals with the now popularized topic of the refrigeration of the earth, and the ultimate destiny of the universe of matter, it is unnecessary to add that it is interesting. Whether the fate of the moon, hung dead and cold in the sky, without living inhabitants or an atmosphere to support life, is to overtake the earth, and after the earth our whole solar system, and afterwards the other systems scattered through space, is a speculation which may be of no concern to such religious sects as have the satisfaction of knowing in advance the particular week and the particular year in which the last day will come, but to the rest of mankind it is one which arouses almost as much as it baffles curiosity. At the present time, there is a prevailing impression among the unscientific public that the fate of the moon solves the whole problem; but those who read Mr. Fiske's article will find that it is only the beginning, and that so far from death in the case of worlds putting an end to any discussion of what we may call cosmic immortality, it really makes the future teem with speculation. What with the luminiferous ether pervading space, yet unlike any form of matter which we can weigh or measure, both hard and elastic to an inconceivable degree, occupying the whole of space and yet occupying no space at all, and the vortex-atoms of Helmholtz and Thomson with their eternity of duration and rotation, we reach subjects of contemplation, as Mr. Fisk says, the most stupendous that can be presented to the mind of man. We must refer the reader to the articles themselves, however, for the conclusions to which their speculations point.

—It occurs to us to say, with reference to the Harvard College statistics published last week, that perhaps they are not so satisfactory as they might be, from the fact that the tables in the reports take no account of the possible case of the same student electing two or three courses in the same study. One student, for instance, might elect two or three courses in Greek, another in Latin, or in history or music, etc., and so the percentages would not show fairly the distribution of the different studies among the students. There may be a number of instances in which the time required to be given by the student to electives is thus concentrated in favorite studies, and such a concentration is rather to be expected under a system allowing to students freedom of choice. We should think the tables would be more complete if this attendance of one student in different courses in the same branch were indicated. Another point of interest is to know who the students are who take this and that elective—where are found the scholars of highest rank? As prophetic of the resources to be drawn hereafter by the country in different pursuits from the graduates of Cambridge, it is interesting to note where ability places itself during the college course. The reports give this information to a certain extent in pointing out the departments in which students win "honors" and "highest honors"; but in what departments have others, or the others, gained their laurels who have public parts assigned them at Commencement?

—There is an old statute of this State—dating back, we believe, to the last century, when our higher educational establishments possessed a character quite different from their present one—which forbids the election of any professor or teacher in a college or academy to the board of trustees of such college or academy. For the following reasons this enactment seems to be injurious, and its repeal, so far at least as colleges are concerned, to be desirable in the interest of the colleges themselves. It subjects to a humiliating disability one of the most enlightened, incorruptible, and unselfish classes of the State's citizens. It excludes from the supreme governing body of a college the very persons most familiar with the management, needs, and condition of the college—the very persons most deeply interested in the institution's welfare. It presupposes that the best educated persons of the community—men usually of unblemished integrity—cannot be trusted with the administration of funds a portion of which is to be devoted to the payment of their salaries; while, on the other hand, the law permits the officers or directors of many other corporations to vote upon questions directly affecting their own compensation. It has led to many unfortunate disagreements and disputes between the trustees and faculties of colleges, greatly to the detriment of those institutions. It is in direct opposition to the system which prevails in all other civilized countries. Everywhere in Europe the control of the funds of universities is entrusted almost exclusively to the professors, between whom and the State there is no intermediate body like our boards of trustees. This is one of the chief causes of the unequalled position held by the universities of Germany. Its expediency is disproved by a notable instance in our own country. The most successful and most promising educational institution of the highest grade which has recently been built up in the United States, is the Sheffield Scientific School of Yale College. The whole management of this School, pecuniary and otherwise, has been from the start in the hands of its professors, who have even increased and diminished their own salaries at will. To this fact every one familiar with the history of the school attributes its rapid growth and its high reputation. In several colleges of the State the alumni are now permitted to elect a certain number of the members of the corporation. This reform should be supplemented by the repeal of the obnoxious statute referred to, or of that portion which relates to the professors in colleges. If an alumnus happens to be a professor, he is thereby rendered ineligible to an office to which any of his associates may aspire. If the majority of the alumni consider a particular one of their body best fitted to assist in the management of the college, they are prevented by the statute from choosing him if he chance to be a professor. There is not the slightest danger

that the repeal of this statute will result in giving to the professors a preponderating power in the government of institutions to whose reputation and success they are the largest contributors. Each board of trustees will still possess the power to prevent such a consequence. Scarcely any step which the Legislature can take will, in the end, exercise so favorable an influence upon the growth and progress of advanced education as the removal of this disability; and it is an act of justice and expediency which will cost the State nothing.

—The activity and good sense which have characterized the management of the Bellevue Training School for Nurses have been rewarded by a continual increase in the work done by the School. It was opened in 1873, less than three years ago, with six pupils, in the face of a good deal of determined opposition in quarters where none ought to have existed, and though it has been entirely dependent on public charity for its support, it has now forty pupils, and the only barrier in the way of an almost indefinite increase is the want of funds. The importance to the city hospitals of having a school of this kind is obvious enough, but we doubt if the public at large appreciate sufficiently the advantage of its existence to them. The standard aimed at, according to the circular before us, and the statement may be relied upon as accurate, is "careful discipline and drill, order, cleanliness, method, trustworthiness, and an obedience so absolute and intelligent that a physician, though absent, can as fully depend upon his orders being obeyed by the nurse as if he were present"; and the difference between the system introduced by this School and the kind of nursing which the people unfortunate enough to need nursing were subjected to in this country before the year 1873, is the difference between the standard here set up and that in vogue among the American cousins of Sairey Gamp and Betsey Prigg. The School is now the headquarters in the United States of the modern and enlightened system of nursing, and not only trains nurses but acts as a normal school also, having, in less than three years, furnished the Roosevelt Hospital and the Brooklyn Maternity Hospital with matrons, the Boston Training School with a superintendent, and being now about to send persons qualified for positions like these to Georgia, Arkansas, and other Southern States. The School has now control of nine wards in Bellevue Hospital, containing 160 beds, and within the past year has supplied more than sixty private families. The finances of the institution are managed economically, the maintenance of the pupils costing only forty-seven cents per diem apiece. An annual increase in the income to the sum of $10,000 is needed, and the circular of the School asks for contributions. We know of no charity in the city which has stronger claims, none in which there is less waste, none in which there is more care and thoroughness, and none in which the benefactors may feel more confident that every dollar they give will be conscientiously applied to the best and most enlightened methods of relieving suffering among all classes.

—The short but important report of Professor Curtius of Berlin upon the recent discoveries at Olympia, which Dr. Robert P. Keep has just communicated to the *Evening Post* in an English translation, will rouse the enthusiasm of all lovers of art. The systematic labors of the German explorers, who began in October last the herculean work of removing the deposits with which the Alpheus has fortunately covered the ruins of Olympia, are now crowned with success; and this bulletin of Professor Curtius, with the telegraphic accounts which supplement it, seems to show that we are on the eve of archæological discoveries more important than any which have been made since Herculaneum and Pompeii rose from their ashes. The results already gained prove that there has been no such wholesale destruction of the works of art which adorned and surrounded the temple of Zeus at Olympia as many feared, and that Curtius was amply justified in directing the attention of the German Government to this famous spot. The mud of the Alpheus has been a far gentler protector of treasures of art than were either Turks or Venetians, and the British Museum is now likely to have a formidable rival in the new museum at Olympia. It is well known that the German Government has promised to leave every work of art which may be found, except, perhaps, duplicates, in the possession of the Greeks. Among the first relics found was a three-sided pedestal of a statue, with an inscription showing that both the pedestal and a statue of Victory which stood on it were erected by the Messenians of Naupactus, from "spoils of war," as a votive offering to Zeus, and that the sculptor was Paeonius of Mende in Thrace, who (the inscription adds) made also some of the pediment statues of the temple itself, having been victorious in a competitive contest for the honor of furnishing them. Paeonius was a contemporary of Phidias; and from being a mere name known only to archæologists, he must henceforth take rank among the first sculptors of the Periclean age. The next day was found the statue of Victory itself, which has excited great admiration even in its mutilated condition. Its head and arms were still wanting at the last accounts, but when every day is bringing heads and arms in abundance to light, there is little doubt that the goddess will soon be complete. The scholars who superintended the excavations at once recognized this statue as the identical one mentioned by Pausanias (v. 26), who states (probably on the authority of the inscription now discovered on the pedestal) that it was the work of Paeonius of Mende, and was erected by "the Dorian Messenians, who had received Naupactus from the Athenians." Pausanias relates that the Messenians themselves (*i.e.*, those of his time) believed that the "spoils of war" were taken at the time of "the affair of the island Sphacteria," when, according to Thucydides (iv. 41), a body of the Messenian exiles came to Pylus from Naupactus and invaded the old Messenian territory, much to the injury and the terror of the Spartans who then held it. The fear of the Spartans afterwards prevented them (it was said) from adding to the inscription the name of the enemy from whom the spoils were taken; this omission in the inscription seems to have been used by the later Messenians as an argument against the statement which Pausanias is inclined to accept, that the "enemy" was a less formidable one in the neighborhood of Naupactus. If the Messenians were right, we have a most interesting memorial in this statue: first, of the terrible revolt of the Spartan helots and the futile attempt made by Cimon to induce an army of democratic Athenians to help suppress it; of the new fright which the presence of such dangerous allies gave the Spartans, who feared that their "progressive" ideas might spread (Thuc. i. 102); the insulting dismissal of the Athenians, which caused the first open breach between Athens and Sparta; and the protection afforded by the Athenians to the vanquished helots or "Messenians," and their settlement of the exiles at Naupactus; again, of the defeat and capture of the Spartan army on Sphacteria by Cleon, and the fulfilment of his "mad promise" (Thuc. iv. 39) to bring home the Spartans as prisoners within twenty days (the one unfortunate precedent for the interference of politicians in military affairs); the eager seizure of the opportunity by the Messenians of Naupactus to avenge their own and their ancestors' wrongs upon their Spartan conquerors; and the pious gratitude with which these poor exiles dedicated a part of their booty, in the form of this beautiful statue of Victory, to the god whom their ancestors had worshipped at Ithome. Even if the promise of this statue is not entirely fulfilled, it will still remain a priceless specimen of the highest period of Greek art, in fact (with the exception of the marbles of the Parthenon, so far as they can be attributed to Phidias), "the first authenticated statue by a Greek sculptor of the fifth century before Christ." It will be interesting to see how far the inscriptions on its pedestal and on other bases which have been found near it confirm the Messenian opinion as to its origin. Whatever may have been the occasion of its erection, the inscription shows clearly that a work of art which is likely to be one of the great statues of the world was dedicated by a colony of fugitive slaves, whose ancestors had been in barbarous servitude two or three centuries, and who had themselves within thirty years been settled in a foreign country by foreign charity, after being expelled from their native land as the result of a long servile war.

—The very first discovery made was that of a "colossal male torso of marble," which "was at once seen to be a work of conspicuous value," being probably part of the statue of Zeus himself which formed the central figure of the eastern (or front) pediment group. As Curtius says that other statues have since come to light faster than they can be secured and raised, we can hardly doubt that we shall have at least the group of this pediment in a far more complete state than we now have either of the pediment groups of the Parthenon. Curtius reports the finding (Dec. 22) of a reclining figure of a river-god before the east front of the temple, which has since been completed by the discovery of its missing parts. Dr. Keep tells us further that a charioteer and a male torso have been reported by telegraph. Pausanias gives us (v. 10) a full description of the statues on both pediments, which will be of great aid in identifying and restoring the fragments which may be found. He says of the front or east pediment, that it represented the scene as the chariot-race between Pelops and Oenomaus (by which the former won Hippodameia) was about to begin. In the centre sat Zeus as judge; first on his right was Oenomaus with a helmet on his head, probably in the very armor in which "he slew Hippodameia's thirteen suitors, and so put off his daughter's marriage" (Pind. Olym. i. 128); by his side his queen, the Pleiad Sterope, daughter of Atlas; then Myrtilus, the treacherous and ill-fated charioteer of Oenomaus, "sitting before his horses" (of which there were four); behind Myrtilus were two grooms, who had

charge of the horses of Oenomaus; at the extreme end was the river-god Cladeus. On the left of Zeus were Pelops and Hippodameia, the charioteer and horses of Pelops, and two grooms in charge of the horses; in the extreme northern angle was the river-god Alpheus. The figures of the two rivers remind us of those of the Ilissus and the Cephissus on the pediment of the Parthenon. These statues of the front pediment, Pausanias says, are works of Paeonius of Mende, while those of the rear pediment are works of Alcamenes, "a contemporary of Phidias, and a man who bore away the second honors for skill in making statues." The inscription above-mentioned would seem to indicate that these "second honors" refer to a competitive contest with Paeonius; the passage of Pausanias, however, might mean that he was second to Phidias. He then describes the scene of this group, which contained the battle of the Centaurs and Lapithae at the marriage of Peirithous. We hope we may yet have to record the discovery of this group also, as "a female torso" is already reported as found at the southwest corner of the temple. And why may we not hope to see at least the basis of the great statue of Zeus, which bore the autograph of Phidias? (Paus. v. 10). Dr. Keep informs us that preparation has been made for taking plaster casts at once of the statues which may be found. Will not some museum of art in this country find the means to obtain copies of some of them while they are still in the hands of the German Commission?

STEDMAN'S VICTORIAN POETS.*

"THE main purpose of this book," says Mr. Stedman, "is to examine the lives and productions of such British poets as have gained reputation within the last forty years." It is "a book of literary and biographical criticism." Stress has often been laid on the difficulty and uncertainty of contemporary criticism. Jeffrey's estimate of Wordsworth, the *Quarterly Review's* judgment of Keats, are stock instances urged in support of the proposition. The consentient verdict of successive generations is, doubtless, an aid in estimating the qualities of a writer of former times, but a sensible man is likely to make as few mistakes in judging his contemporaries as in judging of men of other times, and a critic qualified to speak of the authors of a past century is qualified in like degree to speak of those of his own. To judge correctly the first works of young authors is, indeed, sometimes difficult, because promise is not always fulfilled by later production, and the dividing line between the capacity of sustained power and the display of transient and quickly exhausted force is not always clearly marked. But in judging the authors of a period of forty years, the sifting of good from bad is already in most cases effected, while the contemporary critic has the advantage, in forming his final estimate, of thorough acquaintance with the external conditions that have affected the lives and the productions of the subjects of his discourse. Mr. Stedman is in many respects fitted for the task he has undertaken. He has been a diligent reader of poetry, he has written verse, and some of it of much more than ordinary merit; he has wide sympathies with intellectual moods, a liberal taste, and the freedom of an educated man from extravagant prepossessions and unfounded prejudices. He has consequently reached that measure of success in his work which is to be found in a generally fair proportionate estimate of the chief poets of our time, in a series of intelligent studies of their works, and in marshalling in rational order a vast number of writers of more or less distinction who have formed the rank and file of the regiment of what he terms Victorian poets. As a handbook to the poetic literature of England during the last and present generations, Mr. Stedman's volume is commendable and serviceable.

But his work has also another aim. It is "an essay in philosophical criticism." Its intent is to set forth "correct ideas in respect to the aim and province of the art of poetry." In this portion of his subject, Mr. Stedman says modestly, "much originality is not claimed for either manner or thought. My effort simply has been to illustrate, through analysis of the career of various poets, what already is widely understood among philosophical critics." The want of originality in such work as this is not a fault, but the contrary. The most philosophical critic cannot invent new principles of judgment; he can do little more than set old truths in new lights, or present them with fresh illustrations. But it is essential that he should have a clear discrimination of the truth and the error in commonly received notions, that his own principles should be consistent and defined, and that he should have the ability to set them forth in logical sequence and according to their relative importance.

As a "philosophical critic," Mr. Stedman shows himself more receptive and impressible than discriminating; he exhibits facility rather than force of mind, and more fluency of expression than body of thought or keenness of discernment. He is better at the analysis of individual qualities than in broad generalizations. In his philosophical speculation his hold of ideas is loose, it lacks grip; his reasoning is not infrequently inconsecutive, and his conclusions are formal rather than necessary. These defects appear, for instance, in his attempt to define the characteristics of our age in their relations to prevailing forms of thought and expression. The age is, in his view, one of transition, complex, in which "the scientific movement assumes an importance equal to that of all other forces combined." But all ages seem to the men who live in them to be ages of transition and complex, so that to determine the effect of these aspects of the world upon thought and expression in any given period, would require a broad comparative historical survey. The force of the scientific movement in determining the mental dispositions of the present time is a simpler subject of enquiry. But in estimating its effect upon poetry, Mr. Stedman seems to have no clear and settled idea as to the relations between knowledge and imagination. He declares that "there is no inherent antagonism between science and poetry," but he discovers "that a temporary struggle is under way and has seriously embarrassed the poets of the era." He regards this as "an enforced transition to the method of the future," whatever that may be. "The transition period, doubtless," he asserts, "will be prolonged by the ceaseless progress of the scientific revolution occupying men's imaginations, and constantly readjusting the basis of language and illustration." But in these utterances Mr. Stedman seems to be without distinct perception of the nature of the poetic imagination. With science as mere science it has nothing to do. Its high prerogative is that of choice. Facts do not compel its acceptance of them. It apprehends "more than cool reason ever comprehends." Science and imagination cannot quarrel, there can be no struggle between them, because the imagination is supreme and absolute in its own domain. "If the time should ever come," says Wordsworth, in a passage cited by Mr. Stedman, but apparently not fully understood by him, "when what is now called science, familiarized to men, shall be ready to put on, as it were, a form of flesh and blood, the poet will lend his divine spirit to aid the transfiguration, and will welcome the Being thus produced, as a clear and genuine inmate of the household of man." The very form and figure of this sentence illustrate the point at issue. Here is a truth expressed by trope and metaphor, and fact is dressed in the garb of fancy. But Mr. Stedman seems to expect that science is to invade the realm of poesy, and that the poets are likely to follow the lead of such a writer as George Eliot, who often shows her deficiency of poetic imagination in making use of the raw material of science long before it has become familiar enough to put on a form of flesh and blood.* Let science make what progress and discovery she may, she will but open new regions over which the imagination will have sway, while she cannot take from poetry one foothold that the muse has ever called her own. Knowledge widens as the years advance, but the imagination is never troubled by the increase. One superstition after another drops away, the old forms of fancy give place to new, yet the poet, mourning that "glory and loveliness have passed away," still declares, "But there are left delights as high as these." To him "*Now* is a fairer season," and he is not troubled with the doubt—

> "that the high
> Imagination cannot freely fly
> As she was wont of old."

We do not question that Mr. Stedman is practically in accord with this doctrine. Many passages might be cited from his pages that by themselves sustain it, but he has no vigorous grasp of the principle of criticism involved in it, and his conclusions are vague and indefinite. After reading his disquisitions, we are left, like Omer Khayyám, who

> "heard great argument
> About it and about; but evermore
> Came out by the same door wherein he went."

The clearness of a writer's thought may often be illustrated by the character of his metaphors. If the nature of his mind is orderly and discriminating, he is not likely to mix his figures of speech. Now, Mr. Stedman speaks of poets who, "seizing upon the merest germs of scientific discovery, pursue them to their ultimate bounds." He talks of "classicism blossoming on the sprays of song," and of a method "maintaining an atmosphere." And this is his picture of Landor's station: "His station resembles that of a bulkhead defending the sea-wall of some lasting structure

* Victorian Poets. By Edmund Clarence Stedman. Boston: James R. Osgood & Co. 1876. 8vo, pp. xxiii.–441.

* This mannerism of George Eliot's is illustrated by the opening sentence of her new novel, 'Daniel Deronda': "Was she beautiful or not beautiful? and what was the secret of form or expression which gave the dynamic quality to her glance?" It will be long before poets or lovers talk, whether in verse or prose, of the "dynamic quality" of those "lights that do mislead the morn."

—a mole or pier built out from tuneful, grove-shaded Arcadian shores. He stretches far into the channel along which the tides of literary fashion have ebbed and flowed. Other poets, leading or following the changeful current, often appear to leave him behind, but ere long find him again abreast of them, unchanged and dauntless, wearing a lighted beacon at his head." Landor should have taught Mr. Stedman better than this.

Mr. Stedman's utterances are sometimes obscure. We do not understand him when he says, "There always are cases when poetry fairly rises above the idealism of its day," or when he tells us that "Tennyson is subjective, so far as a pervading sameness of style, a landscape seen through one shade of glass, can make him." Nor is he always consistent with himself in judgment, so that the reader is fairly at a loss what to think. Thus, in his notice of Clough we read, "It may be said of Clough as Carlyle said of Sterling, that he was 'a remarkable soul,' . . . who, more than others, sensible to its influences, took intensely into him such tint and shape of feature as the world had to offer there and then; fashioning himself eagerly by whatever of noble presented itself." This is clear, but we turn the page and are told, "His fine original nature took no tinge of the prevailing influences about him."

It is in no spirit of zeal to pick flaws that we point out such defects as these, but we notice them as affording illustration of mental traits which prevent Mr. Stedman's book from taking the place we should desire for it as a critical treatise. A sharp revision of the volume and the excision of much of the general criticism would give his work a chance of a permanent place in literature. If Mr. Stedman would attempt less, he would achieve more. If he would be content to be simple, and would give up philosophy, he might write pleasantly always as he now does sometimes; for he would write as a man of refined taste and of good natural perceptions improved by generous culture. The chapter in his present volume on Tennyson and Theocritus has an agreeable scholarly flavor, and some of his translations from the Greek poet are so felicitous that we could wish he would give us what we believe he has long promised—a complete version of the 'Idylls.'

THE NORTH AMERICAN REVIEW FOR JANUARY.

THE *North American Review* has published a "Centennial Number," which reviews the course of American thought in Religion, Politics, Abstract Science, Economic Science, Law, and Education. The writer of the paper on Religion, Professor Diman, has had a much more difficult task than any of his coadjutors, but has produced an article which has been rarely equalled in periodical literature, and indeed can hardly be charged with any defect except—though it fills forty-seven pages—its shortness. There is nothing in modern ecclesiastical history more interesting than, and nothing so complex as, the religious thought and feeling in America during the last two hundred years, because nowhere else has their expression been, on the whole, so free and so little trammelled either by tradition, custom, or legislation. Nobody who has not studied it can safely say that he knows the religious side of human nature, and yet to study it carefully is a task of no little difficulty, so manifold have been its variations and tendencies. Professor Diman has performed a literary feat of no small dexterity in giving us a bird's-eye view of the wide and shifting field of denominational life. The cases are very rare in which a religious man has shown himself so capable of taking an objective view of an interesting phase of church history without losing or concealing the sympathy with which he watches it. The first fact which comes out most prominently in his narrative, and leaves the deepest impression on one's mind as one lays down the article, is that the success of the denominations has been almost invariably in the ratio of the rigidity and completeness of their governmental organization. Discipline, obedience, fixed rules, and stern enforcement of them, in the church as in the world, carry the day. The second is that those denominations which have given the emotions the highest place in their scheme, or, in other words, have substituted the "theology of the feelings" for the "theology of the intellect," have been, other things being equal, those whose growth has been steadiest and greatest. Indeed, the people, as Professor Diman suggests, seem to seek in the strictness and completeness of church organization a refuge from the growing looseness and changeableness of that of the state. The article can hardly be overrated as an example of the treatment of a difficult subject in a short space by a master-hand.

Professor Sumner, in dealing with politics during the century, brings us down by a lucid sketch of party history to the close of the late war, illustrating copiously the gradual conversion of the republic into a democracy, and explaining the agencies which were most active in bringing it about. Contrasting the apathy or phlegm about political matters which characterizes the people of to-day as a whole, compared with that of the earlier part of the present century, he ascribes it to the greatly increased number and variety of social interests, and to the gradual recognition by the average voter of his own inability to deal with them satisfactorily, and of the necessity of committing their management more and more to trained hands, and confining himself to the selection of men rather than to the solution of questions. What the "ordinary voter wants now is good government and efficient administration, businesslike permanence and exactitude." In answer to the question why he finds it so hard to get them, Mr. Sumner says that the difficulty arises out of the strength and complexity of the party machinery which was created during earlier stages of public feeling, and which it will probably now take much time and long effort to overthrow; but in the dissatisfaction with it which prevails and in the widespread desire for something better he finds proof that while the party machinery has degenerated, the political will or "political morale" of the people—which, after all, supplies the motive power—has not done so, but, on the contrary, has improved and is improving. "That will," he says, "needs instruction and guidance. It is instructed only slowly and by great effort, especially through literary efforts, because it has learned distrust. It lacks organization, and its efforts are spasmodic and clumsy." In what way it can be made to assert itself and resume control of public affairs the professor does not show, and it is not his business to show, in the article before us; but we suspect the deliverance will only come, as he suggests, through bitter experience. This seems discouraging; but by what other process than self-conquest and suffering has man or nation ever come to anything?

President Gilman of the new Hopkins University discusses education in an article which contains a great deal of solid information. With regard to primary education, he tells the tale of its homogeneous diffusion from its New England birth-place throughout the country, including even, since the war, the old slave States, and sets down as its chief difficulty the peculiar condition of affairs at the South, as its chief defect a want of thoroughness, and as its chief danger the religious question. Secondary instruction—*i.e.*, that between the primary and the collegiate—is "commonly conceded" to be, Mr. Gilman says, the weakest part of the system. With regard to the universities, colleges, and other degree-giving institutions, the number of which had swollen from about twenty-six in 1800 to five hundred and forty-five in 1875, Mr. Gilman is not disposed to agree wholly with those who lament this astonishing growth, and thinks it has done a good deal to keep the lamp of knowledge burning in dark places, where the alternative was not better illumination but black night. The growth of State universities in the West, he thinks, has been a healthy reaction against the multiplicity of sectarian colleges. He refers to the statistics collected some years ago by President Barnard of Columbia College, showing a gradual lessening of the proportional number of students attending college throughout the country, or, in other words, a gradual loss of their hold upon the community by the colleges, but does not appear to think that this points to a necessarily permanent danger. With regard to the conflict between science and religion, he notices the fact that in this country it has never been rampant, any more than has the struggle between science and the classics. The figures quoted from the report of the Commissioner of Education as to the gifts of men of wealth to institutions of learning, will probably be a surprise even to those who have been in the habit of putting a very high estimate upon the national tendency to liberality in this direction; it seems that no less than $33,000,000 were given in the four years prior to 1875, a period which covers a whole year given up to business depression and positive panic. Summing up the causes for pride on the one side and dissatisfaction on the other, he thinks we may rejoice at being if not the most highly at least the "most generally" educated people in the world; at the stimulus we have given to popular education in England, in Japan, and in South America; at the constant improvement in our machinery of popular education; and at the growth of a few strong colleges, the commencement of numerous public libraries, schools, and galleries of the fine arts and of museums of natural history, and at the changes of some of the older colleges to true universities. On the other hand, there is reason for being dissatisfied with the inferiority of our systems of higher instruction to those of Europe; we must acknowledge that in intermediate instruction we are "far behind what we know to be requisite"; that in primary schools there is a great deal of waste of time and strength—or, in other words, of money; that the illiteracy of large numbers of the voting population, revealed by the last census, must cause us grave apprehension; and that the religious question (which Mr. Gilman would have settled by complete secularization) must still be considered a "rock ahead."

We regret to observe that in all or almost all the articles in this Cen-

tennial Number of the *Review*, the "practical man"—or, in other words, the Philistine—comes in for some pretty hard knocks, a fact which will probably prevent the number from having a large circulation among members of Congress or among aldermen and mayors of large cities. This is a pity, for what the Philistine principally needs to know is the depth of his own ignorance. At the same time, it cannot be helped, and, on the other hand, it is only fair that the unpractical man should have his revenge, at least once in a hundred years, for the numerous ward-meetings he has failed to influence and the caucuses and conventions he has failed to capture, and the insults and jeers and exhortations that have been heaped upon him in consequence, by explaining to his practical brother what a consummate mess the latter usually makes of all the more delicate parts of the social machine when he undertakes, not merely to plod along obediently and perform his allotted tasks, but, as he now actually has done, to govern the world. He has not made a great success of it in abstract science, according to Mr. Simon Newcomb, whose account of his subject might be briefly summed up by saying that there is not in America any abstract science. That there is not going to be, Mr. Newcomb does not say (and, indeed, if any one else had been writing the article, no doubt Mr. Newcomb's own name would have been brought forward in qualification of some of his statements); but he does say that abstract science has been hitherto in a far from flourishing condition. In other countries it has had the support of government or learned bodies. In this country it has had almost no support. The basis of any future advance must be a better knowledge of the wants of science among those who give money for its promotion. In this direction the "practical man" has only as yet reached the rather elementary stage at which he has been able to grasp the idea that astronomy cannot be successfully cultivated without telescopes nor chemistry without retorts. Big telescopes he has accordingly been putting up in all directions, and laboratories in every corner, until Mr. Newcomb declares that we want no more. What we do want is men to use them, and public recognition of the value of their labor.

The article on Law by Mr. G. T. Bispham is not so satisfactory as the others. It contains too much philosophy of a vague sort and too little law. The "great fact in the progress of American jurisprudence," Mr. Bispham says, is "its tendency towards organic statute law and towards the systematizing of law"; or, "in other words, towards written constitutions and codification." This may be true, but Mr. Bispham has wholly failed to point out the peculiarity of American constitutional law, which does not at all consist, though it is often loosely spoken of as if it did, in the fact that it is written. French constitutions are written, and yet they have no effective force like ours. The English constitution is unwritten, and yet the great body of our constitutional law, so far as it affects private right, closely resembles the English, and was taken in great measure from England. If the art of writing and printing were lost to-morrow, the constitutions of the States and the United States would not lose their vitality, though their interpretation would of course be more inconvenient than at present. The whole secret of American constitutional law lies in the fact that it puts the courts above all the rest of the government. Mr. Bispham also wholly omits to notice the revolution in the study of the law brought about by Austin's school in England—a revolution which now begins to be felt in this country pretty plainly; and he hardly touches upon the relation between the bench and bar and the public at all. He does not speak with favor of the new systems of pleading, and thinks the true principle of reform in this department would be to simplify the common-law system—the Massachusetts Practice Act is as good an example of this sort of reform as any one can ask for—and not to sweep away technical pleading nor abolish all the forms of action.

Professor Dunbar, who always writes so well that we wish he wrote oftener, in his review of Economic Science, comes to the conclusion, which must certainly be admitted as true, that "the United States have thus far done nothing towards developing the theory of political economy." There have been several able men, from Hamilton down, who have studied economic science and made successful applications of their knowledge in practical affairs, but they have not advanced the science itself. Mr. H. C. Carey is the only name that can be brought forward against this statement, and to say this is to make the case worse than before; for the history of Mr. Carey's mind, as revealed in his books, is the history of a mind hopelessly confused on the very subjects it professes to know and teach. His historical refutation of Ricardo will no doubt hereafter better serve the purpose of illustrating logical error than of advancing the fame of the "Pennsylvania school." As to the causes of our economic barrenness, Mr. Dunbar finds them the same as those which have kept us so backward in philosophy, in pure mathematics, in abstract science generally, in the more recondite historical investigations, and the higher generalizations in physics—the newness of the country, the hitherto practical character of American life, and the seeming immunity from the consequences of economic blunders caused by our wonderful natural resources.

Fine Arts.

NINTH EXHIBITION OF THE WATER-COLOR SOCIETY.

If a new painting vehicle could be discovered every five years, it is wonderful the development of strength that would be manifested in the national art. Nothing can equal the stimulus of an escape from old methods, a disfranchisement from routine, a competition of ancient comrades rallying in fresh societies. As each man turns a novel side of himself to the criticism of his competitors, he exercises on them the enlivening power of an innovator from some strange country; and in the clash of practice and experiment there arises that agitation of learned dust called respectfully in the profession atmosphere. It is for this reason, and not because water-color will ever express the best things of art, that the vigor of President Smillie's crusaders is so gratifying. The ninth year finds them assuming the stability of experience without losing the enthusiasm of the start, and the little indescribable signs of live earnestness cover the whole exhibition and give it a lustre. The special stimulus of the year has come in for an additional inducement to exertion, and several gentlemen have expressed their patriotism in the natural way of ordering a larger frame than they ever used before. The rooms of the Academy are accordingly filled to repletion, and there are six hundred pictures hung, while it is understood that an uncommonly large number were rejected. Three-fourths of the space are, however, occupied by the spandrels which surround the pictures; that tendency to segregation which induces the aquarellist to express the major part of his idea in blank card-board showing this year with especial distinction and exclusiveness. A little group of Spanish pictures are framed in velvet, by no wish of the Society, we are sure; they are contributed by a foreigner, and their arraying is admitted by courtesy. A colorless wall-paper has been stretched temporarily over the Academy's walls of maroon, forming a vacuum on which the delicate harmonies of each composition play with all the vigor they can. The visitor feels that the discipline is a little severe, but there is enough individual merit in the pictures to reward him for penetrating the bleakness of the galleries.

A spacious and important picture (41) forms the contribution of Mr. Tiffany. Although the intention is excellent and the execution thorough, this work betrays the amateur. Having found in Switzerland a weather-stained wooden niche employed as a boutique, the artist has eagerly seized this structure for the boundary-motive of his picture, allowing that frame within a frame whose effect is never good, and which is always shunned by a master of composition. In this receptacle is amassed a universe of tinware, to relieve the nacre-tints of which the whole picture is drowned out in a uniform contrasting shade, harmoniously treated but disagreeable. The patient pursuit of detail cannot be too highly commended; the glancing armor of the tins covers one part of the picture with subtle silvery spectrums, and there is a copper kettle which challenges the Dutch masters. Two figures, one with a wooden Punchinello profile and the other lifelike, give human interest to this careful piece of art-jewelry. "A Scrub-Race on the Western Plains" (161) is a scene sketched from nature among the manners and humors of the prairie caravan; a half-dozen of emigrants and half-breeds are exercising their clumsy horses on a fine evening after the wagons are drawn up in camp array. In this earnest picture Mr. J. D. Smillie has undertaken one of the hardest tasks ever assumed by an aquarellist, the study being most original and difficult, and the dimensions—some four feet diameter—adding unnecessarily to the awkwardness of the labor. The group of horses is certainly not a success; the drawing is heavy and anxious, and in the foreshortened cluster of racing brutes the artist has badly entangled himself in what would puzzle a Landseer—to show elegance of drawing in the treatment of the scurviest models. While the figures sink down in an anxious heaviness, the landscape, on the contrary, is diaphanous and delicate to a charm. There are, in fact, two pictures here, a group of dark and clumsy silhouettes glued to a landscape-motive as faint as a glass window, and only forced into unity by the exaggerated blackness of their shadows. Either the group or the setting would make a picture, but the two are treated under different conditions of force, finish, and light-and-shade, and the tender scenery breaks like gauze under the weight of the intruding figures. At the same time, the command of technic, especially in the broad sky and aerial distance, is remarkable. The

picture interests every artist, but it is a pedagogue's exercise, and does not get out of the school-room.

Mr. Homer sends in the usual budget. It is hard to say whether irritation or pleasure prevails in contemplating the present works of this artist, they go so nimbly up to a certain point and stop so definitively within the gaol. It may, perhaps, be acknowledged that his pictures are the only figure-pictures by an American exhibitor which are grasped with the real dramatic force Each one is perfect in telling its story: character of hero, pertinence of surroundings, degree of expression, type, age, atmosphere, time of day, strength or reticence of color—every study is a rounded sonnet sufficient to itself. But each is shouted out of breath so hastily and rawly that the prevailing impression perhaps is a sense that we are defrauded of a suggested delight. The delicacy of conception in the two negro Cupids, one of whom is catching a bee and the other is waiting, with the unutterable pregnant patience of his race, to confer a gigantic sunflower on his schoolmistress, is most enjoyable; no bronze from Herculaneum expresses more by simple posture. But the charm of competent finish is wanting. Would finish have spoiled the charm? If so, the shortcoming of Mr. Homer's art is confessed. In another picture, where a Zouave, armed with the fragrant canteen, is making friends with a little contraband, the soldier, relieved against black, is modelled with the skill of Vibert or Detaille; but the completion of this single figure seems a caprice or an accident. In a further example, some boys, bathing after sunset, are stilled in spirit by the creeping horror of the night, as they stand darkling out of the water with their spirit of larking quite beaten out of them; in another, the same boys, perhaps, are toasting in the sun after a noon bath on the sands, their dry, gritty sense of cleanness expressed in every curve of their bodies under their correct palm leaf hats. It is such a beautiful thing to tell these healthful stories with all the simplicity, all that confinement to the idea, which we find in Japanese artists, that we can only mourn the loss of the fine painter Mr. Homer would be if he could give us the developed painting instead of the sketchy impression. Mr. Eakins, whose studies of American sports seemed to complete what Mr. Homer aimed at, is regretfully missed this year. Mr. T. W. Wood contributes a study (13) of Band-master Grafulla, stark and stiff in his professional authority amid the burly splendors of his Seventh Regiment uniform, that shows an advance in the freedom and expressiveness of the countenance; this is but a fairy's gift, however, and fades away in the rapidly degenerating treatment of the rest of the painting, while his contributions 74 and 78 reveal his old elaborate poverty; in the last picture, however, there happens to be a detail, a lime-bucket treated in body-color, that is a perfect statuette or bas-relief of its original, consummate in mechanical perfection, and accurately expressive of the competence of its creator. Mr. Perry shows "Anne Hatheway's Kitchen" (79) and "A Month's Darning" (18), both in his most careful style. Mr. Edwin A. Abbey, a new contributor, sends a fine exhibition of youthful energy, a broad trowel-cast of rough distemper, the greater part of which accurately represents Shakspere's conception of "Wall," but the corners of whose spacious extent afford room for a couple of figures of true graphic merit (24): the Yankee squire of Van Buren's epoch meets the village belle in a rural coaching office; and, while modestly separating themselves to the extreme limits allowed by the composition, the personages think furtively of each other, and a sort of communication of impressions wittily fills up the blank which the artist has so considerately placed between them. Mr. Magrath's life-sized head (76) is evidently a mistake in scale, as his knowledge of the figure is not sufficient to carry him through such a task with the distinction we look for in him, even if aquerelle were ever very satisfactory in the dimensions of nature. This painter's other contributions are all beautiful, in the happy line of Irish pastoral he has struck upon. No. 47, "On the Hillside," is a peculiarly noble and serene composition, with a few well-contrasted forms of sheep relieved in shadow against a sunny distance, in an environment of foliage that just leaves a focus for the brilliant vista. The labor here, in old-fashioned legitimate water-color, is most rich and satisfying. Other pastorals, as the "Morning" (188), display the sense of open blowing weather, in the blue fleece-sprent sky and the rock transiently chilled in the shadow of a cloud, so common in English examples of cartoon art. In knack of composition, in the introduction of figures that carry on the sentiment of the scene, in trick of chiaroscuro, and in color, Mr. Magrath occupies with perfect acceptability the field of the old shepherdess-painters. He has even improved on the most of them. But he spoils, in every single instance, the sentiment of his compositions by a type of the human face which is neither rustic nor innocent, nor ignorant, but which belongs to the lower life of cities. A more fatal shipwreck in this kind, however, is made every year with unerring punctuality by Mr. Matt. Morgan. The beer-saloons undoubtedly have their artistic side, and when Mr. Morgan sketches the ruffians and men-about-town who were naturally intended for his prey, he is certain to be strong; but the waitress found in those haunts, who at present forms Mr. Morgan's sole type of feminine beauty, and whom he perseveringly introduces as a lady or an *ingénue* at every annual exhibition, is a less sincere creation. He presents her in a group of old-young, hardened-looking children, in a picture he has painted in collaboration with Mr. Bricher (14); and again as a Venetian soubrette (422). As for Mr. Bricher, his landscape is hardened up to a perfect sympathy with his colleague's figures; the woods in No. 14 are dashed in with dry, scene-painter's knack, without any love, or even detailed recollection, of the real forest; in 99, where he attempts a coast-scene, the regular line of foam seems to be imitated from Miss Bridges's thistle-seeds (150). A figure-painter of real merit is Mr. Wordsworth Thompson; but his effort this year—his first, as we believe, in water-color—is not commensurate with his powers; the "Park Shanties" are excellent material for an artist, but Mr. Thompson has applied to them only for an incident of desperate commonplace and inherent vulgarity.

Messrs. Henry Holt & Co. have nearly ready the History of the United States, in Freeman's Historical Course, with maps by Gen. Francis A. Walker; Dr. Brinton's new work on 'The Religious Sentiment'; a revised edition of his 'Myths of the New World' and 'Jonathan'; a new novel by C. C. Fraser-Tytler, author of 'Mistress Judith'; Taine's 'Ancien Régime'; 'Ersilia,' by the author of 'My Little Lady'; and General Walker's exhaustive work on 'The Wages Question' will soon follow.

A VALUABLE BOOK
FOR
Public and Private Libraries,
NOW OFFERED AT A VERY GREATLY REDUCED PRICE.

A General System of Botany,
Descriptive and Analytical, in two parts. By Le Maout and Decaisne. Translated by Mrs. Hooker—the orders arranged by J. D. Hooker—with 5,500 engravings, 1,066 pages, royal 8vo, cloth. London, 1873.
This Grand Treatise was imported in quantities by Messrs. Lee & Shepard, from whom the undersigned has purchased the balance of the stock and reduced the price from $25 to $9.
Every copy warranted perfect. Orders will be promptly executed upon receipt of Post-office money-order. Only thirty-four copies remain.

The Nation.

NEW YORK, THURSDAY, FEBRUARY 24, 1876.

The Week.

AMONG the occurrences of the week which have had a decidedly *bouffe* air, recalling the political and social life of the Grand-Duchy of Gerolstein, are the performances of General Babcock, a colonel in the regular army, and private secretary of the President of the United States, who on hearing that he was accused of complicity in frauds on the revenue, and that suspicious telegrams signed by him and addressed to him had been discovered, promised to explain everything, and then hired lawyers to use all their skill to prevent the submission of the telegrams to a jury. Another is the appearance, as the chief mouthpiece of a leading Christian church before an ecclesiastical council, of the confidential agent and attorney of James Fisk, jr., who figured so prominently in the judicial scandals of the New York Ring. Another is the request, on his arrest, of Winslow, a Methodist minister, who preached a sermon on the goodness of human nature the Sunday before he fled, after committing numerous forgeries, that "Massachusetts would remember his services in the army and navy." Another is the sworn testimony of the President of the United States that he knowingly appointed an "illiterate man," who could hardly write his name, to an office of trust and emolument, in spite of damaging charges against his character, on the ground that he had seen a "great deal of the world and people"—his experience of life having been really that of a gambler and sharper, or, in other words, the low life of a city as described in the amusing drama of "Tom and Jerry"; and that he (the President) picked him up off the sidewalk in Washington as an agreeable and suitable companion in a drive.

It is now set down as beyond doubt that the President is sufficiently displeased with Mr. Bristow on account of the prosecution of Babcock to make it tolerably certain that he will have to resign. But, as usual, it is not the President who is to blame at all; it is his "wicked partners" who have "imposed upon him," or "led him astray," or "poisoned his mind." The "wicked partners" are this time apparently persons connected with the whiskey frauds, or politicians who think these exposures are going too far for the good of the party. The President's position in all these matters seems, according to the account of some of his friends, to be that of a minor king, who is "got hold of" now by one set of evil companions and now by another, but who, if the bad men would leave him alone with clergymen and elderly persons of good repute, would really be an excellent young man. We prefer, for our part, the Oriental theory, namely, that he is in his attitude towards civil government a thorough Turk, and takes the Sultan's view of all these matters—that is, a strictly personal view. He is willing to govern well as long as his interests and caprices and friends are not interfered with. When he said, "Let no guilty man escape," he said it in the sense in which Bajazet would have said it, and intended numerous exceptions to be understood. Therefore, if any mistake has been made in pursuing Mustapha the favorite, off goes somebody's head—it may be the Chief Eunuch's or it may be that of the Minister of Finance or of the Commander-in-Chief of the army. When one sees how irresponsible and easily "poisoned" and "led astray" an elected President can be, according to General Grant's friends, one is tempted to ask what we gain by forbidding the hereditary transmission of the office. Would not a pure-minded youngster who had received it from his father and had been well-grounded in hard-money views by his mother serve our purpose as well as it is now served?

The Babcock case has reached the stage of speech-making, and Col Broadhead has begun the summing-up for the Government, followed by Messrs. Storrs and Porter for the accused. The case for the prosecution, which is admirably presented in the *Tribune* of the 23d, consists chiefly of proof that Babcock did what he could to further the interests of the whiskey-conspirators at Washington; but the strongest point in it may be said to be the total failure of the defence to furnish any explanation of the telegraphing between St. Louis and Washington consistent with the theory of innocence. Colonel Broadhead, in his speech, does not appear to have been much hampered by recollections of the fate of Mr. Henderson. He referred to the President as having "stepped down from his high position to interfere with the duties of one of the Department officers." This remark created a sensation in court, and was substantially what Henderson was removed for saying. The President's deposition in favor of Babcock consists mainly of an endorsement of his character, and throws some light besides on his own system of appointments.

Mr. Edwards Pierrepont, the Attorney-General, recently sent a circular to the District-Attorneys warning them in so many words that hereafter punishment would be meted out to all persons engaged in the whiskey frauds, informers included. As it is mainly through the informers that any convictions have been procured, the press not unnaturally treated the circular as an indication that the Government was growing tired of the prosecutions and wished to have an end of them, and the report was spread that the circular had been written by the President's direction, and that he had chidden the Attorney-General for not making it stronger. Mr. Pierrepont now writes to the *Herald*, not denying that the President directed the letter to be sent, but that he was dissatisfied because it was not stronger. It can hardly be said that this puts the matter in a much better light, and it is one of the little incidents which, though possibly harmless and capable of satisfactory explanation, help to deepen the popular impression that the Administration would like to let the "whiskey thieves" run, and thank God it was rid of such knaves. Mr. Charles Nordhoff, the Washington correspondent of that paper, writes to the *Herald*, under his own signature, a reply to the Attorney-General affirming positively that the latter, when spoken to about the letter by the "better class of lawyers," did say that it was written by the direction of the President, who wished it to be stronger; that the letter was first published by the Washington correspondent of the Chicago *Times*, and read in that city, where heavy whiskey cases are pending, like a warning to informers not to testify. Mr. Nordhoff adds that there is a profound belief in Washington among "people who love justice and hate mystery" that Congress ought to make a thorough examination of the proceedings against the whiskey frauds.

The Advisory Council has been sitting in Brooklyn during the week and getting the evidence relating to the points submitted to them by a sort of desultory examination of witnesses, including Mrs. Moulton's counsel, Mr. Van Cott, and Mr. Bowen, apparently in a spirit of great fairness. Mr. Bowen explained the contradiction between his opinion of Mr. Beecher now and that expressed in the Tripartite Agreement by saying that when he signed the agreement, although he knew of his wickedness, he thought he had "reformed," and therefore was not unworthy of "friendship, confidence, and Christian fellowship." Mr. Beecher has taken occasion twice during the proceedings to challenge the world to bring forward charges against him, and once, after appealing to any angels there might be of unusual "prescience and omniscience" to reveal the truth about him, called on God to do the same thing—a performance which brought down the tumultuous applause of the galleries, but, of course, could have no other results. The call for a

Council forwarded by the Andover church has been published, and is a sensible and well-drawn document, containing the reasons for further enquiry with which everybody is familiar, but it has apparently not been well received by Plymouth Church, the managers of which, by frequent protrusions of the "main question" into the proceedings of the Council now sitting, are apparently desirous of giving its finding the air of a judgment on the whole case. It looks more and more as if the ordeal of fire or of water would have finally to be resorted to. The importance the church appears to attach to Mr. Beecher's appeals to Almighty God to make known his innocence, looks as if they thought the divine interposition might be visibly secured by some simple process.

Both Houses of Congress have passed and the President has signed a joint resolution making the 22d of February of the present year a national holiday. Besides this the Senate has refused, by 33 to 30, to take up Pinchback's claim, a vote which will, it is supposed, postpone the consideration of his case for a good while, and has voted to concur in the District of Columbia 3.65 bond Conference Committee report. This is the second conference report made on the subject, the first having been recommitted, and the questions involved in the District of Columbia dispute are becoming somewhat "mixed." The principal trouble is with "Boss" Shepherd's Board of Audit, which furnishes the machinery for the manufacture of the bonds, and which we believe is hard at work auditing while the debate is going on. It is obvious that there can be no settlement of the matter till this process is stopped, and so the Boss and his friends have now introduced the "workingman" on the scene, and represent that unless a little more auditing is done, certain claims which the workingman has against the District cannot be paid. It seems from the debate that the workingman in the District is a peculiar character, and differs a good deal from workingmen elsewhere. Generally speaking, the workingman when he is not paid strikes work until he is paid; but in the District it seems he keeps patiently toiling away, and, feeling that he is worthy of his hire, prefers to fund it in "claims" that he may afterwards convert them into 3.65 bonds; and so if these claims cannot be audited he will be defrauded of his pay. The Senate has also passed the House bill extending the time for filing *Alabama* claims. The House, by a vote of 143 to 102, has passed the act to reorganize the judiciary substantially as it came from the hands of the Committee, debate being apparently left entirely to the Senate. Mr. Cox has been made speaker *pro tem.* in the absence, on account of bad health, of Mr. Kerr.

The printing of Congressional speeches—a subject to which we called attention in the *Nation* a fortnight ago—has been brought up by Senator Anthony. He thinks that the *Record*, instead of containing much that is never said in Congress, and omitting much that is said, ought to be an exact transcript of Congressional proceedings. As an illustration of the abuses of the present system, he told a story of a member of the House who some years ago informed that body that he had prepared a "few remarks" on the duty of recognizing Cuban belligerency, but as he did not wish to trouble the House with them, he asked for leave to print. This was given him, when it was discovered that the speech, instead of being about Cuba, was "a shameful attack on an honored member of the Senate" not long dead. The House ordered that it should be excluded from the official edition of the *Globe;* but the mischief was already accomplished through the regular daily edition. We heartily agree with what Mr. Anthony says. There are but two ways, however, to prevent such scandals—either by an elevation of the general tone of Congressional opinion, or by fine and imprisonment. Any wilful tampering with official Government records, no matter by whom done, is a crime against the public, and it is high time that members of Congress who do such things should meet the same punishment that is provided for any one who falsifies any of the Department records.

Mr. W. D. Kelley has replied to Mr. Blaine on behalf of the inflationists—who, he says, number one million of Republican voters—who were "wounded and grieved" by Mr. Blaine's speech. It is very difficult to make a précis of Mr. Kelley's speech, for reasons which it would not be polite to mention. The best we can do is to say that he rebukes Blaine for saying or insinuating that the issue of the legal-tenders was unconstitutional; maintains that the volume of the paper currency had no effect on the price of gold or other commodities; proposes that the Government should substitute its own notes for those of the national banks; acknowledges that the crisis of 1873 was caused by an undue expansion of credit, but alleges that this undue expansion was the result of previous undue contraction of the currency; thinks Blaine's citation of the case of California very unfortunate for him, as her prosperity is not due to her coin but to her great natural wealth, and denounces her as a poor place for men with small means; refers to the monetary condition of the country after the Revolution as a sad illustration of the consequences of the failure of the Government to issue paper-money; declares the maintenance of a monetary system of which gold shall be the basis impossible anywhere except in France, England, and Germany, which levy tribute on other nations in the shape of interest on bonds; and draws a dismal picture of the future unless we get out more paper-money. Of Mr. Blaine's speech he took a generally low view, declaring "his allegations loose and often unfounded, his deductions illogical and inconsequential, and his conclusions untenable." We notice that some hard-money papers have begun energetically to refute the judge, but they may save themselves the trouble. They might as well try to refute a prima-donna in an opera.

The annual report of the Massachusetts Railroad Commissioners contains a curious exposure of railroad "accounts." As the matter stands now, every company lays down its own rules as to what it shall charge to construction and what to current expenses, and these rules are not deduced from any general principle, but depend to a great extent on whether the company wishes to leave a large or a small balance in the way of net earnings. As an illustration of this, they refer to the substitution of steel for iron rails—a process now going on all over the country. If two corporations are doing this, one of which is embarrassed and desires to increase its apparent income, while the other is pursuing a conservative course and improving the value of its property, they will adopt rules for their accounts diametrically opposed to each other. The embarrassed company will so manage that the whole outlay is charged to construction, while the conservative company will meet the expense from net earnings, and the old iron will then be put down in the one case as so much material on hand required for use, in the other as so much money earned by the operation. So it is also with regard to rolling-stock; and on the books of the Massachusetts companies locomotives vary in cost from $2,507 to $12,565, passenger cars from $96 to $4,500, and freight cars from $57 to $868. It is from accounts kept in this way that stockholders and the public derive their only knowledge of the condition of the corporations, and one of the most urgent reforms now demanding attention is, as the Massachusetts Commissioners say, the introduction of a uniform system of accounts, the adoption of which shall be made compulsory upon all roads.

The past week witnessed the beginning of specie exports on a large scale, the steamers for Liverpool and the Continent having taken out $2,331,946 specie, of which about $2,000,000 was gold coin. Since the opening of the year specie shipments have several times seemed to be imminent, but when exchange advanced to the shipping point an unexpected supply each time appeared, and calculations that gold would go were proved to be erroneous. The explanation of this is that a large amount of the bills made against the heavy railroad-bond negotiations in London at the beginning of the year were bought on speculation by brokers, who held the bills until the market became strong and then sold them at high prices,

selling only such amounts as could be sold at about specie shipping rates. That this supply has been exhausted the course of the markets during the week has shown. When so large an amount as £250,000 demand bills was wanted by a prominent banking-house, it could not be got at rates below the point at which they could remit gold. Accordingly, $1,250,000 gold was sent by this house, which started the general movement. Subsequently exchange advanced, so that it became profitable for bankers to engage in shipping gold just as they would ship cotton, breadstuffs, or securities, and the week closed with the market in this condition. The foreign trade of New York continues in excess of last year, the imports, merchandise and dry goods, last week having amounted, at even the low prices ruling, to $9,018,213, against $7,974,697 last year. The exports for the week were $3,440,295, against $3,952,584 last year. The exports from New York and the whole country have been reduced in the past few weeks by the falling-off in cotton shipments, which has been due to the fact that cotton has ruled in our markets above the price in Liverpool.

The New York banks increased their loans during the week about $1,500,000, although losing $1,200,000 in surplus reserve; the latter, however, still amounts to $14,880,000, against about $8,000,000 last year. There is, therefore, a large margin for gold shipments without disturbance to the loan market. The most notable event in relation to Stock-Exchange affairs has been the passage by the Wisconsin Legislature of the Vance Bill, which materially modifies the notorious Potter Act. The enactment of the bill shows such a change in public sentiment in that State respecting railroads, that the bonds of these roads and their shares have been bought with more confidence, and there has been a large rise in the price of each. A feature of the week has been the advance in United States bonds, which, for several classes, have sold at the highest price on record. The gold price of $100 greenbacks has ranged during the week between $88 09 and $87 71.

The long-expected debate on the Suez Canal purchase opened in the English House of Commons on Monday, though nothing very positive in the way of comment can be based on the telegraphic report of the debate. The Opposition, which is led on this occasion by Gladstone, seems to rely on the commercial uselessness of the purchase, inasmuch as it only gives England ten votes, combined with the loss of the position of dignified neutrality which it entails and which England has so long held. But the summary of Disraeli's reply seems to indicate a serious difference of opinion in the Cabinet as to the end and aim of the purchase; for Lord Derby, in a recent speech on the subject at a public meeting, distinctly laid it down, and the diplomatic correspondence seemed to corroborate what he said, that the object of the purchase was the care and improvement of the Canal for the general benefit, while Mr. Disraeli, if the telegraphic summary of his speech is to be trusted, lauds it as a political measure calculated to strengthen the empire. There is little doubt that this is the view which makes the purchase most acceptable to the British public.

The result of the Senatorial elections in France seems to give great satisfaction to all moderate men, and to be likely to be regarded by the country at large as a guarantee of prolonged stability. M. Buffet, who might be called a Conservative Irreconcilable, has been defeated in eastern France and M. Thiers returned, and M. Louis Blanc, one of the most rabid of Republicans, has been defeated in Paris even, and M. Freycinet, Gambetta's Minister of War, been returned, which is regarded as a signal vindication of his new policy of moderation. He has for the last year or two been endeavoring to prove to the country, and especially the timid country people, that republicanism was not the enemy of order or property; but many doubted whether he would be able to carry the politicians of his own party with him in his new programme. He has apparently succeeded, and if he has, there is little chance that even in 1880 the present constitution will undergo any radical change. Victor Hugo has been elected in Paris with difficulty, which indicates a great change in popular sentiment in the direction of sober-mindedness.

The elections for the French Assembly appear to have resulted as fortunately for the new constitution and for the Conservative Republicans as those for the Senate, though the former are by direct universal suffrage. In the interval the Bonapartists have exposed themselves to some ridicule by denouncing election by two degrees, and glorifying universal suffrage pure and simple, because in the last election they seem to have been as signally worsted as in the first. The returns received of the Assembly vote appear to indicate that the combined Republicans, both Radical and Conservative, have a clear majority, while the pure Radicals, or Reds, are nowhere. The Bonapartists, all told, are reported as numbering only 59 out of 395 elected candidates. M. Buffet has been again defeated in the four districts in which he was put up, and has, as was quite proper, resigned. It is now to be hoped that Marshal MacMahon will form a new ministry before the new legislature meets, so as to prevent the carrying into it of the old conflicts and bitterness. The Bonapartists are trying to console themselves by the reflection that the election of so many Radicals will lead to excesses, and thus, as before, help the cause of the Empire. The whole result—which is due, first of all, to prolonged and peaceful discussion under the guarantees for public order which Marshal MacMahon has honestly and faithfully supplied; and, secondly, to the change of tactics on the part of Gambetta—ought to, and we hope will, put to the blush the Radical blatherskites both in this country and England who have for the last five years been abusing the late Assembly for not at once proclaiming the Republic with tumultuous applause. In other words, they were furious because the French did not commit the folly they have so often committed before. The present Republic actually owes its existence, in fact, to the steady, peaceful resistance of the ultra conservatives, because it forced Gambetta and his following into reflection, and led to their abandoning the policy of frantic hostility to all conservatism with which they began their political career after the war. As soon as he got into a rational frame of mind, and a constitution had been adopted, and all was ready for a sober-minded election, the Assembly dissolved.

The state of the Turkish question is now this: Turkey has accepted Count Andrássy's Note on all the Powers giving in their adhesion to it, though she probably would have refused had England held aloof. The Note, which has been published, asks for (1) full religious liberty, (2) the abolition of the system of farming the revenue, (3) the passage, or rather issue, of a law providing that the direct taxes levied in Bosnia and Herzegovina shall be applied to the uses of those provinces, and shall not be turned into the imperial treasury, and finally (4), the formation of a Commission composed of an equal number of Christians and Mussulmans, to see to the carrying out of the reforms. It also asks for, but does not make it a *sine quâ non*, some effort on the part of the Government to ameliorate the condition of the Christian population of these provinces by the offer of facilities for acquiring possession in fee of waste or crown lands, and urges the prompt fulfilment of the promises of the firmans of the 2d of October and 12th of December, providing for the independence of the judges, the establishment of provincial councils elected directly by the inhabitants, the reform of the police and of the system of forced labor on the public works, and the reduction of the tax levied in lieu of military service. The Note dwells strongly on the uselessness of further promises or "programmes," and of laying down any further general principles; this time there must be execution, for, as Count Andrássy points out, the insurgents pay no further attention to firmans. There is a report, though it is not well authenticated, that there exists a secret understanding, suggested by England, that in case there is any failure on the part of the Porte in carrying out these reforms, or on the part of the insurgents in accepting, the provinces shall be occupied by Austrian troops in the spring until order is fully restored.

MR. BRISTOW'S DUTY.

WE are unable to say how much truth there is in the reports of dissensions between the President and Mr. Bristow arising out of the whiskey prosecutions, but it is certain that they grow stronger every day and take more shape and consistency, and that they derive a certain corroborative force from such incidents as the Attorney-General's letter withdrawing the promise of impunity to informers which has really secured most of the recent convictions for frauds against the revenue. The report, for instance, that if Mustapha the Vizier is acquitted at St. Louis, the Sultan will cut off Mr. Bristow's head for pushing his friend so hard, is now scarcely denied, and finds a certain *à priori* support in the Sultan's character and official history. What we have to fear now is that Mr. Bristow may be sufficiently disgusted, or made sufficiently uncomfortable, to cause him to resign, and thus save the President the responsibility of dismissing him. We sincerely trust that he will not in any moment of weakness or irritation be betrayed into any such want of fidelity to the public interests as this would be. One of the misfortunes of General Grant's Administration has been the exceeding unwillingness of the better class of men whom he has from time to time put into office to find fault with him publicly, or confess publicly that they have had anything to complain of at his hands. This has been due in part to the halo with which his military career surrounded him, and in part to the horror which every man in political life entertains of being considered "a sorehead." When Mr. Cox and Mr. Curtis, for instance, had to resign in consequence of his breach of faith towards them, they both treated their retirement as if nothing had happened to diminish in the least their admiration of him, or their confidence in his administration. They passed before the Presidential chair carrying their own heads in the baskets and crying, "Mortui te salutamus!" The result was of course to retard or prevent the educating influence of experience on the President's mind. He came into office without any political training whatever, and apparently without much interest in civil affairs, and whatever he has learned has been through observation of the consequences of his own acts. But this natural and healthy process of enlightenment some of the very best men in the Republican party have done their utmost to hinder, by protesting steadily, year by year, that the hero of Appomattox Court House either never did anything wrong or did no wrong of any consequence. When he turned a good man out of office the good man said he was sorry, but perhaps on the whole it was all for the best. When he put a bad man into office, the good men said they were sorry again, but did not see how, under all the circumstances, the President could have done anything else. When he abandoned a reform, he was assured that he had done his mortal best; that "the politicians" were too strong for him; and that the People must rise against the Politicians, and then the President would reform with all the efficiency and dexterity of a steam-engine. This went on so long that General Grant very naturally fell into the way of thinking—to which we are all so prone, and against which religion and law have had so long and hard a fight—that whatever he chose to do was pretty sure to be "about right." All his bad tendencies were stimulated by flattery and apology, all his good ones repressed by the entire absence of any spirit of exaction or criticism on the part of the only portion of the public about whose opinion he cared anything. Finally, he fell into open, defiant support of corruption, as in Shepherd's and Delano's cases, when he met the moral indignation of the country with endorsements worthy in their sullen contempt of public opinion, of the Czar Nicholas or the Sultan. It is rumored, and it is easy to believe, that he does not see to this hour what there is wrong in Schenck's case, and wonders what the infernal newspapers are making such a fuss about.

The reason why characters like his succeed in military life and fail in civil life is easy to see. In the field there is no way of covering up mistakes—the dullest man is taught that the subtle adulation of friends or followers will avail him nothing. The enemy is an awful angel with a flaming sword, who stands guard over him night and day, and makes swift destruction the penalty of a bad appointment or a careless move or a foolish delay. This tremendous discipline rouses the most sluggish natures into watchfulness and activity, sharpens their insight into character, and deepens their sense of responsibility. In political life there is no such swift test of temper and capacity, and the penalty of a thousand faults and follies may be indefinitely postponed. The greatest need of the present Administration is for somebody who has earned the attention of the country to say boldly, "This is wrong and that is dangerous, and I cannot approve of it, but I will not resign." Some such person was needed in the Treasury when the Puritan Boutwell acknowledged to the Missouri delegation that MacDonald was probably the shiftless gambler and blackleg that they said he was, but that, nevertheless, he would have to appoint him. Some such person is needed now to give the vast amount of aimless and unorganized reprobation there is in the air something on which to solidify and make itself felt. None of the men whom General Grant has by accident or design put in high places has yet displayed so much fitness to be the embodiment of this floating protest against evil as Mr. Bristow has. He has shown himself thus far more nearly the minister of a constitutional state than any one else with whom the President has had to deal. His course has appealed in a most striking way to the better sense of the country, and has given strong expression to the widespread and deep popular desire for a government by law and not by men, for the application to public affairs of rational methods. The growth of his popularity, therefore, considering that he was comparatively little known when he took office, that he seldom or never makes a speech, and that he has no fame or standing in the fields of political intrigue, is perhaps one of the most hopeful signs of the present day. The duty of the country towards such a man is first of all to make him understand that it appreciates such services as his, and that, in or out of office, he will not lose his hold on its remembrance. His duty towards the country, on the other hand, is to stay in whatever post he is able to render most service until he is thrust out of it, and when he leaves it to give a frank and candid account of his removal without whitewashing or fear of "hurting the party." The party is too far gone to be saved or helped by any concealment, or evasion, or bearing of other people's burdens. The time has come for the President to face openly the responsibility of his own acts, without any distribution of the blame among his "wicked partners." The interests of public morality require that things should be at last set squarely before the public eye without varnish or drapery.

THE BANKRUPTCY SEE-SAW.

THE repeal of the Bankrupt Act in the House by a large majority, practically without any debate, brings us once more face to face with the old question, Is it possible to have any uniform and settled law of insolvency in this country? It cannot be denied that the subject is an important one—more important perhaps in a new, flourishing, enterprising, and speculating country than in any other. When fortunes are made and lost with the rapidity that marks our trade, it would seem as if one of the first things to be guarded against was any fluctuation in the guarantees to creditors against repudiation of obligations. So we should say that in such a country, one of the first things to be guarded against would be any fluctuation in the measure of value. Yet we know by experience that both with regard to the currency and the laws affecting insolvency, there has been no pretence of stability since the foundation of the government. The power to coin money given to Congress has not preserved us from issues of every species of currency known to man, and the power to frame a uniform law on the subject of bankruptcy has not preserved us from every fluctuation in the relation between creditor and debtor that the ingenuity of either could devise. Congress has three times, in 1800, 1841, and 1867, exercised its power, and twice, after a very short experiment, abandoned the attempt.

The third time the effort has lasted longer, and the law has remained unrepealed, though it has been amended, till the present time. In the intervals during the absence of a bankrupt law, there have been as many different laws governing insolvency as there are States; and when we say that in several of them the law permits preferences, or in other words permits debtors to determine what debts they will pay in full, and what they will not pay at all, it will be seen that in the absence of a national bankrupt law the condition of affairs has been little better than chaos.

As the House of Representatives has declined to discuss the subject, we are thrown back for a determination of the reasons advanced for the repeal of the act upon the memorial of the petitioners for it. It appears from this document that the objections to the act are that in practice "it does not prevent fraudulent preferences," but, from offering the temptation of a possible discharge without payment in full, induces dishonest persons "to contract large debts," and then seek a discharge on a compromise—a process which the petitioners say they "regret to represent" is "often facilitated by the collusion of creditors and dishonest attorneys." Second, although the act was intended to effect a cheap and speedy distribution of the bankrupt's effects, in practice, dividends to creditors are "exceedingly small" and the payment long delayed, "careful estimates" revealing the fact that the average percentage before the passage of this act was about thirty-five per cent., while since its passage this average has been reduced to ten or twelve. The third reason is that

"The practical effect of the bankrupt law has been to destroy confidence on the part of capitalists and damage the credit system. As a natural consequence, capital accumulates in the money centres, it stagnates there, causing paralysis in nearly all the great productive industries of the country. We regard the operations of this law as one of the leading causes of the prostration and embarrassment that now depress trade, and it is susceptible of demonstration that this depression and embarrassment commenced with the passage of the Bankrupt Act in 1867."

These, after nearly ten years' experience of the working of the act, are the only reasons that the opponents of the law have been able to bring forward, with the exception of a passage contained in the President's message of two years ago, in which he attacked the provisions then in force as to involuntary bankruptcy, on the ground that they worked injustice to many debtors who, otherwise able and willing to meet their obligations, found themselves forced into bankruptcy by "obdurate creditors," on account of a merely temporary inability to liquidate, which he declared was owing generally to the "extraordinary scarcity of money."

Now, all these arguments may be divided into two classes: they either amount to saying that the bankrupt law should be repealed because "obdurate creditors" are disagreeable people to have about one, or that there is some defect in the working of the act. The suggestion of the petitioners that the panic of 1873 and the consequent depression from which we are still suffering were caused by the Bankrupt Act we do not propose to discuss, because it does not seem to be worth discussing; the delays complained of, the "dishonest attorneys," the "fraudulent preferences," the small dividends, are all defects in the working details of the law, and not arguments for its total repeal. The process of winding up an estate is exposed to all these evils, whether it is done by State or United States machinery. The process consists of the appointment of a receiver or assignee, and the collection by him of all the assets, and the distribution of the proceeds among the creditors under the supervision of a court of law. Under either system there will be "dishonest attorneys," attempts at fraudulent preferences, and, if the system is badly administered, delays and small dividends. The remedy for these evils is not oscillating backwards and forwards from one system to another, but the improvement of the machinery for the administration of the act. No one will say that, taking the whole of the country together, the State machinery for the settlement of estates is better or more honestly managed than the judicial resources of the General Government, and the conclusive argument is that under the latter there is a uniform system, while under the former there is no system whatever.

It ought not to be forgotten, too, that as a general rule the smallness of dividends from insolvent estates depends far more upon the value of the assets than it does upon the machinery for winding up. The smallness of dividends by which most creditors are now struck, is the result generally of insufficient enquiry into the basis of credit on which they have advanced money. The mania for railroad speculation which led to the panic of 1873 took possession of all classes of the community, and the result was that vast amounts of capital were locked up in enterprises which can make no returns for years, which in many cases will never make any returns at all. The men who obtained all this money had for the real basis of their credit nothing but the prospects of these enterprises, and, that gone, there are naturally but small dividends among the creditors. The remedy for this is of course circumspection and prudence, and a stern resolve to lend money to "none but good men," not the repeal of the Bankrupt Act. This we certainly hope will not be done without a careful examination by the Senate into the facts connected with the administration of the act. After succeeding for the first time in the history of the country in keeping a bankrupt act on the statute-book for a number of years, it would seem very much like a return to barbarism to confess by repealing it that the Government cannot administer it. We do not by any means intend to say that the act is now satisfactory. Amendments have been engrafted upon the original act which have changed its character. But all this is a question of detail. The main thing is that by a bankrupt act everything can be done that can be accomplished by any other means; and that while a national bankrupt act properly administered is uniform and just, all others are local, and therefore necessarily unjust.

Looking back at the legislation on this subject (as on many others in which the general public is not deeply interested—the tariff, for instance), one can trace in the action of Congress the alternate triumphs and defeats of particular classes of the community as they gain or decline in strength. After a commercial crisis a large body of persons is apt to be left burdened with heavy debts which they see no chance of clearing off, and they accordingly bring a powerful pressure to bear on Congress to procure the passage of a bankrupt act, and succeed. The act then works vigorously for a few years, until "the debtor class" is gradually weakened by the release of all the big debtors. This fact "the creditor class" speedily perceives, and it concentrates its forces on the laggards and weak men who have not already got through, and are still only threatened with insolvency, routs them in Washington, and gets the act repealed. On the subject of the controversy Congress itself has no policy or principles, and the general public, which neither owes much nor has much due to it, pays little heed to it. The only persons, in fact, who give the matter any careful attention are the lawyers in the Senate, and we trust they will not now be found wanting.

THE OPENING OF PARLIAMENT.

London, February 1, 1876.

THIS day week Parliament is to be opened with unusual pomp. The Queen is to be present in person—the first time for many years. The Princess of Wales, who has been spending a happy six weeks amid the simple pleasures of her old Danish home, has been summoned in hot haste from Copenhagen to attend her mother-in-law. How she must hate Mr. Disraeli for having curtailed her pleasant holiday by persuading her Majesty to take part in the ceremonial. The royal robes are, it is confidently stated by several of those Jenkinses of the press (I do not mean the author of 'Ginx's Baby') who know or profess to know all the backstairs secrets of the Court, to be placed theatrically on the throne; and the whole operation of opening Parliament is to be performed in the best possible style, under the management of the First Lord of the Treasury and the Lord High Chamberlain, who will do the parts of masters of the ceremonies with their accustomed grace. The House of Lords will, it is said, be crowded. The Peeresses' Gallery will be thronged by all the beauty and millinery of the land. The Lord Chamberlain's Office is already besieged

by applicants for tickets of admission, and the eight cream-colored horses who draw the royal carriage from Buckingham Palace to Westminster are being duly prepared—so far as carrots and hot stables can prepare them—to show the sleekest and shiniest coats next Tuesday that ever have been seen. These dazzling arrangements are to be the prelude of a brilliant season; and, so far as we can see at present, there is nothing to mar the effect. Mercantile people are perhaps not quite so rich as they were two or three years ago, but the fluctuations of trade do not, to any great extent, disturb the gaieties of the season when the landed aristocracy and their ladies set themselves to do it well. The season is not dependent on the commercial classes. They, for the most part, live their own lives apart from the lives of what fashionable novelists call "real people." A few City people hang on to the skirts of the "real people," and struggle and jostle to be presented, and to be asked to Court balls and royal garden-parties at Chiswick. But these individuals are not numerous, neither are they respected. Some of them who cut a dash two years ago may fail to put in an appearance this year, being under the necessity of economizing elsewhere; but the great flood of this year's season will rise and fall all the same without them, until it spends itself on the lee-shore of boredom about the dog-days in the middle of July.

If the prospects of the social season are thus bright and hopeful, what, you may ask, are the prospects of the Parliamentary season? And, however willing I might be to indulge in sinister auguries, I cannot, if I am to speak the truth, gratify my natural predilections. The Government have made many blunders, some trivial, some serious, some grave, but nevertheless they are, as things be, impregnable. The main points in the Queen's Speech will probably be the state of Turkey; our transactions with Egypt; the condition of the army; and the visit of the Prince of Wales to India. A fancy fly of insignificant size will likely be thrown over Ireland in a half-hearted manner, and Scotland will be propitiated in her weak place, education, by the promise of a University Commission, though, if the leading Scotch papers are to be trusted—and they are generally well informed—the said commission is already constituted or packed with a lot of obsolete Tories who have pulled the Tory wires in Edinburgh for upwards of a quarter of a century. And what will the Opposition have to say to these impressive subjects? Lord Granville and Lord Hartington have issued circulars to their followers—even, I am credibly informed, to the Home-Rulers, or at least to the less obnoxious of that party—and have invited them to be in their places when the address is moved. There is no significance in this. The recognized leaders of the Opposition in both Houses issue their circulars as a formal matter every year. When real fighting is meant, the custom is to move an amendment on the address and notify that in the circulars of the leaders. There is no mention of any proposal of this kind, and, so far as I have heard, there has been no special circular sent out by the Opposition "whip"—a process always followed when a critical division is anticipated. We may, therefore, take it for granted that the Opposition intend to acquiesce in the general character of the Government transactions and proposals, and go on, as they did last year, riding a waiting race. They will demand information as to the decision of the Cabinet on the Andrássy note—perhaps the most momentous step taken by a British Cabinet since the declaration of war against Russia two-and-twenty years ago. Very likely the Cabinet have done wisely in backing up the Austrian note, but, so far as the ignorant outside public can judge, it would appear that we have gratuitously impaled ourselves upon one of the horns of a dilemma. If this note means disintegration of Turkey, we reverse our traditional policy, and lend our influence and support to further the Russian traditional policy against which we have protested and fought. If the note means, as it professes to mean, the maintenance of the *status quo*, why do we join in maintaining it in Turkey and proceed to destroy it in Egypt? Because, if the purchase of the Suez Canal means anything beyond a dramatic freak played off to gratify Baron Rothschild and dazzle the Philistines, it means that we are ready to let Turkey take her chance provided we keep our hold on Egypt; and what is that except encouraging the piecemeal disintegration of the Turkish Empire?

I am far from saying that the latter policy is an unwise policy. But let us be consistent if we adopt it. The fact is, this Egyptian business must be sifted to the bottom. The Government has seen fit to mix this nation up in what at best promises to be a dirty financial mess, and the Opposition must take care that England's good name is not sullied. Whether the stock-jobbing operation has been prudent or the reverse, it has tended to produce a low tone both in the press and on the Stock Exchange, and, if report be true, among people who ought not to combine knowledge of state secrets with dealings in Egyptian securities. The wild gambling in these stocks and the dishonest propagation of false rumors which have discredited the commercial morality of the country during the last six weeks, are in themselves a condemnation of the Government, unless they can show that real and tangible good will come out of all this dirty scramble. The dramatic incidents of the purchase, and the subsequent despatch of a member of the Government to see if it was sound—a curious proceeding at best, giving a heavy cheque to a dealer for a doubtful horse, and then sending a veterinary surgeon to examine him—captivated the imagination of the writers of leading articles for the London papers, and had, I am given to understand, a favorable effect upon Continental politicians. So far, so good. But what we wish to get at is how much of the success of this incident is due to imagination and how much to reality. "The divine principle of Fluke, which directs a good half of mundane affairs," may have operated favorably towards the Government in directing them to make a *coup d'état* when they merely meant a costly *coup de théâtre*, and every one in England will be pleased if it should turn out to be so. But the Government will have to satisfy the House of Commons that the nation gets something tangible for its four millions; that Mr. Cave's report upon the finances of Egypt shows that we have some prospect of receiving the annual income of our money; and that the road to India is made more secure than it was before we parted with our money, and allowed the Queen's name to be dragged up and down every stock exchange in Europe.

I see one obvious advantage to the world in the purchase of these shares by a wealthy country, and that is that the Canal is more likely than it was to be improved and kept in order, and so made more available for traffic, than heretofore. But this reasoning would lead to the necessity of taking the Canal out of the hands of private trading companies and putting it under an international commission, like the mouth of the Danube. If this is the policy of the Government, I can understand how the purchase has had a favorable effect upon Continental politicians. But this policy implies neutralization in time of war. I can hardly believe that the representatives of the British nation, or their constituencies, are so enlightened and cosmopolitan as to hail with delight the expenditure of many millions of money in bringing about an agency, the *raison d'être* of which is to prohibit the transmission of British arms and troops and contraband-of-war through the Suez Canal, if this nation should unhappily be at war with (say) Russia on the Indian frontier. If this should be brought about by a Tory Government—which has always gloried in its national as distinguished from its cosmopolitan conduct of affairs—I, as a man of peace and a staunch supporter of the *Alabama* arbitration and every transaction of the kind, shall rejoice. But I shall begin to think that Dr. Cumming is right after all when he prophesies that the lion and the lamb are about to lie down together for eternity, and that the thousand years of peace are now commencing, at the very moment when there are seven million armed men in Europe, and that eminent Churchman, our Secretary of State for War, is preparing to come to Parliament with gigantic army estimates, in order to bribe the British vagrant to enlist in the British army and remain there when he has enlisted.

The other matters in the Queen's Speech will be passed over lightly. The Opposition will criticise with some severity the publication of the now notorious slave circulars, and the maladministration at the Admiralty, and they will condemn any serious increase of public expenditure, but it is unlikely that any hostile divisions will take place on this head before the introduction of the budget. Finance and jobbery always wreck Tory Administrations in this country, and the present Administration do not promise to be exceptions to the rule. Their recent appointments have not been guided by a single eye to the public service, and it is not improbable that something may be heard of more than one of these when the salaries of the office come to be voted. They have already in two short years squandered the surplus millions which Mr. Gladstone's Government left in the Exchequer, and are, it is said, going to ask for more. Some additional estimates for the Prince of Wales's expedition to India may be required, and it is unlikely that the organized portion of the Opposition will demur. But there will be some nasty things said about the elephants and buffaloes at whose destruction the Prince assisted, by some of the wilder spirits below the gangway. It would not be in human nature if a platformistic orator or two did not make radical capital out of the sufferings of the poor brutes.

There will be a good deal of lively sparring round about these questions at the beginning of the session, but it will all be with the gloves on. The first real fight will be upon the Burials Bill—a dead horse, it was thought this time last year, but proved to be all alive and vigorously kicking. It is not impossible that the Government may find themselves in a minority in this division. Under any circumstances, the Opposition will run them very

close. The Government have all the bigotry and all the backing of the clergy on their side, and that is difficult to upset. But common-sense and justice are both so clearly against them that, if not this year then next, they must give in. Still, they enter on the session very strong. The Opposition have found no weak point in their armor yet, though they too are stronger than they were. It will be an interesting session, and more lively than its immediate predecessors; but, unless something unexpected turns up, it is unlikely that it will lead to serious change.

LAGRANGE'S REGISTER.

PARIS, January 28, 1876.

AMONG the men who have honored the profession of actor can be cited Lagrange, who was the favorite pupil of Molière, and who published, after the death of Molière, the first complete edition of his works. The archives of the Théâtre Français contain a very valuable manuscript, called the 'Register of Lagrange,' which the administrators of this theatre have just published. It is a curious monument of the history of the French stage. You will find in it an exact account of all the play-bills of the famous "Troupe de Molière" from 1635 to 1685, with the amount of the gross receipts and of the sum which was left for the actors after all the expenses were paid.

Lagrange was probably born in 1639. He was made an orphan at an early age, and with his sister and brother was robbed by his legal *tuteur*. He became a comedian, as did his brother Achille. He changed his family name of Varlet into the name of Lagrange, as was then, and is even often now, the fashion for actors. He made his début in some of those companies which Scarron has painted in his 'Roman Comique,' and which travelled in the provinces. Molière himself had first played and written plays for the provinces. The 'Etourdi' was first given at Lyons in 1655; the 'Dépit Amoureux' at Béziers in 1656. When did Lagrange meet Molière? This point is still a mystery. We only know that he made his début in Paris in Molière's troupe at the time when it played at the theatre called the Petit-Bourbon, six months after Molière had established himself in it. His 'Register' was begun immediately, and therefore it may be said that it gives almost the whole history of Molière's representations.

Lagrange played at first what we now call the *jeune premier*. He became the personification of youth, of love, of elegance; but at an early age Molière saw in him that type which the seventeenth century baptized as the *honnête homme*—a phrase which is not well translated by "honest man," as honesty is only one of its characteristics. The *honnête homme* whom you find in almost all the plays of Molière is the sensible man of the world, who is wise, but who has nothing *rébarbative* in his wisdom, the man of common-sense, who is full of indulgence for all the follies of mankind, the safe man and good friend. It may be that Lagrange, who had received a good education, gave to Molière many traits of this type, as he certainly bore all his life the character of a gentleman, and showed himself his faithful and trusty adviser. The Hôtel de Bourgogne was at that time the leading theatre. It had a position very similar to the position now held by the Théâtre Français, and of course it became very jealous of Molière's troup. The public was on Molière's side. After the 'Etourdi' and the 'Dépit Amoureux' came the 'Précieuses ridicules,' then 'Sganarelle.' M. de Ratabon, the superintendent of the royal palaces, discovered that the Petit-Bourbon was a dangerous building, which might soon fall on its spectators, and ordered its demolition. In 1660, Molière found himself without a theatre. Molière's actors remained faithful to him in his misfortune. "All the actors," writes Lagrange, "loved the Sieur de Molière. Their chief combined an extraordinary capacity with honesty and with the most engaging manners. They protested that they would follow his fortune, and would not leave him, whatever proposition should be made to them from other sides." Molière moved heaven and earth, and finally his troupe was allowed to play in the Palais-Royal. He almost immediately produced the great masterpiece called 'L'Ecole des Maris.' The frontispiece of the original edition shows Molière in the part of *Sganarelle*, Mlle. de Brie in the part of *Agnes*, Lagrange as the young lover, with his curly wig, his sword, his plumes, his long *canons* (such was the name for the long lace which hung about the knee), his shoes adorned with ribbons. I cannot go into the details of every part created by Lagrange. Molière confided to him the part of *Don Juan*, though it was, to use Molière's own words, "very contrary to his humor." There is a wickedness, a depravity in *Don Juan* which was perhaps beyond the capacity of Lagrange. In fact, I do not remember to have ever seen a good *Don Juan*, and, greatly as I admire Molière, it seems to me that Mozart has surpassed him in his conception of this extraordinary type. The *Don Juan* of Molière is too coarse, too comical; the *Don Juan* of Mozart has a supreme elegance, and he becomes at the end extremely tragical. He is, as it were, the Satan of love; he is handsome, bold, unscrupulous, and invested with an indescribable charm. He is irresistible, and even death cannot curb his criminal and elegant arrogance. *Don Juan* is the greatest myth of the Latin race, as *Faust* is the greatest myth of the German race. They embody all the characteristics of two families of mankind. On the whole, as a Latin, I must have a certain weakness for *Don Juan*. *Faust* is quite as bad as the lover of *Zerlina* and of *Donna Anna*; he is as complete an egoist. The one pays with his eternal soul for the pleasure of learning—the other for the pleasure of feeling. The one is an artist, the other a professor.

We read in the 'Register' of Lagrange, under date of the 14th August, 1665: "Friday the troupe went to Saint Germain-en-Laye. The king said to the Sieur de Molière that he wished that his troupe should from this time be his own; that he would ask it of Monsieur. (The Palais-Royal was the property of Monsieur, the brother of the king.) The king at the same time gave a pension of six thousand livres to the troupe, which took leave of Monsieur, asked him for the continuance of his protection, and assumed the title of 'The King's Troupe at the Palais-Royal.'" It will be remarked that Lagrange always calls his patron the Sieur de Molière; I have, however, seen copies of the first edition of Molière's pieces, which appeared in 1666, and which bears the title, 'Works of Monsieur Molière.' For eleven years, Molière employed Lulli, the musician, who had first been in the kitchen of Mademoiselle, then *violon-laquais* in the house of the same Mademoiselle. This Lulli had a true musical genius, and was very useful to Molière for his ballets and the fêtes of Versailles. He had written all the music of the 'Fâcheux,' of the 'Amants magnifiques,' of the 'Bourgeois gentilhomme,' of 'Psyche,' etc. Lulli secretly bought the privilege of a certain Abbé Perrin, who had an exclusive right over all the music of the kingdom, and suddenly prohibited Molière from having at the Palais-Royal anything like singing or dancing. Molière appealed to the king, and the king stood by him. Molière had to look for another musician; he found Charpentier, who was the master of the Sainte Chapelle and the musician of the Duke of Orleans. Charpentier wrote the music of the 'Malade imaginaire.' Molière, alas, died after one of the first representations of this piece. "This same day," writes Lagrange (17th February, 1673), "after the comedy, towards ten o'clock at night, M. de Molière died in his house, in the rue de Richelieu, having played the part of the aforesaid *Malade imaginaire*, much troubled with cold and pain in the chest, which caused him to cough; so much so, that in the great efforts which he made he broke a vein in his body, and did not live more than a half-hour or three-quarters of an hour since said broken vein."

Lagrange became the successor of Molière; he was already what was called the *orator* of the troupe, the man who always spoke to the public. The troupe of Molière seemed lost, however, without Molière. It is the sad necessity of those who amuse the public not to take any repose. Molière was hardly in his grave, where he was buried at night, than Lagrange, receiving no orders from the king, put the 'Misanthrope' on his bill. This choice was an indirect homage to his friend, as the 'Misanthrope' is the masterpiece of Molière, and is as much a tragedy as a comedy. Baron had to take Molière's part, and he sang the song of *King Henri* so as to draw tears from his audience. Could anything more dramatic be imagined than the first representations of the 'Malade imaginaire' which followed the death of Molière? Who could laugh at the sight of the old man pursued by the phantom of death? Had death not been a terrible reality to the poor Argan? When the curtain was drawn, could the audience not imagine that they saw the ghost of Molière himself in the old man sitting in his chair and reading his doctor's prescriptions? This famous chair is still preserved at the Théâtre Français, and is used in all the representations of the 'Malade.' The troupe of Molière soon broke up; some of the actors emigrated to the Hôtel de Bourgogne. Lulli asked the king to give him the Palais-Royal, and the opera turned out the comedy. Lagrange entered into negotiation with a ruined troupe, the troupe of the Marais, and opened a new theatre at the Hôtel Guénégand—it was still Molière's theatre—*ex* as opposed to the Hôtel de Bourgogne.

Much has been said about the wife of Molière, and her true history still remains to be written. We find this note in the 'Register' of Lagrange: "Sentence for Mlle. Molière [she is always called Mlle. on the play-bills] against the Sire Lescot, president at Grenoble, condemned to do her reparation for injurious speeches and *voies de fait* which he has used against her." This President Lescot had become enamored of Mlle. Molière during the representation of 'Circe,' in which she had appeared in a magnificent costume and with her fine flowing hair. The President once went behind the

the curtain and followed *Circe* to her box. She would not receive him ; he declared that she must know him very well, having received so many presents from him. It seems that he had been the victim of a false Mlle. de Molière, who looked like her, as afterwards the Cardinal de Rohan was deceived by a false Marie Antoinette. Mlle. de Molière was obliged to call for help, and President Lescot was brought before a court and condemned. Madame or Mademoiselle de Molière, to use the words of Lagrange, did not keep the illustrious name of her husband. She married an actor called Guérin. Armande Béjart did not know what she had lost ; she thought that one good comedian was as good as another. Lagrange used to mark particular days in his 'Register' with lozenges or circles, which he painted with different colors, according to the character of the event. He had behaved like a devoted friend to the widow of Molière. On the day of her second marriage he simply writes "Marriage of Mlle. Molière," and he tints his circle with a dark color.

The famous Champmeslé became one of the actors of Lagrange's troupe, and 'Phèdre' was played on the same stage as the 'Misanthrope.' Molière and Racine became for a time inseparable. The troupe often appeared before the king. Lagrange died on the 30th of March, 1692, quite suddenly; he was only fifty-three years old. His daughter had been married some time before, and was extremely unhappy. It was thought at the time that her misfortune broke the heart of the poor, honest old actor, who had managed so long and so faithfully the greatest troupe that ever ascended the French stage. Madame Guérin did not survive him long. She had not been a good wife to Molière. She had no appreciation of his great genius ; she was indolent, frivolous ; but many of the stories which were told about her in the pamphlets of the time were mere calumnies. She was simply the ordinary wife of an extraordinary man.

Correspondence.

THE BANK OF ENGLAND RESERVE.

To the Editor of The Nation :

Sir : I now proceed to say a few words on the question you raise respecting the gold recorded as being in possession of the Bank of England. In the weekly reports published by the Bank there are two statements given of the gold—one of the amount lodged in the Issue Department, the other of the quantity in the reserve of the private bank called the Bank of England. As you most justly imply, it is of the utmost importance that these two masses should not be confounded ; they belong to two most distinct bodies, for the Issue Department is absolutely an office of the state. If it were transferred from the premises of the Bank to Whitehall, not a single fact would be altered, but the non-identity of the two bodies would become visible to all.

The gold I spoke of as proving the nullity of the suspensions of the Act of 1844 was of course that which belonged to the Issue Department—to the state ; for on that department the commands of the law of 1844 fall. The Act does not say a word about the deposits or the banking of the Bank of England. Let us look now at the report of May 2, 1866, before the suspension, and that of May 16, after the law was, for the time, repealed, and the Bank might have as many notes as it chose without purchasing them with gold.

The report of May 2 quotes the

Notes issued at.....	£27,712,020
The gold in store at.....	12,712,020
	£15,000,000

The report of May 16 records—

Notes issued.....	£26,851,825
Coin and bullion.....	11,851,825
	£15,000,000

The gold required by the statute was found in store in both cases alike. The fifteen millions of uncovered notes allowed by the law were not exceeded. And so it went on afterwards. At the same periods,

On May 2 the reserve of the private Bank was.	£5,636,370
On May 16.....	1,202,810

In giving these figures for the gold reserve of the Bank, I follow the universal English practice of reckoning the notes it possessed as gold, as the gold might be had for them at the Issue Department by sending a clerk across the court.

The panic was not nugatory on the Bank's reserve ; it lowered it enormously.

But now I must beg you to allow me to draw your attention to a fact of extreme importance and significance, which no one ever notices, and which, to my great regret, I forgot to notice in my little book on 'Currency and Banking.'

Look first at the report for May 30 :

Notes issued.....	£26,434,205
Coin and bullion.....	11,434,205
	£15,000,000

So much for the Issue Department.

As to the Bank of England itself, in the face of its liabilities towards its depositors, which amounted to the prodigious sum of thirty-three and one-half millions, it possessed a banking reserve of only £859,980—less than one million.

Now, you are aware that the Directors of the Bank of England, Mr. Bagehot in his 'Lombard Street,' the *Economist*, and the City articles of every newspaper, preach that, if the Bank, through the exchanges or any other cause, loses a couple of millions of its gold reserve, the rate of discount must instantly be raised ; for, as the gold sinks, the danger of "ruin" becomes imminent. Thus the banking business is made to rest on a different principle from every other business. The price of the article it deals in, the price charged for loans, is made to depend, not on the universal law of the supply and demand of the article dealt in, but on the movements of a mere insurance fund to guard against a possible danger. This being the general doctrine, let us look how the matter stands after a suspension of the Act. I have shown that as regards the issue of notes, so far the suspension was null, because the gold which would have been required by the law was found, spontaneously, in the Issue Department. But what shall we say, not of the notes, but about this gold ? What might have been done under the suspension of 1866 ? Suppose that on May 31, from any cause, the Bank had been asked for the payment in cash of two millions without any increase of resources. The reserve of £859,980 must have been paid away : the ruin, the stoppage, and all their sorrows must have overwhelmed the Bank. But is this so ? There were more than eleven millions of the yellow metal in the Issue Department : could they be of no service ? Ay, every pound of them. Let us consider how the matter would have worked. When the reserve was all run out there is presented a check for £1,100,000 about. The Bank sends instantly for so many notes from the Issue Department, and they are paid to the presenter of the check. But he wants gold : so off he steps to the Issue Department and demands gold for the notes I do not see how the Issue Department could have refused to give the gold ; for the suspension of the Act, I conceive, simply restored the state of things before 1844, when both gold and notes were subject to the pleasure and management of the Directors of the Bank, and they were bound in law to cash every note presented. If this is so, when their reserve was all run out they might, with these notes which the suspension enabled them to issue, have drawn out the whole stock of gold in the Issue Department ; and then what becomes of the fine principle that because two or three millions out of ten or twelve have been taken from the Bank, the Bank, which would still have some eight millions or more in its private reserve, and a power of commanding some eleven additional under a suspension, is authorized to impose a heavy burden, an oppressive tax, on all the trade of England ?

I see no escape from this conclusion ; but as this is the first occasion on which I have put this view in print, I may have overlooked some other points and be in error. If such is the case, I shall be most thankful to be corrected.

Bonamy Price.

Oxford, Jan. 25, 1876.

Notes.

Sheldon & Co. have removed from their up-town quarters to No. 8 Murray Street, in Mr. Van Nostrand's immediate neighborhood, and not far from Printing-house Square. They will hereafter confine themselves exclusively to publishing.——Roberts Bros. will republish here Mr. Kegan Paul's 'William Godwin : His Friends and Contemporaries' ; and William F. Gill & Co., 'Robert Haydon's Correspondence.'——J. H. Coates & Co. have nearly ready 'King and Commonwealth,' by B. Meriton Cordery and J. Surtees Phillpotts ; and the second volume (Vols. 3 and 4 of the French edition) of the Comte de Paris's 'History of the Rebellion.' Of Vol. I., the first edition of 2,000 copies has been exhausted.—— G. P. Putnam's Sons have been appointed American agents of the London *Academy*, and will furnish it to subscribers in this country at six dollars per annum,

or at twelve cents the single number.——George Routledge & Sons will shortly publish 'Thomas Wingfold, Curate,' a *Tendenz*-novel by George MacDonald, directed against the theological views of Prof. Tyndall and his followers.——The *Publishers' Weekly* reports that its enquiry of the trade, "Which are the twenty-five most salable books in biography?" resulted in giving the first place to Forster's Dickens and Irving's Washington, followed by Boswell's Johnson, Plutarch's Lives, Farrar's Christ, Bigelow's Franklin, Strickland's Queens of England, Abbott's Napoleon, Carlyle's Frederic II, Irving's Columbus, Motley's Barneveld, Grimm's Michael Angelo, Guthrie's Autobiography, Sherman's Memoirs, Memorials of a Quiet Life (Hare), Todd's Life, Ames's Alice and Phœbe Cary, Curtis's Webster, Irving's Goldsmith, Mrs. Somerville's Recollections, Memoirs of J. Q. Adams, Lewes's Goethe, Lockhart's Scott, Mill's Autobiography, Robertson's Life and Letters. The scale of suffrages, so to speak, ranged from 21 (Dickens) to 7 (Adams, etc.); Carlyle ranked 11, Sherman, 19. The list is curious and suggestive.——The *Tribune* Index for 1875 is now procurable. The topics are not arranged under one alphabet, but distributed under the four heads of editorial, political, miscellaneous, and foreign; for instance, the progress of the Emma Mine scandal must be sought under three of these heads. Prominent characters or events are emphasized by a fuller-faced type than the ordinary, and the principal classifications are referred to in the table of contents. For excellent specimens of these we may point to New York City and Legislature and United States Congress under "Political," and Obituary, Religious, and Reports under "Miscellaneous." But we have said enough to show what value this Index has for a very wide circle, including journalists, politicians, and intelligent persons generally, as well as the *Tribune's* readers.——J. W. Scott & Co., No. 75 Nassau Street, have begun publishing the *Coin Collector's Journal*, under the editorship of Mr. Edward Frossard. It is freely illustrated, and, besides articles of general interest to collectors, furnishes reports of the more important public sales of coins, with the prices brought. The third number (for February) begins a description of the Centennial medals already struck.——The Annual Report of the Trustees of the Museum of Comparative Zoölogy at Cambridge is full of encouragement to the friends of that institution. The additions in all the departments during the past year have been unusually valuable, and several unrivalled private collections have been designated by their owners as the future property of the Museum. Nevertheless, as illustrating the sound principle of our modern endowments, viz., "unto those that have *should* be given," Mr. Alex. Agassiz states that to enable the Museum to rival the national establishments of Europe, "each of its several departments should have an income equal to that provided for the whole institution by its present endowment." Mr. Agassiz has also some pertinent remarks on the relief which museums of natural history are to obtain, in the storing of specimens for study, from the establishment of zoölogical stations such as now exist in Italy and in England. The Report gives an account of the Louis Agassiz fund, and plans and an elevation of the Museum buildings in their contemplated extension.——We regret to learn that the usual water-color exhibition of the Brooklyn Art Association, which forms the sequel of the New York exhibition, is unavoidably given over for this year.

—The fourth memoir of the Peabody Academy of Science at Salem is a posthumous work by the late Dr. Jeffries Wyman, on the 'Fresh-Water Shell Mounds of the St. John's River, Florida.' Only a portion had been printed when the writer was suddenly removed by death, and the supervision of the rest has fallen chiefly upon Mr. F. W. Putnam, his successor. With the aid of a map the mounds are each described in their order from north to south over a space of one hundred and fifty miles in length. Their state of preservation, relative age, composition, fossil and other archæological remains, are all discussed with Prof. Wyman's well-known caution and candor. He concludes that some of these shell-heaps were essentially finished two or three centuries before the white man set foot in Florida; that the builders of them, so to speak, were a primitive race, destitute of pottery, of metals, and even (to any great extent) of stone implements; and that they were undoubted cannibals. The proof of this last assertion, drawn from the human remains discovered, is of a kind to carry conviction; but it is fortified in an appendix by liberal extracts from books of travel and Jesuit Relations showing the common practice among the American Indians of both continents of eating their prisoners of war at least, sometimes after having tortured and sometimes after having fattened them. This chapter is naturally not very pleasant reading. It is followed by a discussion of the age of the mounds as determinable by almost the only trustworthy factor, namely, the trees which have grown upon them or in the swamps formed upon part of their original site after the devastating river had changed its course. Some of the live-oaks are estimated at from 360 to 666 years of age, one of the cypresses at 340 years; and the assumption of a thousand years for the process of destruction of the mounds is declared not unreasonable, and possibly too small. The mounds must certainly be regarded with something of the veneration bestowed on other ancient abodes of man. They have remained the best camping-places on the river; they are now occupied by the colonists of our day, and even, as at Old Enterprise, by hotel-keepers; they were used during the rebellion as military positions; they were the nursery of the wild-orange groves, which are thought, by the way, to have sprung from the camps of the Spanish invaders; and the shell-fields are daily turned up by the cultivator. This memoir might stimulate invalid tourists to continue the researches described by Prof. Wyman, in which of necessity the whole had often to be inferred from a part. The *extent* of cannibalism, for instance, has yet to be ascertained.

—Our leading medical quarterly, the *American Journal of the Medical Sciences* (Philadelphia: Henry C. Lea), published in its January number two essays upon "Practical Medicine" and the "Discovery of Modern Anæsthesia" by Drs. E. H. Clarke and H. J. Bigelow respectively, of Boston, as part of a series on "A Century of American Medicine." Medicine, whether American or European, has not had a scientific life for much more than a hundred years; indeed, some of its features even now are not so blessed. But neither in empirical practice nor in scientific deduction and study have we cause to blush for our country. Dr. Clarke, after prefacing that for the first fifty years of the Republic "the necessities of the present left little leisure for the cultivation of the arts and sciences," shows that subsequently our physicians contributed their share to the world's progress. Indeed, in the earlier years, Rush, Physick, James Jackson, Hosack, and others gave promise of creditable successors. Stearns, Nathan Smith, Eberle, Bigelow, Gerhard, Pennock, the Boston Jacksons, Ware, Holmes, Horner, Neill, the two Flints, Bowditch, Horace Green, Da Costa, Weir Mitchell, A. Clark, Stillé, Hammond, Wyman, and H. C. Wood are among those whom he mentions as contributors to the sum of definite knowledge. Some of the contributions that he justly claims for this country are: the original diagnosis between diphtheria and membranous croup; the clear distinction between typhoid and typhus fever, recognized about the same time by Louis of France, but not admitted until comparatively recently in Great Britain; the nature of hydrocephalus; many very valuable points in the diagnosis and treatment of diseases of the chest; a more rational treatment of mania a potu; the nature of the rice-water discharges in cholera; the recognition of the self-limitation of many diseases (a doctrine that seems likely to be abused); the excretion of cholesterine; facts as to the trichinous disease; a multitude of important facts and many generalizations as to the nervous system and its diseases; the peculiar action of ergot; the independent discovery of chloroform; the introduction of wild cherry, veratrum viride, podophyllum, and a host of other useful remedies from our indigenous materia medica. He also cites the discovery of the influence of soil-dampness upon consumption, the communicability of puerperal fever, and Bowditch's method of thoracentesis in pleurisy—three valuable professional contributions which, however, more appropriately belong to hygiene, gynæcology, and surgery. We might wish that Dr. Clarke had carried his view further from the North Atlantic coast—that he had, for instance, while commemorating Dr. James Jackson as having moulded the New England profession by his teachings and example, also remembered with due praise Drs. Daniel Drake and Warren Stone, of the West and Southwest; but what he has here modestly although explicitly set forth is a very satisfactory contingent to the centennial contributions. Those who know his 'Sex in Education' require no comment upon this essayist's style. Dr. Bigelow, to whom indeed the world is directly indebted for the introduction of anæsthesia in surgery at the exact time that it occurred, furnishes a lucid, solid, and conclusive argument as to the claim of W. T. G. Morton for bestowing upon the physical man the greatest boon that he has ever received from his fellows.

—The *Tribune* has published some extracts from advance sheets of 'Two Rivulets,' the latest contribution to literature of Mr. Walt Whitman. The book contains some new views on the subject of poetry which will, no doubt, attract all the attention they deserve. Everybody has noticed, probably, that there are certain peculiarities of construction in Whitman's verse not to be found in older poets, but most people have been repelled from the task of discovering exactly what the principles at the bottom of them were, partly by the filth in which the bard is frequently found wallowing, and partly by the inanity of most of his ideas. In the present book, however, he is at pains to take the reader into his confidence and tell him what his views are, and they are no less than this—that the time for a new

kind of poetry has come. The time has arrived, he says, "to essentially break down the barriers of form between prose and poetry." Henceforth, poetry is "to win and maintain its character regardless of rhyme and the measurement-rules of iambic, spondee, dactyl, etc." Even if "rhyme and those measurements," he continues, remain in use among "inferior writers (especially for persiflage and the comic)," the "truest and greatest poetry" (while subtly and necessarily always "rhythmic" and "distinguishable easily enough") can "never again, in the English language, be expressed in arbitrary and rhyming metre." Rhyme, he continues, has played in the past an important part in literature, and has served admirably to express "the pensive complaint, the ballads, wars, amours, legends of Europe, etc.," but the day for it is over. The "literary as well as social etiquette of feudalism and caste" must be dismissed, at all events in this country, while the "Muse of the prairies and the peaks of Colorado," "joyfully enlarging, adapting itself to comprehend the size of the whole people, with the free play, emotions, pride, passions, experiences, that belong to them, body and soul—to the general globe, and all its relations in astronomy, as the savants portray them to us—to the modern, the busy nineteenth century, (as grandly poetic as any, only different), with steamships, railroads, factories, electric telegraphs, cylinder presses—to the thought of the solidarity of nations, the brotherhood and sisterhood of the entire earth—to the dignity and heroism of the practical labor of farms, factories, foundries, workshops, mines, or on shipboard, or on lakes and rivers—resumes that other medium of expression, more flexible, more eligible—soars to the freer, vast, diviner heaven of prose." This strikes us as almost as good as Alwato.

—When Miss Cushman bade farewell to the stage in 1874, it was generally believed she could not long struggle with the painful disease which threatened her life. Nevertheless, her extraordinary native vitality has enabled her to appear on the boards, even within the past year and a half, in some of her most successful characters, and at the time of her death her reappearance was already beginning to make the fears of her friends and herself seem exaggerated. The loss which the stage suffers by her death is very great, for there is absolutely no one to take her place; and whatever estimate may be formed of her standing as an actress or an actor—for she was both—there can be no question that she was, in the half-dozen parts which she finally made her own, without a rival. It is the misfortune of actors that they have to submit themselves to contemporary judgment, and leave nothing behind them by which future generations can form any opinion of their merits. Their tones of voice, their methods of expression, their walk, their address, their conception of their parts, die with them. What survives is a tradition of their style, distinct enough at first, perhaps, but growing fainter and more shadowy with every year. For this reason it is impossible to try successful acting by any common external standard handed down from the past, as we can literature, painting, sculpture, or architecture, and we are forced back upon contemporary standards afforded by living actors, or upon the general principles with regard to dramatic art. The first of these standards, in Miss Cushman's case, it is difficult to apply, for her best parts were acted for years by no one of importance in England or America but herself; the value of the general principles of the art as a test consists, as everybody knows, "in the application" of them. To our mind, Miss Cushman's success was a success rather of industry than of genius, and her style was too melodramatic for the best playing of the great Shaksperian parts. Her *Meg Merrilies* was a good proof of this, and her *Queen Katharine* and *Lady Macbeth* were, we should say, just devoid of that touch of nature which distinguishes true tragedy. In remembering Miss Cushman's success, it is impossible not to doubt whether patriotism did not have something to do with it, and whether the necessity of proving to ourselves that America, too, was capable of producing great actors was not at the bottom of a good deal of the applause that she won. If her career were to be run over again, she would be perhaps deprived of this adventitious aid. It should be added, however, that her success was not achieved without a severe struggle against great odds, and that she did not obtain the support of patriotic approval till after she had already placed herself, by sheer force of her unwearied application and ambition, in the front ranks of her profession.

—Perhaps no branch of the Executive Departments in Washington is less widely known and appreciated than the Hydrographic Office. The surveys and explorations carried on by the Government within the limits of its domain are under the supervision either of the Engineer Corps of the Army or of the Interior Department. The surveying of our coasts and harbors is conducted by officers of the navy and civilians under the supervision of the Coast Survey Office. The Hydrographic Office is the repository of charts, books, manuscripts, and other data relating to the hydrography, navigation, and meteorology of the world, with the single exception of the United States. Its chief objects are: to provide charts and descriptive works for the use of mariners; to arrange in convenient form for reference and discussion the information recorded in journals of cruises, and in publications in every language; to provide suitable instruments and books for the use of navigators and surveyors; and to organize and conduct all surveys and explorations carried on by the United States Government outside of its own domain. The old building now rented and occupied by this office is less than half the requisite size, even for present needs; every hall and stairway, in fact every nook and corner, is crowded with shelves for storing charts and books; and even the old ice-house, stable, and hay-loft are filled with valuable plates, instruments, and records, in default of any other available place to store them. The window spaces in these and the main building are monopolized by engravers and draughtsmen; the library is used as a working room; in short, draughtsmen and computers, messengers and officers, engravers and compilers, clerks and copyists, occupy the same apartments, and such is the want of desk-room that some of the officers and employees are obliged to work at their homes or boarding-houses. Necessarily every one works at a great disadvantage, and it is highly desirable that early provision should be made for the purchase or erection of a suitable building, where the valuable archives, plates, books, instruments, etc., may be stored without imminent daily risk of destruction by fire, and in which the important work may be carried on in accordance with the increased and increasing demand. Before the office was established, British charts and publications were issued for use in our navy, and our merchant marine depended for their supply on the few marine stores having them for sale. A rupture of friendly relations between the two countries would have cut off the supply at a time when the demand would have increased, and this consideration led to the establishment of the Office. Since then the annual appropriations for its support have been so small that engraving has had to be confined to a few standard charts, while the cheaper method of photolithographing corrected foreign charts has been resorted to. Even this has been confined to the charts most in demand, and we are still obliged to purchase foreign publications for use in the navy and for sale to the merchant marine. The proper maintenance of the Office is, we need not say, of private as well as public importance. Thousands of lives and millions of dollars have been sacrificed through our ignorance of the dangers which beset the pathways of ocean travel. These losses are still occurring; yet the small sum asked for the purpose of decreasing the dangers is struck out of the estimates by the head of the Department, and Congressmen give little heed when their attention is drawn to it. Had England the whole world's commerce under her flag, it would be reasonable to expect her to do all the surveying.. But happily we can still speak of American commerce, and we are not wanting in naval officers experienced in surveying and eminently qualified to perform it creditably. All that is needed is an appropriation, placed beyond the reach of politicians, to the credit of the Office, to be used under the supervision and at the discretion of the Navigation Bureau.

—Mr. W. Carew Hazlitt has recently made an addition to the tolerably long list of good things he has done ill by editing and publishing anew the poetical and dramatic works of Thomas Randolph. Randolph, who was born in 1605, and who died in 1634, left behind him a few plays and poems which well deserved being put in the way of readers who go at all beneath the surface of English literature. He was a favorite of Ben Jonson's, who did a great deal to encourage younger men, and one of his odes is "A Gratulatory to Master Ben Jonson for his adopting of him to be his son," in which he says:

> —"the whole quire
> Of poets are, by thy adoption, all
> My uncles; thou hast given me power to call
> Phœbus and self my grandsire; by this grant
> Each sister of the Nine is made my aunt."

His poems have little in them that deserves praise, but the plays are noteworthy, and it is easy to see that their writer might have been considered a promising young man. As for Mr. Hazlitt's part in the volume, it is of about the merit of all his work. Mr. Lowell has often tricked him up and given him his three dozen, but wholly without effect, for the poor man apparently always does his best. As it is, he does actual harm by getting out editions of old plays (for which the demand is never anything but small at any one time) which are full of his mistakes, blunders, and inept comments. It will be years before the occasion will arise for new editions, and meanwhile readers have nothing better to consult than his prettily-printed books, where the notes as often lead astray as not. Some instances are to be

found in this volume of Randolph's works. In the text is this passage, p. 119 :

"Like the sweet gums that from electar trees
Distil,"

which is elucidated by the following note : "I do not know what is meant by *electar trees*. Perhaps Randolph may have written *elecam tree*, referring to the *elecampane* or *Helenium*, which certainly yields a species of gum." Quite as certainly a man of Mr. Hazlitt's reading should know that *electar* trees are those which were supposed to distil amber (electre), and that his hypothetical reading has not a leg to stand on. Again, p. 128 :

"Or have these devils
Broke into Paradise ?"

to which is appended this note referring to the word *devils:* "A term which Webster's celebrated drama so-called, printed in 1612, brought into fashion." It would not be easy to gather from this statement that Mr. Hazlitt meant Webster's "White Devil ; or, Vittoria Corombona."

—In view of the deluge of criticism which is certain to be poured out upon George Eliot's new novel when the publication is completed, it might seem the part of discretion not to open fire upon the first instalment. But this writer's admirers can reconcile themselves to no argument which forbids them to offer the work a welcome, and—putting criticism aside—we must express our pleasure in the prospect of the intellectual luxury of taking up, month after month, the little clear-paged volumes of 'Daniel Deronda.' We know of none other at the present time that is at all comparable to it. The quality of George Eliot's work makes acceptable, in this particular case, a manner of publication to which in general we strongly object. It is but just that so fine and rare a pleasure should have a retarding element in it. George Eliot's writing is so full, so charged with reflection and intellectual experience, that there is surely no arrogance in her giving us a month to think over and digest any given portion of it. For almost a year to come the lives of appreciative readers will have a sort of lateral extension into another multitudinous world—a world ideal only in the soft, clear light under which it lies, and most real in its close appeal to our curiosity. It is too early to take the measure of the elements which the author has in hand, but the imagination has a confident sense of large and complex unfolding. The opening chapters are of course but the narrow end of the wedge. The wedge—as embodied in the person of Gwendolen Harleth—seems perhaps unexpectedly narrow, but we make no doubt that before many weeks have gone by we shall be hanging upon this young lady's entangled destiny with the utmost tension of our highest faculties. Already we are conscious of much acuteness of conjecture as to the balance of her potentialities—as to whether she is to exemplify the harsh or the tender side of tragic interest, whether, as we may say in speaking of a companion work to 'Middlemarch,' the Dorothea element or the Rosamond element is to prevail. A striking figure in these opening chapters is that of Herr Klesmer, a German music-master, who has occasion to denounce an aria of Bellini as expressing "a puerile state of culture —no sense of the universal." There could not be a better phrase than this latter one to express the secret of that deep interest with which the reader settles down to George Eliot's widening narrative. The "sense of the universal" is constant, omnipresent. It strikes us sometimes perhaps as rather conscious and over-cultivated ; but it gives us the feeling that the threads of the narrative, as we gather them into our hands, are not of the usual commercial measurement, but long electric wires capable of transmitting messages from mysterious regions.

—The new *Revue Historique*, edited by G. Monod and G. Faigniez, is a large octavo of 320 pages, handsomely printed. It contains six articles, the opening one being by M. Monod, upon the progress of historical studies in France since the sixteenth century. Of the others, the most considerable is by A. Castan : "Granvelle et le petit empereur de Besançon" (1518–1538). The "petit empereur" was a demagogue by the name of Gauthiot ; the episode here described is one of those municipal contests, so common in episcopal cities, between the bishop and the municipality, and had as its result the permanent establishment of the imperial power and the Catholic religion in the city of Besançon. Another important article is by M. Victor Duruy, upon the municipal system in the Roman Empire ; it is to form a chapter in the fifth volume of his Roman History. After the original articles follow "Variétés," two in number—one upon the Regions of Italy under Augustus ; one upon the Sack of Magdeburg. Then follow "Mélanges," also two—an unedited memoir of Richelieu, and a conversation between Napoleon and Sismondi in the year 1815. Next comes, in the "Bulletin Historique," a survey of recent historical literature—for France (by Faigniez), Germany (by Hartwig), and England (by S. R. Gardiner). The number closes with the review of half-a-dozen books, before which is a list of periodicals and transactions, with the titles of their articles. This review differs chiefly from Sybel's *Historische Zeitschrift* in the prominence given to intelligence. The "Bulletin Historique" is its most distinctive, and perhaps most valuable, feature. It seems at first sight to have fewer reviews of books than the *Zeitschrift ;* but it is found that a large number of books receive brief but adequate notice in the Bulletin.

—The most striking thing in this number of the "Bulletin Historique" is a summary, by Mr. Gardiner, of the Introduction to Mr. Brewer's since published volume of "Calendars of State Papers for the Reign of Henry VIII." (1524-30). It is, he says, "a real history of the epoch," founded "not upon the rapid researches with which Mr. Froude is satisfied, but upon profound and conscientious investigations." The result of Mr. Brewer's studies is to show Henry as the real master, to whom Wolsey submitted, and to make the king primarily responsible in the matter of the divorce. In this matter both king and prelate appear utterly unscrupulous ; "the fall of the Cardinal, under the weight of an unjust accusation, was the consequence of his efforts to satisfy his master without breaking with the Pope" As to the final rupture with the Pope, Henry did not desire it, and tried to avoid it for several years, but was led to it by the force of circumstances ; he was obliged, in consistency, to carry out his threats so often made. Another interesting paper is that by M. Reuss, upon the destruction of Magdeburg. Tilly has already been exonerated from the guilt of this conflagration (not, however, of the rapine and carnage), and the article in question is an attempt to trace out the responsibility for it, with the aid of some new documents discovered (chiefly at the Hague) by Prof. Wittich of Jena. The conclusion arrived at, as being almost absolutely proved, is that the conflagration was, like that of Moscow, a part of the strategy of the defence. Falckenberg, the commander of the city, probably in accomplishment of a misunderstood order from Gustavus Adolphus, and in concert with the chiefs of the extreme party in the city, appears to have placed combustibles in different houses, which were simultaneously fired after the capture. The whole argument is skilfully elaborated, and almost reads like a novel by Wilkie Collins.

HAMERTON'S ETCHING AND ETCHERS.*

EIGHT years ago the first edition of this work was published by Macmillan & Co. It has become very scarce, and a copy for sale to-day brings easily twice the original price. This first edition was in many respects a different book from the one before us ; it was in larger type and on larger paper, and on paper of a curious sort, apparently made for the work and with the purpose of being used throughout—the same paper for the letterpress and for the illustrations. These illustrations were numerous and splendid, and of very unusual character. They were all etchings, thirty-five in number ; six by the author himself, one or two copied by the author or others from ancient prints, several by modern etchers, who may be supposed to have worked directly for the book, but a number, as well, printed from genuine ancient coppers, which Mr. Hamerton had got together with great labor and patience and considerable expense. Thus, the Rembrandt was an unquestioned original (Jacob and Laban, Blanc 7, Bartsch 118), selected by the author as the best from among the half-dozen Rembrandt coppers which he found to be within his reach. The Paul Potter (second state of Le Vacher, Bartsch 14) belonged to M. Galichon, at that time the director of the *Gazette des Beaux Arts*, since dead ; the large and historically-interesting Callot (La Tour de Nesle) belonged to M. Arsène Houssaye ; and the etchings by Waterloo (Bartsch 53) and Weirotter were the property of a Parisian dealer. These important illustrations gave to the first edition of the book a sumptuous air, which the appearance of its letterpress tended to increase ; in fact, it was a rather magnificent publication, especially when well bound, for the original cover was not in good taste ; just one of those books which seem to be printed appropriately in small editions on purpose to become scarce.

The second edition, which is now before us, though the same book to begin with, is yet different enough. The text has been a good deal changed, chiefly by the addition of whole chapters and the omission of others ; there is perhaps a quarter more matter in the new edition than in the earlier one ; the illustrations are entirely changed ; there are only twelve etchings in the book, and of these all but two have been copied by Mr. Hamerton himself from etchings by ancient and modern masters. The Lalanne at page 182 is the only print retained from the first edition, and of this there is room for only a part on the present smaller page (the plate must have been cut in two). The preface to the second edition says that it would have been

* 'Etching and Etchers. By Philip Gilbert Hamerton.' Second edition. Boston : Roberts Bros. 1876. Pages xxx.–459.

impossible to get together the coppers used for the first edition, even had it not been desirable to make the present book an inexpensive hand-book within the reach of every student of etching. Each plate has an account of itself and of its manner of production printed on its fly-leaf, wherein the student is told how long an immersion in the acid bath each part had received, how many proofs were taken, how many changes made, and how much dry-point work had been superadded. In short, the illustrations are to illustrate alone, in this new edition, and not to ornament.

The art of etching has many claims to general regard, but none greater than this—that it lends itself to the purposes of artists who devote their lives to it, to those who may wish to preserve memoranda of their observations or of their moments of inspiration, and equally well to the purposes of students and of those who live by the application of fine art to industry. It is an art by itself for those who love it and succeed in it, and who can live without that pecuniary success which the public at present denies to the practitioner of this especial branch. It is of great value to the architect, to the architectural sculptor, and, finally, to the student of decorative art, whether as a means of preserving a record of precious things that he cannot procure, or as a means of preserving in imperishable form his own designs. Any one who can draw may, with a very slight experience of the simple processes employed, produce etchings which, though artistically valueless, may be of the greatest importance and interest to himself. Any one who can draw as well as a professional painter is supposed to do, may, with little study, make etchings as successfully as he could make drawings in pen and ink, and these, although of slight importance in the history or progress of art, may be of great value to himself and of great interest to his friends. Great success in etching, on the other hand, is reserved for the very few. But in this respect it is like other arts. Modelling in soft material may be compared closely with etching. Anybody can learn to work in clay and in wax; and this art is the daily resource of the pattern-makers and the carvers in wood and in stone, and ought to be the daily study of all learners; while great excellence in it is of course confined to the few sculptors, born and taught, great by nature and by training.

Mr. Hamerton seems rather to resent the suggestions of Mr. Charles Blanc and of Mr. Palgrave that etching is easy to learn, and may be practised by those whom he would call amateurs. His objection to the consideration of etching from this point of view seems to be that its practice by weaker hands would not help "the cause of true art"; and if by amateurs he means merely, as one passage seems to indicate, the ladies who would desert worsted work and potichomania for the etching-needle, no one will dispute his dictum. But suppose the case of a lady spending some part of her summer in seriously-intended drawing from nature, or of a student of drawing who wishes to use it for his own convenience in scientific research. To these and to other such workpeople, faithful as far as they go, successful within their narrow limits, the convenience and the advantage of a little knowledge of etching are not to be denied, nor are their attempts at it other than a great and positive gain to "the cause of true art."

To take a case which is immediately before us: if the newly-established weekly, the *American Architect and Building News*, could be illustrated with etchings—supposing always that the subjects chosen for illustration are worthy of being etched—how interesting would it become, how desirable would be many of its illustrations to take out and lay in the portfolio! And why should it not be so illustrated? Every draughtsman who can make a perspective drawing of a church, shaded up with pen and ink, can learn with a very little patience to draw the same thing on copper with the etching needle, and the merit of his etching would be exactly proportionate to the merit of his pen-drawing. Any student who, during his months of happy labor among the unrestored ancient buildings of Europe, fills his portfolio with drawings of his own with lead-pencil, with pen, and with the brush, is capable of doing the same work on copper; let it be that he goes no further, there are many ways in which going so far only as this will be of benefit to him. The somewhat greater difficulty of the process will make him more careful and more sincere; but if the only good result that should come of it were to be his own greater appreciation of the works of the great masters, "the cause of true art" gains indefinitely in the gain of sympathy for art of any man or woman of our unsympathizing society. Any one who finds that he begins to understand the charm and the actual value of a great etching should be sincerely thankful; it is a charm that can hardly be explained and never be defined, but only more or less clearly indicated. The power of appreciating it to its full value is akin to the power of producing it; it is a matter of temperament which cultivation may greatly aid indeed, and would perhaps develop in many persons who now seem to be without it, but which no teaching can ever create.

Mr. Hamerton is not too rigid in his insistance upon the vast superiority of etching for *effect* over all other kinds of etching. The greatest result is to be got in that way, without doubt. Turner, in preparing the outlines for the plates of the 'Liber Studiorum,' is using the art appropriately, and Mr. Cruikshank, too, in his illustrations to 'Grimm's Household Stories,' although his work is almost wholly outline, and shade and shadow are used only to indicate form, is an etcher still, and Mr. Hamerton seems to recognize him as such, for he notices "The Elves and the Shoemaker" with the same terms of laudation that he would give to a finished etching, and such as he does give to the comparatively elaborate chiaroscuro work in "The Folly of Crime" and the admirable "Dougal MacCallum." We are inclined to claim for everybody who has occasion to use graphic art the privilege of employing the etching-needle and the acid bath, and to set up as many standards for criticism in the use of these sacred implements as in the case of the familiar household lead-pencil. But Mr. Hamerton is right, thoroughly right, altogether right, and deserves our heartiest support in his constant reiteration of the statement that greatness in etching is a mental and not a technical greatness. The giants of etching are men who can think their own thoughts and who have conceptions which are not those of other men. The use that Mr. Hamerton has made of the extraordinary technical achievements of Flameng and Jacquemart, to discriminate between such art as theirs and such art as Rembrandt's or Haden's, is admirable, and leaves little to be desired in the way of instructive criticism. His remarks on Ruskin's etching, and the difference between it and the work of a great artistical etcher, are full of suggestion. His attempt to explain abstraction (chap. viii.) and comprehensiveness (chap. vii.) seem to us as nearly successful as such brief treatment can be. He has explained admirably the various manners of different artists, and the different practices of the same men at different times; and we can hardly believe that Mr. Hamerton would object to admit all that we can claim for the right of the whole community to use this art in an everyday sort of fashion without fear of the artistically-minded critic.

For, indeed, if the art is not to be used by all the world and on all occasions, why these many pages of practical notes at the close of the volume before us? The few who are artistically inclined in the highest sense are in the way of learning enough about their art to begin their work without this carefully-prepared hand-book. These pages of explanation and instruction seem to be very complete, and to give the well-known and recognized processes and also the more important of the newly-discovered and recently-proposed modifications of them. Whether another and equally good manual exists in English we are not able to say; in French there are several books of instruction, but none that we have examined is, on the whole, as full. It is possible that something could be done in the way of arrangement or with catch-titles and the like to make it more immediately available for reference. And this brings us to speak of a defect which cannot be forgiven, and which is simply incomprehensible—the absence of an index. The first edition had no semblance of an index; the second, now before us, has what is called a "catalogue index," merely of artists, with the titles of those plates of theirs which have been mentioned in the volume.

FEMININE POETRY.*

THE number of women who write verses is increasing, especially in America. Our common-school education supplies multitudes of women with a capacity of expression which, however limited, is sufficient for the needs of rhythm and of rhyme, while our social conditions cultivate fluency of utterance, and have no tendency to promote that reticence which comes of large experience and high breeding. Much knowledge of the world and a keen sense of self-respect are restraints to the outpouring of personal emotion and to the publishing of private sentiment. To crave sympathy is so feminine a trait, to find in speech relief from oppressive emotion is so natural to a large class of men as well as of women, and to measure the interest of sentiments to others by their importance to ourselves, is so common an error, that there is no reason for surprise at the quantity of verse by women which in these days of cheap and easy printing finds its way to the booksellers' counters. But we doubt if much of it is read except by its authors, by their personal friends, and by the conscientious critic.

The abundance of these female writers, however, has a not unimportant bearing on what is rudely termed "the woman question." Poetry is an open field for them, where they may contend on even terms with man. And it must be allowed that the mass of contemporary verse by women shows no marked inferiority to the mass of contemporary verse by men.

* 'Cartoons. By Margaret J. Preston.' Boston: Roberts Brothers. 1875. Sm. 8vo, pp. 240.

Out of the hundred new volumes of poems, ninety might be classed as distinguishable more by external differences than by any absolute internal division. But of the ten remaining, the select few that may outlast the year of their production, this is not to be said. A vast proportion of the verse that endures has been and still is the work of the harder sex. And the explanation of this fact is not to be found in the inferiority of female education, or in any unfair treatment that women may have received from men. Mill's argument in respect to the stunting of feminine intelligence and the warping of their capacities, as the result of their education and of their position, is not good to account for the fact that, in all time and under favorable as well as unfavorable circumstances, no woman has ever produced a first-rate poem or a first-rate work of imaginative art of any kind. Sappho, Mrs. Browning, Rosa Bonheur, any woman of greatest note who has tried poetry or the other arts, affords an instance in point. Their work is not first-rate. It has admirable qualities, but as art it is inferior to what men (men, it may be, of less general capacity) have done. It is in the nature of things that this should be the case. The keen susceptibility (however it may have been acquired) of the feminine temperament gives to immediate impressions a force that is opposed to the steady action of reflection and reminiscence. The power of the intellect is, in a sort, subordinated to the power of the sense. In this there is nothing either to praise or blame; it is matter simply of observation, and is due to physiological conditions which cannot be changed even were change desirable. But in poetry, as in all other arts of expression, the highest excellence depends upon imagination and the sense of form—two most strictly intellectual qualities, two qualities based not on direct perception, but on reflection, comparison, and reminiscence; that is, not merely on the reception or even the accumulation of images, but still more on ideas and principles derived from the recollection and classification, conscious or unconscious, of the impressions and images themselves.

The general characteristic of women's verses, be they Greek, Italian, French, German, English, or of whatever tongue, is the predominance in them of sentiment over thought, the absence of imagination in its higher phase, and the substitution (usually) of a smooth and flowery diction, such as the Greek critics noticed in the verse of Sappho, for a strong and clearly defined form. These characteristics often give to woman's verse a peculiar, but not properly artistic, charm. It is the verse of sentiment, fresh from an instant experience, eager for expression. It is too lyric, personal, impassioned, to pay attention to the restraints of art. Euterpe and Erato have a larger share in feminine inspiration than Clio or Polymnia. The woman is more than the poet, and gives us confidences which may touch our hearts without moving our intelligence.

The subject admits of abundant illustration, and the volumes before us will serve for this purpose as well as any others. We take up Mrs. Preston's 'Cartoons.' The poems thus named reveal a woman sensitive, impressionable, tender-hearted—a woman who has travelled and read—read especially the poems of Mr. and Mrs. Browning, and who has found satisfaction in the cultivation of her gifts of expression. Her verse never sinks below the level of respectability, never rises to that of vigorous originality. It bears no such individual stamp as to distinguish it from the poetry of many others of the choir of contemporary poets. But, says Mrs. Preston (after the manner of Mrs. Browning):

> "What then? If one weak song of mine
> Should yet prevail to bring the shine
> Back o'er some spirit's dull decline,
>
> "And for a moment seem to fling
> A flash about its sun setting—
> I think (God granting) I may sing."

We indeed see no objection to Mrs. Preston's singing even if her songs do not fling flashes round the sun-setting of spirits. She may find singing good for her own sake. Indeed, Mrs. Preston's verse deserves praise for all its minor qualities, and, if judged by any common standard of average performance, may stand creditably among the year's productions.

From the rudimentary art of 'Cartoons' we pass to the simple nature of 'Hawthorn Blossoms.' These blossoms seem to have been mostly gathered in Indiana, where Mrs. Charles appears to have lived and to have loved and to have suffered. It would further seem, from some of the revelations that they make, that during the last year a prospect of new happiness has opened before the author. In reading some of Mrs. Charles's verses, we feel as if committing an impropriety in partaking of confidences not intended for our ears. It is true that some great poets have set a bad example in disclosing to the public gaze what ought never to have been seen by more than one pair of eyes. And little poets may cite the great in excuse for a similar procedure. But the fault would be inexcusable in them were it not that their experiences of sentiment, whether kept private or made public, are of not much importance except to themselves. For their own sake, however, they should practice self-restraint. Mrs. Charles's emotions, feelings, and experiences are similar to those of many American women, and her poetry is of the kind that many can write with more or less facility. It is the verse of an innocent, gentle sentimentalist of many aspirations and right purposes. Its naïveté betokens a state of culture hardly yet ready for the critic. Take, for instance, the opening stanza of a poem called the "Minstrel":

> "Fancy now that I'm a minstrel, only listen to my lay;
> Thou shalt be my love ideal, for 'tis true, as poets say,
> We must on earth love something, and I have no lover real;
> So, perhaps, it e'en were better that I choose a beau ideal."

This is intended seriously, and, being so, what can be said of it except that it is a pity to print it, especially as Mrs. Charles says:

> "Derision I would not excite,
> A just decision I invite;
> I may not climb the hill of Fame;
> Justice and truth is all I claim"?

But the standard of justice and truth in matters of criticism is not likely to be the same in Indianapolis and in New York. Culture is of slow growth, and cannot be forced—a fact that most Americans, loath as they have been to admit it, are gradually coming to acknowledge. High schools, and Oread or other Institutes however named, and even State universities, are in general of little more use in developing those qualities without which no real culture can exist, than travelling menageries or itinerant lecturers. If there were a high standard of critical judgment of women's work in our Western States, we should hardly be called upon to notice Mrs. Charles's poems, or those of Miss Minnie Ward Patterson of Michigan.* The merits of Miss Patterson's verses, like those of Mrs. Charles, are such as might justly appeal to the kindliness of a familiar circle, but hardly qualify them to claim the interest of the busy world. They are essentially high-school- or college-girlish. Miss Patterson gives us the "Poem delivered at the Quinquennial Reunion of the Alumni at Hillsdale College," as well as that "delivered at the dedication of the Society Hall of the Eclectics and Atheniades, Albion College." They are both full of excellent sentiments, delivered with imperfect art, and of such principles as are indicated in the following stanzas:

> "But when, with pure heart, woman stands as the he'per
> And equal of man—soon may usher the day—
> The demon of crime that debases and thralls us
> Must let go the nation and hasten away.
>
> "Fear not! ne'er can liberty rob her of home-love
> Or gentleness. You would not fear that the vine,
> Transplanted from cellar to garden, and flinging
> Its boughs to the breezes, would e'er be a pine!"

"Shadows and Silver Sprays," by a lady whose name we presume to be Maggie Roberts, is a book of another order. She says of her own productions: "Every poem is to the point; therefore it is needless for the author to say more than that they command the admiration and respect of their own and every other nation." We may add that they have the interest of being distinctly products of the civilization of the city of New York. The author, like many of her sex, is a hero-worshipper. Here is a stanza from her "Song of Welcome to Alexis," which is certainly to the point:

> "We hail thee! Imperial Prince,
> Son of Russia's great Czar,
> Beneficent in time of peace,
> Most terrible in war;
> We'll shout an hearty welcome
> Wheresoe'er thou shalt roam,
> Noble Alexis,
> Pray feel at home."

Five of the Silver Sprays are devoted to Noble Alexis and one to the "gracious monarch" his imperial sire, of whom we are told, with a somewhat bold use of a familiar verse:

> "Millions of freemen own thy sway,
> And all thy great commands obey.
> So when thy journey here is o'er,
> Thy praise shall sound from shore to shore."

Next to Prince Alexis, "bold son of the sea," the author's chief hero seems to be "the magnanimous Col. Fisk," whom, also, with a republican metonymy, she calls a prince. One of the four poems that relate to him is entitled "The Assassination of the Prince of Erie," and in another the Lord is besought to

> "Inscribe his name upon the scroll
> That hangs in heaven's high dome."

'Hawthorn Blossoms. By Emily Thornton Charles (Emily Hawthorne).' Philadelphia: J. B. Lippincott & Co. 1876. 12mo, pp. x.-165.

'Pebbles from Old Pathways. By Minnie Ward Patterson.' Chicago: C. J. Burroughs & Co., Printers. 1875. 12mo, pp. 206.

'Shadows and Silver Sprays. By Eiggam Strebor.' New York: John F. Trow & Son. 1875. Sm. sq 8vo, pp. 123.

We might cite much from this volume curious as illustrating conditions of character and feeling prevalent in a certain class in New York, but we have cited enough to show our readers that the usual forms of criticism are not to be applied to it. It is not always needful to call a spade by its name.

There is more than ordinary felicity of diction and sincerity of feeling in many of Mrs. Aitken's poems, but they are not in general stamped with the impress of so distinct an individuality as to separate them widely from the mass of good feminine poetry. Mrs. Aitken is no intentional imitator, but her style has been more or less consciously affected by that of her favorite poets. She is, we infer from her verse, an American transplanted to Scotland. Her volume begins with a series of thirty sonnets addressed to the American people, earnest appeals, after the manner of Mrs. Browning, to the better sense of the nation, vehement in denunciation of the baseness of its politics, the tricks of its trade, its low material aims, its recklessness in the pursuit of wealth, its lack of integrity and honor. It is because she loves the land and the people so well that she is moved to try "to stir the hearts of men," and the impatient and overexcited tone in her verse is itself the indication and proof of the depth of her emotion. The longest and most ambitious poem in the volume is also perhaps the best. It is a series of dramatic scenes entitled "A Day in the Life of Mary Stuart." The character of the Queen is vigorously conceived and delineated, and the situations of the piece are effectively chosen, and picturesquely presented. There are touches of uncommon pathos and of passion in the work, and we cite a few stanzas from a song that occurs in it as a specimen of Mrs. Aitken's poetic resources which may well recommend her volume to our readers:

"'Tis a crime to remember—O hard, O strange!
What sorrow is worth a year of tears?
And who shall defy the gathering years?
It should be easy for hearts to change!
Oh not for mine, saith my heart to me—
Would we were free!

"And why not easy, dear heart, for you?
Wiser it is, you'll surely grant,
To take instead of the thing you want
Anything else and make it do!
I cannot, saith my heart to me—
Would we were free!

"That's done over and over again,
But not by women who've a way
Of nursing a dream in its decay,
Which never, God wot, was the way with men!
So will we dream, saith my heart to me—
Would we were free!"

Vulfila, oder die Gotische Bibel. Herausgegeben und erklärt von Ernst Bernhardt. (Halle: Waisenhaus, 1875; New York: L. W. Schmidt.)—The present work constitutes Volume III. of Zacher's Germanistic Library, the preceding volumes being 'Gudrun,' by Martin, and 'Walther v. d. Vogelweide,' by Wilmanns. Of the series in general we need only say that it bears throughout the stamp of unmistakable scholarship. As for Dr. Bernhardt's labors in particular, a careful inspection warrants us in demanding for them the sympathy of all lovers of Germanistic studies. Such an edition of 'Vulfila' has been long and sorely needed. A knowledge of Gothic is the rightful beginning of the scientific study of German, Anglo-Saxon, and Icelandic, and Dr. Bernhardt's critical text and commentary are the best foundation we have yet possessed. The Gothic text is based upon Uppström's reading of the several manuscripts. But while the Swedish editor contented himself in the main with reproducing the manuscript text in its inconsistencies and variations, Dr. Bernhardt has attempted to give a corrected text, approaching more nearly to what must have been the language of Vulfila himself. The great Goth—for he fully deserves the predicate—died in the third quarter of the fourth century. The manuscripts now extant, the Silver Codex and the Ambrosian Codices, are a century and a half later, and were all made in Italy during or soon after the reign of Theodoric. Not only must the language have changed somewhat in the interval, but the later copyists interpolated in the text glosses and revised readings from parallel passages and from the Itala, not to speak of misspellings and other blunders. The editor has restored the text, so far as possible, to the form that it probably had on leaving the hand of the original translator. Accompanying the Gothic is a Greek text, constructed by the editor by means of an exhaustive comparison not only of the uncial Greek manuscripts of the New Testament (Cod. Sin. and A, B, C, etc.), but also of the leading Latin manuscripts of the Itala and Vulgata groups. The patient labor and research herein displayed are worthy of the highest praise.

The editor's method is twofold. On the one hand, he has restored, we may say, the Gothic to its early form; on the other, he has placed by its side a Greek text such as Vulfila himself might have used. He has made it probable that the Greek original used by Vulfila for the Gospels resembled closely the Codex Alexandrinus, but not without some remarkable coincidences with the Codex Sinaiticus. That used for the Epistles resembled D', F, G, of the Italian-Greek class. Furthermore, he has shown that Vulfila, although translating directly from the Greek, must have consulted a Latin version, especially in the difficult passages in the Epistles. The results of these minute researches are contained in the foot-notes at the bottom of each page of text. These give us the apparatus for understanding and appreciating Vulfila's work. Thus, Luke i. 3 reads in the Gothic "it hath seemed good to me and to the Holy Spirit." The clause "and to the Holy Spirit" is not found in any Greek manuscript, but occurs in *b*, *g*[1] of the Itala. Similarly, Luke ix. 43 reads in Gothic, "But while they all wondered at all the things that Jesus did, Peter quoth, Master, Why could not we cast that (spirit) out? But Jesus quoth, That kind goeth not out but by prayers and fasting. Then he quoth to his disciples," etc. Peter's question and the answer are found in *f* (Codex Brixianus) of the Itala. Most probably they were interpolated by some copyist from a manuscript like the Brixianus. As an example of critical acuteness we may cite the editor's note to Luke i. 5, in which it is shown that Vulfila mistook the meaning of the Greek ἐφημερία, "course," daily temple-service, and translated it by a word meaning "race, family."

But it is needless to multiply examples, when every page testifies to the editor's untiring research. Our knowledge of Vulfila's life and personality is meagre enough. Dr. Bernhardt appears to have added little, if anything, to the results already gained by Waitz and Bessels. Indeed, so long as no new materials are discovered, we must be content perforce to rest in ignorance upon many of the most important points in the life of the Gothic bishop. He was born in 310 or 311—whether of pure Gothic descent, or the offspring of Cappadocian Christians carried off captives by the Goths in the preceding century, is still a disputed point. Bernhardt inclines to the latter view. In 323 he probably accompanied a Gothic embassy to the empire in the reign of Constantine. In 341 he was consecrated bishop of the Goths by Eusebius, at the Synod of Antioch, and took up his residence north of the Danube. In 348, in consequence of the encroachments of Athanaric, he and his people, with permission from Constantius, settled to the south of the Danube, in Moesia, near Nicopolis. In 360 he took part in the Synod of Constantinople. In 380 or 381 he was summoned by Theodosius to Constantinople, and died there. These few dates and the fact that he was a staunch Arian are all that we can profess to know of one who must have been an extraordinary genius. The more closely we examine his work, the greater becomes our respect for the faithfulness and skill with which it was done. It remains to this day the marvel of all who approach it. We can only regret that so few scholars in this country, and even in England, have been attracted by a literary monument which has fascinated the acutest minds in Germany and which is the key to the Teutonic group of languages.

It may not be superfluous to add that Dr. Bernhardt, although giving the text of the *Skeireins* (explanation of the Gospel of John) and of the fragments of Ezra and Nehemiah, does not regard them as the work of Vulfila, as indeed no modern critic does, and also that his edition is strictly what it professes to be, a critical text-edition, without grammar or glossary. Hence it will not enable us to dispense with the editions of Gabelentz and Löbe and of Heyne.

Histoire des Éventails. Par S. Blondel. (Paris: Renouard; New York: F. W. Christern. 1875. 8vo, pp. iv.-336.)—The recent revival of interest in the charming result of the fan-maker's skill may be said to date from the Loan Exhibition of fans opened in May, 1870, at the South Kensington Museum. M. Blondel confesses that it was a chance remark in a newspaper notice of this fine display—long to be remembered by those who had the good fortune to see its five hundred admirably arranged fans—which suggested to him the preparation of the present volume, much if not all of the matter in which has already appeared in the pages of one of the French art-journals. In the introduction to the excellent catalogue of the Loan Collection, Mr. Sam. Redgrave sketched in a few pages the birth and gradual development of the fan. M. Blondel has made use of most of Mr. Redgrave's references and researches, with the result of rendering his book far fuller of items of interest to English readers than French works of a similar character usually are. In the catalogue of 1870, besides two small

---

[1] Sonnets, Songs, and Stories. By Cora Kennedy Aitken, author of 'Legends and Memories of Scotland.'' London: Hodder & Stoughton. 1875. 16mo, pp. vi.-248.

engravings inserted in Mr. Redgrave's text, there were seven full-page woodcuts of fans loaned for exhibition, and, by the courtesy of the South Kensington authorities, M. Blondel has been enabled to reproduce six of these—the one omitted, curiously enough, being an engraving of "No. 146, a dress-fan lent by the Empress of the French." These cuts, which in the catalogue had a fine clean look, and were printed on separate pages of thick tinted paper, do not appear to equal advantage here, where they are merely inserted in the text with printing on the under side, treatment decidedly detrimental to neatness of impression.

M. Blondel has apparently had free access to the leading collections of the French capital; many of his best illustrations are taken from fans in the possession of the former librarian of the Empress, the Count Philippe de St. Albin, and of his sister, Mme. Achille Jubinal. In chronological sequence, the book describes the fans in use in India, China, and Japan, and among the Egyptians, the Greeks, and the Romans. Then, after noticing briefly the fans of Italy, Spain, and England, it devotes most of its space to the fans of France—with justice, for in France alone is fan-making raised to the dignity of one of the fine arts. There the *éventailliste*, or artist-manufacturer, suggests a subject, giving out *mount* and *stick*—to use the technical terms—to separate hands; generally, however, the stick is subordinate to the mount. In France alone was made the mysterious *vernis-Martin*, of which neither Mr. Redgrave nor M. Blondel is able to tell us much. In France alone have celebrated painters not refused to spend their skill upon the decoration of a fan-mount: to mention only a few out of many, Boucher, Watteau, Lancret, Hamon, Gérôme, and, strange to say, Gavarni have painted fans. There is in the possession of a lady of this city a beautiful fan painted by Hamon, whose delicate style seems admirably adapted for such dainty work. Engravings of two other of his fans will be found in the obituary notice of him in the *Gazette des Beaux-Arts* for February, 1875.

In France, fans of necessity followed the changes of fashion and politics, and, like the pottery of the people, they became patriotic during the Revolution. Under Louis XVI., they were decorated with versified adulation of Necker set to music, both words and notes appearing in full on the fan. Louis himself, meeting with a quatrain by Lemierre which he liked, had written it upon the fan of Marie-Antoinette, much to the delight of the courtiers, who chose to credit the king with the authorship. The lines are rather better than the poetry of kings:

> "Dans le temps des chaleurs extrêmes,
> Heureux d'amuser vos loisirs
> Je saurai près de vous appeler les Zéphires;
> Les Amours y viendront d'eux-mêmes."

Although M. Blondel professes to give the history of fans among all peoples and at all epochs, he makes no mention anywhere of the only fan modern America has produced. Montezuma's mighty fans—apparently resembling those borne beside the Pope during high festivals at St. Peter's — eceive due notice, but by some unaccountable oversight nothing is said of the ingenicus feather-fan made by the aborigines of Niagara.

Backsheesh; or, Life and Adventures in the Orient. By T. W. Knox. (Hartford: A. D. Worthington & Co. 1875.)—The supplementary title of this book states that it contains "descriptive and humorous sketches of sights and scenes over the Atlantic, down the Danube, through the Crimea, in Turkey, Greece, Asia Minor, Syria, Palestine, and Egypt; up the Nile, in Nubia and Equatorial Africa, etc., etc." Mr. Knox made this extended journey principally for the purpose of amusement, and looked upon everything he saw as part of a comedy got up for his special entertainment. His humor is not of a delicate sort, and is, in fact, often vulgar and coarse, having its roots in a total lack of reverence. In the descriptions of Damascus and Jerusalem there is a soberness which is slightly akin to awe, but usually the tone is one of great flippancy in regard to historical places and personages of whom we are accustomed to speak with some amount of respect. This rollicking, *nil-admirari* treatment of antiquities has been so thoroughly and cleverly worked up by Mark Twain that it seems somewhat tame in the hands of any one else. Throughout his journey Mr. Knox's exertions were largely devoted to outwitting hackmen, dragomans, guides, Oriental shopkeepers, etc., in the matter of charges, and he was usually successful—sometimes in a most laughable way, as when he discharged a guide who would not make the ascent of Mount Pentelicus *alone*.

There is considerable information scattered through the book, in regard to routes and charges, which might be very useful to travellers. Most of it, perhaps, can be found in guide-books, but it impresses one more distinctly when accompanied with the actual experience of a traveller. The illustrations are very numerous, nearly two hundred and fifty in all, and are about equally divided between cities and ruins and personal mishaps with donkeys, camels, and sea-sickness—the latter being rather more pointed than witty.

The Nation.

NEW YORK, THURSDAY, MARCH 2, 1876.

The Week.

THE Syndicate, having succeeded in selling all the five per cent. bonds authorized by law, now want the privilege of trying a 4½ per cent. bond, to be made attractive to solid investors here and in Europe by the length of time which it runs. Accordingly, a bill has been introduced and passed by the Senate changing the time which 4½ per cent. bonds run from 15 years to 30 years, and, to make the transaction larger, increasing the amount of 4½ per cent. bonds from $300,000,000, as now authorized, to $500,000,000. It is a matter of record that every syndicate operation, since the refunding began, has cost the country more or less gold, and has accordingly made it more difficult for the Treasury to get the gold needed for the work of resumption. While, therefore, it is desirable that the Government should pay as low a rate of interest on its bonds as possible, it is nevertheless a question whether after all it is not a positive loss to disturb the bonded debt when by so doing payment of the demand debt is deferred, and public attention is diverted from the main question.

Besides the passage of the Funding Act and the West Point Appropriations Bill (with amendments) neither Senate nor House has accomplished anything of importance. The Senate has received a large number of petitions protesting against the repeal of the Bankrupt Act, and has discussed Mr. Anthony's resolution with regard to the accurate printing of debates, but without coming to any decision. One event of the week has been the appearance of Senator Sharon of Nevada, who was elected Senator some nine months ago, but has not thought it worth while to come to Washington before. In the House, the 3.65 District Bond Conference report has been discussed and the whole matter postponed a week, the February interest on the bonds remaining, we believe, still unpaid. The Democratic Currency Caucus Committee has had a hard week of it in endeavoring to reconcile the conflicting views of those who "roar for more soft-money" and those who are opposed to this roar. The committee is pretty evenly divided on the subject, there being some eight hard-money men on it and five anti-contractionists, as they call themselves, headed by Mr. Holman. The subject has been brought up in the House also, with the almost instantaneous result of an adjournment, hard-money Democrats uniting with Republicans in the vote; the object of the former being to prevent action on resolutions introduced by the inflationists, and the latter desiring to prevent a vote on Democratic resolutions demanding an enquiry into the whiskey frauds and Babcock's case.

The verdict of "not guilty" in General Babcock's case was probably a surprise to most people, both in and out of St. Louis, and perhaps to none more than to the General himself. Judge Dillon's charge was decidedly in the defendant's favor, rather from what he omitted to say than from any positive instructions. He referred to the high character given the accused by the President, but did not call attention to the fact that his admitted acts had not been those of a man answering to the President's description of him, and he made no reference to the color given to his telegrams and letters by the circumstance of the correspondence being clandestine. He also gave the jury a warning not to be influenced by popular clamor, but did not caution them at all against the influence of a great name and high station. All this may have been perfectly right, but it certainly helped the defendant. There can be little doubt that the political effect of the acquittal will be bad; this much may be inferred from the sudden appearance upon the scene of several notorious political scamps who had been keeping quiet lately, headed by Boss Shepherd, and their telegraphing in very blasphemous terms their exultation over the result. Every corrupt gauger, distiller, rectifier, or revenue officer, in or out of jail, gave a sigh of relief when he heard of it.

District-Attorney Bliss has explained the proceedings of Sherman, the deputy whom he sent to the West to hunt up evidence for the Government, and who turned over what he found to General Babcock's counsel. He says that Sherman found valuable evidence which went to show General Babcock's innocence; that he—Sherman—feared that if he turned it over to Dyer it would be suppressed, and he therefore turned it over to Babcock. This conduct, Mr. Bliss says, was perfectly proper; but this is so obvious that we wonder at any question being raised about it. Mr. Bliss is a *bouffe* district-attorney, and has been acting under the orders of an Attorney-General who issued only the other day a *bouffe* order warning his subordinates that hereafter anybody who turned State's evidence against the Whiskey Rings would be severely punished by the Government. In *bouffe* prosecutions, the Government always collects the evidence, and then hands it over to the defence. Offenbach is coming to this country in a few weeks, direct from the Duchy of Gerolstein, to study our institutions, and we trust the opportunity may not be lost to bring about a meeting between him and Messrs. Bliss and Pierrepont.

Mr. James E. Lyon, who, as we have once or twice stated in these columns, knows more about the secret history of the Emma Mine than almost any other man living, has told his story to the House Committee on Foreign Affairs, and a shocking story it is. There are one or two features of it which deserve attention. Mr. Lyon corroborates on every important point the story of the mine as it was related in Mr. Paffard's pamphlet (which we reviewed in the *Nation* some two years ago). His position was that of actual owner of a large interest in the ore which had been taken out of the mine; and when he found that Park and Stewart were going to sell it, he clung to them in the hope of getting his money, and he was thus brought into close relations with them, and they were forced into giving him a great deal of valuable information that no one else could ever have got at. The Schenck transaction he corroborates in every important point. The story will, we fear, be cold comfort for Mr. Williams, who estimates at $25,000 the damage done to his character by the statement that he prepared the Emma for Prof. Silliman's inspection; for Lyon says that Park told him that Williams was "the best man in the world to fix a mine for examination," and that he had "fixed up the Mariposa" for him. The story implicates a good many persons besides Park and Stewart whose cases will now have to be looked into. As to the condition of the mine at the time of the sale in England, Lyon has a letter from Stewart in which it is spoken of as "worked out."

The State Department, in response to the resolution of enquiry voted the other day by the House, has furnished the same Committee with copies of the correspondence between the Department and Gen. Schenck, showing that on his connection with the mine attracting attention from the press in England, he addressed a telegram to the Department saying that "his entire interest in the enterprise arose from the ownership of certain shares for which, after investigation, *he had paid dollar for dollar*" (the italics are ours), and "that he had become a director at the solicitation of respectable Americans, to protect their interests and his own," but offering to withdraw if it was deemed advisable. The Department replied, on the 28th of November, that the advertisement of his name as "a director of a Company seeking to dispose of its shares in the country to which he was accredited was ill-advised, unfortunate, and calculated to subject him to criticism," and earnestly advised him to withdraw

his name. On the 12th of January following, Schenck enclosed to Mr. Fish a copy of a letter addressed to the chairman of the Company, dated the 6th of December, resigning his directorship, and cited the well-known case of Saldanha and the Lisbon tramway in palliation or justification of his own conduct. On the 20th of December he also telegraphed, on hearing that a resolution of enquiry had passed the Senate, that he was ready for investigation. Mr. Fish then adds the following remarkable statement:

"As the resolution of the House makes a reference to the action of the Executive Department of the Government on this question, I deem it due to Gen. Schenck, as a public officer who has had various and important public trusts, and who has for many years occupied a prominent position before the country, to further state that the course adopted in the Department growing out of these facts was based on the conviction that, while the use of the name of the Minister of the United States in such an enterprise was inconsistent with his position, at the same time Gen. Schenck had been guilty of no wrong purpose or intent in connecting himself with the Company in question. I remain firmly of this opinion, and am, further, satisfied that he, in common with many others, became a sufferer thereby."

As Mr. Fish is a man of unimpeached honor, and as no recent change has to our knowledge been made in the fundamental principles of morality and in the usages which govern the conduct of gentlemen in matters of trust, we take it for granted that, when he wrote the above, he had not read Schenck's own deposition in London and the copy of his agreement with Park. If he will do so, he will see that when Schenck said that he had invested in shares and "paid dollar for dollar" for them, he was guilty of gross falsehood. He had, on the contrary, simply secretly borrowed shares from the promoter of the mine, with an agreement which absolutely protected him against loss and secured him eleven per cent. per annum profit, even supposing he paid Park seven per cent. for the use of the shares. Mr. Fish will, therefore, see at a glance that, had this arrangement leaked out, the British purchasers of the shares would have considered Schenck a dishonored man, and themselves the victims of a swindle. We must also call Mr. Fish's attention to the fact that when Schenck, by forwarding him on the 12th of January a copy of a letter of resignation of his directorship dated the 6th December, led him to believe that the resignation had really taken place at the latter date, in consequence of his (Mr. Fish's) telegram of the 28th November, he (Schenck) was again guilty of deceit, inasmuch as his resignation was not announced until January, thus allowing the "respectable Americans" who were promoting the mine a month longer to get rid of their shares before the British public began to suspect. We have therefore no hesitation in assuring the public that, when Mr. Fish finds time to read the documents we have mentioned, he will agree with all Protestant theologians, all modern moralists of reputation, and all gentlemen of civilized countries, in pronouncing Schenck's conduct dishonorable. Many queer things are allowed to pass in official circles just now in Washington, but Mr. Fish is not a man to lower his standard to the Shepherd level under any pressure or temptation. We notice that Mr. Fish also says he is satisfied that "General Schenck is open to no imputations whatever" arising from the Machado matter, but we feel sure that in this case also Mr. Fish has not read the correspondence. We must observe, at the same time, that when the papers were all crying out a month ago on the publication of the Wiard correspondence and the Park agreement that Schenck *must* now come home, we warned the public that he would not resign nor be asked to do so, and that he would stay in his place under the new "Fire" rule; and the reason is that, as the Government is now conducted at Washington, not only do dishonest men do dishonest things, but the honest men who are looking on have forgotten, or are forgetting, what the marks of dishonesty are.

There have been several conventions during the week, the principal ones being those of the Republicans in Indiana and of both parties in Connecticut. In Connecticut, the Republican ticket, headed by Henry C. Harrison, of Hartford, and with Gen. F. A. Walker as candidate for Secretary of State, is a good one, and the resolutions are pronounced for hard-money, as are also those of the Democrats, notwithstanding a desperate attempt on the part of the inflationists to carry the platform. In Indiana, the Republicans have drawn up a series of resolutions as long as an article of a State constitution. They begin by "hailing" the Centennial year, then give a history of the past achievements of the party from the point of view of absolute, unbiassed, historical truth; and then proceed, "in view of this record," to promise faithfulness in the future as in the past; to deny the so-called rights of nullification and secession; to declare the independence of the national and State governments in all cases in which there is not some sort of dependence; to promise amnesty to the penitent and rebuke the impenitent rebel; to demand a reformed civil service; to protest against all encroachments of church on state or state on church; to demand a revenue system which will give "all needful encouragement" to trade, agriculture, manufactures, etc., and bring about "harmonious relations" between labor and capital, and a system of taxation which shall give "the greatest possible exemption" to articles of "primary necessity," and fall most heavily on "luxuries" and "wealth"; to demand the repeal of the Resumption Act, and that the currency be neither contracted nor expanded, but resumption be left to be brought about by the "laws of trade"; to protest against all attacks on the common-school system and other Democratic schemes; and to endorse General Grant as a patriot, and nominate Senator Morton for the Presidency. The State ticket is headed by G. S. Orth for Governor. There is not much in the Wisconsin Republican resolutions except a hard-money plank, an anti-third-term plank, and a quasi-nomination of Mr. Blaine for the Presidency. The Democrats have fixed upon St. Louis as the place and June 27 as the time for their National Convention.

The Advisory Council in Brooklyn, as was expected, decided all the points of procedure submitted to it in favor of Plymouth Church—that is, approved of what the church had done. It threw on Mrs. Moulton the responsibility of the failure of the Mutual Council, by commending the desire of Plymouth Church to exclude the local churches. Before separating, however, it fell in with the suggestion of the Andover Church so far as to appoint a Committee of Three, which should, on the request of Plymouth Church, select a Commission of Five, out of a prepared list of twenty eminent Congregationalists, to be charged with the duty of investigating any accusations that may be made against Mr. Beecher by any person declaring himself responsible for them, within a period of sixty days after the dissolution of the Council, the result of the investigation to be made public. To this Professor Egbert C. Smith, of Andover, makes serious objections in the *Congregationalist*, which we have no time to discuss this week. Mr. Bowen has, in the meantime, read his statement before the Examining Committee, but declined to remain in their company one minute after finishing, not wishing, probably, to submit himself to cross-examination. An attempt to compel or induce him to do so by locking the door was foiled by the good man's flight through the door of the back parlor, and, in his agitation, he called loudly for the "gentlemen of the press," who were on duty on the sidewalk and promptly came to his aid. Brother White, who locked the door, says it was a playful act, while Brother Bowen pronounces it the "greatest outrage of the century." The truth probably lies half-way between these two views. We would recommend, however, that Mr. Bowen be examined next time in chains. We know of no other way of securing the prolonged attendance of so astute and good a man at the meeting of a hostile body desirous of interrogating him on any subject. He likes to give his own account of things and then return promptly to his holy work.

The Treasury, in pursuance of the Sherman Act, has bought silver bullion, issuing bonds to get gold to pay for it, and has now in its vaults between $13,000,000 and $14,000,000 of silver

dimes, quarters, and halves. These coins are worth 95½ in greenbacks, while fractional notes are worth 100; in gold they are worth 83¾ to 84, while fractional currency is worth 87¾—the same as Treasury notes. It was the intention to begin paying out this subsidiary silver coin on the 1st of March, and to herald the movement as the beginning of specie payments and the restoration of a sound currency, on the assumption that the people would, when they saw silver coins in circulation, believe that the small change of the country had been improved. There seems, however, to be some hesitation on the part of the Treasury, and the question is, what can be done with this silver coin? If it be paid out, then the Treasury forces into circulation a currency more debased than any in use. It is true that an advance in the price of silver, now 53⅛d. per ounce in London, the lowest price on record, might bring it up to the gold value of the paper currency, but then the danger would be that it would be exported, and the country left with no small change. To sell it and turn it into gold would entail a heavy loss on the Government, which paid very much more for it than it is now worth. Altogether, this whole business is calculated to bring the cause of sound currency into so much contempt that we are surprised to find an inflationist like Judge Kelley attempting to restrain the Treasury from pursuing to the utmost its "silver resumption" policy. There were during the week no important changes in the Wall-Street markets, if we except a decline in speculative stocks. The bank statement showed a surplus reserve of $13,634,950, which is $1,293,400 less than last week, but $4,200,000 above the corresponding week of last year. In domestic trade the season is late, and the outlook is less encouraging than at the beginning of the year. The gold price of $100 greenbacks during the week ranged between $87 62 and $87 91.

The Carlist war has come to an end by the dispersal and capture of what remained of the Carlist troops and the flight of Don Carlos himself into France. The present contest has lasted four years, or two years less than the war of 1834, and, again unlike the latter, has been ended without foreign assistance. It would undoubtedly not have lasted so long but for the establishment of Castelar's Republic, and the consequent dissolution of the army and uncertainty about the future of the government. Don Carlos was, however, prevented from descending into the low country and taking any advantage of his frequent successes by the fact that the bulk of his followers were local volunteers, who were in arms for the defence of provincial *fueros* still more than for the vindication of the principle of legitimacy, and could hardly have been persuaded to advance on Madrid even if they had been sufficiently equipped for the work. The restoration of Alfonso, and the consequent increase in the vigor and unity of the operations of his army, has brought the end about somewhat more speedily than was expected, and it may be fairly predicted that the Pretender has made his last attempt. He is not likely again in his lifetime to find constitutional government in a state of so much discredit as that into which it had fallen when he raised his standard. His success will probably seat Alfonso firmly on the throne, and at the same time cause considerable discouragement in the ranks of the friends of Ultramontanism and Divine Right throughout Europe. There is not likely to be again, in our time, so strong a conservative reaction as followed on the follies and atrocities of the Commune in France and its counterpart in Spain.

M. Buffet, as was expected, resigned after his complete defeat at the elections, and there was great depression at the Bourse as long as it was uncertain how Marshal MacMahon would deal with the crisis. He met it, however, with perfect good temper, and put M. Dufaure in M. Buffet's place, and made arrangements for an entire reorganization of the Ministry, to be announced in a message at the meeting of the Chambers. All the new members of the Cabinet, except, it is said, the Duc Decazes, General Cissey, and M. Montaignac, will be taken from the Left Centre, which is probably as far to the Left as the Marshal can ever be expected to go. M. Thiers is, in the meantime, engaged in rallying the Moderate Republicans into something like a party, and will probably have the co-operation of Gambetta, and talks, among the fresh measures to be sought, of an amnesty for all the Communists whose offences were purely political or who were plainly misled. The objections to such a step are stronger in France than they would be in any other country in the world, as something which would help to diminish, in the eyes of the city populations, the seriousness of armed attempts at revolution. It is a well-known fact that at least three generations of workingmen have now grown up in Paris to whom stories of street-fighting against the troops were the great interest of their boyhood, and who in their boyhood looked forward to the defence of a barricade as one of the necessary and desirable social experiences. This tradition must be utterly broken before any French government will be completely secure.

The only news of importance from Germany is that of a powerful speech in the parliament at the close of the session, by Prince Bismarck, in which he offered the most earnest assurances of the peaceableness of the new German Empire and of the pacific temper both of the Emperor and himself. All this was apropos of the Press Bill, then under discussion, which gave him the opportunity of throwing the blame of the rumors of war last spring on the newspapers, and accusing them of complicity with the military party and of gross inefficiency in the discharge of their own duties as collectors of news and commentators on it, and of giving notice that the Government would hereafter have no relations with any of them, either official or semi-official. Whereupon, much abuse of the German press has appeared in various quarters, and much depreciation of the character and attainments of its conductors, and much invidious comparison of it with that of England and the United States. Most of this talk is, however, rather idle. The press of a country is the product of its institutions and manners, and the reflection, one may say, of its society, and it may be taken for granted that enterprise in the collection of news or power in the writing of articles will never appear in the press of any country until its complete liberty and independence are guaranteed both by the laws and by public opinion. A good newspaper cannot be made without a heavy outlay of money, and nobody will invest heavily in a business which a police magistrate may any day bring to a standstill.

A wail comes from the Chamber of Commerce in Odessa which will delight the souls of the Grangers. It has issued a report in which it says that, even so recently as 1867, 44 per cent. of the grain imported into England came from Russia. By 1873, 44 per cent. of it came from the United States, and only 21 from Russia. Between those years, it is true, the total export of Russian grain increased about ten per cent., but American total exports increased nearly fifty per cent. Now there is a positive decline in Russian exports. Moreover, the Chamber is afraid matters are going to become worse instead of better under the influence of the improvement and cheapening of transportation in this country, and they are especially alarmed by the improvements at the mouth of the Mississippi. The United States, too, is beating them out of the German market, and they fear additional competition from the Spanish states on the Pacific coast. The Russian banks are trying to place a large amount of real-estate mortgages on the London market to raise money for agricultural improvements; but the trouble with Russia is said to lie too deep for speedy cure, or cure by any investment of capital—viz., in the character of the people and in the constitution of society. It begins to be seen that the peasants, left to themselves since emancipation, and with the communal system of property, cannot compete as producers with the greater intelligence and individual ownership of Western countries, and another and greater revolution than the abolition of serfdom now begins to be called for—viz., the division of property among individuals, which would be a violent break with a social system thousands of years older than serfdom, and far more deeply rooted in the manners.

GENERAL BABCOCK AND THE ARMY.

THERE can be little doubt that a verdict of "not guilty" was the only one left to the jury in General Babcock's case by the facts as actually presented to them. The evidence introduced by the Government and admitted by the Court positively proved only as much as this—that there had been a conspiracy between the distillers and internal-revenue officers in St. Louis to defraud the Government of the whiskey tax, to which Joyce, a revenue agent, and McDonald, the supervisor, were parties; that these men were on intimate terms with General Babcock, who was in a position of trust and confidence in the President's household, and therefore was exactly the man needed by the conspirators to inform them of intended descents by revenue agents—the daily danger which they had to guard against; and that on several occasions, when the Ring had objects to further at Washington, in one case the appointment of an internal-revenue officer, in the others the prevention of descents, Babcock was discovered in active correspondence with the Ring, and rendering them material assistance. The first of these occasions was in 1873 after the death of Ford, the collector—a man greatly trusted by General Grant, but after his death suspected of being a "whiskey thief"—when Babcock interested himself in a very suspicious way in securing the appointment for the Ring's man, Constantine Maguire, since convicted.

The next evidence introduced by the Government showed that in the spring of 1874 Douglass, then Commissioner of Internal Revenue, becoming suspicious of Joyce, determined to pack him off to California, and to send a revenue agent by the name of Hogue to St. Louis to look into matters there; that notice of this intended descent was at once telegraphed by Avery, the chief clerk of the Treasury Department and one of the Ring (since convicted), to Joyce, who telegraphed back, "Telegrams received. Start for San Francisco Sunday night. All perfect here"—meaning evidently that no illicit whiskey was being made; and that at the same time he telegraphed to Babcock, "Start for San Francisco to-morrow night. Make D. call off his scandal-hounds, that only blacken the memory of poor F. (Ford) and friends. Business"; that General Babcock went to D. (Douglass) and made enquiries about the intended descent. But there is no proof that he tried to prevent the descent, and the letter which he wrote in reply to Joyce's telegram contains nothing compromising.

Joyce now went to California, but returned by leave in June, and went at once to Washington, and, on enquiry, finding there was no danger, telegraphed McDonald to "let the machine go"—or, in other words, to begin work again. Later in the summer it was determined by the Internal-Revenue Department to send Brooks, a Secret-Service detective, and Hogue, the agent, to make an investigation, and the Ring, as usual, became nervous, and began to telegraph actively. In this correspondence Babcock appears, for the first time, actively working to prevent a "raid." It was proved that on October 25 Joyce telegraphed him: "Have you talked with D.? Are things right? How?" and, on December 3, "Has Secretary or Commissioner ordered anybody here?" that a letter from Brooks to Rogers, Douglass's deputy-commissioner, relating to the intended descent, was stolen from his (Rogers's) desk, and next appeared in Babcock's possession (it was admitted that he had not stolen it); that this letter he took both to the President and to Douglass, urging on Douglass that the letter looked like blackmail—though this was obviously an absurd interpretation of it—asking him what "a sensitive man like Logan" would think if he saw such a letter, and suggesting that a superior class of persons ought to be used for work of this kind, and saying pretty much the same thing to the President; that on December 13, 1874, Douglass told Babcock that the proposed visit of Brooks and Hogue to St. Louis was "off," and that on this Babcock telegraphed McDonald at St. Louis: "I succeeded. They will not go. I will write you." This was the first despatch signed "Sylph," and usually referred to as the "Sylph" despatch.

About January 27, 1875, it was determined by the Commissioner, after consultation with the President, to issue an order transferring the supervisors and revenue agents from one district to another. The Ring immediately began to telegraph, protesting against the order, and it was proved that Babcock again actively interfered, with Douglass and Rogers, to have the order rescinded; that while he was doing so Joyce telegraphed him (February 3): "We have official information that the enemy weakens. Push things." This despatch was also signed "Sylph," and the order was, as a matter of fact, almost immediately rescinded, on the ground, according to the President's testimony, that it would only be likely to serve as a warning to the thieves, and that an unannounced descent of some kind would be preferable. This correspondence was all in cipher, and carried on without the knowledge of the President. It was also proved that after McDonald had been indicted, and suspicion fallen on Babcock, the latter opened a clandestine correspondence with him through a third person; but this correspondence was not produced by either side on the trial.

In estimating the weight which this written evidence ought to have, there are several things necessary to be taken into consideration *pro* and *con*. There is, in the first place, the obvious consideration that on the theory of guilt it is all easily explicable. If Babcock had been one of the conspirators he would have taken just the interest he did take in furthering the objects of the St. Louis Ring, and the same means to conceal his connection with it. The appointment of Ford's successor would have aroused all his energies, and when he found that Hogue and Brooks were going to St. Louis, or that the supervisors were to be shifted about so that a new man would be placed in McDonald's place, he would (as a guilty man) have taken just the measures to have the orders rescinded that he did take, by going to Douglass or Rogers or the President and representing to them that public considerations required the use of other means. The attempt of the defence to break this down by showing that the order shifting the supervisors was really withdrawn because the President and his advisers had come to the conclusion that more effective steps might be taken, has in reality nothing in it. The question is not what the President wanted, but what the Ring wanted, and there is no question that they were greatly alarmed at the news of the order with regard to the supervisors, and began to use the most strenuous exertions to get it rescinded. When we find Babcock telegraphing under an assumed name in cipher to Joyce: "I succeeded. They will not go. I will write you," and when we find Joyce using the same signature, and telegraphing about the "weakening of the enemy" and "pushing things," and also find that things are pushed, we can only say that all this was eminently natural if Babcock were guilty, but otherwise not. And not only his despatches, but those from the other side also addressed to him, are all explicable and natural on the theory that he was, in 1874 and 1875, bound to the Ring by the closest ties. It must also be remembered that, if Babcock were innocent, he was not merely an unconcerned spectator of what was going on, but, from his position, bound to do what he could to acquaint the President and the Revenue Department with any important facts that came to his knowledge relating to the conspiracy which was all the time believed to exist. All the telegrams he received should have been shown at once; but instead of this he carries on a secret correspondence with the conspirators, and does whatever they ask him to do at Washington.

On the other hand, it cannot be denied that the evidence is very fragmentary, and that there was no positive proof of any motive on Babcock's part. The Government undertook to prove that he received money from the Ring by mail, and a pecuniary motive would certainly be the natural one in such a case; but the only witness produced for this purpose was unable to swear positively to the fact of a letter containing money having been even addressed to General Babcock. There was no proof of its being received; so that, leaving out of view the extraordinary testimony of a letter-carrier who swore that he took the letter out of the mail and returned it to Joyce, it cannot be said that Babcock was proved even to have been offered any money.

Under these circumstances, no jury could have properly found the accused guilty. In a criminal case, a jury is not allowed to decide by a preponderance of probabilities, but must, to bring in a verdict of guilty, be satisfied beyond a "reasonable doubt" of the guilt. With the meagre evidence before them, without the benefit of hearing from General Babcock's own lips this explanation of his telegrams, or of having him tested by cross-examination, it cannot be said that his guilt was established beyond a reasonable doubt. The case illustrates very forcibly the barbarism of the common law on the subject of criminal verdicts, which, excluding by strictly artificial rules a great deal of the most important evidence, at the same time forces a jury either to acquit or to convict. The Scotch verdict "not proven" is the only one which comports with the facts in such a case as that of General Babcock.

But though the verdict of "not guilty" was, under the circumstances, the only proper one for the jury to render, the real question at issue was not whether, by resorting to every legal device in the exclusion of the evidence, a verdict of guilty could be prevented, but whether General Babcock was actually innocent. The public is in possession of a great deal of evidence on this point which did not get to the jury at all, and, when it is considered in connection with the other, his case cannot be said to be improved.

The most important of this evidence is the fact that the behavior of General Babcock since proceedings against him began has been that of a guilty man. On first learning of the accusation against him he telegraphed to St. Louis proclaiming his innocence, promising a full explanation of all his correspondence, and demanding to be heard in his defence in St. Louis. At the same time he was privately telegraphing to Luckey, the other secretary, instructions to his counsel in these words, "Tell him to employ assistance if he wants, and means, but to prevent my going there now at all hazards"; and when the trial actually took place he got the telegrams sent for this purpose ruled out on the ground that they were "confidential communications." His clandestine correspondence with McDonald he neither produced nor explained, and of his long correspondence with Joyce, extending over a period of three or four years, he omitted to produce any which related to the years 1874 and 1875, though he did produce a quantity of letters written before that time, and showing a very different relation existing between the two men from that which must have existed when they were sending "Sylph" despatches to each other. From first to last, he struggled to prevent any fragment of evidence from going to the jury which the Government did not itself produce. To cap the climax, no sort of rational explanation of the more mysterious despatches was offered even by his counsel.

In estimating the effect which the result of this trial ought to have on General Babcock's future, it will not do to forget that he held two relations to the public service. He is not merely the President's secretary, but is an officer of the army besides. The army has always been above all other professions a school of honor, and has professed to test, by a standard altogether nicer and more sensitive than that of courts of justice, the conduct of its members. What it asks is, not whether an officer has or has not committed an indictable offence, but whether he has been guilty of conduct "unbecoming an officer and a gentleman"; and in discovering this it is not bound by any technical rules of evidence or law. The military idea of the "officer and gentleman," as settled by the practice of military courts and by usage, especially excludes want of frankness or sincerity or truthfulness. The telegram, for instance, from Babcock to Luckey, telling him, at the very time that he was clamoring for an opportunity to clear himself, that his counsel in St. Louis must prevent his going there now at all hazards, was not sent by "an officer and a gentleman," and it was not the act of an officer and a gentleman, but that of a pettifogging criminal, to have it ruled out as a "privileged communication." And the whole farcical spectacle of a gentleman of high character, as the President declared him to be, accused of crime, first promising to explain all, and then sitting down as dumb as an oyster and keeping all the evidence to himself, is, in the eye of military usage, utterly disgraceful. It is before a military tribunal that General Babcock ought to be summoned now. The present position of his case makes his retention in the army a public scandal, and his request, if he has really made it, to be assigned to active duty, is a piece of impudence which, if there were no such thing as "politics," would probably result in the loss of his commission on the spot. When the case first came up, General Babcock's demand for a military court of enquiry was preposterous, because all the evidence was in the hands of the District Attorney, and consequently beyond the court's reach. Now the evidence has been all produced, and the only remaining question is, What should be done with an officer whose conduct is such as to require a semi-official announcement from Washington that his resignation is in the President's hands? Ought he to be suspended or cashiered? Now that it is proposed to transfer the Indian Bureau to the care of the army, the maintenance of a rigid standard of military honor becomes of more importance than ever. The work which the army, in case of such a transfer, will undertake is nothing more nor less than watching the acts and preventing the frauds of agents and contractors who stand in the relation to the Indian Bureau that Joyce and McDonald did to the Internal Revenue. Sharpness, vigilance, and open honesty, a single eye to the interest of the Government, are the qualifications for such a duty, and we have no doubt the army is the place to look for these qualities. But these are just the qualities General Babcock has not displayed. There is, we suppose, no question in anybody's mind that his retention in the White House after such revelations as we have had of his character is a public outrage, and to send him back to the army after dismissal from any position—even that of a White House scullion—for acts such as those he has been guilty of would be a gross insult to the army, and the corrupting effect it would have on the tone of that branch of the service can hardly be estimated.

THE FRENCH REPUBLIC.

THE constitution of 1791 in France was upset in the following year by the insurrection in Paris of the terrible Tenth of August. The constitution of 1793 was then adopted, but the Convention which framed it suspended it before it went into operation, and established a revolutionary provisional government, composed of the Committee of Public Safety. This government was put an end to by the killing of the more important members of the Committee, and a commission was then appointed to draw up another constitution—that of 1795—in which the government was lodged in the hands of a Council of Elders and a Council of Five Hundred, with an executive Directory of five members. This lasted until 1799, when Bonaparte came home from Egypt and overturned it with a battalion of grenadiers, and made a new constitution, with an executive of three Consuls, of whom he himself was naturally the chief. This lasted three years, for in 1802 Bonaparte, feeling that it was ridiculous for as good a soldier as he was to have colleagues, ordered his own election by popular vote as Consul for life. This lasted two years, and then the Empire was established in 1804. This lasted until the overthrow of the Emperor in 1814, when another constitution was framed restoring the monarchy, which lasted until the Revolution of 1830, when another constitution set up what was called "the Monarchy of July," which was overthrown by the Revolution of 1848. Another constitution—this time republican—was then adopted which lasted until 1851, when it too was set aside by the *coup d'état*, and the Empire restored, which lasted until 1870, when another revolution lodged the power once more in the hands of a Provisional Government, and finally in that of an Assembly composed in the main of Royalists. We have gone over the governmental changes in French history since 1789 simply for the purpose of calling attention to the fact that every government set up, from that year until 1870, was the direct result either of the use of violence by the populace or of the threats of violence on the part of the person commanding the army. The new constitution, too, was in

every sense the work of the victors in an armed conflict, and was intended to express, and did express, the political views of the party which for the time being happened to be dominant in Paris, the capital.

One has to bear all these facts in mind in order to appreciate the importance for France, and doubtless for Europe also, of the establishment which we have just witnessed of a new government. The number of happy accidents which have contributed to or accompanied the work, has been so great as to tempt anybody who chose to be superstitious into the belief that a run of luck had begun for a country which has become notorious for the extent and duration of its political misfortunes. The rising which overthrew the Second Empire was undoubtedly due to the tremendous military disaster of Sedan, but had it not been for the continuance of the war, with its still more appalling subsequent reverses, we should undoubtedly have witnessed the proclamation by the mob of another republic of the old type, destined, in all probability, to excite general alarm, like the others, and after a brief period of trial to share the fate of the others; for the men who figured most prominently in bringing about the "déchéance" were Reds and adventurers of the same kind as those who obtained control of the Government in 1848. The prolongation of the war and the siege of Paris speedily reduced these men to insignificance, and compelled the transfer of the seat of government to the country districts, leaving the politicians of the capital, to use Bismarck's coarse but happy phrase, "to cook in their own grease." We all laughed a good deal when Gambetta went to Tours in a balloon and began issuing proclamations against the enemy on the line of the Loire, and there was a good deal that was laughable about it; but he was doing something which he had no intention of doing, and which may prove more important to France than the defeat of the Germans would have proved—that is, breaking the spell by which Paris had held the popular imagination for so many centuries, and proving to the peasantry that there might be a government outside Paris, and that all was not lost when the capital was lost, and all was not ended when the capital had spoken. The meeting of the Assembly at Bordeaux afterwards and the negotiation of the peace from that point, was another valuable confirmation of this view, and had doubtless a powerful influence on public opinion. For the first time since 1789 the occurrence of great events in Paris had not settled anything for the nation at large. The mob had "descended into the streets" and overturned the Empire, but the power to decide what should succeed it had passed out of their hands.

The new Assembly was largely monarchical in its composition, and it was fresh from panic-stricken country districts in which the destruction of the army had discredited the Empire, and Gambetta's frantic efforts at resistance had discredited the Republic. On the old plan, the proper course for the Assembly under such circumstances would have been to recall the king and proclaim a monarchy. But here again Providence seems to have interposed through M. Thiers and procured time for deliberation, under that agreement to postpone the determination of the form of the government known as the "Pact of Bordeaux." But then this, doubtless, could not have been brought about if the Germans had not held France by the throat, and were not standing ready to carry fire and sword down to the shores of the Mediterranean. The willingness of the Royalists to wait is entitled to all the more praise because at that time the follies of Gambetta, whom M. Thiers did not hesitate to call a "raging madman," had made the Republic seem another name for anarchy and dismemberment. The rising of the Commune which followed was simply the attempt of the Paris mob to reassume their old supremacy, and was inspired by rage at the sight of independent action by the country outside; and the contest which followed made the lesson of the war complete and, we trust, enduring, for it showed that Paris might rise, expel the Government, and resist desperately, without in any way changing the political situation—that, in short, for political purposes Paris was no longer France.

The five years of struggle in the Assembly which have since followed have been also a most valuable piece of political experience. The Monarchists have had, in the first place, the fullest opportunity for a peaceful trial of their own strength and of the temper of the country. They were left to discover, without let or hindrance, the depth of the chasm which separates the last descendant of the old line of kings from the nation. They found out for themselves that Henry V. had become an impossibility, and they acknowledged it. They gave him up when he wrote his letter. They discovered, too, by incessant discussion and by the trial of all sorts of combinations, how much divided they were on fundamental questions, and how little fitted they were as a party to take charge of the Government. They were brought to the adoption of the new constitution, not by the guillotine or the bayonet, or by fear for their fortunes, or by any of the old forms of coercion, but simply by five years of steady debate. The effect of this delay on Gambetta and his following was no less marked and no less happy. The Gambetta whose moderation and tactical skill we are now all admiring is by no means the Gambetta of 1871, nor yet even of 1873. He is neither any longer a Red Dictator nor Radical Reformer. He has abandoned the notion that the Republic is of divine origin, and has ceased to believe in the necessity of a new "couche sociale." Four or five years of experience in a really free parliamentary body, with, on the whole, opportunities for testing public opinion such as public men in France have never before enjoyed, have cooled his ardor, taught him the conditions of healthy political life, and revealed to him why it is that Frenchmen have feared republican government. He has got over the belief that any class of his countrymen are enemies to be hunted down or denounced, and has learned that opinions, however outrageous or dangerous, are best met by moderation and persuasion; that the gravest political problems are best solved by not trying to solve them completely; and that really good laws are, as Sir Matthew Hale said, "the production of the wisest thing in the world—Time." In short, he has become competent to give lessons to some zealots and demagogues among ourselves, and might profitably harangue Mr. O. P. Morton on "outrages" and the best method of dealing with them.

The new constitution, therefore, comes into existence under the happiest auspices. It is the product of peaceful discussion, after all the worst traditions of French politics have been discredited or destroyed by the utter failure of their supporters to devise anything else. It has been adopted by the country, in vote so free that—an event unprecedented we believe in French political history—the head of the Ministry has been unable to find a constituency in all France to return him to either branch of the legislature. It is placed, too, as far as material conditions are concerned, under the protection of an executive officer who, though not a great political head, is a gallant soldier and, what is far better, an honest gentleman, who keeps the company not of "Bosses" or speculators or gamblers, but of whatever is best in French society both morally and intellectually, and who undoubtedly does desire to give his country rest and to assure her future. And though last, not least, it goes into operation just as the people have received the most admirable illustration possible of the integrity and skill and wisdom of the national financiers, and the prudence and intelligence with which their contributions to the national treasury are managed. We may fairly hope, therefore, that the wanderings of France in the political wilderness are over, and that she has at last reached the promised land, though it must be admitted that as long as the army is as large as it is, and the temper of the people as volcanic, no political experiment can be watched with complete confidence in the result until it has lasted much longer than any of those already tried have done. What she needs above all things is to pass into the hands of a generation which has known nothing of the violent transfer of power or of its lawless exercise, and on which the established order of things has secured the strong and enduring hold of habit; and that she will effect this transition through the Septennate seems now if not certain extremely probable.

A SENATORIAL ELECTION IN FRANCE.

PARIS, February 11, 1876.

THE elections for the new French Senate have taken place, and I have had the curiosity to see how they would take place in one of the Departments. The origin of this new creation may be cited among the few well-ascertained cases of spontaneous generation. Living, as I do, among politicians of all shades, I could not say with exactitude who invented the curious mode of suffrage which has given existence to the new Senate. The American Senate is a representation of the States, and this representation has an historical cause; our constitution-mongers felt that they were obliged not to give to the Upper House the same origin as to the Lower House—that one chamber was enough for the representation of mere numbers, of the passing and fleeting passions of the day. They dared not give a distinct representation to the Departments, which were the artificial creation of the French Convention, though the Departments have now lived long enough to have a sort of permanent entity; not knowing exactly what to represent, they hit upon the curious idea of representing the French Communes. Now, what is a Commune? If you travel through the country you see from time to time on the horizon a spire, or a tower—it is the old church. If you get nearer you will see on some little square opposite the church the *mairie*, which is not seldom adorned with the tricolor flag. Three or four houses with gardens will mark the places where live the chief landholders, and, if the place is a little important, sometimes the notary, with the two gilt *panonceaux* over his door; all the other houses are the homes of the peasantry. This Commune has its little municipal council and its mayor; and the mayor is named by the prefect, and can be chosen outside of the municipal council. Of such Communes there are as many as 36,000 all over the country, their population varying from a few hundred souls to the two million or more which represent the population of Paris. Now, in a country where equality has become the ruling passion, imagine a system of representation which gives the same importance to the poor little hamlet lost in the solitude and to the capital, and you will have the system which has become the basis of the Senatorial elections. And what is still more extraordinary, this political importance was given to the Commune just after the movement which had made the name of "Commune" synonymous with rebellion and crime. Each Commune, however, was allowed the right of naming a senatorial elector, and while the discussion of any political subject is strictly forbidden inside of the municipal councils, these delegates were entrusted with the nomination of the Senators, of the legislators of the country.

The first act was therefore the nomination of the delegates. In most of the 760 Communes of the Department of the Oise, which I had selected as the theatre of my observations, the municipal councils chose their mayors for delegates. The proportion of the mayors who were named to those who were not was 87 per cent.; and in the instances which seemed to mark an opposition between the councils and the mayors must be classed a few cases of sick mayors who could not well travel to the *chef-lieu* of the Department, and a few cases of absent mayors. The day of the election the delegates started in various directions for Beauvais, some in their own carriages, some by the special trains which had been provided for them by the railway companies. As soon as they arrived at Beauvais they found themselves in a sort of political paradise. Obliging friends were waiting for them at the station; all the councillors-general were there in attendance; they had provided for rooms and for meals at the little hotels of the place. Men came from all sides and very politely handed them electoral tickets. I noticed that the good country mayors never refused anything; they took every ticket which was offered them and placed them with much care in their pockets. They resorted to the lodgings which had been prepared for them, took breakfast, and then made their way on foot to the court-house, a charming building in the best Renaissance style, which stands just opposite the magnificent and, alas! unfinished cathedral of the Middle Ages. In the court-house was the prefect, with his staff of sub-prefects and *conseillers de préfecture*. How polite and amiable they all were! How they shook hands with the good country electors! The prefect, however, was only a witness of the ceremony. The electoral proceedings, according to the terms of the law, were to take place under the supervision of the president of the court, so as to give a sort of judicial dignity to them. Many conversations took place before the proceedings began. The Government had very honestly refused to have official candidates—that is to say, nobody was allowed to give himself out as such, or to sign himself on the placards, as was the fashion in the Imperial times, "M. X——, *candidat du Gouvernement*." The Administration could not help, however, having its favorites, and the prefect and the sub-prefects were free to recommend them individually to the delegates whom they personally knew, or who asked for their advice.

The Department of the Oise contains only two very important personages, who both have much influence as landowners: one is the Duc d'Aumale, the proprietor of Chantilly; the other is the Duc de Mouchy, the proprietor of Mouchy, now allied to the Bonapartes by his marriage with the handsome Princess Murat. The Duc d'Aumale, who has completely devoted himself to his important military duties, is still the President of the Council-General of the Department, and as such he had come to Beauvais on the day of the election. The Duc de Mouchy being under forty could not offer himself as senator; but he had composed his list of three Bonapartists—a country gentleman, a colonel of the army, and an ex-deputy of the Empire. The Duc d'Aumale had made no list; for, being in cordial sympathy with the existing Government, he had said that he would give his support to the list of the Administration. The Republicans had made their own list, and, as they are not strong in the Department of the Oise, they had taken two names from the Government list, and simply added as their own nominee Colonel d'Andlau, the author of the famous book on the capitulation of Metz. This was not bad policy on their part, as it was the publication of this book which rendered necessary the judgment of Marshal Bazaine; it was, therefore, not easy for the Duc d'Aumale, who had been obliged to pass judgment on Bazaine, to make much opposition to Colonel d'Andlau. Everybody in Paris expected a large return of votes for the Bonapartist list; neither the Duke nor the Administration had done any canvassing or made any agitation in the Department, while the Duc de Mouchy and his partisans had been moving heaven and earth. The Duc de Mouchy was seen everywhere shaking hands with all the country mayors, and, as he is personally much liked, he received everywhere marks of public sympathy. The vote took place in great silence and with much solemnity. Each delegate was called by name, and dropped his carefully-folded paper into the urn. When the numbers were read, it was found that two candidates of the Administration were elected; the candidate who came third was Colonel d'Andlau, but he had not an absolute majority. The Bonapartists were out of the race. A second balloting took place, and this time Colonel d'Andlau was elected. The election of the Oise, therefore, ended in a complete defeat of the Bonapartists in one of the most Conservative departments of France. They have been more successful in other places, but many of their leaders have been defeated. On the whole, they have been disappointed in their expectations, and they now exclaim against what they call the "restricted" suffrage, and make an appeal to universal suffrage, of which they profess to be the only apostles.

It is very difficult to say with any precision what our new Senate will be. If it were not for the seventy-five life-members who were named by the late Assembly, the majority would belong to those who style themselves Constitutionalists—men who have accepted the present constitution, but who have not been Republicans before. There are ninety-seven of such Constitutionalists on the list I have before me, and I can only find thirty Republicans proper—men who were always attached to the Republic. There are not more than forty Bonapartists, and I give this name to those candidates who spoke in their circulars of the revision of the constitution and of the direct appeal to the people. The Republicans will command about one hundred and forty votes, but will not have a working majority. The Constitutionalists will have about one hundred votes. It is quite clear that in all questions affecting the actual republican constitution the Bonapartists will be completely crushed; but, in those questions which may be called social, they will be able to throw themselves on the side of the Constitutionalists or conservatives, and will help them keep the advanced Republicans in check. In all personal questions affecting the existence of a Cabinet they will play fast and loose, as they did in the late Assembly.

If we look only at the great features of the situation, it cannot be denied that the Bonapartist party has been defeated, and this proves that the country is not alarmed at the present state of things. The chief reason of its calm and confidence is not, as Gambetta and his friends would like the world to believe, the existence of the Republic; it is the tenure of power of Marshal MacMahon—a man known by his energy, his devotion to his duty, and his determination not to allow any disorder. So long as there is no direct conflict between the Executive and the Chambers, the country at large will work, enjoy its repose, and care little for the small tempests in the glass of ministerial life.

According to the present constitution, there is now a double responsibility—the responsibility of the President, of the chief of the Executive, and the responsibility of the ministers. The ministers are not merely the clerks of the President. Hitherto they have been chosen in the Chamber, and have represented the majority of the day. The time may come when

the President may refuse to govern according to the dictates of this majority, and may choose his ministers outside of it. Such a conflict arose in 1849 between Louis Napoleon, who was then Prince President, and the then Chamber. The French people are reassured by the idea that the Marshal will not be the mere tool of the Chambers, and perhaps this belief tends to increase the strength of the Republican party; for it is generally felt that even in case the Upper Chamber should become the citadel of M. Thiers and the Lower Chamber the citadel of Gambetta, the Marshal, as chief of the army and President, would still remain in the citadel of his own prerogative, and would not give way to the pressure of the radical party. The Marshal considers himself as a soldier on duty, who has been charged with the defence of order. He is stubborn, self-willed, and tenacious. He has strong dislikes, and he has just shown it by removing from the Prefecture of Police M. Léon Renault merely because M. Renault accepted, in the Department where he is now a candidate for the Lower Chamber, the patronage of a M. Valentin, who was made prefect at Lyons by M. Thiers. The Marshal's objection to M. Valentin does not arise from this last fact, but merely from the fact that in 1848 Valentin was a sergeant in the army and joined the insurgents against the established government of Louis Philippe. "Mauvais soldat," says one of the actors of the "Grande Duchesse" in speaking of another. In the eyes of MacMahon, Valentin is and will always remain the "mauvais soldat."

As there is no dispute now as to the form of government, personal considerations and questions have become all-important, and it is somewhat difficult to judge them at a distance. I will not deny that the administration of the Marshal, under the Duc de Broglie and under M. Buffet, has committed mistakes, sometimes gross mistakes; but, on the whole, I believe that the rule of an honest and determined soldier, who insists in every case upon the strict enforcement of the law, who does not coquet with ambitious or corrupt politicians, has been a great benefit to a country which had just gone through the greatest misfortunes. After the war, after the Commune, a strong hand was a necessity, and it will probably remain so for a while.

Correspondence.

MAJOR ANDERSON AT FORT SUMTER.

To the Editor of The Nation:

Sir: Surprised by the view of Major Anderson's conduct presented in the 'Reminiscences of Forts Sumter and Moultrie in 1860–61' by General Doubleday, noticed in your issue of the 10th inst., I looked up and have had copied for you the enclosed letters from Major Anderson, written during that period, and never before published. They certainly agree perfectly with your own theory, that "it is difficult to see how in such a trying case, without precedent or instructions, an officer could have pursued a different course from that adopted by Major Anderson—namely, to remain passive until his fort was attacked, and then to defend himself as well as his small force and scanty supplies would allow; meanwhile to leave politics to the Administration at Washington." I suppose all who knew Major Anderson will agree that, whatever may have been his defects of character, want of sincerity was not among them. He was indeed a perfectly sincere and modest man, of simple and earnestly religious character, as these letters, written under circumstances which brought out that trait in his character, to the rector of the Episcopal Church at Trenton, N. J., of which he was a member, abundantly show.

It may be well to add that that clergyman, the Rev. Dr. Richard Bache Duane, my very dear friend, who died in December last, and by whose will I came into possession of these letters, was an ardent Union man. He kept no copies of the letters to which those now sent you reply; but, from my knowledge of him, I know very well that there was nothing in them to which Major Anderson could so respond, unless he too was heartily loyal to the Government and cause he served.

The father of Dr. Duane, referred to in one of the letters, was the late Hon. William J. Duane, Secretary of the Treasury under General Jackson, and himself the son of "Duane of the *Aurora*." So that, descended as he was through his mother, a Bache, from Benjamin Franklin, Dr. Duane came naturally by his patriotism.—I am, yours faithfully,

Howard Potter.

New York, February 25, 1876.

No. 1.

Ft. Moultrie, S. C., Dec. 19, 1860.

My dear Friend: God grant that you may never be placed in a position so full of responsibility and apparently so entirely cut off from all prospect of human relief as the one I am now in. Until such be the case you can never realize how cheering, how consoling and bracing, such a letter as yours is to me. Were it not for my firm reliance upon and trust in our Heavenly Father, I could not but be disheartened; but I feel that I am here in the performance of a solemn duty, and am assured that He, who has shielded me when death claimed his victims all around me, will not desert me now. . . . . A word or two about my position, etc. As soon as I had time to inspect my position and ascertain the feeling and temper of the people here, I found that to enable me to comply with my orders to defend this Fort, it was absolutely necessary that more troops and ordnance stores must be sent, and I recommended that they should be sent at once. The Government has, as you see it stated, declined for prudential reasons to send them, and I must now do the best I can.

This Fort is a very weak one in its capability of being defended. It is surrounded by houses which I cannot burn or destroy until I am certain that I am to be attacked, and I shall not be certain of it until the S. Carolinians are in position; but I have so little ammunition that I cannot waste it in destroying houses. And again, within 160 yards from the walls are piles of sand hills, some of them higher than our Fort, which will give the best and safest shelter for sharp-shooters, who may pick off, in a short time, our Band of 60 men—all we have. Now, my dear sir, do you not think that this is rather a gloomy picture? And yet were you to see this little Band, to note how zealously they attend to any duty I require of them—frequently voluntarily engaging in some work which they know I wish executed—how entirely they refrain from drinking, you would see that they are men who, in the hour of trial, would do their duty. For myself, I can say frankly and truthfully that I have not had a moment of despondency. I feel that He who made me will guide me through any trials that may be in store for me, and that should it be His will that I should fall, He will be a Protector to my wife and a Father to my children. Be assured that your kindness in sending me such an encouraging, sustaining epistle will never be forgotten by Your friend,

Robert Anderson.

No. 2.

Ft. Sumter, S. C., Dec. 30, 1860.

My dear Sir: Your most welcome letter of the 26th December, received to-day, finds me, as you see, at Fort Sumter. God has been pleased to hear our prayers, and has removed me to this stronghold. Perhaps at the very moment you were writing to me I was, by his guidance, leading my little band across to this place. I left Fort Moultrie between five and six P.M., and had my command here by eight o'clock the same evening. You say that you had marvelled that I had not been ordered to hold Fort Sumter instead of Fort Moultrie. Much has been said about my having come here on my own responsibility. Unwilling to see my little band sacrificed, I determined, after calmly awaiting instructions as long as I could, to avail myself of the earliest opportunity of extricating myself from my dangerous position. God be praised! He gave me the will and led me in the way. How I do wish that you could have looked down upon us when we threw the "Stars and Stripes" to the breeze at 12 o'c. on the 29th! Our chaplain thanked God for having brought us from our place of danger, and prayed for our country, that that flag might long continue to wave over a united and happy people. The flag was then raised, the command presenting arms, and the band playing "The Star-spangled Banner," after which three cheers were given for the flag and three for the Union. It was to me a solemn, and to all a most interesting, ceremony. Thank my kind friends in ——, who feel an interest in my welfare; especially my young friend ——, who so kindly remembered me. I am now, thank God! in a place which will, by His helping, soon be made so strong that the S. Carolinians will be madmen if they attack me. There are some alterations and some additions which I wish to have made. The Gov'r of this State has interdicted all intercourse with the city, except that of sending and receiving letters, so that, you see, we are quasi-enemies. Were I disposed to declare myself independent of, to secede from, the General Gov't, and retaliate, I could cut Charleston off from her supplies; but I will show him that I am more of a Christian than to make the innocent suffer for the petty conduct of their governor.

I rec'd a letter to-day from my poor wife. The first news of my movement she heard in N. Y. was, "Fort Moultrie is taken." It was enough to have killed her.

God bless you and yours.

Yours aff'y,

Robert Anderson.

You see it stated that I came here without orders. Fear not; I am sure I can satisfy any tribunal I may be brought before that I was fully justified in moving my command.

No. 3.

Fort Sumter, S. C., Jan. 16, 1861.

My dear Sir: Your letter of 9th inst. has given me very great satisfaction and pleasure. Do present me, if you please, most gratefully and affectionately, to your venerable Father, and assure him that I was deeply moved by reading your statement of the manner in which he received the news of my movement. In reference to the incidents connected with that move, I can only say now that in the main the statement you sent me is sufficiently near the truth. Had I time, I might enter rather more fully into the manner in which I ordered things, so as to deceive the South Carolinians, and even to blind my own men, as to the steps I was about to take; for everything depended upon secresy, and anything calculated to draw

suspicion towards my acts might, probably would, have caused a failure. But God, to whom I appealed, showed me the way and gave me the will to execute it. To Him be all power and praise.

I trust that He will so order it that I shall be spared the cruel necessity of being engaged in strife against our fellow-countrymen. All my endeavors, all my prayers, so far as the public is concerned, are directed to that end.

I am in daily expectation of news from Washington, where you see I have two of my officers, who were sent on with my despatches.

Begging you still to remember me and my little command in your prayers, I am, as ever,

Yours affectionately,

ROBERT ANDERSON.

No. 4.

FORT SUMTER, S. C., March 11, 1861.

MY DEAR FRIEND: Yours of February 21 was received in due time, but I have been so constantly occupied that I could not make my acknowledgments to you for it sooner.

It seems that this is still to be a point of interest. I thought that the policy of the new Administration would have been developed by this time. The occupancy of this work, and the fact that a demand would be made by the Southern Confederacy for my withdrawal, were facts well known to all. I presume, however, that persons who are not in power make up their minds as to what *ought* to be done much more readily and upon slighter data than the same persons newly placed in office. The question of reinforcing is one that is very easily determined upon, but, when the *how* is it to be done? and how many lives will it cost? are examined, the matter is of much greater difficulty than it was thought to be. You have had very many rumors about us which were wholly untrue. With the exception of my having added considerably to our defensive means, no change of any consequence has been made in the command. I am still doing something every day, and shall probably, should we be unattacked a month longer, make some changes every week.

The S. Carolinians continue working very energetically, building new batteries or strengthening those already built. They will certainly be ready to pour a very heavy storm of shot and of shells upon us; but, trusting in God, I have no fear of the result. He has been pleased to scatter a much larger force than these people can muster, and His arm has lost nothing of its strength.

My own impression is that when Mr. Lincoln and his cabinet examine into the question of my position they will decide that it is useless to keep me here. My position is an interior one; and the entrance of the harbor is *not* at all guarded by my guns, but *is* by heavy batteries which are *not* under the fire of my guns.

I do not worry myself about these questions. They are not for me to discuss or to decide, and I know that God will order all things aright, and I am content with that knowledge. . . .

I thank you, most earnestly, for your prayers. I hear from many sources that we are remembered in prayer, both public and private, and I thank God for His continued mercies to us, and pray that He will be pleased to unite us, if not as one people, to make us *one* in our love and adoration of Him. When I reflect upon what has been passing around us during the last ten years, I sometimes feel that we have strayed so far from God's paths that He will chasten us with the rod of His power; but, then, when I reflect upon His mercies, I hope that He may spare us, a people, and that we will repent and turn to Him.

Please still remember me in your prayers. I need them.

God bless you and yours.

Yours faithfully and aff'y,

ROBERT ANDERSON.

Notes.

THE *American Naturalist* states that H. O. Houghton & Co., of the Riverside Press, will shortly publish, with explanatory letterpress, a series of sketches of the wild flowers of North America, from studies by the well-known botanical artist, Mr. Isaac Sprague.——Mr. Joaquin Miller has found a happy title for his prose romance, which Jansen, McClurg & Co., Chicago, are to publish, viz., 'The First Families of the Sierras.' It is a story of miner life in California.——An acute writer, Mr. James Thompson Bixby, has written a work called 'The Similarities of Physical and Religious Knowledge,' of which D. Appleton & Co. will be the publishers.——The appointment of a superintendent of the Astor Library is of no little importance to the reading public of this city. The *World's* suggestion of Mr. James Carson Brevoort as a fit candidate for that place is an excellent one, and we hope it will find favor with the trustees. Mr. Brevoort's private library is the largest and, we believe we may say, the most comprehensive in Brooklyn, and his knowledge of books, both special and general, is very great.——Deserved attention has been given by Dr. Elliott Coues, U.S.A., in the Bulletin of the United States Geological and Geographical Survey of the Territories (No. 6, Second Series), to the various publications relating to the classic travels of Lewis and Clarke. He traces to three sources some twenty editions, "authentic, abridged, spurious, or collateral," and gives the most complete bibliography of the whole subject ever attempted, though he constantly expresses his indebtedness to Mr. Thomas W. Field for his previous labors in the same direction. This interesting *exposé* of the bookmaker's art is followed by a review of Lewis and Clarke's contributions to zoölogy in respect of mammals and birds. Dr. Coues indicates all the passages in which each species is described, the diversity of scientific names which have since been applied to them, which of these were based on the explorers' descriptions, and to which of them priority of nomenclature is due. This also is excellently well done. The curious doubt which hangs over the spelling of Captain Clarke's name is recognized on p. 426, and the conclusion is reached that "the balance of evidence is in favor of 'Clarke.'"——Mr. Joseph Sabin's latest monograph, extracted from his 'Dictionary of Books relating to America,' is a 'List of the Editions of the Works of Louis Hennepin and Alonso de Herrera,' pp. 16. The 'Dictionary' itself has now forty printed parts, numbering 32,000 titles, and six more parts are expected to appear this year, the MS. being, as we understand, advanced to the letter K. Even at this stage the work deserves a prominent place in our Centennial show of national literature.——J. W. Bouton announces the 'Works of William Unger,' being seventy etchings by this admirable artist after the old Dutch and Flemish masters, with English text. There will be ten parts, royal folio, at $7 each.——A handy little fortnightly, *Gazette anecdotique, littéraire, artistique et bibliographique*, has been begun with the year at the Librairie des Bibliophiles, Paris (New York: F. W. Christern). It has a very attractive typography.

—When we published, week before last, a letter signed "N. N.," comparing Smith College at Northampton with Girton College at Cambridge, England, considerably to the advantage of the former, we had not seen its prospectus, and had no knowledge of it ourselves. This we have since received, and have made some enquiries, which render it necessary to say that "N. N.'s" letter was in many respects misleading. Smith College was only opened in September, 1875, so that nothing whatever can be asserted with any confidence as to the character of the education it will afford. The faculty, if it be now complete, is composed of persons who have still their reputation to make as university instructors, and it is, therefore, improper to compare them in any way with the lecturers or examiners at Girton College. Moreover, as nobody has ever graduated at Smith College, it is manifestly absurd, if not worse, to say that it gives as good an education as can be had at Harvard or Yale. All that "N. N." was entitled to say on this subject was, that he hoped or expected that it would do so. In fact, the institution is as yet simply a mass of promises. We find, too, that the domestic arrangements and the discipline, as described in the prospectus, are by no means like those of Girton, and are evidently adapted to younger and less formed students than those of Girton. In short, we must pronounce Smith College to be another small, feebly-endowed, and insufficiently-equipped college, added to the host of those which in all parts of the country are doing so much injury to the cause of the higher education in the United States. We would earnestly urge the friends of collegiate instruction for women to refrain from the expenditure of money in this way, and to devote themselves, if possible, to procuring for female students the benefits of the existing educational machinery, by creating, if possible, halls attached to the older universities, and obtaining a share in their instruction and the use of their standards, without resorting to the device called "coeducation." The country does not contain the talent or learning necessary to man any more universities in the existing state of the profession. The older colleges know this well, and the new ones should not pretend that they have discovered any hidden treasures.

—The death of Horace Bushnell, which occurred on Feb. 17, is an event in the intellectual, and not merely in the theological, world. For more than twenty years he was an invalid, disabled from professional labor, and compelled to desist from exciting toil; but in this discouraging condition he sent out some of his best productions—'Sermons for the New Life,' 'Nature and the Supernatural,' 'Work and Play,' 'Christ and His Salvation,' 'The Vicarious Sacrifice,' 'The Moral Uses of Dark Things,' 'Woman Suffrage, the Reform against Nature,' 'Sermons on Living Subjects,' and 'Forgiveness and Law'—eight volumes, some of which were composed entirely of new material. In this way, and by his power of personal character, he kept himself alive in retirement, and was an intellectual force while invisible. Dr. Bushnell was primarily, by the structure of his mind, a theologian, and would have shown the theological bias in any calling he might have pursued, even in journalism or law, had he followed either of those callings, as he proposed to do and for a short time did. His actual ministry, which began late and ended early, occupying

but twenty-five years out of seventy-four, could hardly have created the predisposition that was so strong in him. He was a theologian, too, of the grand type. The end he had in view was the reconciliation of theology with the primal instincts of human nature. The points he presented and discussed were: the claims of nurture as distinguished from conversion; the human motive and necessity of the Incarnation; the unexceptional character of the Atonement; and the naturalness of the supernatural. These points he made with great ability and brilliancy, in a style original in its piquancy, with remarkable subtlety of definition and variety of illustration. Thirty years ago he was the most conspicuous figure in our ecclesiastical world. He had disciples in all the divinity schools, and even founded a school of his own, equivalent, within orthodox Congregationalism, to the Broad Church of the F. D. Maurice school in England. It is probable, however, that he did as much to weaken orthodoxy as to strengthen it; his interpretations were not welcomed by the authorities, who suspected him of heresy, and put him on his defence. He was more than a match for them, and yet their suspicions that he weakened the faith rather than confirmed it were not unreasonable. Dr. Bushnell's most characteristic work, on the whole, the work that displays the full peculiarity of his mind, is that on Woman Suffrage. It is a volume of equal size with Mill's book on the same subject, written in an equal spirit of reverence for woman. Dr. Bushnell dedicates his book to his wife in terms as glowing as those used by Mill in his former dedication of 'Liberty.' Yet the two reasoners arrive at opposite conclusions. Bushnell's antipathy to the movement was deep and earnest. He would not even consent that the experiment of suffrage should be tried. But his candor appears in his frank admission, in this book, that on other points connected with the general subject his views have undergone decided changes.

—The Johns Hopkins University was formally instituted at Baltimore on the 22d of February, in the presence of a remarkable company, which included a German-like representation of the heads and leading professors of other universities. President Eliot, of Harvard, made what was playfully characterized as the baptismal address, and was followed immediately by President Gilman, who in a long discourse unfolded, as definitely as was possible, the condition of the University's endowment and the plans agreed upon or under consideration by the trustees. He first showed that Mr. Hopkins's bequest, unparalleled as it was, really enabled the University to begin life only in very moderate circumstances. Half of the seven millions goes to a hospital, half to the University, and the income on the latter ($200,000) is but little more than the annual expense of Harvard, whose "plant" is estimated at five millions. Out of this income, too, the future buildings have to be provided for, and it is therefore clear that unless fresh endowments are forthcoming, the University must content itself with a very gradual development. Its scope and methods, as next set forth, were substantially foreshadowed in the *Nation* a year ago (No. 500). President Gilman did not distinctly formulate what is still evidently to some extent *sub judice*, but he let it be inferred that elementary instruction in all branches of science is not contemplated at the new University. There will be no stated curriculum of four years. Great freedom is to be allowed both to teachers and to scholars; the former must be "free and competent to make original researches in the library and the laboratory"; the latter will be encouraged to "make special attainments on the foundation of a broad and liberal culture," and to make them through a "combination of lectures, recitations, laboratory practice, field work, and private instruction." Pending the filling of the several professorial chairs, the trustees will ask distinguished professors from other colleges to come to Baltimore during a term of years and reside there an appointed time, "and be accessible, *publice et privatim*, both in the lecture-room and in the study." But two appointments have thus far been made, viz., Prof. Gildersleeve, of the University of Virginia, to the chair of Greek; and Prof. Sylvester, of England, to that of mathematics. The order in which the departments will be built up was presented at some length. The foundation of the hospital makes it natural and probable that instruction in the biological sciences will receive early attention from the trustees of the University.

—Mr. James T. Gardner, in his report to the American Geographical Society on "the uses of a topographical survey to the State of New York," has given due prominence to the economical value of such a survey, and points out very forcibly the loss which the want of it entails upon property-holders. He says "there can be no proper valuation of real estate, hence no equalization of taxation, until the State is provided with a correct map of its entire public and private property." As under the present system there can be no accurate maps, the assessment rolls are made up largely by guessing, and since it is each man's interest to pay taxes on as few acres as possible, the aggregate area of taxable real estate is constantly shrinking, so that Mr. Gardner estimates that now one-tenth of the whole escapes taxation altogether. For instance, in Queens County in 1864 the assessors' books gave only 182,000 acres, while the maps showed 253,000 acres. The facts that he brings forward to support this statement, as revealed by recent special surveys made in different towns and cities, are conclusive as to the injustice of the present system upon the taxpayer. In Yonkers, 525 acres, worth $260,000, were brought under taxation by the new survey, and it was found that some persons were paying taxes on as much as forty acres more or less than they possessed. In Newport, R. I., only four men were found to be properly taxed upon their real estate; ten men were paying assessment on $579,000 instead of $280,000, while ten others were only taxed on $450,000, when their property was really worth $700,000. In the matter of equalizing taxation alone, the survey would be a measure of great economy for the taxpayers of the State. By its survey the town of Yonkers reduced its tax $4,000 per annum, and, at the same rate for the whole State, the saving would be $3,200,000 annually, the interest of which amount would be sufficient to carry on such a survey as Mr. Gardner proposes. It is evident, on the other hand, that Yonkers pays the penalty of striving to obtain greater accuracy in its town taxation by being obliged to bear a proportionately larger burden of the State taxes.

—As another result of the present system, or rather want of system, Mr. Gardner states that "hardly in one case in a thousand do the deeds in the State of New York describe correctly the area of real estate conveyed." So general a statement might appear exaggerated to any one but real-estate lawyers or surveyors, who have constant proof of its truth. A case is quoted where a man about to sell his seventy-acre lot was induced to have a new survey made, by which it was found to contain eighty-seven acres; and another where an owner, upon subdividing a lot of land purchased for fifty acres, found that actual measurement gave him only forty acres. Such inaccuracies arise from the want of permanent imperishable monuments, the trees or stones which were used as points of reference when land was of little value having in general disappeared, and their position been since determined by the shrewd guess of some more or less disinterested person. A properly conducted survey should not only provide monuments that will last for all time as guides to property boundaries, but also furnish to every one at a low price an authentic map of his property and its relations to that of his neighbors. The maps of the Ordnance Survey of Great Britain, for instance, which are sold at a shilling or two a sheet, not only furnish accurate information about the surface features of the country but give the boundaries of a man's farm in the country or his lot in the city, and the points of reference determined by them constitute a final standard in cases of disputed boundaries. The saving which an official survey of this State, conducted on scientific principles by men whose position and reputation should place them above the influence of local interests, would make in the costs of litigation, which increase even faster than the value of property, can hardly be estimated. What these costs may amount to can be inferred from the case cited of a lawsuit now pending in New York City where five surveyors are employed to determine the right ownership of three inches of land. The maps of such a survey should give an accurate delineation of the surface-features of the country, which would serve as a basis for laying out such public works as the water-supplies for towns and factories, and drainage systems for improving the health of marshy districts and increasing the value of agricultural lands. The work should be entrusted to a man whose experience, scientific attainments, and natural ability would fit him to direct it and train up a corps of assistants. It would require probably fifteen years for its accomplishment, and the cost, though very considerable, would fall short of what is actually expended by special surveys, which only accomplish a part of its results. This cost would fall heaviest upon the more thickly settled regions, where the accruing advantages would be greater; to the farmer it would not be more than ten cents per acre.

—A correspondent of *Notes and Queries* has been tracing the origin of Macaulay's New Zealander. He finds in the *Monthly Review*, 1780, lxii. 128, a notice of 'Poems by a young nobleman of distinguished abilities, lately deceased, particularly the State of England, and the once flourishing City of London. In a letter from an American traveller, dated from the ruinous portico of St. Paul's, in the year 2199, to a friend settled in Boston, the metropolis of the Western Empire." Mr. Bartlett has already shown that besides the use of the image three times by Macaulay himself, something very similar is to be found in Volney's 'Ruins,' Henry Kirke White's 'Time,' Shelley's dedication to 'Peter Bell,' and in a letter of Horace Walpole's to Mason, dated Nov. 24, 1774, from which last Macaulay is generally supposed to have derived it. The correspondent of *Notes*

and Queries now brings forward another claimant—and this time a foreigner. In 'L'An Deux Mille Quatre Cent Quarante : Rêve s'il en fut jamais' there is a vision which treats in like manner of a wanderer amid the ruins of Versailles. An English edition of this book appeared in London in 1773, a year before the date of Walpole's letter, and seven years, therefore, before the publication of the supposed visit of the Bostonian to the ruins of London, where "a poor emaciated Briton, who officiates as cicerone, is his attendant." It is curious to note that the self-styled Bostonian's book was published during the American War.

—We are very glad to extend a hand of welcome to the new *Revue Philosophique de la France et de l'Etranger*, edited by Th. Ribot, and to be published monthly by Germer Baillière (New York : F. W. Christern). M. Ribot is a most painstaking and enthusiastic student of the science of man, and his abridgments of the labors of English and German philosophers and physiologists have probably had no small share in the promising revival of psychological studies which we now see in France. The programme of his review is catholic enough. Kantians and inheritors of Cousin may contribute to its columns on the same terms as Comtists and experimentalists—individual responsibility namely, and the obligation of saying something novel. Even from metaphysicians "*facts* will be required." This temper compares pleasantly with that of certain persons in England and with us, who are as great friends of evolution and of physiological methods as M. Ribot, but whose own evolution upwards from theological beginnings seems to have stopped short at the stage of inarticulate joy over their emancipation ; and for whom every piece of writing is good whose pages are speckled over with words like "body," "ganglion-cell," "brute ancestor," "visceral emotion," whilst the sight of a term like "soul," "design," or "free will" in a book affects them with a sort of foaming at the mouth. In this first number of the *Revue Philosophique* M. Taine and M. Janet stand shoulder to shoulder, the latter discoursing of final causes, for which, as usual, he is a more fluent than original apologist ; and the former giving an entertaining diary of the way his child learned to talk, and finding in his observations a corroboration of Max Müller's theories. This child created several words for its own use. The sound *ham* was uttered by it at fourteen months.

"For some weeks I took it for mere babbling, but at last I saw that it invariably occurred when the child was fed. The child now is sure to utter it when hungry or thirsty. . . . If we listen attentively and try to reproduce the sound, we see it to be the *natural vocal gesture* of a person catching something in his mouth. It begins by a guttural aspirate not unlike a bark, and ends by the lips closing as if the food were seized and swallowed. . . . Now the family uses the word like the child. Originality, invention are so lively with it, that if it learns our language, we also learn from it its own."

The bibliographic part of the review is both extensive and conscientious. The list of articles soon to be published contains many relative to recent German psychology. As this important matter is little known among us many persons may be glad of this second-hand and easy introduction to it. It is confidently asserted in Germany that the new science of "psychophysics," the outcome of laboratories, and the creation of such physicists as Wundt, Helmholtz, and Fechner, is but a brilliant commentary on the deductive conclusions of the idealistic philosophers of that country. Not only is the intellect not built up of sensations, says the new science, but a pure sensation is a nonentity ; what we call sensation is soaked through with intellect, and the result of complex logical inference. We do not vouch for the truth of this interpretation of the experimental facts, but we have said enough to show philosophical students of even the most conservative type that they possibly may lose more than they save by giving physiological methods the cold shoulder.

—In 1872 Domenico Comparetti, the distinguished Italian scholar, published a work entitled 'Virgilio nel Medio Evo,' which was received with the greatest favor in Italy and elsewhere. Although a work of general interest, it has now for the first time been made more accessible to students by a German translation ('Virgil im Mittelalter von D. Comparetti. Aus dem Italienischen übersetzt von Hans Dütschke.' Leipzig : Teubner, 1875). We say more accessible, though it seems paradoxical that a stranger to both languages should find German the easier ; but, apart from the fact that German literature attracts far more students than does the Italian, the German translator has, by omitting reprints of rare texts, etc., of no value to the general reader, reduced the original two volumes to one octavo volume The first part treats of "Virgil in Literature to the Time of Dante," and is an exhaustive essay on the vicissitudes of the Latin poet, during the Middle Ages, in the hands of the grammarians, commentators, and Christian fathers. In fulness of details Comparetti far exceeds all who have heretofore treated this attractive theme. It is interesting to follow the author's luminous account of the *literary* changes in the character of Virgil from the time of Servius to the allegorical exposition of Fulgentius. Although the *sortes Virgilianæ* were employed under the Antonines, and the writer of the Fourth Eclogue was early regarded as having a prophetic foresight of the coming Christ, it is remarkable that, to the time of Dante, no suspicion of magic attached to Virgil. That interesting transformation is due entirely to the popular traditions of Naples. It is seldom that a myth can be traced so clearly in its rise and diffusion. The author follows it from Naples in its spread over Italy and the rest of Europe, giving in the second part ("Virgil in Popular Tradition") a mass of interesting details. One or two additional traditions from Sicily may be found in Pitrè's collection (see *Nation*, No. 528), vol. ii., p. 13–17.

—Few historians of Florence have cared to follow the fate of that commonwealth under the Grand-Dukes. Napier does so in his history in a somewhat hasty way, and there are native historians (among them Galluzzi and the incomplete Ammirato) who continue their works to the extinction of the Medici. Capponi, on the other hand, whose death is already to be lamented, ends his fresh labors with the fall of Florentine liberty in 1531. The student will find a dearth of good histories of this period, and will be grateful to the indefatigable Alfred von Reumont, who had scarcely finished his great work on 'Lorenzo de' Medici' when he began a history of Tuscany since the Florentine Republic. His work forms part of the invaluable Geschichte der europäischen Staaten' of Heeren, Ukert, and Giesebrecht, 'and bears the separate title : 'Geschichte Toscana's seit dem Ende des florentinischen Freistaates' (Gotha, 1876). It is a first instalment, and contains the history of Tuscany under the Medicean Grand-Dukes from 1530–1737. The volume is provided with a chronological table, bibliography of works relating to this period, and a genealogical chart. The purely historical details are relieved by chapters on the state of literature, science, and art, in which the author's profound knowledge finds a congenial outlet. Everything that Von Reumont writes about Italy is sure to be accurate and interesting, and the present volume, it seems to us, possesses these qualities to an unusual degree.

—Several German publications which lie upon our table either speak for themselves, or require but a brief introduction to our readers. First of these is 'Das Ancien Régime in Canada,' the German version of Francis Parkman's well-known work bearing that title, and one of August Auerbach's American series (Stuttgart) to which we so lately alluded. It makes an octavo volume of 333 pages, uniform with the 'Pioneers of France' previously issued by the same house. A third volume of Mr. Parkman's is announced as in preparation—the 'Jesuits in North America.'—'Die Urne' (Leipzig : C. G. Theile) is an annual of universal necrology, edited by Dr. Hugo Schramm-Macdonald. The volume before us is the first ; it covers the years 1873–74, and is adorned with a portrait of the late King of Saxony. It classifies the dead first according to their station or profession, and then according to their nationality ; and the biographical details, the anecdotes, etc., tempt the reader to go through the 'Urne' as he would through any other review of the year. For ready reference, on the other hand, an alphabetical index is provided at the end of each period. The editor's design is to overcome as far as possible the inaccuracy of newspaper and telegraphic obituaries, and to furnish more trustworthy material for even the conversation-lexicons. We have examined his list of the notable dead of 1873, and find that it certainly includes the greatest names. A fulness to satisfy the prejudices of every country would be impossible. Among our own countrymen, for instance, we find Judge Chase but not Judge Nelson ; James L. Orr but not John P. Hale ; Gen. Canby but not Gen. Meade ; Agassiz but not Catlin ; Powers but not Sully, etc. Under Winslow, by the way, is given in a foot-note the story of his fight with the *Alabama*, which is unqualifiedly characterized as a "pirate-ship." One excellent feature is a reference to fuller notices of the deceased in periodicals and elsewhere, as in the case of J. S. Mill. The 'Urne' decidedly takes its place beside 'Men of the Time.'—The German law of trade-marks and the exchange stamp-tax law are given textually and discussed scientifically and historically in the two last numbers (Theil III., Band I., Hefte 2, 3) of 'Die Gesetzgebung des Deutschen Reiches' (Erlangen: Palm & Encke).—A light and versatile writer, Ernst Eckstein, has had unusual success with his latest production, 'Der Besuch im Career' (Leipzig : J. F. Hartknoch), which has reached a fifteenth edition. It is a humorous story of the way in which a *Primaner*, locked up for mimicking the flat and pompous speech of the Herr Director of the Gymnasium, contrives to place himself on the outside of the cell and to turn the key on his persecutor. The mystification of the janitor between the real and the counterfeit voices is very amusing. After vainly endeavoring to establish his

dentity with his servant, the Director can only exclaim, despairingly but still classically, that "Mit der Dommheit kämpfen Götter sülbst vergübens!" There are six clever illustrations. In one of them, out of a group of nine *Primmer*, two are represented as wearing glasses—unwitting confirmation of the statistics of Dr. Cohn, of Breslau, as to near-sightedness in the German gymnasia (31.7 per cent.)——As a continuation and complement of Kiepert's ancient and modern hand-atlases, Dr. Carl Wolff has been employed to edit an historical atlas in eighteen maps, embracing the period from A.D. 500 to 1871. The first of three parts, all of which will appear during the present year, is before us (Berlin : Dietrich Reimer ; New York: L. W. Schmidt). It is strictly limited in scope to Europe, and Germany and her immediate neighbors receive most attention. In this respect, of course, as well as in the number of maps, it differs distinctly from Spruner's atlas, and while calculated to be of service even to the learned, it is designed chiefly for the use of students in the higher schools. As regards clearness and beauty of execution and accuracy, Dr. Wolff's maps compare not unfavorably with Spruner's, and by turns one feels inclined to give the palm to the Berlin establishment and to that at Gotha (Justus Perthes). Dr. Wolff, except in a few cases, preserves the national spelling for names of places, though in this he is not always consistent, *e.g.*, Warszawa (16), Warschau (15), Warszawa (Warschau) (12), etc.

THE LIFE OF GEORGE TICKNOR.*

THIS book is likely to hold a unique place in American literature. We have had nothing like it heretofore, and we shall have nothing like it hereafter. The biographies with which it might be compared—that of Washington Irving, for instance, or that by Mr. Ticknor himself of his friend Prescott—are very different from it in quality and association. Mr. Ticknor was the most marked type of the American man of letters and society of the first half of this century, as distinguished from the mere scholar or author. He combined traits not often found so happily mingled ; his strong social tastes and his brilliant social gifts did not interfere with the steadiness of his literary industry or diminish the worth of its results. He had a fortunate temperament and an easy life. He was in fortunate relations to his times, and he succeeded in securing, together with such advantages as America could afford to a man of strong moral feeling, rational desires, and genial temper, the benefits of the best culture of Europe and the charms of its best society. His biography, quite apart from its personal interest, will have a permanent value as a vivid illustration of the conditions of the most cultivated society of New England during a period of rapid national development, which even now, though so recent, seems to belong to a somewhat remote past—a period of comparative simplicity of living, of cheerful confidence in the political institutions of the country and in the moral progress of the people—a period far less various in aspect, far less perplexed with difficult political and social problems, far less unsettled than the present. In the homogeneous community of Boston—a community which had a high if somewhat narrow and provincial standard of intelligence and character—Mr. Ticknor was for many years a distinguished and original figure.

He never took a leading part in political affairs, never held political office, never was tempted outside those lines of activity which, with unusual good sense and clear discrimination of his own capacities and inclinations, he had early laid down for himself. His career was one of uncommon consistency. There is nothing dramatic in its incidents. But probably no American has led a life richer in that class of associations and interests which belong properly to literary biography, and the two volumes in which his history is told afford such varied literary entertainment, such pleasant personal anecdotes and reminiscences of so many of the most distinguished people of the time, as to form a substantial addition to the books on the shelf that holds the memoirs of Johnson, of Scott, of Mackintosh, and they may find a place, perhaps, close to the 'Life of Southey' and the 'Diary of Crabbe Robinson.' It is curiously distinguished from all its neighbors, however, in the fact of its American origin. The American portion is even more fresh and instructively entertaining than the foreign. And in this the book is the true image of Mr. Ticknor himself. He was on even terms with the best society everywhere, but he was most perfectly at home in it in his own delightful library, where to the agreeableness of a man of uncommon social accomplishments was added the gracious welcome of a most genial and ready host.

His nature was of even proportion and build, and admirably adapted to its actual surroundings. He was pre-eminently, in a good sense, a man of the world. Alert, self-controlled, of liberal and refined taste, with many sources of enjoyment open to him, he was not exposed to the temptations of vehement passions, or to the illusions of the poetic imagination. His clear intelligence and sound moral nature were in admirable harmony. A steady sense of duty was combined in him with great sweetness of disposition. His character was based upon a strong will and moulded by strong moral principles. In the circumstances of his life he seemed a fortunate man ; in great part this was due to his having learned the difficult lesson of how to compel good fortune to one's bidding.

Such a man's life would be worth reading even were his experience of less variety than that of Mr. Ticknor. The outline of his can be told in a few words. He was born of excellent parents in Boston in 1791. He was an only child, and he received every advantage of education within his father's means. After graduating at Dartmouth College, he studied law, and was admitted to the bar, but his literary tastes were so strongly pronounced that he soon determined to give himself to literary pursuits, and to this end resolved to go to Europe for purposes of study. The account given in the pages of his biography of his zeal for study, and of the difficulties he met with in attempting to learn German from the impossibility of obtaining the needful books, is a striking picture of the difference between the opportunities of sixty years ago and those of the present time. Before leaving America he made a journey to Washington and Virginia, seeing many eminent men, and meeting with a reception from them which showed that even then, at twenty-three years of age, he must have been a youth of uncommon powers of attraction, and not less uncommon acquisitions. His accounts of visits to Madison and Jefferson, his sketches of Marshall, Pinkney, John Randolph, Emmet, and others are full of interest. In the spring of 1815 he set sail for England, amply supplied with letters of introduction from Jefferson, John Adams, and other eminent men to their friends abroad, and from the moment of his landing at Liverpool and first acquaintance with Roscoe, and on his way to London with Dr. Parr, begins the series of sketches of distinguished persons whom he saw more or less familiarly wherever he went during his four years' stay abroad, and with many of whom he formed relations of life-long friendliness which were renewed during subsequent visits to Europe in later years. One of his earliest acquaintances in London was Byron. They were together one morning when a gentleman came suddenly into the room and announced the defeat of Bonaparte after a great battle in the Low Countries. "But is it true ?" said Lord Byron. "Is it true ?" "Yes, my lord, it is certainly true ; an aide-de-camp arrived in town last night, he has been in Downing Street this morning, and I have just seen him as he was going to Lady Wellington's. He says he thinks Bonaparte is in full retreat towards Paris." After an instant's pause, Lord Byron replied : "I am d—d sorry for it."

The anecdote is a characteristic one, and the scene again reminds the reader how far 1876 is from 1815. But the pages of Mr. Ticknor's 'Diary and Letters' are full of anecdotes and narratives of conversation, of descriptions of remarkable men and women, and of unusual personal experience, which are so fresh and entertaining, so well told, and so illustrative of social habits, as to form a contribution of no slight value to our knowledge of the life of the times.

Mr. Ticknor's style was from the beginning simple and animated. He wrote with fluency and ease. His head was not turned by the flattering attentions he received at all hands, and his journals and letters are free from the conceit and egotism that too often mark productions of the sort. The freedom from extravagance of expression in the accounts of his experiences was a characteristic sign of the even balance of his temper and of his fixed habit of self-control. His sympathies, though quick, never betrayed him into enthusiasm, nor was his judgment overmastered by excitement of feeling. In August, 1815, he established himself at Göttingen, and there remained, leading a most industrious life as a student, with brief intervals of vacation, for the next twenty months. His zeal for learning, eager as it had been, was quickened and satisfied by the ample opportunities that were here afforded to him, and the time he passed at Göttingen was in some respects the most important period of his life, as that in which he acquired large stores of thorough scholarship, which, constantly augmented in future years, served as the solid basis of his later literary work, and distinguished him as one of the most accomplished students of his generation. He had special gifts for the acquisition of languages, and at Göttingen devoted himself mainly to the language and literature of Greece, of Germany, and of Italy.

From Göttingen he went to Paris, and, while continuing his studies here with great diligence, he entered freely into society, where his attractions and his abilities secured for him the acquaintance and intimacy of the per-

* 'Life, Letters, and Journals of George Ticknor.' Boston : James R. Osgood & Co. 1876. 2 vols. 8vo.

sons best worth knowing. Few young foreigners have had such a reception. Madame de Staël, Humboldt, Madame Récamier, Châteaubriand, Villemain, Benjamin Constant, Lafayette, and others worthy to be named with these, pass one by one before us in living presence on the pages of his journal. Our limits do not allow us to quote, as we should like, the account of the striking conversation of Madame de Staël and Châteaubriand. We can but refer our readers to Mr. Ticknor's own pages.

In Italy, in Spain, his experience was the same, everywhere welcomed by the best and most interesting people, everywhere making diligent use of his unrivalled opportunities for the observation of men and manners, while pursuing his serious studies with unrelaxed ardor. There is nowhere in literature such a picture of the society of Europe in the years immediately after the fall of Napoleon as is given to us in Mr. Ticknor's narrative.

He returned home in 1819, after four years' absence, and he came back quite unspoiled by his dangerous experience of the charms of Europe. The solidity of his character showed itself by his simple, unaffected acceptance of the conditions of life in Boston, and his adaptation of himself to the narrow limits of American society. He almost at once entered upon the duties of the Professorship of Belles-Lettres and Modern Languages at Harvard College, to which he had been appointed during his absence, and applied himself with earnestness and generous zeal to the task of instruction, and to the quickening of whatever literary and scholarly taste and ambition there might be among his students. For fifteen years during which he held the professorship he sought not only to enlarge the scope and elevate the standard of literary acquirement in the College, but to promote the higher culture of the community at large. No man did more than he by the influence of example, by the liberal use of his time and knowledge, and by the generous freedom with which he placed his large and rare collection of books at the service of all who might be aided by it, to foster the love of letters and to qualify the force of the material tendencies of American life by the promotion of the better interests of intelligence. Few men have done so much for the civilization of this country. Few have been such worthy Americans.

In 1834 Mr. Ticknor again visited Europe with his family, and a large part of the volume before us is made up of the journal of the three years that he now spent abroad. Its chief interest is similar to that of the journal of his earlier residence in Europe, consisting in the clear and animated accounts of the remarkable persons with whom he was brought into relation. It is an extraordinary supplement to the earlier description, and taken as a whole gives an unparalleled view of good society forty years ago in England, in France, in Germany, and in Italy. Mr. Ticknor, it is true, had not the instinct of the imagination, and some of the chief figures of the time, living outside the conventional circle, do not appear on his pages, or, if at all, only in unsatisfactory and uncharacteristic likeness. But the very traits in Mr. Ticknor's mental disposition which limited his powers of imaginative insight, give to the mass of his notices of persons and narrative of incidents an absolute trustworthiness so far as the actual fact and the personal impression are concerned. He is seldom epigrammatic, very seldom gives a poetic touch, but writes always with good sense and constantly exhibits his strong moral sympathies. Perhaps the most remarkable passage of his experience is contained in his exceedingly interesting narrative of a series of conversations with Prince Metternich in 1836. Such a revelation of the statesman's judgment of himself and his policy has, we believe, never been made public before. But this is only one out of many passages of interest.

It was after returning home in 1837 that Mr. Ticknor gave himself to the preparation for the press of his 'History of Spanish Literature.' For many years he had employed himself in amassing the materials required for it, and the labor upon the work was suited to his taste. The book is too well known and too highly esteemed to need fresh criticism. It is one of the most thorough and exact of literary histories, and one of the few most creditable productions of American scholarship.

During the later years of his life he was greatly interested in the establishment of the Boston Public Library, and the immediate, and what seems likely to be the lasting, success of that institution was in great measure due to his judicious counsels and active exertions. He made it in large part what it is. In its interest he visited Europe for a third and last time in 1856-7. Old and new friends clustered around him, and again wherever he went he was welcomed by the best. His last years were passed quietly at home. No one who had the privilege of knowing him there but will have a pleasant and often a grateful memory of his rich and abundant conversation, of his ready helpfulness, of his lively interests in books, in persons and affairs. He died, after a happy life, in full possession of his faculties, in the eightieth year of his age.

The 'Memoir' which is now published of him is prepared with taste, discretion, and fidelity. It is a sincere and simple presentation of a sincere and simple but remarkable character. The book, as we have said, is unique in our literature, and we could wish that when another edition is called for, some parts of merely local and temporary interest might be omitted, in order to extend its circulation, and thus to increase the influence of a life so honestly devoted to intellectual ends, of a character so exemplary in its ministry of culture and civilization.

SOME RECENT BOOKS ON GOVERNMENT.*

MR. REEMELIN'S book is hardly to be called either an essay or a treatise. It is a series of reflections on politics, of which it is not always easy to see the connection or even the drift. The chapter on the "Object of Government," to which we turned as a sort of test of the writer's aim, merely tells us that most old, and especially theological, definitions of government are incorrect; that "adequacy to the purpose in hand and consistency with the permanent welfare of society are the true measures by which to determine the amount of government to be exercised"; and that "wherever the increase or diminution of powers proceeds with least commotion, there is the healthiest public conduct, provided it is always done for sound political reasons." This, it must be admitted, is not very clear, and, in so far as we understand it, is not much more useful than the old plan for catching birds by putting salt on their tails. The chapter contains one remark of some originality—that we in this country are apt to forget that "our churches, political parties, chambers of commerce, and corporations" are part of the governmental machinery. On the subject of individual self-government the author is still less clear; for he tells us that "the two qualities through which the universe rules itself are omnipresence and omnipotence," and that, therefore, "whatever approaches nearest to an omnipresent and omnipotent guidance of individuals will be the best control over man," and that this thing is "self-government," under "the various names of religion, morals, ethics, etc." The "et cætera" in this case must cover a great deal. In fact, the book is a mass of loose thought, very obscurely expressed, with a large intermixture of pure commonplace, and we are entirely unable to detect any good reason for its appearance. We suspect that the author is a rationalist, and in the matter of morals a utilitarian, and that if he had his way he would model a state on the basis of suggestions drawn from John C. Calhoun, with the assistance of Bentham, Mill, Von Holtzendorff, Virchow, Buchez, and other writers, whom he seems to have perused in a diligent but not orderly manner; but what kind of state it would be we cannot guess.

Mr. William Giles Dix seems to be a very excitable and despondent person, who takes a very dark view both of the American state and of the American statesmen; but he says some things worth saying and remembering, though many of his sayings, it must be admitted, are a little mixed, as where he announces that a "blazing, bitter star has fallen on our American waters and mountains, on ripening fields and happy homes, spreading lurid, blasting terror, like sparks from the furnace of perdition, and the name of that star is called Federalism." It will be seen from this example that Mr. Dix is not sober in his rhetoric, and that his mind is in a somewhat inflamed condition. One of his chapters is a glowing eulogy on Mr. Sumner; another is devoted to maintaining, apropos of Mr. Sumner, the thesis that a United States senator represents the whole Union, and not any particular State. Another is a poetic retrospect of the American Congress, in which he takes a gloomy view of the man who regards his election to Congress as "a successful political trick," and tries to reform him by calling up memories of the great men who have sat in that body before him, and advises him to look at the signatures to the Declaration of Independence, one of which, that of John Hancock, has, he says, "a fourfold character, being at the same time a pledge, a prayer, a challenge, and a patriotic appeal." If this be true, we presume that there is no other signature like it in the world. Mr. Dix considers Christianity "the inspirer of nations," and the only proper basis of civil society, in this agreeing with that other eminent political thinker, Edmund Burke; but he gives a Christian government a great deal to do, such as to "encourage and develop honorable industry in

'Nova Instauratio Reipublicæ. The Commonwealth Reconstructed. By C. C. P. Clark, M.D.' Oswego. 1872.

all its branches" and "all manly enterprise," and enforce Christian law and discipline respecting marriage and divorce. The chapter on this subject contains an account of the political position of the Devil in this country which is the clearest and most careful statement on this subject we have seen anywhere, and is evidently the result of personal observation :

"In Europe the Devil is an outlaw—so regarded, so treated in theory by all Christian governments, however much in practice they may follow his counsel. But in America the Devil is not an outlaw, but a fellow-citizen in good and regular standing, who goes to the caucus which he has already packed, and finally prevails on a political candidate to accept, very reluctantly and diffidently, his nomination, which has been made to his great astonishment and surprise—as he says—but which he may have been trying with all his might to get for ten years. Then the Devil 'votes early and often' whenever he can. He goes to the National Conventions for nominating and enjoys himself very much, because they seem so natural and home-like. He is petted and patted on the back by committees of both political parties, who make heavy bids to get his support, and he accepts both bids and pockets the money. He is told that large and influential numbers of American citizens define a free country as one in which the Devil has equal rights with Almighty God, and argue that laws should be made or applied accordingly, which, being told for news, makes the Devil chuckle, for it is no news to him. Then he is told that many Americans regard him as the victim of a rather exclusive administration ; that though it would not do to nominate him for the Presidency, because availability must first be considered and his nomination might offend some superstitious old bats who count nothing of themselves, though their votes do, yet that any special friend of his, and known to be such by the managers, would stand a good chance. Then they tell him that he can make the laws to suit himself, and then the Devil chuckles again, for he has already had a hand in making a good many of them, and then he winks and says, 'Indiana' ; then they all laugh. One says, 'That's a good one' ; then they all laugh again and take something. Then the Devil winks again and says, 'Connecticut.' Then another cries, 'That's another good one.' Then they laugh all round again and take something."

The rest of the book is taken up in working out, in a very denunciatory manner, theories of government which are those apparently of a very High-Church Episcopalian, with a deep hatred of Cromwell and serious doubts about the Puritans, considerable admiration for England and great devotion to national unity as opposed to State sovereignty, and gifted with a gorgeous rhetoric, which has apparently got the better of him, and rolls him through his volume as the surf rolls him along the beach in summer, if he ever ventures into anything so unbridled and unchristian as the sea.

Mr. Quincy's essay on the protection of majorities endeavors to deal, in the form of a dialogue between a Minister, a Merchant, a Journalist, and a Senator, with the great problem of getting rid of the tyranny and corruption of caucus nominations. He assumes that the majority in every American electoral division is honest and knows a good man when it sees him. The people of a town, for instance, find no difficulty in pointing out the best doctor, or lawyer, or grocer, or carpenter in the place. They would be equally competent to select the best legislator or administrator, but are prevented from doing so by the political managers, who, by organizing a caucus, take the work out of their hands and deprive them of all control over the nominations. He proposes, therefore, that the state should take charge of the nomination as well as of the election, and publish a paper called the *Nominator* in each locality, in which everybody should be at liberty to nominate, with a reasonable amount of explanation and commendation, any candidate he pleases, the suggestion to be adopted or not afterwards at the polls. This Mr. Quincy thinks would reduce the caucus to a mere debating-club, and make underhand arrangements impossible. The proposal is ingenious and yet simple, but it assumes, we fear, greater intelligence and homogeneity in the community, and greater influence on the part of local notables, than are to be found anywhere out of New England. We are afraid that in many parts of the country the caucus would flourish side by side with the *Nominator*, and that the "practical men" would make great fun of the sheet in their secret conclaves. The weak place in all the arguments about reform which assume the public spirit and intelligence of the majority, is that they assume them as constant quantities, whereas they are very variable. The truth is, and it furnishes the professional politician with his stock-in-trade, that the majority is sometimes, and at its best, what its friends take for granted that it is constantly and in its ordinary moods. The men who are willing to watch always are sure to get control of the ship, no matter what their character, and to get the better of those who are only willing to watch when it blows hard.

Dr. Clark's pamphlet has been in our hands for some time. It propounds a plan of reform much more complicated than Mr. Quincy's. He describes the existing situation very ably, though in sombre colors, and aims at the same object as does Mr. Quincy—the deliverance of the political community from the domination of the caucus. He says that what gives the professional politician his power is our practice of giving our political constituencies fixed geographical boundaries. This keeps him constantly informed as to the nature and amount of his work. Knowing exactly the area he has to "subsoil," he calculates his wants, distributes his forces, makes his combinations, lays his "pipe," and rolls his "logs." If, therefore, we can prevent his knowing what the constituency will be until the day of election, his occupation is gone. So Dr. Clark proposes that registered voters be drawn by lots, in constituencies of a certain number each, fifty, one hundred, or one thousand, as the case may be, and that these proceed forthwith to choose a representative elector, and that these electors then elect the various State or town officers or members of Congress—service as elector being made obligatory. It is difficult to say how the constituencies created by lot would work, but Dr. Clark supports his plan by many forcible as well as ingenious arguments. It contains, in any event, the idea on which any great reform in our political system must rest —that is, the provision for the citizen of some safe and simple mode of bolting "the regular nomination." Such essays as Mr. Quincy's and Dr. Clark's, whatever their practical value, are signs of a healthy interest in the undoubted defects of our political machinery, and nobody can read them without deriving from them a great many useful suggestions about the solution of problems which we all perceive staring us in the face, but which some of us would fain leave our children to solve.

BOOKS OF THE WEEK.

Authors.—Titles.	*Publishers.—Prices.*
Bancroft (G.), History of the United States, abridged. Vol. I.	(Little, Brown & Co.) $2 50
Browne (J.), Humorous Phases of the Law	(Sumner, Whitney & Co.)
Feuillet (O.), Marriage in High Life. A Novel	(Porter & Coates) 1 50
Frothingham (Rev. O. B.), Beliefs of the Unbelievers	(G. P. Putnam's Sons) 1 00
Habberton (J.), Spectator	(G. P. Putnam's Sons) 1 25
Huntington (Rev. F. D.), New Helps to a Holy Lent	(E. P. Dutton & Co.) 1 50
King (E.), French Political Leaders	(G. P. Putnam's Sons) 1 50
Lilly (W. S.), Characteristics from the Writings of John Henry Newman	(D. & J. Sadlier & Co.) 1 50
Macmillan (Rev. H.), Our Lord's Three Raisings from the Dead	(E. P. Dutton & Co.) 1 50
Paul (C. K.), William Godwin. 2 vols.	(Roberts Brothers) 6 00
Plain Directions for Accidents	(Claxton, Remsen & Haffelfinger)
Taylor (R. W.), Stories from Ovid in Elegiac Verse	(Rivingtons)
Van Santvoord (Rev. C.), Memoirs of Eliphalet Nott, D.D.	(Sheldon & Co.)
Welch (Prof. F. B.), Faith and Modern Thought	(G. P. Putnam's Sons)
Wharton (F.), Commentaries on Agency and Agencies	(Kay & Brother)
Wolff (C.), Historischer Atlas, Part I., swd.	(E. Steiger)

New Leisure-Hour Books.

16mo, $1 25 each.

HER DEAREST FOE. By Mrs. Alexander.

JONATHAN. By C. C. Fraser-Tytler.

PRETTY MISS BELLEW. By Theo. Tift.

VERS DE SOCIETE.

MR. SMITH. By L. B. Walford.

HENRY HOLT & CO.,
25 Bond Street, New York.

F. W. CHRISTERN,
FOREIGN BOOKSELLER AND IMPORTER,
77 UNIVERSITY PLACE, NEW YORK.
Large assortments of the publications of Charpentier, Didier, Didot, Hachette, Lévy Frères, etc., on hand; also complete lists of Tauchnitz's Collection of British Authors, and Teubner's Greek and Roman Classics. All European periodicals received weekly in parcels.

BOOKS AT LONDON PRICES.

B. F. STEVENS, AMERICAN Library and Literary Agent, 4 Trafalgar Square, Charing Cross, London, England, supplies Books and Periodicals of every sort by mail or express at lowest London prices. Full particulars of terms and mode of remitting United States currency are given in his printed List of English Newspapers and Magazines, which may be had free on application to him direct in London, or to his Custom-House Brokers, Messrs. Tice & Lynch, 34½ Pine Street, New York.

FOR any Book Desired or Information respecting Prices and Editions, address LOCKWOOD, BROOKS & CO., Boston, Mass., who will promptly reply. Books carefully forwarded, post-paid, on receipt of advertised price. Send for catalogue of our own publications.

The Nation.

NEW YORK, THURSDAY, MARCH 9, 1876.

The Week.

ON the 29th ult. Mr. Caleb P. Marsh, one of a firm of noted contractors in this city, appeared on subpœna before the House Investigating Committee, and testified that in 1870 he had been offered a post-tradership at Fort Sill, in the Indian Territory, on the suggestion and at the request of the then wife of the Secretary of War, Gen. Belknap. On his signifying his willingness to accept it, he was told either by the Secretary or his wife that it would be well for him to see the actual holder of the office, one Evans, and make some arrangement with him. He did see him accordingly, and made Evans agree to pay him $12,000 a year out of the profits as a condition of leaving him undisturbed, and of this he (Marsh) paid half every year to Mrs. Belknap, and on her death in the fall of the same year the payments were continued to her sister and successor, the present Mrs. Belknap. There was a reduction made in the annual amount exacted from Evans two or three years afterwards, in consequence of his complaints and of those of the unfortunate soldiers whom he was fleecing in order to pay the bonus; but Mrs. Belknap received in the aggregate about $20,000. The rest of Marsh's evidence consisted of a recital of the efforts made by the Secretary of War and his wife to prevent his appearance before the Committee, or to induce him to make his evidence harmless. Considering the official rank of Mr. Belknap, and Mrs. Belknap's position in what is called "Administration society" in Washington, the whole story is revolting. As soon as Marsh had given his testimony, the committee apparently began to cry, and prepared a report for the House in which the damning tale was told, and which Mr. Heister Clymer, on the 2d inst., read in tears, or semi-tears, called by the reporters "tremulousness" or "agitation." Resolutions providing for Belknap's impeachment were then passed unanimously and with little or no debate, and the next day he was impeached accordingly before the Senate, considerable doubt, however, prevailing whether the Senate will hold that he is impeachable; for Belknap, on finding that the exposure was coming, promptly placed his resignation in the President's hands, who as promptly accepted it, showing that the Fire rule is put in force only for the protection of officers, and not for that of the public.

While the Committee were contending vainly with their emotions, the witness Marsh, finding how serious the matter was, packed his valise and departed for Montreal, where he is now residing at a hotel, but, the telegraph informs us, looking "haggard and anxious." His flight, it is said, somewhat endangers the proof of the case before the Senate, but it is to be hoped means will be found to bring him back in time. In the meanwhile, other frauds of Belknap's have been brought to light, and notably a fraudulent award of a contract for erecting headstones in the National Soldiers' Cemeteries, by which he is alleged to have pocketed $90,000. Other exposures, too, with regard to the post-traderships are forthcoming. In fact, Belknap appears to have prepared for traffic in the post-traderships by procuring legislation taking the appointments out of the hands of the General of the Army, under the approval of the officers at the posts, and giving it to the War Department. The public mind is, of course, greatly excited, and the air is filled with stories of fresh discoveries. We presume and trust that the Navy Department will now receive a thorough overhauling, and also the Department of the Interior. But when we consider that the War Department was less suspected by the public than any of the others except the State Department, and that the evidence which has destroyed Belknap came to light through a mere accident—the chance remark of an enemy of his to a member of Congress—the public can hardly be blamed for believing that there are still many dismal discoveries to be made on all sides.

General Schenck has sailed for home, but received the news of Belknap's fall before he started, and we trust it has furnished him with profitable food for reflection on the voyage. A full telegraphic summary of James E. Lyon's testimony was sent to the London *Times*, and this probably at last made London too hot for the ambassador. He was served with a writ in the MacDougall proceedings at the railroad station; but this, in true *bouffe* style, he sent to Lord Derby through his first Secretary of Legation. He says he is going to vindicate himself completely before the Committee. We hope he will at the same time explain to Mr. Fish how he came to say he "paid dollar for dollar" for his stock, and how he came to suppress his letter of resignation as director of the Mining Company from December 6 to January 8. Senator Stewart is in California, but says he is coming also to vindicate himself, and enquires innocently "when must he start," to which the *Evening Post* very judiciously replies that the time to "start" is now, at once. Park has not yet been heard from, as he is in Central America; but we dare say he will soon arrive also. When they are all in Washington, with the post-traders, and the gravestone men, and the Indian agents, and the whiskey thieves, and the borrowers of the freedmen's savings, the assemblage will be one of the choicest the world has ever seen, and we advise the Centennial Commission to try and get them lodged and exhibited in a separate building in the grounds, with Colonel Forney and Babcock as superintendent and purveyor. We venture to assert that no feature of the Exhibition would draw as well or prove as profitable. We have frequently enquired in these columns who the persons were so often mysteriously hinted at in the Republican platforms during the last ten years as trying to stop the pensions of the soldiers and sailors, and get the nation to prove generally ungrateful to them. It now appears that it must have been the War Department that was meant, for it was there that the arrangements were made to sell sutlers the right to rob the poor fellows who garrison the forts on the plains, and to make money even out of the headstones which mark the last resting-place of the men who died in the war. When we put this along with the cheating of the freedmen through a sham savings-bank set up by Congress, we feel as if it was a mockery to talk either of the defeat of the party at the polls or even of the consignment of some of the managers to the penitentiary, and as if a good shower of fire and brimstone was the only thing that would meet the case.

The mission to England has, at this writing, been offered to Mr. Richard H. Dana, jr., vice Schenck, resigned, which appears to indicate that "Administration circles" at last begin to guess what the present fuss is about. We earnestly trust that Mr. Dana may be able to accept even for the remaining year of General Grant's administration, for the appearance of a man of his character and reputation would, even during that short period, go far to clear the American name of the odium brought on it by General Schenck's conduct. Complete vindication will only come from thorough reform in the Administration at Washington, and the appearance at the head of the ruling party in politics of a higher type of men than those who have had charge of affairs during the last ten years. But, under the present deplorable circumstances, no man of Mr. Dana's standing can refuse a place except under the pressure of overwhelming necessity.

There are now some three thousand bills awaiting the action of Congress or the Committees; but the events of the past week have made the prospect of legislation on the currency and other questions of public interest seem further off than ever. In the Senate Mr. Sherman and Mr. Bogy have made speeches on the subject of finance. The Pinchback case has again come up, and again been postponed; important petitions from merchants opposing the repeal of the Bankruptcy Act have been presented; and a resolution passed calling upon the Postmaster-General for information as to "straw bids." The House has impeached General Belknap for corruption; has debated (not very luminously) the Hawaiian treaty; has adopted a resolution instructing the Judiciary Committee to enquire into the facts connected with the so-called Safe-Burglary trial (important evidence having, it is said, been discovered showing the complicity of high officials); and another resolution for the appointment of a select committee to enquire whether any official of the Government helped the defence in the recent whiskey trials in any way by communication of facts, papers, or other evidence, or by interfering with the prosecution, or in any other way. Mr. Randall has also introduced a bill, which has been referred, providing that evidence given by witnesses before Congressional committees shall not be used against them elsewhere.

The Democratic caucus finance committee, by a slight majority, has agreed on a measure to be called "a bill to provide for the gradual resumption of specie payments." It directs the Treasury to accumulate a coin reserve, to the amount of three per cent. each year (after July 1, 1876) of the outstanding legal-tenders; provides that the banks shall accumulate a similar reserve against their circulation out of "coin receivable" and interest on thier Governments; that this accumulation shall continue until the reserve in the banks and the Treasury amounts to 30 per cent. against legal-tenders and the same percentage against bank-notes, and requires this percentage to be retained as a constant reserve; repeals the requirements of the resumption act of last year for retirement of legal-tenders, and the fixing of January 1, 1879, as the date of resumption. The bill names no definite time for resumption. There is little chance of its passing, but its introduction into the House by a responsible committee, who bring it forward after months of reflection and debate as the best measure the Democrats are capable of offering the country, is a shocking exposure of the intellectual and moral condition of the leaders of the party. The bill is a gross act of bad faith, as it violates three distinct pledges given by the Government. Senator Sherman's speech on the currency question in the Senate puts measures like this in their true light. He declares—and this is now, indeed, the only position which can be honorably taken by any one—that the time for discussion about resumption has gone by, and the only question for the country is whether it will redeem its promises or finally repudiate them. He shows that in the first place the United States, in 1862, promised to pay dollar for dollar in coin for its paper, and that it has violated this promise for fifteen years; that this promise was renewed in 1869, "at as early a day as practicable," and again in 1875 a promise was given to resume in 1879. We must now either provide means for resumption or confess the country dishonored and disgraced in the eyes of the civilized commercial world. This view of the subject is that generally taken outside of Congress, and deprives all measures like that proposed by the Democratic committee of any vitality. The country understands well enough that if last year's promise can be broken now, the promise of this year can be broken quite as well twelve months hence.

The Detroit bar has presented a very strong memorial to Congress in regard to one of the defects in the bill to establish Federal courts of appeal. It may be recollected (*Nation*, No. 554) that the bill now before Congress embraces the precise elements of a measure previously suggested in these columns—save one. The lawyers of Detroit take up the subject and point out that this omission is certain to be attended with serious inconveniences. After acknowledging that "some intermediate appeal is necessary to relieve the Supreme Court," and that whatever is done "should aim to make legal redress prompt, easy, and at the least practicable cost," the memorial goes on to give some powerful reasons why each Court of Appeals should sit in every State, as suggested by the *Nation*, and not merely in every circuit, as provided by the bill. Among others:

"Each circuit embraces several States, and some circuits include an immense territorial extent. Thus, this circuit includes the large States of Tennessee, Kentucky, Ohio, and Michigan, from the south to the extreme north a distance of near one thousand miles.

"The saving and convenience of suitors and their counsel would be very great. In many cases it would be safe to say it would diminish the cost of litigation one-half. This will be obvious when the charges of counsel, called to go a long distance and to wait the uncertain progress of a heavy calendar, is considered.

"It would bring the court into personal and professional intercourse with a much larger circle of members of the bar, and give the latter the great advantage which the sittings of such a court would afford in many ways.

"Finally, it is obviously desirable that all appeals should, if practicable, be heard and determined in the place where the laws prevail under which the cases have arisen and been tried. Everything which pertains to the local practice can be better dealt with and applied in the forum of such practice than elsewhere."

It is to be understood that this omission is due to the fact that our representatives in Congress are ashamed to compel the judges to hold courts at distant points without paying them adequate salaries, but are also afraid to increase the appropriation bills so near a Presidential election. In other words, the Congressional idea of economy is that it will cost the people of the United States less for fifty suitors and lawyers to travel a thousand miles than for one judge, and that courts ought to be as inconvenient as possible in order that they may be as cheap as possible.

There is a reciprocity treaty with the Sandwich Islands before the House of Representatives which we trust there is wisdom enough in that body to kill incontinently. The whole foreign trade of the islands—*i.e.*, what the islands buy—amounts to about $1,155,000 per annum; what they sell amounts to about $1,400,000 per annum, six-sevenths of which (or $1,200,000) is represented by sugar. Of so much of this sugar or other products as the United States consumes it pays for as it pays for other things (in 1874 by products to the amount of $620,000). But the Sandwich Island planters, numbering about forty, now ask that, in addition to paying as in ordinary trade, the United States shall give a bounty, by specially remitting the duties imposed on all foreign sugars in favor of the island products, equivalent to an average of fifty per cent. bounty on the cost of the sugar at the shipping ports of the island. This bounty on the import of Hawaiian sugar for last year would have amounted to $540,000, and is certain to increase, under a guarantee of 50 per cent. profit on all that they can produce, to $1,500,000 per annum. Or, in other words, it is proposed that we carry on trade with the islands hereafter by giving a dollar's worth of American products for a dollar's worth of island products, and then making the island people the present of another dollar to encourage trade. This is called reciprocity, but it looks like buying trade and paying an excessively high price for it. For every dollar of revenue thus remitted an equivalent dollar must be raised by some other form of taxation to supply the deficiency. Neither will the American price of sugar be affected; for the amount the islands can produce under any circumstances, although in the aggregate large, is as nothing to the aggregate consumption of the United States.

The friends of the treaty use some arguments in its favor that border on the comic. One is that it would give us the carrying-trade with the islands; but as this trade is not a coasting trade, and as, therefore, we have no monopoly of it, it will go to the ships of whatever nation can carry cheapest, unless the sugar-planters are simpletons, of which there is as yet no sign. Another is that if we do not make the treaty Great Britain or some of her colonies will. But

Great Britain has not, since this treaty was last rejected in 1867, shown the slightest disposition to do anything of the kind; and why should she, for all sugar is now admitted free to her home ports? Nor are the Pacific colonies likely to do so, because they now get their sugar from another British colony, the Mauritius, which makes it cheaper than the Hawaiians can make it. General Schofield and Admiral Porter also say that the Sandwich Islands are "our only natural outpost for the defence of the Pacific coast." As these islands are 2,500 miles from the coast, this is very like saying that we need the Azores for the proper defence of the Atlantic coast, and is, with all respect for the army and navy, a little ridiculous. Civilians have some common sense about military matters. It would be easy to base on this theory an argument that we needed nearly the whole world for the strategic protection of the United States. We must remark in conclusion that when Mr. Fernando Wood reported to the House on this proposed treaty that we import sugar from Cuba to the amount of $77,000,000 a year, and that Cuba only took in return from us of our products $1,400,000, that statesman erred grievously. Our exports to Cuba for the year 1873-4 were $19,597,000; our imports, $86,272,000.

The fact that silver halves, quarters, etc., are worth much less in gold than fractional currency, and also that they are worth much less measured by the paper legal-tender standard, seems to be unwelcome to those who were getting ready to throw their hats in the air at the success of "silver resumption"; and the *Times* has found it necessary to come to the rescue. It maintains that a fractional note is less valuable than a piece of silver, which is one way for saying that it takes less gold to buy a pound of paper than it does to buy a pound of silver. By this kind of reasoning it could be conclusively shown that a piece of paper on which is inscribed a promise to pay five thousand dollars is worth less than the smallest silver coin. Evidently feeling doubtful, on second thoughts, whether this reasoning is altogether conclusive, the *Times* goes on to say that the silver halves, quarters, dimes, etc., being legal tender, "the law-abiding citizens of the United States who have for years taken little bits of paper" will take the silver coins, and therefore "it will be miraculous if their exchange value falls below that of the inflammable stuff" (Treasury notes). In other words, it will be miraculous if, being a legal tender, people refuse to take them in sums for which they are a legal tender. All of which, of course, proves conclusively that with silver at its present price, and with gold at its present price, a given sum of subsidiary silver coin is now worth more in gold than is a like sum of fractional notes. There is no doubt that subsidiary silver coins will now circulate; the danger is that there may be such changes in the paper legal-tender currency as will drive silver out of circulation, a danger which will not disappear until the only standard legal tender is gold coin.

In Wall Street there was little, during the week, out of the usual course of affairs except the heavy decline in one or two speculative stocks. Pacific Mail fell 11 "points," ostensibly because the Panama Railroad managers, acting in their individual capacity, determined to put on an opposition line to Pacific Mail, and sent out one of the steamers which is to run between Panama and San Francisco. The stock of the Western Union Telegraph was also depressed by the reduction in rates forced by rival lines, which must impair dividends. Railroad stocks were well held, and their earnings are increasing. Money was very abundant, and the change in the bank reserve was not important; although $600,000 less than the next preceding week, the surplus reserve is more than double what it was at the corresponding time last year. The exports of specie during the week were not large—$1,341,916, of which only $815,000 was gold coin. Sterling exchange closed with rates below the point at which gold coin can be shipped. The gold value of $100 greenbacks ranged during the week between $88 49 and $86 95.

A public meeting of some significance was held in Boston last week in response to an invitation to "all persons interested in the political aspects of the temperance movement, and those similarly interested in the claim of suffrage for women, to consider the propriety of taking measures to unite their political efforts to secure the success of the two movements." Mr. Wendell Phillips, the principal speaker, stated to the large audience present that a union of the friends of woman-suffrage and of prohibition in Massachusetts would form a political party able to command from 30,000 to 40,000 votes in that State, and thus to hold the balance of power between the two great political parties, thereby forcing the one or the other to accede to their demands. Judge Pitman, of the Superior Court, also believed that if women were allowed to vote, "the temperance (prohibitory) cause would be speedily successful." Another speaker, Mr. A. Bronson Alcott, thought that "the vice that was now sapping our public institutions was the impurity of men, and the voice of woman would be given in behalf of personal purity; women would enquire into the private lives of politicians"—assertions which read queerly in the light of the connection of women with the last great political scandal. Mr. Phillips advised also the union of "a third element"—the friends of "the labor cause." It cannot be doubted that a large number of people look for the coming of a political and social millennium through the establishment of a particular reform—woman-suffrage, prohibition, labor-reform, secular education, or some other cherished hobby. They take the same mental attitude which enables many people to read with gladness the advertisement of the patent-medicine vender who has discovered a new panacea for physiological ills; and the orderly development of genuine political progress is likely to be complicated and impeded for a long time to come by mischievous schemes analogous to the one thus favorably initiated in Boston.

Professor Egbert C. Smyth raises, on behalf of the Andover Church, certain objections to the provision made by the Brooklyn Advisory Council for the further investigation of any charges that may be offered against Mr. Beecher which strike us as having a good deal of force. He, in the first place, criticises the arrangement as not Congregational; but what he says on this point has not much interest for the general public. His strong point is that accusers are asked to bring charges before a court not yet constituted, and which cannot be constituted until the charges are made, and which, though it may be made up of five of the twenty persons put on the list, may, in case all these decline to serve, be made up of persons as yet unmentioned and unknown, as the Committee of Three has, in that case, the right to travel through the denomination in search of judges. It may be said that trials before courts-martial take place under somewhat similar conditions, but parties always know approximately what the composition of these courts will be—know, that is to say, that they will be composed of persons of a particular and small profession, and selected from a small portion of that profession. It must be admitted that this is, or is likely to be, considered a serious objection by any possible accusers of Mr. Beecher; but then his probable accusers are Moulton and Bowen, who are not easily daunted. Should the demurrer now pending in Moulton's civil suit be decided in his favor, he will be able to get all the facts before the court, without the encumbrance of Tilton's faults and follies which proved so distracting a feature in last year's trial. Bowen's statement has in the meantime been published, and contains stories told him by two women whose names he offers to communicate under pledge of secrecy; but the Examining Committee are stern and implacable with him, and will probably withdraw the "watch and care" which the church has hitherto exercised over his precious but peculiar soul. The most marked effect of the statements and counterstatements as they succeed each other is, we think, a deepened impression of the amount of lying done in and about and concerning Plymouth Church and its pastor, and of the amount of disingenuousness, short of lying, of which professing Christians can be guilty without loss of self-respect.

THE BELKNAP CASE.

THE LAW OF IT.

WE presume there will be little difference of opinion as to the wisdom of the course which the House has adopted in resolving to impeach in spite of Belknap's resignation. The Constitution, as Story says, appears to contemplate the actual holding of a place in the civil service of the Government as necessary to make a person liable to impeachment; but the point has never been settled in practice, and the present case affords an excellent opportunity for settling it. What the precedent ought to be, supposing the field to be open for making one, there can be little doubt. The Constitution expressly prohibits the pardon by the President of anybody convicted on impeachment, thus following the common law, and unquestionably for the same reason—that is, in order to prevent the chief executive officer of the Government from shielding, under the influence of sympathy or complicity, any of his subordinates from the penal consequences of gross misconduct. But if an officer can be protected against impeachment by placing his resignation in the President's hands, and getting him to accept it, of course the withdrawal of the pardoning power in impeachment cases becomes nugatory. The President can, under this view, always pardon before impeachment, and pardon much more effectively than if he pardons afterwards, because he can save the culprit the shame and exposure of a trial. In fact, the consequences of the doctrine that when an officer finds that he is threatened with exposure he has only to throw up his office in order to protect himself against proceedings before the Senate, would be almost farcical in their character; for it must be remembered that for the success of the trick it would not be necessary to have the President for an accomplice, or to take him suddenly and by surprise. An officer who saw unpleasant revelations impending, as Belknap did, several days or weeks before they came, would only have to plead ill-health, or domestic affairs, or weariness of harness, to secure in a leisurely way the President's formal and unsuspecting acquiescence in his retirement, and then the House would find itself powerless. This is therefore an excellent occasion for a precedent which shall render it impossible for any officer in the service of the Government to withdraw himself, or for the President to withdraw him, from trial before the Senate on the accusation of the House for any crimes or misdemeanors committed by him while in office.

There has been more or less ransacking of English precedents in this case, although it is admitted that they are not applicable to the civil service of this country. The one which has most application, if any are applicable, is neither Bacon's nor Warren Hastings's, but that of Viscount Melville, the famous Harry Dundas, so powerful in Scotch politics in the early part of the present century. He was First Lord of the Admiralty under Pitt in 1804, and was accused by a committee of investigation of having appropriated £20,000 to some other use than the service of his department. He said it had gone "to other services not connected with his situation as Treasurer of the Navy," but that he could not account for it "without disclosing delicate and confidential transactions of the Government." Pitt was convinced of his personal integrity, and resolved to defend him. Resolutions of strong censure were then introduced in the House of Commons by the Opposition, and carried by the Speaker's casting vote. Melville thereupon resigned his place of First Lord of the Admiralty. But this was not enough. A motion was then made for an address to the King asking for his removal from the Privy Council. Pitt tried to compromise by declaring that Melville would never return to power; but Melville asked him to stop the discussion by sacrificing him, and accordingly Pitt announced in the House that he had advised the erasure of Lord Melville's name from the list of Privy Councillors. But even this did not satisfy the Opposition. On the appearance of a supplemental report from the Committee of Investigation, a new motion for his impeachment was made, and before it was debated Melville was heard in his own defence at the bar of the House. The motion and an amendment for his criminal prosecution by the Attorney-General were then debated, and the latter was carried by 238 to 229. His friends, however, preferring impeachment to prosecution, carried a motion to rescind this vote and proceed by impeachment. He was accordingly tried by the House of Lords and acquitted; but he was a ruined man.

THE MORAL OF IT.

There are reflections enough of an unpleasant sort suggested by the Belknap affair, and we presume it has caused in all parts of the country a vast amount of shame and humiliation. But then it is of the utmost importance that we should be ashamed of and humiliated by the right thing. At present all our emotions run into wrath against Belknap, and we try to believe that by swiftly punishing him by all sorts of processes, we shall not only cure the wound which his fall has inflicted on the national pride, but prevent the recurrence of such wretched tragedies in the future. We sincerely hope that but few people will be tempted into such illusions. Belknap's fall is nothing but the symptom of a disease from which not he but the whole body politic is suffering; a disease of which the American people has had full knowledge for years, which its statesmen and moralists have been in vain imploring it to treat while it is yet time, but which it has thus far persistently refused to deal with. We tell those who are wailing over the spectacle now presented by our public life, and who are asking themselves whether honesty is dead among us, that Belknap and Babcock and Williams and Delano and Shepherd and Casey and Schenck and the rest of them are not the natural products of American life or morals, and that the scandals with which the papers are filled are not the necessary or even probable consequences of our political constitution. If the attempt were made to-day, in any civilized country in the world, to carry on the government by a civil service constituted and administered as ours is, the corruption and debasement would be as great in all societies as they are in ours, and in some much greater. The rascals whose presence in places of trust and emolument now afflict us would, under like circumstances, show themselves in England or Germany or France in even larger numbers and with greater enterprise and effrontery. There is nothing peculiar either for good or evil in the executive department of our government; we can no more carry on the business of the American people in total disregard of principles of human nature than we can carry on the business of a single American counting-house. There is no substitute for character in American affairs any more than in European affairs, and there is no mode of testing character but the old one, which was as well known to Abraham as to Secretary Bristow. We presume there is not in the history of superstition itself a more extraordinary chapter than the story of the conversion of the civil service of this Government from a corps of honest, hardworking clerks, living by good behavior, into a horde of adventurers, made up of the failures of commercial and professional life, and encouraged to rely for their bread not on diligence or honesty, but on falsehood, intrigue, and eye-service. It has been wrought openly, notoriously, and on a great scale, under the eyes of the nation, and wrought with so much impunity that politicians have at last acquired brass enough to defend it, as part and parcel of American polity; and wrought, too, in the presence of millions who have learnt through their own experience from what sources men draw the strength to bear their share of the cares and trials of life without cheating, lying, or stealing. There is no man who knows our civil service as it is at this moment—who knows by what arts places in it are procured and kept—but must, in spite of the presence in it of the small *cadre* of the honest and efficient who are necessary to prevent the whole machinery from going to pieces, pronounce it a disgrace to our civilization, and must admit that it constitutes a standing mockery of our religion and morality. The preaching which one hears in our churches in encouragement of honesty in private business is, in fact, made almost ludicrous by the fact that we all subscribe annually hundreds of thousands of dollars out of our hard earnings to keep a-going this great national reproach.

The reason why we are so unhappy just now, and so sad and despondent about politics in this hundredth year of the national existence, is not that the state has any more difficulty than it ever had, or than any state has, in finding men to serve it in singleness of heart, fearing God. As we had the honor to remark, when so many people were bleating out condonation of Butler's rascalities, because he had with a fleet and army held an unfortified, conquered city in subjection, the race of honest gentlemen, and gallant soldiers, and honorable merchants, and faithful lawyers, and just stewards is not dead in the United States, or dying. In fact, we have no doubt they form as large a proportion of the population as they ever did, and resist temptations by which the virtue of their fathers was never tried. But we have allowed a system to be built up under our eyes which actually has all the marks of having been framed for the express purpose of preventing their ever rendering the Government the service either of their character or their skill. That this system has not produced its natural results sooner has been due simply to the fact that, down to the close of the war, a series of accidents kept it under the control of the traditions and usages of a better time. Pierce and Buchanan, and Lincoln and Johnson all had their faults as administrators, but they were men who had grown up in office or in the forum, and who had sat at the feet of teachers in whom the original ideal of the Government was still strong; to whom offices were still trusts, and public opinion a power to be studied and comprehended; who felt bound by a custom which they had no thought of resisting to surround themselves in the high places of the Government by conspicuous, tried, and experienced men.

The crisis came when an ignorant soldier, coarse in his tastes and blunt in his perceptions, fond of money and material enjoyment and of low company, was put in the Presidential Chair. We blame nobody for this, and nobody was blamable The party did the best it could under the circumstances, but his real character as a civilian began to appear very early in his administration. It was fully revealed when he received his second nomination, and on the day he received it the Republican party assumed the responsibility for him and his followers which is to-day covering it with infamy. But the point to which we wish to call attention is, that he and his friends, bold as they are, could not have wrought a tithe of the mischief they have wrought had they been compelled to discharge their duties through a properly organized, disciplined, and honorable corps of civil servants. Instead of this they found themselves at the head of a herd of functionaries to whom the idea of duty to the country, as the consideration of their wages, is never presented, directly or indirectly, from the day of their appointment to that of their dismissal, and on whose honor and devotion no more call is made than on those of a band of robbers. The President when he took office began to do what members of Congress have been doing for forty years—use the appointments in his gift for the benefit of his personal friends; and the personal friends began to make money out of the offices because they naturally presumed that he could hardly have considered the simple bestowal of a small salary much of a favor. When charges began to be made against them, too, he received the charges not as a superior officer responsible for the enforcement of discipline, but as a member of Congress would receive charges against one of the best "workers" in his district—not, in short, as a magistrate, but as a "pal." From the levying of assessments for political purposes on meagre pay to the selling of offices is a short step, which ordinary human nature makes readily; and Belknap is suffering for having made it, not because he is worse than others, but because he is in a higher place. In other words, he is the most conspicuous victim of a rotten system which is gradually ruining public life and public men, and converting our Government into a robber's cave. Belknap is gone; but the system remains, and as long as it remains more Belknaps will appear.

We have been warning the readers of this journal for seven years that to this complexion it would come at last; that the régime under which we were living was so coarse and venal that it must end in some tremendous catastrophe that would cover us with shame and fill us with despair; that the Southern "outrages" were but a blind set up by thieves to throw the police off the scent, and that the great enemies of free government in this country were to be found not in Louisiana and Mississippi but in Washington; and that the chorus of adulation and apology which was addressed every year by Republican editors and Republican conventions to the President were only hardening a somewhat obtuse and selfish nature in courses and associations which were full of danger to the country. The mischief is, however, by no means irreparable. We have just one year more of this deplorable administration to bear with, and during that period we must, while pushing on the work of investigation and praying that the discovery of guilt may stop short of the highest place, possess our souls in patience. But it is still in the power of the American people to see that the affliction does not recur, by electing a President whose sympathies and associations connect him with the best social life of the country, who belongs to its men of honor and intellect and morality, who is familiar with its best political usages and traditions, and who is either content with the fortune he has got or whose character has been tried by temptation and resisted it, and who has the courage which is needed to head a revolution. For revolution there must be. The reform of the army of 80,000 civil officers must come, and it must come in spite of the Camerons and Mortons and Conklings and Boutwells and Chandlers, if the form of the government is to remain unchanged.

THE EDUCATIONAL INFLUENCES OF FREE SOUP.

SINCE the first week in January several of our large cities have been making a regular daily or tri-weekly gift of a dinner of beef-soup or fish-chowder to every poor person who might apply for it. In some places a nominal attempt has been made to separate the sheep from the goats—the deserving poor from the hungry loafers—by taking the names of applicants when they first apply, and making enquiries subsequently at their tenements; but practically, we doubt not, in all of these places every one who wished has been able to obtain food enough to keep body and soul together, free of expense, until the return of warm weather. There is undoubtedly a comfortable feeling of satisfaction connected with the idea that all the poor wretches of any large city can have a full stomach every day, or at least several times a week, which not only fully justifies, on sentimental grounds, this public feeding of the multitude, but which may well make even a Gradgrind reluctant to believe that the practice is almost wholly a vicious one, whether looked at from the point of view of politics, of morals, or of general social welfare.

The number of people, however, even in our largest cities, who are so completely destitute as to be actually in danger of starvation, is extremely small at any time; and this small number can be much more effectually relieved in some other way than by advertising the gift of a bowl of soup at a police-station. But, granting fully that good may be done occasionally in this way, we maintain, nevertheless, that the mischief wrought is so vastly preponderant that the practice entirely fails of adequate justification. It is not necessary to recapitulate the arguments by which it has been fully proved that the best-intentioned private charity is more likely to do harm than to do good, unless careful discrimination, supplemented by a considerable amount of knowledge of social forces, is exercised in the bestowal. We assume that the validity of these arguments will be admitted by every one who is competent to express an opinion about them. Using these arguments, therefore, as a stepping-stone, we wish now to examine certain educational influences connected with the public distribution of free soup which seem to us to have an especial bearing upon some of our most pressing political problems.

Closely connected with the discussion now going on with reference to our public schools, there is a fact of deep moment which we think has not received its full share of attention, the fact, namely,

that however the question of reading the Bible, of religious instruction, etc., may be decided, the decision will have no effect upon the political education of the great mass of our voting population. Indeed, no political education whatever is received in the common schools, for the very good reason that this kind of education is not to be acquired by the study of arithmetic, grammar, and geography, and may be utterly lacking, therefore, in the voter who has been compelled reluctantly to learn how to write his name or to read correctly a chapter in the Bible. Admitting ever—that which, as matter of fact, is of course untrue—that the graduates of our academies and colleges have received a thorough political education, yet all these graduates together furnish only a minority of our voters. In fact, the only political education which is possible to a large majority of voters, or which is likely to be possible for very many years to come, is the education of public opinion, of the social influences which are developed, in part at least, by the practical working of our political institutions. Now, without doubt, upon the very lowest class of our population—the worthless vagabonds and criminals who are rapidly crowding into our cities from every direction—these social influences produce a great part of their effect through the efficiency (or lack thereof) of the police and criminal courts. But the persons composing this class are the very ones who will devour the largest portion of the soup and chowder. If, therefore, they behold the dreaded baton of the officer changed into the wand which protects and conveys to them their daily food, we may feel assured that their political education, if small in amount, will be rapid in growth and very positive in direction. It will take no longer than the date of the next election for them to learn that one very important function of government is to feed them with hot soup and vegetables every winter; and they and their compeers will unanimously cast their ballots for that candidate for the common council who is likely to vote, or who has already voted, for the free distribution of loaves and fishes. And long before the date of the succeeding election, they will have become firm believers in their inalienable right to demand of government free subsistence for a certain portion of every year.

A step above the lowest class of our population is the common laborer, who has an amount of pride sufficiently large to forbid him to apply for free soup unless driven by great distress. Nevertheless, he is now out of work, and, if not destitute, is at least uncomfortable. Observing the vagabond provided with daily food by a beneficent government, he naturally believes that his desires are extremely moderate when he requests the same good government to provide him with work enough to enable him to buy the same food which is furnished free to his less ambitious fellow. This request is now often expressed in the shape of a demand which the politician is fast learning to treat with becoming respect. Already contractors and city superintendents of work recognize the rightfulness of the laborer's demand, and at least in one city, as we happen to know, the superintendent who has charge of the building of the sewers regularly "rotates" his laborers, thus giving employment for a certain length of time to each laborer residing in the district through which a sewer happens to be passing. The arrangement is well understood by the laborers, who are quite satisfied with it, and make no complaint at being discharged without cause, provided each man has had his full allotment of time. In illustration also of the present attitude of the laborer toward government, is the fact that only the other day a band of workmen paraded the streets of a large city bearing a banner inscribed with the legend, "Bread or Work," and when they reached the headquarters of government the mayor promised to give them work upon a new reservoir. It is evident that this demand for work, which grows more importunate each succeeding year, is only the demand for free soup in another form.

Passing from the common laborer, and omitting one or two intermediate grades, we reach the mechanic, who does not dream of asking government to furnish him with food, nor does he even ask for work. He demands only that government shall care for him—that is, furnish him with bread indirectly, by passing laws which shall enable him to make his work light, or to command increased wages for present work, or to protect himself against the competition of other workmen, etc. It is not necessary, however, to pursue the examination further, although we are pretty well convinced that a close inspection would detect the savory odor of free soup inhaled by the farmer asking for "Granger" legislation, or by the steamship or railroad director who is begging for a subsidy, or a land-grant, or a loan of the national credit.

We are not to be understood as arguing that free soup alone has actually produced all the harmful theories above indicated, or that there is any conscious existence in the minds of the other classes referred to of any logical process which, starting with the gift of soup to the poorest class, ends with a demand for government assistance in a different form. But we do maintain most earnestly that many of the national evils most to be dreaded at the present day belong to that political system of which free soup may be regarded as the index, or the initiatory step, or the logical outcome, according to the point of view of the observer. And, moreover, we contend that the daily gift of food to the most dangerous classes of our cities not only gives them a wholly erroneous conception of the relation which government should hold towards them, but that it also encourages analogous erroneous beliefs in more powerful and more intelligent classes—classes, moreover, the members of which are already in a numerical majority in many parts of the country, and the success of whose political or financial theories would immediately endanger our national existence. It is no morbid imagination which finds not only official corruption and financial ruin, but possible communistic horrors also, in the dregs of the bowl of municipal free soup.

The remedy for this unfortunate condition of affairs is not to be found in the education of the common schools, even if this should be made compulsory. The rhetorical aphorism of an English statesman, "Let us educate our masters," has no meaning here, for "our masters" are daily receiving an education of a very different sort from that intended, and their political principles (if we may use the word) are formed undeniably by the general tone of public opinion and not by the spelling-book. The mayors of one or two of our large cities have recently informed the laborer, in unmistakable terms, that a municipal government is in no way bound to furnish work to supply his necessities. Let declarations of this kind, coming from men who are filling responsible positions, be duly emphasized upon all suitable occasions by every man who understands their bearing and their importance, and a very few years would suffice to bring about a healthy change in the tone of public opinion. But even if the desired change should require a longer period of time than we now believe to be necessary, it must be made sooner or later if many things most precious in our national life are to be preserved. Free soup must be prohibited, and all classes must learn that soup of any kind, beef or turtle, can be had only by being paid for.

MOODY AND SANKEY.

A VERY short half hour spent at the Hippodrome will probably convince any one that any very subtle explanations of the success of the revival would be thrown away. When the revivalists were in England the English press (which persisted in regarding the whole movement as phenomenal and out of the course of nature) racked its brains, if the expression may be allowed, to account to an intelligent public for the extraordinary interest excited by the preaching and singing of Messrs. Moody and Sankey; and the *Saturday Review*, if we remember right, finally announced the true explanation to be that the audience were all women, and the manifestations due to hysteria caused by the overcrowding and overheating. But at the Hippodrome the building is not overcrowded or overheated, and the audience is to a great extent masculine, and yet the success of the movement is undeniable. The explanation of this success that we should be inclined to give is a very simple one, for it is nothing more nor less than that the Moody and Sankey services are an old-fashioned revival with the modern improvements. There is, we strongly suspect, no mystery whatever about the matter; and in order that we may determine whether this is so, let us examine in detail what the mystery is commonly supposed to consist of. In the first place, some

people think it very inexplicable that the revival should be conducted by a plain, uneducated man like Moody. There would be far greater cause for astonishment if a revival were to be set on foot by Dr. Hall or Dr. Washburne; but that we should find Moody at the head of it is exactly what might be antecedently expected. In the second place, a good deal of surprise has been expressed at the fact that there should be so little dogmatic theology or biblical exegesis in Moody's sermons; but a revival is not the place to look for these things. A revival preacher is no pundit, but an exhorter to a new life, and he is, by the conditions under which he works, constrained to make his exhortations simple and general. He does not appeal to the select few, but to the general mass, and he must be careful—if any care were needed—never to leave their level. The crowd that goes to the Hippodrome has certain religious feelings of a very vague sort, as a common property, and it is these that must be touched. If the Hippodrome were nightly filled with thousands of people listening anxiously to an examination by Moody of Matthew Arnold's views of the Fourth Gospel, we should certainly be astonished; but that they should go to listen to promises of happiness, of repose of conscience, and of life eternal, from a man whom they must instinctively feel is only different from themselves by the religion which he has "got," and of which he tells them they too may have the endless blessings for the asking, does not strike us as strange at all.

It would certainly be singular if, as has frequently been alleged, there were large numbers of highly educated and critical people who were coming under the influence of Moody and Sankey. But though this has been frequently stated as a fact, we have seen no proof of it, and the general character of the audience at the Hippodrome disproves it. There are, it is true, in the building a large number of such people, but most of them belong to one of two classes, the officially religious class (of all denominations), which sees in the revival a means of bringing religious influence to bear upon people who are ordinarily beyond their reach, or the curious. Of the latter there are a good many, and of the former there are many more. Out ide these two classes the audience is not in any way noticeable, except from the absence of the very poor. Roughly speaking, it looks like an audience able to pay its way, to ride in horse-cars, or even on rapid-transit lines, should there ever be any.

Perhaps the most noticeable thing about the Hippodrome services is the orderly simplicity which marks them. The interior presents the appearance of a large church well filled with regular attendants. So far from there being any hysteria or excitement, it is difficult to detect among the audience any trace of violent emotion. There is so little of it, indeed, that whole rows of the audience present the appearance that rows in the theatre or a regular church might present. In the old-fashioned camp-meeting all sorts of coarse devices are resorted to to induce a somewhat hysterical condition of mind, but these are conspicuous by their absence at the Hippodrome. It is clear at once that you are not in the backwoods, but in a large city which has made considerable progress in refinement, and has learned to insist on mildness in religion. The singing, the preaching, and the whole air of the place tend to a condition of sentiment somewhat akin to that which, if we may suggest such a thing, an orthodox admirer of Renan's 'Vie de Jésus' might think truly Christian, and believers of a sterner mould consider too sentimental.

It has been observed by some persons that the musical part of the Hippodrome performances is made very prominent; and so it is. But so it has also been from the beginning of time at every revival and camp-meeting in the country. At all such meetings the rebellion against the claim of the devil to "all the good tunes" has been very marked. Camp-meeting or revival music is always a protest against religious music as given in the regular churches. There are in the Moody and Sankey hymn-books a few of the old, solemn, gloomy, and grand tunes which are to be found in every Congregational hymn-book, and the contrast between these and the Moody and Sankey tunes is very noteworthy. Musically speaking, the time of the old tunes is slow and regular, and the expression in singing is of the simplest. Pure, well-trained voices are all that is needed for such music. But the Moody and Sankey hymns, while written to religious words, are made attractive by many secular contrivances. The time is now slow, now rapid, constantly changing, the notes of every variety of length, and the general effect of the whole designed to give pronounced meaning to the words. Determine the pleasure that you get from a circus quick-step, a negro-minstrel sentimental ballad, a college chorus, and a hymn all in one, and you have some gauge of the variety and contrast that may be perceived in one of these songs. Sankey's voice is a loud and distinct, though not a refined one, and he sings with expression. He is, in fact, a trained ballad-singer, and dramatizes the sinner's or the believer's situation as he sings.

Moody is a camp-meeting preacher. In his style he is perfectly straightforward and plain; he practises no arts of oratory, and even stumbles in his delivery. There is no thought, of any consequence, in what he says; it is perfectly obvious that thought is the last thing he aims at. What he is here for is to exhort the impenitent sinner to believe and repent, and his means of convincing him that he ought to believe and repent are not those which Jonathan Edwards would have considered the most appropriate, but simply consist of exhortation and appeals.

It has been observed that revivals are apt to occur after great commercial crises; and whether this be true or not, there has not been a revival of any importance in this part of the country since that which followed the panic of 1857. During these fifteen or twenty years people have become so unfamiliar with the phenomena of revivals that they are inclined to believe there must be some mystery in the present one. The only peculiarity that we have been able to detect in it is, that in the present case the revivalists, accommodating themselves to the spirit of the times, have left out of their programme the use of the awful warnings of future damnation which use to play such a prominent part in their appeals. In the services at the Hippodrome the sinner is not frightened or browbeaten. He is affectionately entreated to enter into the kingdom of heaven. It is represented to him to be an easy matter—a matter not of ritual or works, but of exertion of the will. The revivalists' God is not the just Jehovah of the Puritans, holding the scales even and meting out rewards and punishment with an impartial and unpitying hand—a God who keeps the fires of hell constantly replenished with brimstone, and whose scheme of the universe is not complete without devils as well as angels. He is, on the contrary, a mild and loving God, forgiving and pardoning to the last; a God who cares little for correctness of dogma so that the heart be pure—the God of the ignorant no less than the wise, and who is present at the overflow meetings at the Hippodrome no less than at the churches on the Fifth Avenue corner lots.

Whether such a revival does harm or good, is one of those questions which are often put about movements on a great scale without much reflection as to what they really mean. What is meant by "good" and what by "bad" in such a connection? If we mean, Does the revival really "revive" the people affected by it? there cannot be any doubt that it does. The question in this form is very much like asking whether the women's whiskey crusade in the West in 1874 left the West at the end as drunken as at the beginning. The success of a moral or religious revival must be its own best proof. But if we ask whether the revival has, on the whole, improved the tone of those affected by it, we must ask what it attempted to do for them. Now, Messrs. Moody and Sankey's attempt has simply been to arouse an interest and belief in the efficacy of religion—not any particular kind of Christianity, but of Christianity itself; and it is utterly beyond belief that this can do any one any harm. We have no hesitation in saying that any father of a family, no matter of what sort, may risk himself, and his wife, and his children, and his maid-servant, and his man-servant, and the stranger within his gates at the Hippodrome, without fear of the result. They may not be edified, but they certainly cannot be harmed. There is only one type of person likely to be injured by Messrs. Moody and Sankey, and that is the type which from time immemorial has got little good out of any kind of religious services: we mean the character known to the religious as the "scoffer." But the scoffer will always scoff, whether there is anything to scoff at or not, and his scoffing makes but little difference in the long run.

RECENT AUSTRALIAN EXPLORATIONS.

MELBOURNE, Christmas, 1875.

POLITICS are suspended for a time, and it is with a feeling of positive relief that I turn from our degrading faction-fights to chronicle the most recent of a series of remarkable explorations which have ended in giving us a new and fairly full knowledge of a country that two years ago was as little known to us as the South Pole. Those among your readers who have not followed the course of Australian discovery will probably be surprised to hear that a part of this continent, comprising nearly half a million square miles of area, or more than twice the area of France, Switzerland, Holland, and Belgium united, remained down to 1873, or more than eighty years after the first settlement of Australia, a complete *terra incognita*. But a glance at any map of Australia will show that from latitude 20 to latitude 32, and from longitude 119 to 132 within the same parallels, there is scarcely a name to tell that civilized man has explored the country. Most wonderful of all, the country thus unknown was surrounded by settlements, and seems to form the natural highway from west to east across

the continent. We now know that in all likelihood it will remain uninhabited and undeveloped to all time.

Why we were so long baffled in all attempts to penetrate the western half of the continent is more and more easy to understand in proportion as we know the country better. It is, for the most part, a hopeless desert of sandstone and sand plains, resembling the Lybian desert more than any other known part of the world. Water is only found at rare intervals ; there is scarcely a trace of animal life for long stretches ; and the kangaroo, who can travel great distances to water, and the black, who can detect it beneath the soil where no white man would suspect it, are ominously absent from this region. Accordingly, every explorer for many years (except Eyre, who skirted the coast in one of the most wonderful marches on record) has been driven back by want of water for his horses; and if Leichardt, as some suppose, really penetrated into this region, he came to die in the desert. That it is now possible for explorers to succeed, as Warburton and Giles have done, where they themselves failed at first, is due to two causes. In the first place, a line of telegraph has been carried across the continent from Port Augusta, in Spencer Gulf, to Port Darwin, near the mouth of the Adelaide River, and the telegraph stations between parallels 132 and 136 afford convenient starting-points for explorers. Stuart's great discovery of a belt of comparatively fertile land bisecting Australia from north to south has thus had remoter fruits. But even more directly important has been the natural ization of the camel by a wealthy South Australian merchant—Mr. Thomas Elder. The history of the introduction of the camel is a little curious. Mr. Elder owned some important sheep-farms in what is known in South Australia as the Far North—the country from two hundred to six hundred miles north of Adelaide. Some twelve years ago this district was visited by a severe drought, and the ordinary means of transport failed altogether. I remember being there myself when cartage was ten pounds a ton for less than two hundred miles, and commonly could not be procured even at this rate. The natural policy would have been to construct a railway in such a country; but the South Australian Government offered such inadequate terms that no contractor would even look at the country. In this difficulty Mr. Elder saved his property by importing camels, chiefly from Afghanistan. The experiment was a success in every way. The camel flourishes in Australia ; and there is now abundant proof that no other animal can travel across a great part of the continent. Accordingly, Mr. Elder's co-operation is the condition of success just now in all exploration. Fortunately he is a public-spirited man, who, having no family, is well disposed to spend part of his great wealth upon enterprises of national interest.

The first of the three expeditions that have crossed our Terra Incognita owed its beginning to accident. The South Australian Government had resolved to explore from about the MacDonnell ranges (lat. 24, long. 133), and appointed Colonel Warburton, a veteran in such matters, to conduct the party. Objections were at once raised in the press and among the public. It was said, not unreasonably, that a man of over sixty was too old for the work. It was whispered that Colonel Warburton had failed on previous occasions from inability to take his bearings correctly. Not very gracefully, the Government cancelled his nomination, and appointed a Mr. Gosse to take his place. Mr. Elder resented the slight to a friend and old colonist, and decided to fit out an expedition at his own expense, which Colonel Warburton should command. I confess, at the time, I thought it a cruel kindness, and believed that an old man like the colonel, seconded by a son whose health had been very infirm, must either return ingloriously or perish in the adventure. But just as we had begun to despair of him, news came that Colonel Warburton had actually reached the De Grey River in Western Australia (lat. 22). The journey had been a triumph of sheer pluck. Discarding horses, lest they should retard the camels, the party had pushed doggedly on over wastes of dreary sand, or at most sand and scrub, and had just struggled out into good country in time to escape death by starvation. It was a splendid triumph ; but having studied Colonel Warburton's journal, I still feel that the doubts of his fitness for such an enterprise were justified. Like Burke and Wills, who died of starvation in one of the most fertile parts of the interior, the colonel was no true "bushman." We give this name a secondary sense in Australia. It meant originally, and still often implies, a man who lives in the bush or unenclosed parts ; but it means also, and pre-eminently, a man who has acquired the instincts and second sense of the savage, so that he can shift in a country where a townsman would be hopelessly lost. Such a man will never lose his way in common or forest or town ; will remember to all time what he has once seen, and will take note of all that comes under his eye ; will know, for instance, the different tracks of every horse in a large party. Like a sailor—and he is, in fact, the navigator of the desert—he can turn his hand to everything by turns ; will be carpenter, saddler, or sportsman, as suits his need. Above all, he will find food wherever there is animal or vegetable life. Captain Horell, one of the fathers of Australian exploration, once lent me a MS. journal of his early wanderings, in which he had noted that no one need die for want of food in the bush, if there were trees near. At the roots of the young trees he would commonly find a succulent white grub, which he might eat, and by cutting off a few boughs of the wattle (our acacia), and letting the sap drain off into his pannikin, he would get water. Privations scarcely inferior to this are common accidents, even now, in the life of a frontier bushman, and he often suffers from scurvy through the want of vegetable food. Yet so fascinating is the wild life of the bush, or so inveterate is the savage instinct in man, that no one who has really graduated in bush-life ever returns willingly to the towns.

Since Colonel Warburton's success the unknown land has been twice traversed : first, by Mr. Forrest, setting out from Western Australia, and taking a line between 26 and 30 of latitude ; and, more recently, by Mr. Ernest Giles, who started from South Australia, striking up north from Lake Eyre, and keeping pretty much about the line of 30 latitude. Mr. Forrest was fortunate enough to come upon one or two oases of fertile country. Mr. Giles, whose first report has only reached us by this mail, has travelled 2,575 miles between the settled districts of the two colonies during five months of journeying, and has crossed two deserts, one of 325 miles in breadth, the other of 180, without water. The first, of course, was the most trying. The party had travelled sixteen days without striking water, were left with only twelve gallons in stock, and had resolved to kill six of the camels, when they came suddenly on a small lagoon, fifty feet in diameter, described characteristically enough as a "fine sheet of water." Here birds appeared again, and during the last month of their wanderings the party lived very much on the eggs, variously aged, of the lowan, a kind of pheasant. So admirable was Mr. Giles's management that only two camels died on the journey. He proposes to work his way back between the tracks of Warburton and Forrest from Mt. Gascoyne, in lat. 25, long. 117, to the country about Lake Amadeus (lat. 25, long. 130). He had explored beyond this from the east last year, when he was driven back by want of water, having at that time no camels with him. If he succeeds this time, we shall know the western desert pretty thoroughly. It is, of course, barely possible that he may find a belt or large island of good land in the heart of the stony and sandy wilderness. Such surprises constantly meet us on this continent. But the great probability is that all the country is of the same character as that already traversed.

The political results of these explorations are not unimportant. Till now it has been a question whether the position of Australia connected it more with Europe or with America. What little doubt there may have been is now thoroughly set at rest. The east, comprising Queensland and New South Wales, is by far the richest part of the continent ; Western Australia by far the poorest, while the South and Southwest, Victoria and South Australia, are of intermediate importance in the scale of natural wealth. It may surprise you that I should speak thus of Victoria, the Australia Felix of early explorers, the El Dorado of later times ; but though we are still the premier colony, our mines show signs of decline and our land of exhaustion; and our area is so small that we have not that chance of something turning up which our neighbors may naturally count on in a comparative estimate. Above all, we have not the priceless coal-fields of New South Wales and Queensland. Practically, therefore, I think it certain that power will gravitate more and more to the States on the eastern and Pacific seaboard ; and that our commerce and communications will be more and more towards New Guinea and Polynesia, with Chili and California. The consequences of this are too numerous and too remote to forecast, but one is, I fear, imminent. As we people up towards the northern and tropical parts, there will be a growing desire to introduce slave labor under some plausible and philanthropical name. Already the *Argus* has suggested that we must develop New Guinea as the Dutch develop Java, by accustoming the natives to the blessing of forced labor.

Correspondence.

THE BANK OF ENGLAND'S RATE OF DISCOUNT.

To the Editor of The Nation :

Sir : Professor Bonamy Price, in his new book on 'Banking and Currency,' as well as in his recent letters to the London *Daily News* and to the *Nation*, has very pointedly expressed his dissent from the prevailing practice of the Bank of England to regulate the rate of discount by the state of the reserve and by the influx or efflux of gold. He frankly con-

fesses that, in holding these opinions, he is ranked in Lombard Street among the unbelievers and "cast into outer darkness"; but he holds stoutly to them notwithstanding, and is ready to break a lance with all comers in their defence. There is not much probability that the question will ever become a practical one in this country, as there is no controlling bank to dictate rates to borrowers and lenders; but the principle is well worth considering by all nations which have, or soon hope to have, a convertible currency. I ventured, twelve years ago, in a publication relating to banking,* to express the hope that, after a return to specie payments (which I was then sanguine enough to believe not far off), the New York Clearing-House might have the power and the disposition to vary the rate of discount according to the state of the exchanges; but I am sorry now to feel that the necessary conditions of such co-operative action are still very remote.

It seems to me that Professor Price misconceives the purpose of the rule in question. He uniformly discusses it as if it were a rule for the regulation of *banking*, whereas it is obviously a rule designed solely to protect and regulate the *currency*. As it affects the banking business of the Bank of England, and through it all banking in Great Britain, it is certainly open to grave objections. Professor Price has pointed out how unnecessary and futile it is, for example, to raise the bank rate upon the efflux of a million or two of gold at a time when the demand for loans is so sluggish that the increased rate operates only to drive borrowers away from the Bank into the open market. This has happened several times during the last five years, when the operations of the German mint have drawn gold out of London. In November, 1871, an advance of this sort led for the first time to the suspension of the arbitrary rule under which the London joint-stock banks are accustomed to allow interest to their depositors, in accounts current, at one per cent. below the bank rate. When, in this instance, the Bank of England advanced its rate, the open market refused to respond, and the joint-stock banks found that they were paying more for deposits than they could get for them, and the arbitrary rule had to be suspended.

There is no doubt that the frequent fluctuations which are caused by regulating the rate of discount by the state of the reserve are a serious impediment to trade; and the French manufacturers, upon whose petition the Imperial Inquest of 1865–9 was set on foot, had good reason to dread its introduction into the established usages of the Bank of France. Nothing is truer than that trade demands a steady rate for the loan of capital, that being an indispensable element in the cost of production. Any sudden or serious change in the rate of discount disturbs calculations, and even the risk of change taxes the consumer with a higher rate of profit than would otherwise be thought necessary, in order to protect the manufacturer against possible loss. In this respect it operates precisely as a fluctuating premium on gold now operates on the importation of merchandise into the United States. All this was very forcibly pointed out in the testimony given before the French Inquest in 1865. Serious though the objections be, I think they do not, however, touch the real question, which is, whether the practice of raising the bank rate to check an outflow of gold is necessary to maintain the *currency* system of Great Britain as established by the Bank Act of 1844. Whether that system is the best possible is quite another question. If it is conceded that a sound currency cannot be maintained in England unless the issue of credit money is restricted to fifteen millions sterling, then the utmost caution is justifiable to prevent its going above that amount. At some point in an outflow of gold it will be necessary for the Bank to adopt measures to stop it; and all the ingenuity of the Messrs. Péreire in France, and of the opponents of the practice in England, has failed to point out any so effective remedy as to raise the rate of discount. But Professor Price seems to think that if the business of the country is sound the currency will take care of itself, and that gold exported will be sure to come back again as soon as it is really wanted. This is carrying the doctrine of *laissez-faire* to an extreme which even English free-traders would be unwilling to admit.

The Bank Act of 1844 is simply and solely an act to fix and regulate the currency, and to ensure the convertibility of bank-notes. Under it the Bank of England is more than a bank; it is a sovereign, endeavoring, by a system of complex machinery, to do what Lord Overstone and Sir Robert Peel insisted that, under the act, it could do—namely, cause a mixed currency of coin and paper to fluctuate precisely as a purely metallic currency would fluctuate if there were no paper. The assumption upon which the whole system rests is, that the paper currency can under no conceivable circumstances fall below fifteen millions sterling; and that, if gold is held in bank for every pound in excess of that amount, the whole currency is essentially metallic. Now, Professor Price has shown in his last letter to the *Nation* how it is possible, when the Bank Act is suspended, as it was in 1847, 1857, and 1866, to create an over-issue of paper—that is, an issue above the amount authorized by the act, in a manner altogether different from that contemplated or permitted by the ministerial letters by virtue of which the act was suspended. Those letters permitted the Bank to issue an excess of notes in the form of "discounts and advances upon approved securities." Professor Price now shows that such an over-issue might also have been caused indirectly by the withdrawal of deposits. He supposes the case of a large claim being presented which exceeds the amount of unissued notes; the Bank meets it by sending to the Issue Department for more notes, as it may do, while the Act is suspended, on deposit of securities. Having paid these notes to the depositor, the latter, desiring not notes but gold, takes them back to the Issue Department and gets gold for them, thus indirectly drawing out the metallic base of notes already in the hands of the public; and, as Professor Price plainly states, it is possible for this conversion of deposits into gold to go on till the entire metallic base of the currency is withdrawn, and the suspension of specie payments made necessary without a single note having been presented for redemption. Such an event is of course in the highest degree improbable, and he uses it to show that the *banking* credit of the Bank of England is never in peril, since it is possible for its creditors even to exhaust the bullion held in the Issue Department, which is essentially a Government office. His argument, however, establishes the fact, of which he seems unconscious, that the currency system is even now not impregnable, and it seems to me to justify rather than impugn the wisdom of the prevailing method for protecting the convertibility of bank-notes.

It is quite possible that the directors of the Bank of England may be too sensitively alive to dangers which menace this convertibility, and may sometimes raise the rate of discount unnecessarily; but when we consider the enormous *measuring* power possessed by the currency of a country, we can hardly be too sensitive as to dangers which threaten to impair its value. Professor Price seems to me, throughout this whole discussion, to consider too lightly this, the most important, function of money. He treats its influence as insignificant, because so little of it is needed for exchange purposes; but just in proportion as the exchanges effected without money increase in volume, so is the importance of its measuring quality increased, and any inferiority in the standard of value dangerously multiplied. Whatever changes, therefore, are made in the currency of any country should be in the direction of greater intrinsic value.

The current of educated opinion in Europe is certainly with Lombard Street, and against Professor Price, in this matter. A great majority of the witnesses before the French Inquest agreed in thinking that the metallic reserves of the Bank of France should be protected by a rise in the rate of discount whenever a drain needed to be checked. "They recognized that in principle and in fact, before all and above all, the bank-note ought to be at all times convertible into specie." Whatever differences of opinion prevailed among them as to the methods of attaining it, "the object of all was the same—*an impregnable bank-note, kept always convertible by means of a sufficient metallic reserve.*"

GEORGE WALKER.

* "The Banking Controversy in France," *Banker's Magazine*, March, 1864.

Notes.

MACMILLAN & CO. will shortly publish the third volume of Lanfrey's 'Napoleon I.'; 'Fifty Years of My Life,' by George Thomas, Earl of Albemarle, in 2 vols.; 'Dr. William Whewell: an Account of his Writings, and Extracts from Unpublished Papers,' by J. Todhunter, also in 2 vols.; 'The Zoölogy and Geology of Persia,' 2 vols., by W. T. Blanford; 'Mandalay and Momien: the British Exploring Expedition to Western China in 1868 and 1875,' by Dr. Anderson; 'Geographical Diffusions of Epidemic Cholera in East Africa,' by Dr. J. Christie; 'Circular Notes: Westward round the World,' 2 vols., by J. F. Campbell; and 'The English Bible: a History of the Various Translations of the Scriptures,' by John Eadie, D.D.——Robert Clarke & Co., Cincinnati, are to reprint in two volumes 8vo a monthly publication devoted to the early history of settlements about the head-waters of the Ohio, which was issued at Pittsburgh in 1846–7, under the title of the *Olden Time*.——Colonel Richard Irving Dodge has composed, from his personal experience, a descriptive work, with maps and illustrations, on 'The Black Hills.' James Miller will be the publisher. — Claxton, Remsen & Haffelfinger, Philadelphia, have copyrighted what they call "Napoleon Slips"—smallish sheets of note-paper, namely, with seven printed enquiries calculated to direct a train of

thought or to clear up and fix one's ideas—"thereby promoting habits of observation with mental discipline and growth in their purest form," and hopefully imitating, as is alleged, the daily practice of Bonaparte.——Dr. J. P. Thompson has begun in Berlin a series of lectures, free to a select audience, on the American Centennial. The grounds and motives of the Revolution; the doctrines of the Declaration; the adoption of the Constitution; the nation tested by the vicissitudes of a century, and judged by its self-development and its benefits to mankind; and the perils, duties, and hopes of the opening century, are the topics announced. These lectures will also be delivered in Florence, Dresden, Leipzig, and London, and probably in Stuttgart and Geneva.——G. P. Putnam's Sons publish separately from the volume ('Hampton and its Students') in which they originally appeared 'Cabin and Plantation Songs, as sung by the Hampton Students.' The note to the preface would have been misleading in 1874, and is still more so now.——The second volume of the American translation of the 'Manual of Universal Church History,' by the Rev. Dr. John Alzog, Roman Catholic Professor at Freiburg, has just appeared (Cincinnati: Robert Clarke & Co.) Another volume will be required to complete the translation. The character of this history was explained in our notice of the first volume. It stands midway between the condensed text-book, where there is no space for detail, and copious narratives like those of Greseler and Baur. The controversial passages are written, in the main, with good temper, and with more candor than is usual in these days among historical writers of the Church of Rome.——Mr. F. Gutekunst, who has long stood at the head of his profession in Philadelphia, sends us a highly-finished and very striking photographic portrait of the late Charlotte Cushman, which must commend itself to her many admirers.

—*Lippincott's* for March is readable and fairly entertaining. Lady Barker continues her South African voyaging, and is as lively as ever in describing ports and waters little known to the American reader. She is deposited, as we may say, at the last in Maritzburg, the lofty metropolis of Natal, and it seems certain that she will find in her new home an abundance of material for future letters to the magazine. The Centennial paper is taken up with a review of the several international exhibitions, and, in a sketchy way, of the eminence shown in each by the leading contributors, America's invariably meagre portion being not glossed over. The illustrations are of the exhibition buildings from the Crystal Palace down. "The Songs of Mirza-Schaffy" is based on the revelations of Bodenstedt as to this now famous scribe of Tiflis. As presented here, they can hardly be said to make him appear even remotely deserving of the reputation which his German pupil has won for him by transfusion rather than by reproduction. His one song, "Mullah, rein ist der Wein," is here rendered into English together with a number of Bodenstedt's own. In "Charles Kingsley: a Reminiscence," perhaps as notable as any part of the conversation reported is his saying, or the form of his saying: "I owe all that I am to Maurice. I aim only to teach to others what I get from him. Whatever facility of expression I have is God's gift, but the views I endeavor to enforce are those which I learn from Maurice. I live to interpret him to the people of England." Mrs. Rebecca Harding Davis follows up her previous article on our life-saving stations with another relating to the Jersey coast, written with her usual ability. According to one of her informants, "from Sandy Hook to Cape May it's innocent to what is done on Long Island." The remark was called out by an allusion to "Barnegat pirates," and the practices referred to are even a shade darker than those described in the cheerful motto to chapter xiv. of 'Daniel Deronda':

> . . . "wear gems
> Sawed from cramped finger-bones of women drowned."

"The Barnegat men never touch the body till it's dead." The same loyal Jerseyman admitted that "the life-saving service, like all other Government service, for a good many years fell into the hands of politicians." We fear he missed a point here against his Long Island brethren. Politics, if we are not mistaken, still interest them, and have an unfortunate effect on their discipline and efficiency. We are not aware that there are any "harness-makers" or "tavern-loafers" among them, but apparently some of the officers regard their tenure as dependent on their activity in caucuses and at elections.

—There is not much in the current number of *Scribner's*. Mr. W. P. McCarty gives an entertaining account of Truro Parish, in Virginia, and the village of Accotink, and old Pohick church; the indefatigable Mr. Albert Rhodes describes the character of Balzac, and reproduces a proof-sheet corrected by him, which is certainly illegible enough to be curious; and Mr. Bret Harte contributes another instalment of his romance, "Gabriel Conroy"—a tale which does not improve as it goes on. Mr. Harte has got beyond his depth, and, what with his mining law, and his dark-haired senoritas, and his abandoned villains, and his deserted heroine, seems to be gradually leaving daylight behind him, and making a Chinese puzzle of what promised to be an interesting if not improving story. We shall rely on a little cannibalism in the next chapters to relieve the tedium of the way.

—The *Galaxy* for March contains a poem on "The Ideal and the Real," by Joaquin Miller, which we have found great difficulty in understanding. Some critics may think that it is a waste of time to try to understand it; but it must always be remembered that Joaquin Miller, like Walt Whitman, though without much honor in his own country, has received the approval of a highly cultivated public in England, and that he is there thought to be a representative American bard. The theory on which his claim to this character is based is a very simple one, and may be stated in the following terms: America is a country which has cut loose from the traditions, social, moral, and literary, of Europe, and consequently American poetry must not be judged by the standards which have been considered correct in Europe, but by standards wholly different—in fact, by opposite standards. Now, in Europe, by common consent, the excellence of poetry has either been held to consist in the beauty or interest of the subject treated, or the beauty or skill of the versification, or in the clearness, directness, appropriateness, or force of the expression, or in a combination of some or all of these qualities. To determine, therefore, what the best American poetry is, we must search until we find some in which the subject has neither beauty nor interest, in which the versification is based on no rules, and in which the expression is neither direct, strong, appropriate, nor intelligible. Applying these canons, it is perhaps hard to say which is the best poet, Whitman or Miller. As to the interest of their subjects, it would puzzle anybody to tell which has least interest or beauty; for Whitman has taken a sort of cosmic chaos, a jumble of everything under the sun, as his theme, while Miller has exercised a principle of selection, and either taken the most ugly and repulsive materials, or else has in his treatment managed to make his good subjects so uninteresting by his maudlin way of dealing with them as to produce pretty much the same effect. In morality they may be said to be neck-and-neck. As to force, appropriateness, clearness, or directness, they do not recognize, so far as we can make out, any obligation. Whitman we have generally found the more intelligible of the two, while Miller's chief defect consists in the formalism of his verse, showing him to be at a lower stage of development than his rival. We have no space to criticise the poem of the *Galaxy* at length, and we should be loth to do so; but we must call attention to the innovation in the prefatory lines in the use of the word *real*, which we have no doubt will be much appreciated in England. The third line—

> "that the real is the ideal—"

shows that the poet of the Sierras makes "real" a word of one syllable, and the fact that he makes it rhyme with "steal" leaves little doubt as to his pronunciation of it. This number of the *Galaxy* does not strike us as being up to the usual mark. We should hardly have expected before the summer months the appearance of the article on "Hard Times and their Remedy," in which two business men are represented as meeting a friend who is "not a business man," on which one says to the other in a familiar way, "Let us obtain his views concerning the depression of business which is now creating such hard times." The reply of the third citizen was that the trouble all lay in the non-employment of laborers anxious to work, and that the only remedy was for Government to "launch out boldly in the direction of the enlargement of industry, start the wheels into brisk motion," etc., etc. We commend this article to the attention of the able author of the modern Æsop, now appearing in the columns of the *World*, who might find it to his purpose.

—Mr. E. P. Whipple concludes in the March *Harper's* his "Century of American Literature," and justifies our fear that he would not, in the space probably at his command, be able to handle his subject. In this second paper he appears for some time to have it under control, but towards the last he shows visible signs of "distress," as they say in the prize-ring, and, to carry the figure a little further, the mob of authors presently break through the lines and trample him under foot in the struggle for recognition. In fact, the two papers taken together are lamentably wanting both in definiteness and in breadth of treatment. The scheme of the present one we will not venture to describe. It deals mainly with living authors, and opens with the Unitarian poets, among whom, singularly enough, Emerson is not mentioned, apparently because he has already been disposed of as a leader of the "New England revolt against Calvinism." Yet it will hardly be questioned that Mr. Emerson's fame and estimation as a poet are

destined long to outlast his system—or, as it would be more accurate to say, his school—of philosophy. In passing judgment upon his contemporaries, may of them his townsmen and neighbors, Mr. Whipple makes it clear that his task should have been confided to anonymous hands. To be anything but "genial" and "appreciative" under such circumstances should not be demanded of a littérateur who signs his own name to his critique, least of all in his judgment of authors who, as conductors of the periodical press, have his reputation if not his literary success in some degree at their mercy. Some of Mr. Whipple's statements seem to us curiously wide of the mark. When he asserts that "in the political history of the country there only remain two 'families,' in the English sense of the term: these are the Adamses and the Hamiltons"—what will the Jays and the Quincys and the Lees feel like saying? Again, when he asserts of Everett that "he suffered exquisite mortification and pain at unjust attacks on his principles and character, whereas such attacks awakened in Sumner a kind of exultation, as they proved that his own blows were beginning to tell," he advances a view of Mr. Sumner's thickness of cuticle absurdly and notoriously at variance with the facts. One other passage we submit without comment to Dr. Fitzedward Hall. "In the *minutiæ* of English philology he [Mr. Richard Grant White] has rarely met an antagonist he has not overthrown. In these encounters he has displayed wit, learning, logic, a perfect command of his subject, an imperfect command of his temper. The positiveness of his statements, however, seems always to come from the certainty of his knowledge." Of the illustrated articles the most useful is that on "The Microscope." In some of his designs for his paper "The Baby" "Porte-Crayon" is at his best. Prof. Crane's précis of Gregorovius's life of Lucrezia Borgia will be news to most readers, and, allowing the latter part of her career to interpret or to excuse the earlier, will probably modify their opinion of this too famous woman. The second instalment of "Daniel Deronda" is not disappointing like the first.

—Mr. T. S. Perry has written for the *Atlantic* an article on Victor Cherbuliez, which gives a better account of his singular *mélange* of virtues and vices than we have before met with. Most people will probably agree with Mr. Perry that Cherbuliez writes rather for the entertainment of his readers and the display of his own wit than because he has any particular message to deliver to the world; but this is not, to our mind, so serious a blemish as the extremely melodramatic character of the incidents he uses to heighten the interest of his stories. Melodrama is good after its kind, and novels after their kind; but in such novels as 'Le Comte Kostia' or 'Le revanche de Joceph Noirel,' we feel as if we were almost before the foot-lights—as if the witty dialogue and sensational scenes had been designed with reference to adaptation to the stage. His whole use of incidents is theatrical rather than literary; the author exaggerates the importance of the physical facts at every crisis in his stories. In the theatre, the fact that everything is seen from a distance and under difficulties make this admissible, but the same thing cannot be said of literature. At the theatre—or at any rate the melodrama—we are all children, and may be tickled with a straw or pleased with a rattle, particularly if there is a change of scene, and music "to mark the points," when the rattle or the straw is brought forward; but when we read, instead of seeing, we revolt at the childishness of the means used to excite our interest.

"Midnight walks among chimney-tops, swinging in mid-air over an abyss—even on a piece of new rope—struggling with savage dogs, and all such sports are cheap, well-worn incidents, which lend factitious importance to the story, in very much the same way as raising the voice in anger adds to the soundness of argument. It is in the invention of scenes like these that Cherbuliez, when he is not at his best, delights. To this form of art he has bent much skill, so much indeed that it is easy to overlook the cheapness of some of these devices. Victor Hugo has no sooner created an impossible situation than he is out among the audience leading the applause; but Cherbuliez wears an easier air of being amused at his own ingenuity rather than profoundly convinced of its value."

Mr. Perry notices the theatrical turn of Cherbuliez's mind in the curious piece of "business" in 'Paul Méré'—the devotion of the young girl to the slippers of her mother (who had been a ballet-dancer), and mentions it as an instance of his "constant attempt to illustrate what he wishes to say by means of some outward and visibly glaring sign"—a tendency genuinely theatrical. All this does not detract at all from Cherbuliez's undoubted cleverness at dialogue and character (his women are excellent, though his men can hardly be considered very real), but it makes us wonder that none of his stories have—to our knowledge, at least—been turned into plays. There must be a mine of wealth in store for any manager who puts Joseph Noirel (with a few slight emendations, to suit the taste of the audience) on the American stage.

—Admirers of the late Dr. Francis Edmund Anstie will find in the *Practitioner* for January (Macmillan & Co.) a most interesting account of his career from the pen of his brother-in-law, Dr. Buzzard. The steel portrait of him prefixed to the article both reminds one by its youthfulness of his untimely death, and bears most expressive testimony to his goodness and earnestness. One seldom sees, indeed, a more pleasing and intellectual countenance. Dr. Anstie, it appears, got all his non-professional education at a small private school in his native town of Devizes, in Wiltshire, where he seems to have been well grounded in the languages, and began his medical apprenticeship in his sixteenth year (1850). Three years later he entered the Medical Department of King's College, and came under the powerful influence of Dr. Robert Bentley Todd, whose peculiar views as to the use of alcohol in the treatment of acute disease found a disciple in Anstie, and determined the leading line of his original investigations in after-years. His first paper on "The Alcoholic Question" was contributed to the *London Medical Review* in 1862, and was shortly followed by two in the *Cornhill Magazine*, in which the question whether alcohol was food or not was discussed in a popular manner. A work on 'Stimulants and Narcotics' next engaged his attention, and his labors of literary research and laboratory experimentation were most arduous and unremitting. "He would spend whole days in the reading-room of the British Museum, and then sit up till three and four o'clock in the morning working again, and utilizing the material which he had acquired, and this merely for the sake of giving completeness to the historical part of the subject upon which he was writing." "Some of the experiments which he performed were attended with considerable personal risk. On one occasion he fastened to his face an inhaler containing an ounce of ether, placed his watch before him, took a pencil in hand, and began to make a mark upon a piece of paper on the lapse of every fifteen seconds. He soon lost consciousness, and when he could again distinguish his watch, he found that thirty-five minutes had elapsed, and that he had made but two marks on the paper. He was alone during this experiment." The various forms of Dr. Anstie's activity cannot even be enumerated here; most dear to him, perhaps, was the subject of public hygiene. He overtaxed himself enormously, and his system would probably soon have broken down if he had escaped the immediate occasion of his death—a school epidemic which he was investigating. Socially as well as publicly he was a great loss. He had a natural gift for music, and knew more about it than most amateurs. He was, as his biographer lets us see, a good fighter and ardent advocate; but those who, like ourselves, knew him only through the *Practitioner* must have thought him for one of his profession singularly moderate, candid, unpartisan, and liberal.

—The *Renaissance* frequently alludes to the significant proportion of Protestants who rise into prominence in public affairs whenever France is left to act freely. Lately it has been counting the Protestants in the new Senate, and discovers 15 out of 300, or one out of 20; whereas in the country at large there is but one Protestant to every 48 or 50 inhabitants. In the little senatorial minority MM. Léon Say, Scherer, Waddington, and De Freycinet are the most distinguished names. They should have had as colleagues at least three other Protestants among the candidates, Gen. Chabaud-Latour being the most conspicuous. The *Renaissance* consoles itself for the defeat of these gentlemen on the ground that they were supported by the Clerical and Ultramontane wing of their co-religionaries, and were opposed by the Liberal element. The same paper asserts that the figures in the last *Almanach de Gotha*, by which the French Protestants are set down at 500,000, is a third too small.

—"Every art-lover is, as soon as he has any chance of becoming so, an art-collector." It is, therefore, on his own showing, a pretty numerous class for whom Herr Wessely has prepared his 'Guide to the Knowledge and Collection of Prints' ('Anleitung zur Kenntniss und zum Sammeln der Werke des Kuntsdruckes'), which has just been published in Leipzig by T. O. Weigel (New York: L. W. Schmidt). It is an open-faced volume of 280 pages, plus an appendix stuffed with bibliographical lore which few experts can affect to despise. The main body of the work is equally divided between the art-lover and the nascent connoisseur. In the first section the nature, worth, history, and varieties of wood and metal engraving, of lithography, the manufacture and water-marks of paper, etc., etc., are sketched in a lucid and orderly manner, and this is supplemented with a statement of the criteria of the value of prints, whether artistic, mechanical, or commercial. The second section is wholly occupied with instructions, what, how, and where to collect; how to restore, preserve, arrange, and catalogue prints; and with some suggestions as to the object of public collections, and how this object may be realized. As specimens of the manner

and the good sense of Herr Wessely we may refer in the first section to the chapters in which the old question is again discussed as to whether the famous artists of the sixteenth century actually engraved the blocks which bear their names, or merely drew their designs upon them; and the more recent question—Will photography injure the engraver's art (*Kunstdruck*)? The relations of photography to art are very clearly distinguished by Herr Wessely, and he draws the line between them with no uncertain hand. He does not allow them to be competitors, but he is not too prejudiced to admit the utility of photography as ancillary to art, and that nowadays collectors cannot wholly dispense with photographs. He gives a striking proof of the failure of cheap heliotypes or heliogravures to affect the price of rare prints, by citing the high prices obtained at the sale of Galichon's effects for the very Mantegnas and Marc-Antonios from which the heliogravures had been taken. We have not space in which to enumerate the contents of the third section, or appendix as we have called it. It indicates the vast number of works to which the connoisseur must look for his training and for his guidance from time to time; it gives alphabetically the addresses of the principal art-publishers of the last three centuries; in like manner, all the important auctions of copper-prints known to the author; and, finally, two plates of monograms and marks of famous collectors, with their interpretation.

SIDGWICK'S METHODS OF ETHICS.*

I.

THE 'Methods of Ethics' is a weighty contribution to the theory of morals by a writer whose perfect command of his subject is equalled by the originality and freshness with which he treats it. Mr. Sidgwick's work possesses, moreover, that rarest and least appreciated and the most important of all merits, of being throughout an appeal to reason, and to reason alone, by one of the most careful and logical of reasoners, who never forgets himself or lets his readers forget that truth is to be attained by sound reasoning, and cannot be arrived at by the short cuts suggested by rhetoric or sentiment. The primary duty of a critic in handling such a work is clear. Censure and eulogy are, in the strictest sense of the word, impertinent. A reviewer's first and most important task is in such a case the duty of exposition. His aim (and it is the only aim with which the present notice is written) should be to force on the attention of his readers the main characteristics of a book which, whether its conclusions be accepted or not, cannot be overlooked by any one who in future examines ethical problems, and will interest and instruct every student who cares to investigate the questions presented by ethical science.

The following sentences describe Mr. Sidgwick's estimate of his own work: "The present book contains neither the exposition of a system nor a natural or critical history of systems. I have attempted to define and unfold not one method of ethics but several. At the same time these are not studied historically as methods that have actually been used or proposed for the regulation of practice, but rather *as alternatives between which the human mind seems to me necessarily forced to choose when it attempts to form a complete synthesis of practical maxims and to act in a perfectly rational manner.*" These words contain in a compressed form a description of the peculiarity both of aim and of method which is the original feature of a book every page of which contains more thought than would by most writers be held sufficient to supply substance for an essay. But the compression of Mr. Sidgwick's language will lead persons who have not studied the whole of his book to miss the full bearing of the sentences cited, and it is therefore of consequence that their point should (so to speak) be emphasized.

The aim of Mr. Sidgwick's speculations is summed up in the words which we have underlined. The problem he proposes is, How far and by what course of reasoning is it possible to establish a rational system of rules for the regulation of human conduct? Every one, he assumes, wishes to act if possible "rationally." But when the idea of "reasonableness" or "rationality" is analyzed, it will be found that conduct cannot be considered in a strict sense rational unless it conform to some principle which can itself be shown or be seen to be itself ultimate and beyond a doubt. The scientific character, that is to say, of ethics depends on our being able to establish the existence of fundamental axioms or principles, conformity to which gives validity to the minor maxims which immediately regulate conduct. There are at least three different systems, or, as Mr. Sidgwick prefers to term them, "methods," professing to lay the basis on which a science of ethics or a coherent body of maxims for conduct may be erected. The first, which Mr. Sidgwick terms "egoism," assumes as its fundamental principle that it is "rational" for a man to seek his own happiness. The second, termed by Mr. Sidgwick, not perhaps very happily, "intuitionalism," or the system of common sense, makes "rationality" to consist in the doing what is right; whilst the third method, "utilitarianism," makes the rationality of action depend on its being conducive to the general increase of happiness. Each of these systems has its adherents. By the ordinary man of the world the truth of each is (paradoxical as the assertion appears) at once admitted and denied. The fundamental axiom, that is to say, of each school is admitted; but the very person who concedes the principle will generally start back from the conclusions which flow from it, and does not feel the difficulty of admitting in words the truth of axioms which are not only different but fundamentally inconsistent. Whoever doubts this should read Macaulay's attack on James Mill. He will soon perceive that the assailant of utilitarianism was at bottom a utilitarian, and that what Macaulay objected to was the systematic expression of deductions from premises with which he had no serious quarrel.

Now, if ethics can be made into a coherent system or, to use Mr. Sidgwick's form of expression, if it be possible to "act in a perfectly rational manner," one of the following results must be attained with regard to the three existing methods: You must show either that they are all unsound, and that there exists some fourth and true method of ethics, or that some one of them is sound, or, lastly, that some more general principle will include the fundamental maxims of at least two of the three methods. To ascertain, if possible, by fair enquiry whether any of these methods be sound, and, if not, whether any sounder or more rational method can be suggested, is the problem taken up by the author of the 'Methods of Ethics.' His immediate object is, as he well states it, "not practice but knowledge." His attitude is best understood by making use of a fancy which found favor with writers of the last century. They frequently tried to imagine how our world would look to the eyes of the inhabitant of another planet, and thus in imagination gazed on human affairs from the outside. Mr. Sidgwick is the intelligent stranger from Mars or Saturn. Study and sympathy have made him acquainted with the facts of human nature. "Disinterested curiosity" leads him to study the problem, What, if any, are the rational principles which should guide the conduct of mankind? This mode of viewing morals is best understood by contrasting Mr. Sidgwick's attitude with that of other moralists. As an intelligent looker-on he has neither the call nor the wish to be the expounder of a system. His calm investigation leads indeed to more definite results than he has perhaps made apparent either to himself or his readers, but his object is investigation, not exposition. In this respect his position is entirely different from that held by even the most candid of ethical writers. Mr. Mill, for example, is, as far as intention goes, as fair an exponent of utilitarianism as can be found; but he avowedly writes as a utilitarian. His object, which is a perfectly fair one, is to put forward the strength of his own creed and to confute the dogmas of rival schools; and what is true of Mr. Mill is, of course, equally true of the best of his opponents—such, for example, as Mr. Martineau or Mr. John Grote.

Mr. Sidgwick, again, is the critic of moral theories; he is not the historian of ethical opinion. Two or three passages in his book show that he is fully capable of using the so-called "historical method." By assuming the critical rather than the historical attitude he has deliberately run counter to the fashion of the day, and has damaged the popularity of his book. It is, therefore, only just to him to state our deliberate opinion that the course he has taken is the right and the wise course. Historical investigation has an important part to play in the field of ethics, but it is time to protest against the one-sided devotion to the historical method which is leading the world to forget that truth is the end of investigation, and that to show how an opinion grew up is a different matter from proving its truth or falsehood. Indolence and sentiment are so apt to suggest the illusion that a fallacy is respectable because its growth was natural that too much honor cannot be paid to an author who insists on testing every dogma by the criterion of truth or falsehood. If Mr. Sidgwick is neither the exponent of a system nor the historian of opinion, still less does he play the part of a preacher. Filled with the thought that the "predominance in the minds of moralists of a desire to edify has impeded the real progress of ethical science," he resists with singular self-restraint the temptation, of which ethical enquirers are the ready victims, to pass from the domain of careful argument to the province of hortatory rhetoric. Writers whose form of expression continues strictly argumentative are constantly in sub-

* 'The Methods of Ethics. By Henry Sidgwick, M.A., Lecturer and late Fellow of Trinity College, Cambridge.' New York: Macmillan & Co.

stance slaves to what may be termed the idols of the pulpit. No author, for example, has stated the case in favor of intuitionalism with greater success and clearness in a popular form than Miss Frances Power Cobbe. Her 'Intuitive Morals,' which has won deserved reputation on both sides the Atlantic, may compare, and favorably, with Mr. Mill's 'Utilitarianism.' In one respect there is, unfortunately, too great a resemblance between the two books: the effect of each is much diminished by the obvious though unconscious desire of the author to write for the edification of readers. This tendency (which has made the name of "moralist" almost a by-word) can be avoided only by clinging to the conviction that the progress of ethical science can only be promoted "by an application to it of the same disinterested curiosity to which we chiefly owe the great discoveries of physics." This belief gives the tone to the whole of Mr. Sidgwick's book. It fixes the aim of his speculations. It no less governs the method in which they are pursued.

Mr. Sidgwick's mode of procedure is the necessary consequence of his position. His object being to ascertain which if any of several methods are true, and, if not, what if any other method or system can be ascertained to be true, he is necessarily led to criticise existing views at once with the utmost fairness, and also with the most searching strictness. It would be fatal to his object if he did not place the views criticised in their strongest light. He is also bound to subject them to the most rigid criticism. It is further, as he points out, by no means enough to show the strong points of one system—*e.g.*, utilitarianism—and the weak side of opposing schemes. It is equally necessary to show the relation between the strong side of utilitarianism and the strong side of intuitionalism. A conscientious enquirer must also trace each system into its results and face all the difficulties with which each scheme may be met. It is in the extraordinary impartiality and thoroughness with which he goes through this dialectical process that Mr. Sidgwick's power and originality are shown. No maintainer of a system is likely to be satisfied with Mr. Sidgwick's results. His desire not to evade a difficulty, and morbid dread of expressing greater certainty than his premises warrant, lead frequently to something which may best be described as innocent casuistry, and conceal the amount of certainty which he in reality obtains; but candid intuitionists who will to the end of the chapter feel that Mr. Sidgwick has unintentionally done their case injustice, will not deny that he has driven home with the utmost force the arguments against utilitarianism. It is as though our imagined inhabitant of Saturn were good enough to state for the benefit of rival philosophers the case for and against each of their favorite schemes. The whole work may be described as a long charge delivered by an impartial judge to a jury summoned to try the questions at issue between utilitarianism and its opponents. The charge is long, laborious, painfully candid, and thoroughly exhaustive. Careful attention is given to every point which advocacy can suggest. Irrelevant questions are conscientiously set aside. The insoluble riddle, for example, of free-will is reduced to its simplest terms, and proved to have little bearing on the point for decision. The long dispute over the origin of moral ideas is shown scarcely to touch on the validity of moral intuitions. It is freely conceded to intuitionists that the distinction between right and wrong is one which, whatever its origin, is now as natural to the human mind as that between beauty and ugliness. On the other hand, objections to Benthamism which arise simply from the fact that popular language was not framed by Benthamites are brought down to their true proportions. The fluent plausibilities of Mr. Lecky are answered with a completeness which their importance hardly deserved. And the most fanatical Benthamites will probably acknowledge that bigoted utilitarians have often failed to find anything like satisfactory replies to objections which Mr. Sidgwick's acuteness disposes of once and for ever.

This scientific criticism would be of inestimable value even if Mr. Sidgwick arrived at no conclusion, since the destruction of error is the first step to the ascertainment of truth. But Mr. Sidgwick's charge, though perfectly impartial, distinctly suggests a verdict in favor of one form of utilitarianism. The inhabitant of Saturn is not absolutely certain that a rational system of ethics is possible, but observation and reason lead him to the conclusion that the one maxim of intuitional morality which may pretend to be an axiom is also the fundamental principle of Benthamism. For the ingenious train of argument by which this result is established our readers must be referred to the 'Methods of Ethics.' Our present concern is neither the defence nor the criticism of Mr. Sidgwick's dogmatic conclusions, but to press on the attention of all interested in moral problems the extraordinary skill of Mr. Sidgwick's dialectics, and the immense service he has rendered to truth by his dispassionate enquiry into the nature and value of the actual or possible methods of ethics.

SYDNEY SMITH.*

SYDNEY SMITH was one of the favorites of fortune. He lived at a lucky time for himself, and had a very fair slice of what cake was going in his line. No doubt he would not have objected to exchange his canon's stall for an episcopal throne had such been the good pleasure of Providence and the Whigs when they disappointed Byron's prophecy by "coming into place." But, if he had hoped for such a possible return for his fidelity to his party when it had fallen on evil times and evil tongues and for his services to it, the disappointment did not turn the milk of his human kindness sour, nor inspire the *sæva indignatio* which scorched the heart and brain of Swift when Queen Anne could not be prevailed upon by Harley and Bolingbroke to place a mitre on the head of the author of the 'Tale of a Tub.' And we imagine the merry Canon of St. Paul's would have found it hard to have restrained his festive humor within the limits becoming the episcopal dignity. It would have been a suffocating effort, we should judge, to confine his more uproarious laughters to his sleeve, even if that sleeve were of lawn. A dignified position in the church, a sufficient income, a good house in London, the run of the best society, the friendship of wits, poets, and statesmen, and an unending cycle of good dinners, must have been a fitter ante-past of heaven to one of his mould than the solemn splendors of an episcopal palace, and the labors and quarrels which ever wait about an episcopal throne, could have afforded him. The half was more than the whole in this case, we believe, whether he did or not.

We have said that Sydney Smith lived at a lucky time for himself. It was a lucky time for him as an Anglican clergyman. It came after the days of the laxity of the higher clergy and the sordid poverty of the lower which prevailed in the last century, when clergymen figured in divorce cases and fought duels on the one hand, and when Parson Trulliber buffeted his pigs with his own ordained hands and Parson Adams had to copy Æschylus for himself, lacking means to buy one, on the other. And his clerical life was chiefly past before Ritualism on one side and Evangelicalism on the other began to make the gate straiter and the way narrower for his less fortunate successors, who find that it craves wary walking to combine an honorable ambition with the testimony of a good conscience. In his happier day, a dignified clergyman could follow the hounds without Low-Church cavillings; Doctor Portman could hold Shakspere to be the fortieth article of his creed and go conscientiously to the theatre at least once a year as an evidence of his faith, while he could maintain the orthodoxy of his rubber of whist by the example of the anointed head of the English Church. Perhaps there is a remnant left of these sound divines even to this day; but we fear that they hold fast to that which is best in the face of the frowns of Low-Church and the groans of Dissent. We wonder whether the younger clergy of the day are allowed to dance, as the Henry Tilneys and Edmund Bertrams were two generations back. Sydney Smith, however, began his professional life at the very foot of the ladder. Parson Adams himself was hardly poorer than he when he served his first cure of souls on Salisbury Plain, and often dined on potatoes, like his predecessor, the Shepherd of that ilk, in Hannah More's tract, who pitied "those poor people that had no salt to their potatoes!" *He* had *ketchup*. It is a genuine pleasure to follow the bettering fortunes of the stalwart divine as he proceeds from Salisbury Plain to Edinburgh, to London, to Foston, and so forward till he casts anchor in every sense for good in London again.

Sydney Smith was a fortunate man, again, in the circumstance that he had his good things in his own lifetime—the best of all possible times for having such. From the time of his establishing the *Edinburgh Review* forward he was a well-known personage, a favorite of the Whigs, whom he served well and faithfully, and a writer that everybody read and whose good things were in everybody's mouth. We rather doubt whether Prince Posterity will fully confirm the patent of immortality which his contemporary admirers have sued out for him. He was an exceptionally clever and a very witty man, but perhaps hardly so fully head and shoulders above all his competitors mentally, physically though he were, as to be seen very much further or for a much longer time than they. We incline to the belief that his strong personality—what we Yankees call magnetism—had a good deal to do with the impression he made on his contemporaries. Judged merely by his writings and his bon-mots, we think he will not stand out so very prominently from the ranks of the noble army of ephemeral writers and wits as his personal friends hold that he should. His reviews and political writings were keen and bright and polished weapons of offence and defence, but, like the arms of other bygone fights, when collected and hung up for monuments, they appeal rather to antiquarian curiosity than to living

* 'Works of Sydney Smith, etc.' New York: R. Worthington & Co.; London: Longmans & Co.

interest. His topics were essentially temporary in their character, and it is only to a particular class of minds and not to the universal human heart that they appeal, now that the immediate occasions of them have long passed away. In short, though Sydney Smith was, as we have said, a man of great wit and extreme cleverness, he was not a man of genius, and it is genius only that seizes and holds possession of men's minds in perpetuity. We have no room to argue this point, if argument it needs. We will merely illustrate what we mean by a single example. During the time of Sydney Smith's highest reputation and influence, when great parties were diversely but powerfully stirred by his poignant wit and bitter sarcasm, there was a queer clerk in a public office who eked out a petty salary by writing odd essays for magazines now only remembered through him. It is quite probable that Smith never heard of him till late in his career. But Charles Lamb has taken his place among the immortals, and his works have incorporated themselves with the mind of the English-speaking race, never to die out. Sydney Smith could hardly have hoped for an immortality like this. He certainly will not gain it. It is the reward of genius only, that undefined and undefinable gift of which we all feel the charm, though we may not be able to describe the magic that creates it.

We are not sure that it was generally known at the time, that Smith was the writer of most of the savagely contemptuous articles about America in the *Edinburgh Review*. Jeffrey had usually the credit or discredit of them. But Smith it was that penned the famous query, "Who reads an American book?" which so stirred our patriotic bile. These articles of his are full of ill-natured gibes and jeers at us and matters pertaining to us. It is a little odd that the *Review*, which wore and still wears the buff and blue of Washington's uniform, and which represented the ideas of Fox and Burke and our strongest friends during the Revolutionary war, and which was striving to bring about the political reforms that were already in practice here, should have diverted itself with making fun of us and our doings, instead of making the best of us as practical examples of good constitutional government. But there was little malice in it all. "They that have good wits will be flouting," as Touchstone says. It was the frolicsome outburst of high spirits which makes a big brother tease a little one for his amusement, but meaning no harm. But it was a grave error, for more of the ill-will which has been felt towards England here has been owing to wounded sensibilities caused by the wits than to the political injuries attempted by George III. and his ministers. We are too big ourselves now to care about these things. We have outgrown the sensitiveness of our youth, and our national cuticle has thickened and hardened marvellously with our growth. The articles of Sydney Smith in question will be found in one of three volumes which have suggested this prolusion. They will excite small sensation now beyond amusement at their wit and dexterity. One of the three volumes contains his 'Wit and Wisdom,' and consists of a collection of his brightest things. We cannot but think that this was the act of an ill-judging partiality. It is very amusing reading, but it palls a little on the palate from its very quantity, and rather suggests a question as to whether the quality of the dainty dish is quite equal to its pretensions. We think the pudding would have been better if the plums had been left where they belonged, instead of being picked out and put on a plate by themselves. We doubt whether the famous Jack Horner himself would have been aroused to the height of self-laudation which has made his name immortal, if the plum which excited it had been pulled out for him instead of being the trophy of his own triumphant thumb. The three volumes, though they contain all the writings of Sydney Smith, are not parts of a set, one and indivisible. They can be had separately or together. They contain all that was left behind him of the most famous Canon of Saint Paul's. The publishers have done a good thing in giving them to the public in these cheap and handy volumes.

RODERICK HUDSON.*

THE readers of Mr. James's other writings, who rightly appreciate them, are justified in looking for a great deal of pleasure in the reading of this new novel, and, after finding this pleasure, they will recur with all the keener enjoyment to his earlier stories; for while the qualities connected with thoughtful and elaborate observation have here more complete expression than Mr. James has given them before, their very excellence makes them serve as an admirable foil for the greater simplicity of his earlier work. In saying this we are thinking especially of those stories of Mr. James's of which the scene is laid, as for the most part is the case with this, in Europe—that charming series which began with the 'Passionate Pilgrim' and ended with 'Madame de Mauves,' including among others the plaintive tale of the young French girl, pretty, graceful Gabrielle, and the more passionate sorrows of the Italian woman at Isella.

Though the scene of 'Roderick Hudson,' as we have said, is laid in Europe, with Rome for the background of its sombre incidents, which succeed each other in an unbroken file, and with the precipices and storms of Switzerland causing the closing catastrophe, the *dramatis personæ* are all Americans, and each one—it would almost appear, as if unconsciously to the author—is in his or her individual way a constant reminder that Americans lose much of their rightful charm and interest when transplanted from their own habitat and exhibited among the more cultivated growths of foreign life. The bare plot of the story is this: Rowland Mallet, the hero *de facto*, meets at Northampton, in the State of Massachusetts, Roderick, the hero *ex officio*, and, discovering in him an unrecognized genius for sculpture, transports him on the wings of his own large fortune and Rowland's enthusiasm to Rome. On the eve of leaving home Roderick engages himself to a certain Mary Garland, in whose serene solidity Mr. Mallet, in a very few interviews, has on his side felt that charm which is but love, while Roderick's love is but the flower of that other charm which lies in familiar companionship. In mid-ocean, Roderick's careless communication of his relations with Miss Garland reveals to Rowland a future of self-sacrifice—of self-sacrifice, as he despairingly hopes, for her sake. But the self-sacrifice becomes mingled with poignant self-questionings for poor Rowland when the young artist plunges through dissipation into passion—a very headlong and headstrong fall—and becomes the slave of a certain very uncertain Miss Light. Miss Garland and Mrs. Hudson, the sculptor's mother, are summoned to the scene, but they are, of necessity, powerless to aid, and after a time Roderick's death brings an end to one period of unhappiness for his friends and at the same time imposes on them the misery of endless regrets. So it is still compassion and not congratulation that is felt for Miss Garland and Mr. Mallet, though the wonderfully complete mental training which the ever-improving Mary has received, first from love and then from sight-seeing, must somewhat break the force of the blow to her and the force of the sympathy felt for her sufferings.

Poor Rowland we leave comfortably wretched, but how could one be otherwise who had already given ample evidence of the vein of insanity which runs through every man's brain in the madness which leads him to carry a Northampton boy to Italy as a lump of fine potter's clay, to be shaped according to his unforeseeing will on the wheel of fate? The anomalous relation of these two young men, who are sometimes comrades on the footing of good fellowship, and sometimes separated into a modest and most conscientious and responsible patron, and a ward now wholly self-surrendering and endearing, and again obstinately resisting and repelling, is so strange a flaw in the story as to damage it throughout. Even Americans, with all their pliability, do not twist themselves into such odd arrangements as these.

The odd arrangements and circumstances which surround Miss Light's career are (all but an insufficiently accounted for Cavaliere) more in keeping with what has been observed before of human nature. Miss Light—Christina Light—is the *beautiful* heroine; and one looks to Miss Garland to take the rôle of *ingénue*, and to Miss Light to be *première amoureuse*; but, when all is said and done, Miss Light stands revealed in the passionless feebleness of successful, self-scorning worldliness, while the highly-educated Miss Garland poses as a very stalwart Truth.

We may jest a little, for our jests play on a very solid ground of admiration. The serious intention to do the author's best is everywhere felt in this story, and it produces most excellent results. The simplicity and directness and quietness of the plot make the interest of its gradual development a matter of very considerable artistic skill, since it relies wholly on the phases and transformations of the characters involved. No small amount of delicate strength of purpose and power of vigorous execution is to be perceived in the life given to the subordinate characters—Sam Singleton, Mrs. Hudson, Madame Grandoni, Mr. Leavenworth, and especially Miss Blanchard—each of which is to a very unusual degree self-existent, independent of its author; not at all pulled by puppet-strings as part of a show, but walking about actively on legs of its own; and, at the same time, the subordination of these characters to the two principal personages, Christina and Roderick, is always cleverly, and more than cleverly, managed.

It is one of the noteworthy points in considering the artistic construction of the story that Roderick's character is seen wholly through the eyes of others. The author never gives us his own interpretation of Roderick's actions, but only that of the bystanders. We have only an outside view of him from the first page to the last, and the success of his portraiture is less

* 'Roderick Hudson. By Henry James, jr.' Boston: J. R. Osgood & Co. 1875.

likely to be recognized than if the workings of his mind were more boldly revealed. We know him chiefly through Rowland, and Rowland does not always understand him.

The figure of Rowland himself is perhaps, on the contrary, over-elaborated, or at least it seems unnecessary to acquaint us with his prehistoric loves, or to trace the line of his qualities through the biographies of his parents and grandparents in a work not intended to set forth the doctrines of heredity, and not written by Balzac. And we must remonstrate against his name. Why should Mallet be anybody's name in a story of which the hero is a sculptor; and if anybody's, why not the sculptor's own, after Thackeray's fashion?

Melinda the Cabooceer; or, Sport in Ashanti. By J. A. Skertchly. (New York: D. Appleton & Co. 1876.)—Two young Englishmen—"Edward Fortescue, the son of a wealthy squire in one of the Southern counties," and "the narrator of these adventures, Arthur Danvers, a restless wanderer"—are supposed to start out for the Gold Coast in search of adventure and sport. Arrived at Assinee, they procure the services of "Aziza, the lion-hearted," as hunter, and about eighty powerful blacks as carriers. "A perfect giant in form, Aziza stood nearly six feet eight in his bare feet. A lion in name, his nature by no means belied his cognomen, for his equal in strength and courage we never met with on the coast." With this redoubtable hunter and his party they start for Coomassie in canoes, and in a few days overtake a chief "cabooceer" (officer in the Ashanti army) named Melinda, who is travelling in their direction. With him they journey on and arrive at Coomassie, where they are somewhat startled by the first object which meets their gaze—the grinning head of a thief fixed at the end of a long pole. They are received by the king's interpreter and installed in the most comfortable hut the village affords.

While awaiting reception by the king and his permission to continue their journey, they treat us to the romance of Melinda's life. He was the son of a powerful chief residing "far away to the northwest on the shores of the Niger," and had in his youth been married to the beautiful daughter of a neighboring chief. On his bridal night the village was attacked, and both Melinda and his bride Awoona were captured and sold as slaves. Awoona had not since been heard of; but Melinda was brought to Coomassie and sold to the king, who in turn presented him to one of his cabooceers. Following a custom of the country, on the death of this cabooceer Melinda became a free man and succeeded to his office. He had never abandoned his hopes of recovering his lost bride, and was now upon an important mission to the north, in the course of which he felt sure of finding her. Naturally, towards the end he does find her. It is difficult to reconcile our preconceived notions of the ignorant, superstitious blacks with the ideal sentiment and fine speeches which are attributed to Melinda; but the legend is very well told, and is the most entertaining part of the book.

After some delay, the travellers are received with barbaric pomp and splendor by King Kóffee, who kills a couple of slaves in honor of their visit. Subsequently they return the visit, and four corrupt tax-gatherers are decapitated before their eyes as part of the ceremony. Upon leaving Coomassie, they strike at once into the hunting-grounds, and their adventures succeed each other with a rapidity and a kaleidoscopic variety which must make Jules Verne envious. Chimpanzees, pythons, alligators, elephants, lions, hippopotami, panthers, rhinoceroses, antelopes, and buffaloes—of these they kill enough to stock a first-class museum of natural history, and are themselves in turn nearly devoured on several occasions by the driver-ants, which come "trooping along in a column an inch deep." In the course of their wanderings, they find Awoona, the long-lost bride, and, rescuing her from her captors, they return to Coomassie, whence important private business calls them back to England.

Mr. Skertchly's intention would seem to have been to write "an awfully jolly book," not overloaded with information, but full of "sport." His narrative and descriptions are very good, but his conversations are weak and unnatural, and he occasionally taxes the reader's credulity to the utmost. With his fondness for adventure and the peculiar fascination of a year or so of wild life we cannot but sympathize, but we grow weary of bad puns and of the incessant and stilted talk about the horrors of superstition and fetishism which reappears in every chapter.

Remedies and Remedial Rights by the Civil Action, according to the Reformed American Procedure. A Treatise adapted to use in all the States and Territories where that System prevails. By John Norton Pomeroy, LL.D., author of 'An Introduction to Municipal Law,' 'An Introduction to Constitutional Law,' etc., etc. (Boston: Little, Brown & Co. 1876.)—Recent legislation both in England and America has made great changes in the practice and procedure required for the legal remedy of wrongs and vindication of rights—changes so sweeping and radical as to have attracted much attention, and called forth an amount of discussion perhaps greater than the comparative importance of the subject can justify. Changes in the legal procedure, however, are not unimportant; and the general theory of these changes in this country well deserves the thorough treatment which it now receives from Mr. Pomeroy. The object of all such alterations has been to attain simplicity and uniformity, merits which were entirely wanting in the old system. As the law stood for centuries, if a plaintiff sued to recover a piece of land, he was bound to state his case in a particular way, and with certain meaningless forms, required only by inveterate custom, but still necessary to be observed, at the peril of losing even the most righteous cause. If the action was to recover damages for a breach of a contract, the forms varied; if the contract were under seal, they varied again; and if the plaintiff, not content with his damages, sought to have the contract actually carried out, he was compelled to proceed in a form so different from all the others that he had to carry his case into another court before he could find judges who would undertake to deal with it. The rules as to the proper persons to sue and be sued were often arbitrary and complex; many separate proceedings were necessary to arrive at one result; there was little or no liberty of amending mistakes in the proceedings at any stage of the cause; and trifling mistakes were fatal. This state of things certainly called for reform, which came in various ways, and was at last attempted on a grand scale by the famous New York Code of Procedure, which has been freely copied and imitated in other States.

The Code, its imitations, and the comments on them, form already a new *corpus juris* and a beautiful illustration of Lord Bacon's saying that "there is a superstition in avoiding superstition, when men think to do best as they go furthest from the superstition formerly received." Many of its provisions are most excellent. The administration of justice in all cases by one tribunal, the giving of various kinds of relief in one proceeding, the simultaneous disposal of the rights of all the parties to one transaction, and the unlimited power of amending mistakes, are all useful reforms. But the legislators of the Code have gone further than this by the abrogation of all distinctions between different forms of action, and introducing one form for the maintenance of all rights; and pleading—that is, the parties' written statements of their respective cases—has become, in the words of Mr. Pomeroy, "a branch of the art of narrative composition." In former times, the narrative was the client's business, and it was for his lawyer to express in proper form, for the consideration of the court and jury, the legal questions presented and the relief sought. By the new system this labor is thrown on the court, the informal pleadings of the parties often failing to show what the cause of action or ground of defence really is.

Under the old system, a great and undue weight was attached to precedents. But it is by precedent that our law is built up, and the Code, by trying to relieve legal procedure from all the restrictions of former precedent, has only made it necessary to construct a new series of precedents on different principles. Formalism has been swept away, and the courts are busy in building out of the resulting chaos a new set of formalities. The explanation of the new system has become as voluminous within thirty years as that of the older did in six hundred, and Mr. Pomeroy's eight hundred pages are a necessity to the student of the reformed procedure. That procedure is fortunate in finding so enthusiastic a champion and so clear an expounder. His difficulties must have been great. The mass of material is immense, and the value of much of it small; for the new system, whatever its merits may be, is frequently found in very bad company, and its exposition has too often fallen into the hands of judges distinguished neither for learning nor integrity. The same reformers who have displaced law and equity by "civil actions" are the authors of other legal reforms which have substituted Barnard for Kent. It is only by treating the divisions of the courts without ceremony that it is possible to show the new practice as a uniform or consistent system. This is what Mr. Pomeroy has done, and done with a discretion that enables him to show his favorite procedure in a better light than it has yet appeared in. His work will doubtless be an authority wherever Codes prevail, and cannot fail to contribute to a more uniform and reasonable construction of them.

BOOKS OF THE WEEK.

Fine Arts.

MEISSONIER'S PAINTING OF "1807."

AFTER having been seen by cosmopolitan crowds at Vienna as a chalk-marked sketch, and more recently in the Place Vendôme by excited Parisians, who accepted its completion as a sort of triumph of the national arms, the noteworthy canvas of M. Meissonier has arrived and been placed in the private gallery in this city which will be its future resting-place. An unusual amount of attention has been paid to this painting for several years past. It has long formed the "battle-horse" in receptions at the atelier where it was in progress, surrounded by a cloud of preliminary cartoons and studies. Since the declination of Sir Richard Wallace and the sale by telegraph to an American gentleman, it has formed the staple with the Paris lady-correspondent. It has even received, on its late exhibition among the French, the condiment of a little abuse. The circumstances and terms of its sale to the present owner were industriously communicated to newspapers of several nations, so that a sufficiently large crowd was duly prepared to receive it on these shores with acclaim—a disposition which the owner promptly met by strictly interdicting visits to the gallery.

The composition during its progress was indifferently called "Friedland" and "1807"; but the picture is no longer named, but only numbered—the figures of the date being all that we see on the small plaque attached to the frame. In fact, the title of "Friedland" seems inappropriate, as no sign of Benningsen or the Prussians appears, and the wheat represented in the foreground is too ripe for a period before the middle of June, when the action on the Alle River took place. What seem to be represented are the results of Friedland, the dictatorship of Europe and ownership of France, caused by the triumphant campaign in Germany and Poland. A painter has perhaps never represented a composition of a general and his army in which the mind or feeling seems so homogeneous, in which the leader reposes in the sympathy of his troops so like a soul in a body. What is most perfectly represented by M. Meissonier is this flash of living communion from the reviewing general to his troops, who howl in a frenzy of raging triumph. But for the establishment of this unity of incident between the army that rushes and the head that reposes and thinks, the painting would resemble a mere ordinary sham-fight or review of cavalry. But the solution of continuity is very obviously made out, and in the harmony, not contrast, of Napoleon's calm and the army's madness, is established the picture's epical claim, besides its high technical one.

The dimensions of the canvas are quite uncommon for M. Meissonier. It is eight feet across by four and a half feet in height, and a human figure in the foreground is eighteen inches high. This, except as adding to the mere optical toil of microscopic touches over a given space, is of little account, the importance of M. Meissonier's work having never depended, strange to say, on either the dimension or want of dimension of his canvases. While the ignorant admired him for his minuteness of manipulation, the knowing always admired him for his breadth. What the judicious saw in the method of this master was in fact the largeness of style, which was inseparable from his delineation, a largeness which belonged to his art, which was only accidentally confined in a petty dimension and a piercing eyesight, and in which the measure of the canvas played about as great a part as the size of the type in a Venice edition of Virgil. It is hard for an untechnical spectator to comprehend the immense height at which artists place a little subjectless study by Meissonier over an anecdote exquisitely related by Zamacois, Vibart, or Plassan. It is because the painting by the inferior man is of the size of itself; while the Meissonier, within the unimportant incident of dimension, and in the minute mosaic of its touches, has the ease, purpose, swing, and habit of thought of a Tintoretto.

The greater part of the present picture is occupied by a charge of cuirassiers, who sweep across the front of the scene up to a given spot. They are intercepted at this point by four hussars, who trot gently backward and forward across their path to mark the period of the advance. In the background, against the sky, are Napoleon and a dozen maréchaux, with the cent-garde drawn up in line across the horizon. The Napoleon group, the hussar group, and the frieze of galloping cavalry in front make up the picture. There is a rush of artillery going on to the left, with cannons dragged about by four horses, which nobody pays any attention to. One of the gun-carriages has slipped its axle, and lies unlimbered at the left of the foreground, the brass gun being protected by the pacing hussars, and prevented from breaking some brave cavalry-steed's legs. The rushing pelt of the horses in front is the purpose of the picture.

The passage of more than one previous charge has torn up the wheat, which nods against the frame at the base of the painting, and the execution of this bit of still-life—if it be not wrong to call so what is a piece of maddened and almost sensitive agitation, expressing in itself the heat of preceding rushes across the field—is a lesson for painters. The eddies of tossed grain are designed with breadth and sense of motion, as if they were seawaves, while the distracted stalks, leaning this way and that, are true to the life, without niggling minuteness or botanic dissection; where the wheeling artillery-carriages have tracked them, they make a series of concentric curves, like breakers in a bay. With legs plunging through this ocean of grain, pass the horses of the cuirassiers. Along the front of the picture they are viewed in profile, but behind, across the innumerable ranks, they are seen coming on full-face. The direction seems to be a semicircle around the chief and his staff. It is impossible to notice the treatment of Napoleon and the état-major until these troops have been examined, for they are in fact the heroes of the scene. History used to paint the general always in the foreground, the soldiers suffering in the distance with a sense of agony repressed by modesty; the present age insists on having the men in front and the commander at a distance; and M. Meissonier seems to point to a sort of battle-piece of the future in which the cavalry-horses shall be the sole heroes, and the human element altogether subordinated; for, indeed, his horses are the chief thing in the affair, the men being all alike and all like Horace Vernet's. Two or three of the chargers, in this preponderance of the equine element, are quickly impressed upon the eye. The lieutenant's horse in front, with its very uncommon color, is defined with all the warmth and exactitude of a copper casting; it is in full action, and shows its muscles in such clean relief that it seems flayed—a Saint Bartholomew of a barb without a skin. The tendons attaching the humerus to the chest, in full salient action, are designed in a masterly manner; the knees and lower legs are well-drawn systems of knots and cordage. We are asked to take a *loupe* and inspect the eye; and, if we have ever sounded with the sight the depths of the eye-ball in a real horse, we cannot but recognize the same translucidity of clouded jelly. The neck is covered with a net of starting veins like a delicate lace; and the free, forward carriage of the head could only be assumed by a leader, and not by any follower, in a race. This animal is set in the midst of the picture, in full foreground, as solid as the bronze of Verrochio, and glowing with all the honorable pride of the painter who could achieve such a real thing. Behind comes the gray steed of the trumpeter; it is also in profile and quite as good: the rank and file gallop back of these conspicuous figures with individual action and expression. The peculiar movement or intention of each is so perfectly consistent and so interestingly expressed, that we study the whole cavalcade of beasts with separate interest, as a portrait-gallery of notable individuals. It is a family portrait-gallery, however; the steeds, howsoever colored and moved, are all of one strain, and obviously so many masquerades of M. Meissonier's favorite horse Tivoli. The type is good and serviceable, not heroic; the honest business way in which the brutes labor forward is exceedingly true to ordinary life, while it has nothing whatever of the exalted ambition of racing-horses. The only exception in this preponderance of a favorite type is the remarkably long-nosed horse at Napoleon's right. The choice of bay for a majority of the animals is also a piece of seeming favoritism, though the necessity for a united tone in the picture sufficiently explains it.

Not to be too oppressive in distinguishing the claims of such a large company of animals, the heads of two more horses may be pointed out as singularly true to nature. The steed bearing the maréchal at the spectator's left, in the group of staff-officers, lowers his head and snuffs at the invaders with a horse's true curiosity and suspicion; and the middle horse of three in the advancing group of hussars—all of them admirably foreshortened—is being checked as he designs to trot ahead of his comrades, upon which he raises his heavy skull and tosses it about with that superfluous air of insult and mighty agitation about nothing to be remarked in the scale of emotions of his kind. Here are steeds different from those of Horace Vernet and Alfred de Dreux, and, most of all, from those of the Parthenon. This style of painting is not interpretation, but representation. The pupils of Phidias, without falsifying anything about their animals, worked as poets and idealists; you see that the chariot games are a religious rite; but you are to look for nothing of the sort in the work of M. Meissonier. He gives us a rush of well-chosen cavalry-brutes of superior blood, as it must have looked after the hard training of a winter in Poland; if from this appearance of things we can evolve the grandeur of those historic hoof-prints that remodelled the face of Europe, it is ourselves that must bring up the poetry, and not ask it of the man-photograph. If we want a realization of something like De Quincey's mail-horses, flushed through the reins that guided them with the intelligence of Waterloo, and

The Nation.

NEW YORK, THURSDAY, MARCH 16, 1876.

The Week.

MR. ORVIL GRANT, the President's brother, who has been frequently mentioned by the licentious and unbridled press during the last two or three years as a nomadic gentleman whose occupation would not bear examination, appeared on Thursday before the Committee on the War Department, and told his own story of his jobs as an Indian trader in a simple, artless way that would be diverting if it were not for the picture it presents of the views entertained by the Presidential family on "the science of politics." Mr. Grant appears to be an unsuccessful man, who, when all else failed, tried to get a living in some easy way out of the Government, and accordingly applied to his brother to license him as an Indian trader. The reply was very characteristic of the "simple-minded, sagacious man" at the White House. He did not say that it would be improper, or inexpedient, or likely to cause scandal to put one of his own family in such a position; nor did he even say that a certain post was vacant which Orvil might have, and in which he hoped he would earn an honest living. He told him of four posts at which the traders were going to be removed, and Orvil accordingly applied for licenses not for one, but for four, and obtained them. This was in 1874, and he at once put "partners" of his in all the vacancies, who were to pay him a heavy share of the profits; but in one only, in January of this year, did he invest any capital, and in this only $2,000. Of course, the traders in paying him profits paid him simply for his influence with his brother, the President, at Washington, and Orvil confessed to the committee in the plainest manner that what was regrettable in his eyes in the whole affair was, not his use of his "influence," but the smallness of the amount he made out of the traderships. The transaction differs from the Belknap affair, as far as the President is concerned, simply in this, that while Belknap allowed his wife to sell traderships and apply the money to his household expenses, the President allowed his brother to sell them and keep the money himself. We are not surprised to hear that General Grant is very much annoyed by these investigations, and says they are carried on for "partisan purposes." Orvil appeared before the committee to be a man entirely devoid of what is called a sense of honor in matters pertaining to public funds, and is well worth study as a product of recent popular education, and as an illustration of the moral tone of "Administration circles."

A correspondent of the St. Louis *Republican* calls attention to a singular statement in President Grant's deposition in the Babcock case, with regard to his system of appointments, which seems deserving of more than a passing notice. He was asked what was done on the death of Ford, the St. Louis collector, as to the appointment of his successor. He replied that inasmuch as Ford had died "suddenly and away from home," he told Babcock that he "should be guided largely in selecting his successor" by "the recommendations or wishes of his bondsmen"; and in reply to another question, he stated that he could not say "on whose recommendation exclusively" the successor was actually appointed, but that he was "well recommended and satisfactory to the bondsmen of Mr. Ford." This was all stated in a matter-of-course way, as if all appointments had been made in this fashion ever since the formation of the Government, and it is proper to enquire what it means. Now, the only interest the bondsmen of a collector have in the appointment of a successor is, to get a man put in who will cover up any frauds or irregularities their principal may have committed, and their interest is strong just in proportion to the probability of fraud. Their interest is therefore directly hostile to the Government, and they are the very people whom the Government ought most carefully to avoid consulting. So much for the abstract principle. The result of actually applying it in Ford's case was this: Babcock telegraphed at once to Joyce, who was applying for the office, to get the approval of Ford's bondsmen. Ford's bondsmen were the Whiskey Ring, and they agreed with Joyce to recommend one Constantine Maguire for the place. He was immediately appointed. It is hardly necessary to say that Maguire is one of the leading whiskey thieves found out by Bristow, and now, we believe, awaiting sentence of court. We hope Offenbach will be here soon.

More damaging facts in Mr. Pierrepont's case have come out in connection with the Babcock military court. When this court was called together Mr. Pierrepont immediately wrote to Dyer, the District Attorney in St. Louis, to send to the Judge-Advocate at Chicago "any documentary evidence bearing upon the case, and the names and residence of any witnesses whose testimony you [Dyer] judge important to make the investigation thorough"; and ended by reminding Mr. Dyer of what he (Pierrepont) had "so often said," that "we wish no innocent man punished, and no guilty one to escape." The reply which Dyer sent to this letter has not been published, but there is reason to believe that he at once wrote to Mr. Pierrepont asking whether he was in earnest, reminding him that it is not customary in this country in time of peace for civil courts to be put into the hands of the army; declaring that he refused to obey the order, and that, even if he were willing to do so, the court would not allow such a proceeding. This would unquestionably have been the proper reply to send. It will be noticed that the view Mr. Pierrepont takes of his duties is, not that he is bound to prosecute anybody whom he can find *primâ-facie* evidence against, but that he is a kind of wise and loving judge, whose business it is to prevent the innocent from being punished quite as much as to secure the conviction of the guilty. In fact, throughout the case we see Mr. Pierrepont in what, in a profession closely allied to politics, would be called his "Protean feat" of appearing at one and the same time in the three rôles of prosecuting officer, counsel for the defence, and judge. We strongly recommend him to read the fable of the Innocent Dog recently published in the *World*.

The Republicans in the Senate, not to be beaten at investigations, have passed a bill to investigate insects injurious to vegetation—the locust, the chinch-bug, the army-worm, the Hessian fly, and the potato-bug. The bill provides for an investigator-in-chief at a salary of $4,000 a year, the herculean labors of the head of the Agricultural Bureau preventing that official from giving the necessary time to it. The act, should it pass the House—which seems doubtful—will be a new application of the great principle of division of labor, for in future the Agricultural Commissioner will scatter the seed broadcast over the land, while the national entomologist will follow closely on his trail and exterminate the various bugs that may attack the ripening grain. We only want now another Commissioner to harvest the crops, and another to see that they get to deep water, and the husbandman will be entirely relieved from grinding toil. The Senate has also disposed of the case of Mr. P. B. S. Pinchback, refusing him his seat by a vote of 32 to 29; has had a debate on the excise service, which we have discussed elsewhere; has passed a bill to admit New Mexico; and has debated Mr. Morton's bill as to the counting of the Presidential vote. The House has refused to turn over the documents in the Belknap case to the District Courts, after an exciting debate; has brought before the bar a Mr. Wolff, formerly a book-keeper

for a firm of navy contractors and claim agents, who refused to tell the Naval Committee whether he knew of money being corruptly used by the firm. On being brought up, he fell down in a fit, and Mr. Whitthorne, the chairman of the committee, explained that he had already answered the question, and he was discharged. The precise facts disclosed by him to the committee yet remain a secret. The House has passed a bill for the protection of witnesses, exempting all witnesses who testify under protest before either House, or any committee, or the Senate sitting as a court of impeachment, from all criminal liability except impeachment, and providing, at the same time, that absconding witnesses shall be punishable by fine or imprisonment; the Legislative and Executive bill has been reported, with estimates cut down to the extent of $8,000,000; and the Hawaiian Treaty has again been discussed, and the conference report on the District of Columbia 3.65 bonds adopted.

The expected report of the Senate Committee against the confirmation of Mr. Dana, to the body which has just confirmed Billings in the judgeship at New Orleans, would be a wretched piece of business. We believe the agents who have contributed to this result are Mr. W. B. Lawrence, who accuses Mr. Dana of having pirated the notes of his edition of Wheaton, and Mr. B. F. Butler, who accuses him of having "bolted the regular ticket" on certain occasions, and being generally obnoxious to himself. As regards Butler's hostility, we had hoped that the Senate had learned enough to be indifferent to it. As regards Mr. Lawrence's charges, we shall only say that the matter is still before the courts, having been referred some time ago to a master to report on the rival editions. He has made no report because, we venture to assert, there is nothing to report that would not be almost ridiculous as a charge against Mr. Dana. We made a careful collation of the two books ourselves in 1866, and published the result in No. 66 of the *Nation*. The only basis for Mr. Lawrence's charges worth notice was that Mr. Dana's translations from foreign languages occasionally were textually like his own, to which nobody who has ever translated from modern languages will attach any importance in the case of a man like Mr. Dana, who was himself a master of international law and a leading practitioner in Admiralty cases when he undertook the work. As to identity in the illustrations cited of certain rules, since the illustrations were prominent events of modern history, it is almost absurd to base on them an accusation of bad faith offered to educated men. There is *one* case of literal copying of a quotation of four lines of Lawrence's from Blackstone, with the typographical error which it contained—over which Mr. Lawrence has been childishly exultant, but there is no doubt that this was due to an oversight of the printer, to whom, improperly as we think, Mr. Dana had left the task of striking out all of Lawrence's notes. That this error was not detected by him in the proof-sheets was natural enough. In fact, to attack Mr. Dana's character in this matter in ever so slight a degree is to give proof of a perverse and malignant temper, and if the Senate Committee is influenced by such attacks in making its report, without giving him a hearing, it will be guilty of a gross offence against justice and decency.

In his testimony before the House Foreign Affairs Committee James E. Lyon testified that, in 1872, a despatch was sent to England by Professor Silliman, Brydges Willyams, and Hussey, who had made an examination of the Emma Mine, to the effect that there were "eight thousand tons discovered since last report; sample assay, two thousand dollars per ton." Professor Silliman could not remember that he had signed such a despatch, and on going home he searched the files of the English mining journals, and came upon the following, which he admits he did send and wishes to have included in his testimony given under oath, and on which he relies for his professional vindication:

"Very great improvements since last report. On seventh floor drifted 120 feet, and tenth floor 40 feet, all in ore; at the bottom winze, 70 feet below old workings, drifted 40 feet, all in ore. Sample assays 28 per cent. lead and $2,000 silver. Reserves discovered since last report over 8,000 tons. Everything connected with the mine is highly satisfactory. Mailed supplementary report: Canyon road still bad. Shall forward 1,000 tons first-class ore forthwith. Have 65 tons bullion, worth $20,000; propose selling here. Arranged all other matters here. Will report fully on return.

"WILLYAMS, SILLIMAN, AND HUSSEY."

We have examined this despatch carefully, and cannot see what the difference is between the statement actually sent and that given by Lyon; though Professor Silliman says in a letter to Mr. Hewitt, the chairman of the committee, that "there is nothing in this despatch to justify the monstrous statement made in the garbled extract from it that those 8,000 tons of ore had an assay value of $2,000, or that the despatch above quoted gives to the reserves any specific value whatever." If the despatch did not mean that there were 8,000 tons worth $2,000 per ton, we cannot understand what it did mean, unless Mr. Silliman uses language in a way totally different from that in which other people use it. In fact, it seems to us that the meaning of the despatch was clearly just what Lyon represented it to be, and that it was intended to effect just the object he said it was intended to effect. Another point in the case not cleared up is as to the expert's payment for services. He was paid $5,000, he says, at the outset, and promised more afterwards. After the mine was floated, he got $20,000 more. He was employed by the vendees of the mine, he has always maintained, and yet the man who actually appeared as his employer was, he now says, General Baxter, one of Park's "pals" in the sale. As to the $20,000 additional which he got, he says it was in part paid for work on other mining property of Park's. Now the question arises, what was this other property, and what was the work, and did the Emma Mine pay for work done on other and disconnected mines? This witness evidently needs a good deal more vigorous cross-examination than he has yet been subjected to.

The Texas and Pacific Railway Bill has not yet been reported to the House, and the impression is daily gaining strength that its friends believe it unwise to urge it at the present time when its advocates would be intimidated by the approaching Presidential election. If the bill is one which, either from want of merit or through the means used to secure its passage, will not bear the daylight of an election year, it is difficult to see on what ground it ought to pass in any other year, while the character of the bill, so far as known, shows that the period of delay has also been a period of growth, and that the scheme has obtained a size during gestation which will probably strangle it in its birth. The Texas and Pacific Railway proper is 1,500 miles long, of which 1,300 only remain to be built, and there would seem to be no propriety in asking a subsidy for anything more than this 1,300 miles; but the bill, as reported from the sub-committee, would most properly be termed a "Bill providing for the construction of a Railway System in the Southwestern States." In addition to the main line it provides for a branch, at least 300 miles long, from Shreveport to New Orleans; for a branch, nearly 200 miles long, from the same point to Vicksburg; for a third branch, 300 miles long, from Jefferson, Texas, to Memphis; and for a fourth, 400 miles long, from a point in Western Texas to the present terminus of the Atlantic and Pacific Railroad in the northeastern part of the Indian Territory, forming with that line a route to St. Louis. The total length of these branches is fully 1,200 miles, nearly as long as the unbuilt main line, and none of them are demanded to accommodate business. The railway already has rail communication with the Texas ports and steamboat communication with New Orleans. Vicksburg is a point of no importance, while both Memphis and St. Louis are reached from its eastern terminus over the St. Louis, Iron Mountain, and Southern Railway, and its connections, by lines now in operation, nearly or quite as direct as the shortest which can be found. It is understood that the promoters of the railway have no desire to build these branches, but that they are accepted to secure the support of Congressmen. The bill in its proposed form finds a

parallel only in the story told early in the war of the young man who, on asking for a lieutenant's commission, was answered that his request could not be granted, but that he might, if he really cared about it, be made a brigadier-general.

Any moral authority the late Advisory Council in Brooklyn might have had may be safely said to have been destroyed by the address of Dr. Storrs to his church on Sunday evening last, and by the subsequent action of the church with regard to it. Dr. Storrs's arraignment of the Council follows substantially the same line as Professor E. C. Smyth's as regards the ecclesiastical defects of its action, but his exposure of the arrangement it made for the further trial of the charges against Mr. Beecher is still more damaging. He declares that under its rulings "no priest or minister in any other body of Christians ever known on earth was so entirely shielded from enquiry as to his character as is the pastor of a Congregational church, according to the statement of this assembly, so long as he succeeds in keeping his hold on his circle of local hearers." We cannot help thinking that this, if true, is due in some degree to the nature of the Congregational system itself, but we do not know what answer can be made to Dr. Storrs's account of the extraordinary machinery which the Council invented for a final and decisive enquiry into Mr. Beecher's case. In the first place, the Council had, under the letter missive, no authority to suggest or create any such machinery; in the second, the organization of the proposed tribunal was committed to three gentlemen whose confidence in Mr. Beecher is "express and complete"; in the third, the list of twenty persons from whom the tribunal can be chosen contains several names of those who believe in Mr. Beecher's innocence already and are eager for his vindication; in the fourth, if five of them cannot be got to serve, any three can make up the full number out of the denomination at large; so that, in short, the composition of the court would be unknown to the accuser up to the last moment, and it might be strongly hostile to him; in the fifth, the charges must be presented within sixty days, and to the church, who are to forward it to the commission; in the sixth, it is in the power of the commission to decide that the charges presented have been sufficiently tried already (*i.e.*, by Mr. Beecher's investigating committee), and dismiss the complaint; in the seventh, the commission can only act at the request of Plymouth Church, and if at the end of the sixty days no charges have been presented, the church may offer fresh *ex-parte* evidence, and ask on it a further vindication of Mr. Beecher.

Acting on Dr. Storrs's address, his church on Monday evening passed resolutions repudiating the decisions of the Advisory Council and refusing to hold Congregational fellowship with any church which adheres to the principles laid down by it; and declaring that whatever concerns the collective brotherhood of the churches may be judged by the brotherhood in a properly constituted council, and that whenever any church refuses to rid itself of a scandal, by appropriate ecclesiastical procedure, either instituted by itself or proffered by sister churches, it may be the duty of the brotherhood of the churches to institute enquiry on its own account, in order to rid itself of such scandal or of such church. On this, steps will probably be taken to bring about some thorough investigation of "the main question," or to expel Plymouth Church from fellowship if it refuses to submit to it.

The Stock Exchange was enlivened during the week by a "bull" speculation in Erie and a "bear" speculation in Pacific Mail. Each of these stocks has for years been a favorite football for speculators. It appears that Erie, encumbered as it is with financial embarrassments, has been fortunate enough to attract, for ultimate purposes of their own, the attention of capitalists connected with the Delaware, Lackawanna, and Western and the Delaware and Hudson Companies. They, through the Lackawanna Iron and Coal Company and the Cambria Iron Company, both of which are controlled by the interest named, have agreed to lay a third rail on the Erie, making it a narrow-gauge from Jersey City to Waverley, a station a few miles beyond Elmira. The Lehigh Valley, in the same interest, has agreed to continue this third rail from Waverley to Buffalo. The advantages of a narrow-gauge to the coal roads named are important, but the remote object was to benefit the Michigan Central, which is owned in good part by the capitalists who control the Delaware, Lackawanna, and Western Railroad. In the case of Pacific Mail, a month ago, when the stock was selling at 40 or thereabouts, the Company was reported to be in excellent condition, with a small floating debt and with an encouraging business. It is now by the same speculators, and they directors, represented to be wholly insolvent, with an alarming floating debt, with a poor business, and that soon to be divided with a rival line. To show the desperate condition of the finances of the Company the directors have authorized the issue of $2,000,000 bonds, which are needed, they say, to pay the floating debt. On such representations the stock has fallen to about 18.

The suspension of the Bank of the State of New York was directly due to the action of the Clearing-House Association, which, on notification from the Bank Examiner, ascertained that the bank was unsound, and accordingly excluded it from the privileges of the Association. This bank was organized in 1836, has a capital of $2,000,000, and has stood respectably, its stock last week having sold at 106. On investigation it was found that the capital was impaired about one-half—that is, that it could pay depositors and all other creditors in full, and have remaining about $1,000,000. The difficulties of the bank were in no way chargeable to the times, but entirely to bad management. A circumstance which strongly characterizes this was the appearance in the "cash" of an individual check of the Vice-President for $20,000. In addition to these bad eggs in the basket was $224,000 protested paper, among which was $70,000 of Duncan, Sherman & Co. It is but just to assume that such management is not customary in New York banking. Of course, Wall Street was ablaze with excitement when the suspension was first announced. Gold advanced to 115, but fell back to 114⅜. Speculative stocks fell from 1 to 5 per cent., but soon rallied. Money advanced to 1-16 per day, there having been a general calling in of loans. When the exact facts were known, and it was seen that no creditor of the bank would lose, comparative tranquillity was restored. The exposure of the bank was due to the vigilance of the Bank Examiner; its bad debts were of recent creation. The gold price of $100 greenbacks ranged during the week between $86 94 and $87 43.

The reports of the New York savings-banks for the year 1875 have appeared. There were at the close of the year forty of these institutions, one having since failed—the Security—which was a small concern. These banks report total deposits of $184,188,216, against $180,010,703 in 1874, and $170,998,796 in 1873. The total resources from which to pay depositors were, in 1875, $205,415,447; in 1874 they were $195,325,164; and in 1873, $184,414,895. The amount of deposits, including interest credits, which were made during 1875 was $80,900,863, while the amount of deposits withdrawn was $75,086,606; in 1874 these items were: deposits, $80,506,502, and withdrawals, $77,541,298; in 1873, deposits, $91,540,649, and withdrawals, $90,715,320. Out of the $205,415,447 resources in 1875, $46,184,887 consisted of United States bonds, while $65,388,887 consisted of bonds and mortgages. It would speak better for the management of these corporations if the investments in United States bonds were larger, as these securities excel all others not only in point of safety but of availability. The number of open accounts in 1875 was 468,562, against 494,086 in 1874, and 479,102 in 1873. This is not strange, considering that five banks, no one of them important except the Third Avenue, failed during the year, and that these failed banks had 19,000 open accounts. The statement shows a smaller decrease in the amount of deposits than was expected, considering the hard times and the extent to which labor has been unemployed.

"THE ECONOMY AND SIMPLICITY OF OUR FOREFATHERS."

THE fall of Mr. Belknap is generally ascribed, and with considerable appearance of truth, to his wife's desire, and doubtless also his own, to live handsomely. She was what is called a "leader of fashion" in that remarkable portion of human society called "Administration circles," and required considerably more money than her husband's income to reach the standard of gentility in the matter of meat, drink, clothing, and carriages set up by the people among whom she sought to shine; and she got it out of the sutlers, and they out of the soldiers and settlers on the Plains. Whether this is an accurate statement of the case or not, it is the one generally accepted by the public, and the moral drawn from it, by a somewhat sweeping generalization, is that extravagance in living is the main source of our political corruption, and that if we would reform the Government we must go back to the simplicity of food and attire and the accompanying personal integrity supposed to have been common in the year 1776 or thereabouts. We confess there is to us something almost as depressing in this kind of talk as in the practice in which many of our newspapers indulge, of drawing consolation for the present corruption of this Republic from the reflection that the corruption of the English monarchy one hundred and fifty years ago was just as great; because both one and the other have a tendency to turn people's minds away from real remedies and throw them back on quackery.

There is, in the first place, always something childish in calling out in times of public danger and distress for things which are clearly unattainable, and nothing is more clearly unattainable than a return to the manners and customs of another age. This would be true even if it were certain that there was any necessary connection between the plain living of the early Americans and their good morals. There is no such connection. No man or woman is kept from knavery by wearing homespun and living on pork and molasses. If we had only to change men's clothes and put them on short commons in order to make them good, we might dispense with religion and law, and the saints of every community would be found in the penitentiary. It may be said, too, with confidence that the people of every age have lived about as well as they could afford. The men and women of the last century wore plainer clothes than we do, and ate plainer fare, because fine clothes and rich diet were harder to get, because, in short, they had less to offer in exchange for them. The steam-engine and the power-loom and the spinning-jenny had not been invented, and nearly everybody had to trust to the produce of his farm for a livelihood, and the difficulties of travel and the absence of periodical literature kept his imagination in a state of virtuous quiescence. He wore homespun, then, not because he was good, but because he could not help it. "Plain living and high thinking" even in our time often go together, but the thinking is not high because the living is plain; more generally the living is plain because the thinking is high. In order to go back to the manners of 1776, we should have to get rid of all the material progress which separates this year from that—that is, all the industry, art, and means of locomotion which the discoveries and inventions of the last century have placed at our disposal. In order to get very much advantage from living like the forefathers, we should have to reduce the number and power of our temptations to the level of theirs. If we dressed all our modern legislators in serge, and fed them on grits and hominy, it would profit us nothing as long as we allowed Jay Gould to assail them with thousand-dollar bills or railroad stock or bonds.

There are, however, some characteristics of the men of the last century which we can imitate and restore, and which in our present plight may do us much political service. First and foremost among these is their thorough practicalness, and freedom from the kindergarten tendency to shape in your own mind the way you would like things to be, and then to make your arrangements as if that was the way they would be. The Rousseau whey had not made its way into their veins. If we look through their speeches, debates, political treatises, and constitutions, we find that the animal they are thinking about and working for is man as they know him and see him, and not man as they would like to see him and as it would be convenient to have him. Jefferson had some of the true Red dreams about the probable effect on human nature of certain political contrivances or material conditions, but on the whole his contemporaries were politicians of the true Anglo-Saxon type, who saw no visions, and did not expect from human nature any extraordinary displays of self-denial in the ordinary work of life. If we run through the volume which is perhaps on the whole the best example of the political thinking of that day, the 'Federalist,' we find the writers occupied anxiously from first to last in the construction of a government which should put the least possible strain on human nature, and offer it fewest temptations, and take most account of its weaknesses. They tried to set up, not something to which truly good men would do well to adapt themselves, but something which the average man—a being who is neither saint nor devil—would find it easy to live under. For instance, when they were fixing the salaries of the high officers of the Government, they did not, as we do now, evolve from their own moral consciousness the sum which an ideal President *ought* to need annually. On the contrary, they found out what the Presidents of Congress under the old Confederation had spent in the year, and they made such additions to it as they thought the new President would require to enable him to live with ease and dignity. In like manner, when they came to fix the salaries of the judges of the Supreme Court, they did not thrust one hand under their coat-tails, and run the other through their hair, and pour forth a stream of blatherskite about the way an ideal judge *ought* to live, and about the smallness of the sum for which good lawyers of their own acquaintance could be got to fill the place. They said: "The Supreme Court ought to contain the best lawyers in the country, and in choosing the judges for it we ought not to be restricted to men of accumulated fortunes. Therefore, to get the best lawyers we must pay as much annually as the leading lawyers actually earn in the centres of the largest practice." Having ascertained that this was about $3,000, they fixed the salary of the Chief-Justice at $4,000 a year, and that of the associate Justices at $3,500. They followed a similar course with regard to all the other offices of the Government. They offered, in short, such salaries as would in the market of that day command the best labor of the kind the public service required, and made absolutely no extraordinary demand on the virtue of the candidates. They no more thought of treating the public service as a monastery, and exacting a vow of poverty from those entering it, than private bankers thought of it. They knew that men would serve the Government from ordinary motives; that good men would need good pay, and security, and the chance of living in the same style as the people with whom they naturally associated in other callings, and they acted accordingly.

Since that period Congress has raised the pay of the Supreme Court judges only one hundred and fifty per cent., although the remuneration of leading lawyers in active practice has increased five or six hundred per cent.; and the very same policy (we have no space for illustrative details) has been pursued through all branches of the service. The rate of pay has been kept far below the market rate, and the result is that in most of them we get the refuse of the market for Government work—that is, the helpless, the dissolute, the sickly, the lazy, the incompetent, and the knavish, and when they steal and cheat we implore them "to return to the economy and simplicity of their forefathers"; and when they refuse, we begin to weep and wail, and ask what is going to become of the country, and what would Washington say if he could see Belknap. There could probably be no better illustration of the darkened state of the public mind about the causes of our present political disease than the approbation with which the present rage for cutting down the salaries of public officers is regarded, as a measure of economy. Far from being a measure of economy, it is one more step in the process by which a middle wall of partition has been erected between the honesty, capacity, and energy of the American people and the Government which it dearly loves and would fain be proud of.

Apply all this to the case of the unhappy Belknap, and what do we find? The office of Secretary of War, putting aside altogether its dignity and its moral responsibility as regards the discipline of the army, is one of enormous commercial importance. The incumbent is charged with the proper disbursement of about $32,000,000 annually. He ought, therefore, to be sought in the ranks of that body of men who are called in this country to take charge of the greatest railroads or manufacturing or mining companies, or, in other words, ought to be the kind of man who finds no difficulty in obtaining from $20,000 to $30,000 a year for his services, and he ought to be one of the very best of them, because while the president of a railroad or manufacturing company has his conduct submitted every year to the sharp test of money dividends, and is kept up to his work by the watchful eyes of self-interest, the Secretary of War has, for the greater part of his work, no other auditor or supervisor than his own conscience. In Belknap's case he was, however, chosen in the person of an humble and obscure revenue collector in a Western town, where he earned about $3,000 a year, and he was suddenly charged with these enormous responsibilities, with a salary of $8,000, and in a position so conspicuous and surrounded by such social conditions that the temptation to live at the rate of $30,000 a year was tremendous. If he had been a man of Roman virtue, of incorruptible patriotism, of lofty aspirations, of refined tastes, of thrifty habits, and had had a monkish scorn for the good things of this life, and his wife had been like him, they would have returned to "the economy and simplicity of their forefathers," and have saved money out of their salary. But what reason had we to suppose that he was that kind of man? Why should we expect $8,000 a year to fill our Cabinet with saints and sages? Let us not flatter ourselves that Washington is wondering how this calamity overtook us. On the contrary, he is probably smiling sadly at our simplicity in expecting anything better.

TWO "FAVORITE SONS."

THE past fortnight has witnessed two events in Congress of more than ordinary importance—one in the Senate and the other in the House. In the Senate, the occasion was the delivery of an able speech by Mr. Gordon, of Georgia, on the excise service; in the House, the discussion of the Belknap impeachment. About a month ago Mr. Gordon introduced some resolutions instructing the Committee on Finance to ascertain what amendments to the laws are necessary to secure economy and certainty in the collection of internal revenue, and to prevent frauds in its collection. He desired to have the committee instructed especially to enquire whether it is advisable to "create a corps of excise to hold office indefinitely, removable only for incapacity or malfeasance in office." Mr. Gordon, in his speech, showed that Great Britain, whose excise system is always put forward as the model of our own, collected a tax of $2 in gold on every gallon of whiskey made, while we could not collect twenty cents per gallon in greenbacks, and when we attempted to collect $2 a gallon the whole was lost. He quoted from Mr. Fessenden's report, made in 1864, to the effect that the annual product of our distilleries was, even then, $100,000,000; and proved from Mr. Pratt's report of 1870 that, notwithstanding the increase of population and development of business since, a tax upon only $77,500,000 was paid in that year; or, in other words, $22,500,000, at the very lowest estimate, escaped taxation altogether. He asked why it is that one government can collect $2 in gold and the other cannot collect twenty cents, and insisted, what everybody knows to be the case, that the explanation is that the English system of appointments is a premium on honesty and fidelity, while our system of appointment for short terms, for reasons having no bearing whatever on fitness for office, combined with rapid rotation, is a premium on dishonesty and inefficiency. The speech was entirely non-partisan in its tone, and contained just the recommendations which any reflection on the whiskey-fraud exposures and the cases of Joyce, McDonald, McKee, and the rest, would be likely to suggest to the mind of nine out of ten honest and intelligent men. He was immediately replied to by a leading Republican senator, and the reply consisted of these three heads: 1st, a eulogy of the Republican party; 2d, a statement of a report that the Georgia election was carried by bribery and corruption; 3d, an enquiry why, if Mr. Gordon wished to imitate the English, he did not "come out at once in favor of a monarchy."

In the Belknap impeachment case, the House had been discussing the question as to the status of an impeachment pending at the same time with an indictment. In the course of the discussion Mr. Lamar of Mississippi spoke of impeachment as a process intended for "punishment," on which a leading Republican, himself a lawyer, immediately proceeded to debate the point with him, maintaining that impeachment was "protective" and not "punitive." Now, the peculiarity of the debate was that there was nothing to debate about. Mr. Lamar immediately produced the constitutional provision for total disqualification for office in cases of impeachment, and a decision of the Supreme Court in which disqualification for office in case of conviction on impeachment is referred to in so many words as "punishment;" on which the Republican leader was silenced.

It may seem to the reader that we have gone out of our way to rake up the rubbish of the *Congressional Record* in reproducing this monstrous reply to Mr. Gordon's sensible speech in the Senate, and this flimsy trifling with important subjects in the House, but the reason we have done so is that the reply to Mr. Gordon in the Senate, and the pettifogging about impeachment in the House, did not come from obscure and harmless Congressional fledglings, but from two of the leading representatives of the party now in possession of the Government—one of them the "leader" of the House and the other the head man in the Senate, and both being among the most prominent candidates for the Presidential succession; we mean, of course, Mr. Morton and Mr. Blaine.

We have selected these two "incidents" because they represent fairly enough what has been going on in Congress ever since the beginning of the session, and illustrate better than volumes of sermons could one of the worst effects of the present debasement of political life. We do not for a moment mean to compare Mr. Morton and Mr. Blaine in other respects. Mr. Blaine is a man of reputable standing outside of politics, a man of education, and, we believe, right intentions, while Mr. Morton is an unscrupulous demagogue and turncoat. But in one respect they are alike—they are both candidates for the Presidency, and it is important for them to put themselves before the country during the present session in the best possible light, and to lay up as much capital as possible against the autumn. This is quite right and natural, and we have not a word to say against it. It is for the interest of the country no less than the candidates that we should know as much about them as we can, and first and above all what sort of men they are, and what sort of measures they propose for our consideration and approval. It is a singular fact that these two leading candidates, taken from the opposite extremes of the party, should have thus far offered the country absolutely nothing. Mr. Blaine did, indeed, bring forward at the opening of Congress a constitutional amendment directed against the Catholics, but the anti-Catholic excitement was, as every one knows now, a mere flurry; and all that Mr. Blaine means to do or can do with his amendment is, not to pass it, but to use it in the campaign to catch anti-Catholic votes. His next appearance was in the Amnesty debate, in which he showed that Jefferson Davis was a traitor and a bad man, and succeeded, by the usual parliamentary tricks, in making a mess of the Democratic Amnesty Bill. Last year, when the Republicans had possession of the House, they voted, almost if not quite unanimously, for a bill almost identically the same, without any indication from Mr. Blaine that he was offended by the proposal to pardon Davis. Since then he has made a speech on the currency question, in which he has neither brought forward nor even suggested a plan to deal with the only question of importance connected with the subject—the resumption of specie payments; and he has now been dis-

tinguishing himself in the impeachment proceedings—of such solemnity as to involve perhaps the ruin of his party—by putting forward, to harass the Democrats, views as to the process which have no foundation in law or reason, and would be recognized as a quibble by a schoolboy.

We take it that there has never been a time in the history of the country when there was more deep discontent with the condition of the Government, nor a greater longing for the appearance on the scene of a new order of men in public life, capable not merely of giving expression to this discontent—for this has been pretty well done already—but of taking part in the actual government of the country and bringing some decent order out of the present confusion. The day of the fire-eater and of the abolitionist and of the "war-horse" and the "wheel-horse" has gone by, and everybody knows it has gone by, and the question is who are to take their places. It is a question which it is very difficult to answer, for it is one of the signs of the dry-rot which is eating out the life of our system that no new generation of politicians is coming to the surface capable of dealing with the questions which must be dealt with, and very soon too, if we are not to give up the attempt at self-government as a failure. The present dearth of new men in political life in France is one of the most noticeable results of the political decline in that country during the last thirty years, but the French never took the means we have taken to drive honest and intelligent men out of political life. They never made a practice of turning a man out of office because he was a faithful public servant and refused to devote his time to other objects than his official duty. That is exactly what "rotation" means, and that is what we have made the corner-stone of our Government. The result has been that the honest, industrious, respectable classes have been for more than a generation warned away from public life, and the management of affairs has fallen into the hands of the peculiar people that we now see in Washington. The theory of "rotation" is that it brings up new political men "fresh from the people," but it really does just the opposite. Every year the divorce between public opinion and the political class has been becoming greater and greater, just as it did for many years in this city between the Tammany politicians and the public, until finally a point is reached—and it looks very much as if we had reached such a one now—at which nothing short of a "clean sweep," or, in other words, a passionate movement for the rotation of all the rascals out of office at once, is the only resource or hope of good government left.

In the failure of Mr. Blaine to hold his own during the present session we see a curious effect of this wide divergence between public opinion and that of the political class. He is a shrewd manager, and as a shrewd manager he has for years been occupied, not in studying the condition of the country, or considering what questions demand solution, or what questions "the people" are thinking about, but in watching the "machine." He has mastered it completely. He can "spar" in the House, he can expose a Democrat, he can force him into a false position, he can make him introduce a bill that he does not want to introduce, and he can prevent him from introducing a bill that he does want to introduce—and this is all. He betrays no signs of thinking or caring for anything else, and acts as if there really were no questions to care for or solve, but as if we were all simply playing a game in which it was agreed that one side should be called Democrats and the other Republicans, and the side that "scored" the most exposures and the most successful parliamentary dodges should win the game and carry off the "pool." The difference between him and his playmate, Morton, is that he plays the game fairly, while Morton cheats. Politicians are merely the gauges of party sentiment and ability, and Mr. Blaine's failure is simply the failure of the Republican "machine," or, in other words, the failure to produce men equal to the demands of the time. It is no answer to this to say that the Democrats are equally incapable. They must be produced, if not by Democrats or Republicans, then by somebody else.

THE PROGRESS OF THE EXHIBITION.

PHILADELPHIA, March 10, 1876.

THREE months ago a visit to the Centennial was easy and pleasant. The buildings were comparatively few in number and easily distinguished, and the ground was in good condition and unencumbered with building materials. But at the present day the visitor speedily discovers that he has hard work before him. The multiplicity of buildings begins already to be perplexing, the ground is softened by the outcoming frost, cut up here and there with excavations, and dotted with piles of boards, laths, shingles, bricks, and unremoved débris. Everything betokens the last travail before the installation of goods. Not that I wish the reader to infer from these remarks that the Centennial is backward and the managers hastening to make up lost time. On the contrary, the work of preparation is far advanced, and we have the best reasons for expecting the 10th of May to be the opening day in fact as well as in form. But, as every one knows, the last stages in making ready a great enterprise always wear the mien of distraction. It is difficult for the inexperienced to detect the real order beneath all this seeming confusion. The very forwardness of the Centennial looks like the opposite because there are so many buildings rapidly approaching completion about the same time.

Let me run briefly over the principal features of the Centennial in order. The Main Building is done and awaiting its contents. Some boxes and cases from South America, Sweden, and Norway are already placed in position, but the contents not unpacked. The spaces and sub-spaces for all the exhibits are marked off by red lines on the floor. The Machinery Building was finished long ago, and also spaced off. The shafting is well under way and can be finished easily in four weeks. In the centre the huge Corliss engine (1,500horse-power) which is to supply all the motive-power is rapidly approaching completion. The bed is laid, the upright cylinders erected, and also the two walking-beams. The foundations of other heavy pieces of machinery throughout the building are laid. Back of the Machinery Hall is a new structure, 314 feet by 160, with galleries, to be ready on the 15th. This Shoe and Leather Annex is the work of private subscription, and will contain the most complete display ever made of articles of leather. The importance of the department is manifest when we consider that the aggregate annual business is computed at $230,000,000 (of which $90,000,000 belongs to Massachusetts alone). The annex will contain specimens of every kind of shoe and boot manufactured, every kind of leather prepared, and every machine used in the country. Horticultural Hall was finished some time ago. There is a little painting to be done inside, and the potting proceeds slowly, as it requires a good deal of care. But in general I should say that this hall, like the main building, is only awaiting its contents. Agricultural Hall, the most backward of all the large buildings, has made astonishingly rapid strides. The arches are up; the roofing is laid, except around the central cupola and over a part of one of the wings; and the greater part of the flooring is down. In all probability the building will be delivered by the contractor at the end of the present month. The art building (Memorial Hall) is likewise in the last stages. The plastering is done, except some ornamental work around the base of the rotunda, the wood-work is done, and the tiles in some of the rooms are laid. A delay in the delivery of the tiles from Connecticut has thrown the workmen back a week or more, but, notwithstanding, the building will be in readiness by the beginning of April. One hundred feet in the rear is a detached structure, altogether new—the Art Annex. This annex, which is even larger in superficial area than Memorial Hall, is not of a permanent nature, but intended to contain the overflow, as it is called, of pictures and statues. Even with this extra room at their command, the managers fear that they will be unable to gratify all the demands for space. Being projected suddenly to meet an unexpected want, the annex is of course behindhand. But it is being pushed with great energy, and will doubtless be ready in season. The outer walls are of brick; the framework is wood. In appearance it is rather squat and ungainly, especially if compared with the handsome façade of Memorial Hall, and will be found, I fear, to be hot in summer weather. However, it will be no worse than the *Exposition des Amateurs* at Vienna. Near by is the Annex for Wagons and Carriages, also backward. Piles of lumber and the constant buzz of a circular saw reveal the process of construction. It is little more than a temporary frame building, which will not be inelegant when finished, but which at present shows its ribs and joints too plainly. The U. S. Government Building was completed more than a month ago. The Women's Pavilion was handed over last week. The Southern Restaurant and the New Jersey State Building are finished.

But it will not be necessary for me to enumerate more of the fifty or sixty buildings now scattered over the grounds. Suffice it to state that all

the principal ones are now ready, or so nearly ready as to be practically disposed of, and that the buildings incomplete or not yet begun are of a kind that admits of very rapid work. The managers will probably issue an order in a few days to the effect that all building material must be delivered and *in situ* before the 1st of April. The object of this is to reserve the railroad tracks and roads in the grounds for the conveyance of goods. By the middle of the present month Belmont Avenue, a large public drive which intersects the grounds, will be closed to travel, and the enclosure fence will be completed. From the 1st of April, most probably, the public will be excluded rigorously from the grounds, and the work of installation begun in earnest. The more I compare the state of things at Vienna with the condition of the Centennial, the more I am convinced that the managers of the present enterprise have it perfectly in hand. In fact, there seems to be but one source from which to apprehend delay, and that is tardiness on the part of exhibitors in forwarding their goods. If manufacturers could be induced to begin at once the shipment of at least their heavier and bulkier articles, the Director-General and his hard-working associates would, I know, feel much relieved. They would then see their way rid of every shadow of a doubt. Circulars and messages have already been sent out urging haste. I feel it to be only my duty, therefore, to do what little I can in the cause, and to beg every exhibitor whom these words may reach to "hurry up."

It may seem inconsistent with the opening remarks of this letter to add that the grounds are already in excellent order. What I mean is this—that, although the grass and some of the walks are soft under foot, the frost is entirely out, and a fortnight of dry wind will remove all traces of dampness. Even now the main walks and drives leave little to be desired, and there is no real discomfort except when one tries to save time by short cuts over the grass. The artificial lake in front of the Machinery Hall has an almost finished look; the masonry is in perfect order, and the ground, having been highly manured, will soon begin to put forth a bright green. A swan or two on the lake would do away with the appearance of newness. The terrace around the Memorial Hall is in great part graded, and the stone steps leading up to it on the south side are laid. The statues to right and left of the steps are also in position. There is a good deal of work still to be done in this vicinity in the way of sodding, gravelling, laying-out walks, and removing unsightly débris. But assuming the labor of construction to be over by April 1, the six weeks to May 10 will be an ample allowance of time for the finishing touches. Around Lauber's Restaurant, Horticultural Hall, and Agricultural Hall scarcely anything more is required than the removal of some boards and the laying down of a few walks. If the present mild weather continues, the trees and vegetation here will be in a remarkably advanced condition by the opening day. The State Buildings near the United States Buildings are backward, but, on the other hand, the offices of the English Commission are almost ready for occupancy, and the Japanese have their house and bazaar far under way. In general, it is evident that the builders have been highly favored by the weather, and have worked very steadily, "without haste and without rest."

A Department of Public Security, as it may be called, has been organized, and will be placed in charge of Col. Starr as marshal. This department comprises the police (and detective) force, more immediately under Col. Starr's supervision; the fire brigade, under Mr. Atwood Smith; telegraphs, under Mr. Phillips; and medical attendance, under Dr. Pepper.

Concerning the Department of Education, which is doubtless of special interest to the readers of the *Nation*, I may add that the State of Pennsylvania will exhibit in a separate building, 100 feet by 100 feet; Maine, New Hampshire, Massachusetts, Connecticut, Rhode Island, New Jersey, Ohio, Michigan, Indiana, Illinois, Iowa, Missouri, Kentucky, Tennessee, and Wisconsin will exhibit in the main building, chiefly in the gallery, 350 feet by 24, which has been laid out in sections of 25 feet. It is also possible that Massachusetts may decide to erect a separate building.

It may not be safe or fair to give an opinion of the Centennial in its ensemble at this early day. The next two months will probably develop a great many novel features of beauty and merit, and give the exhibition an air of finish which it does not yet possess. Nevertheless, I venture to say this much in advance of the season: The Centennial will not afford any one view so imposing as that of the Rotunda at Vienna from the southern entrance. It will not have any one building so unique as the Khedive's Palace—any one private exhibition so complete and artistically arranged as those of Prince Schwarzenberg and the Duke of Coburg. Neither will there be any one part of the grounds so perfectly attractive as the Mozart Circle and the upper end of Elizabeth Avenue. Yet the Centennial grounds, *as a whole*, will probably prove much more picturesque and less wearisome to the eye and foot, and the buildings will be more convenient of access, and will display their contents to better advantage.

I take the liberty of calling attention to one point of great practical importance. There will not be restaurants enough, I fear, for the large numbers of visitors confidently expected. On the map of the Vienna Exhibition are laid down eighteen restaurants, without counting soda-water stands, buffets, and lunch-counters. My impression is that there were three or four more, not entered on the map. Some of these restaurants were small, and some did not have a very profitable business. Others, again (notably the Liesinger Brewery), were larger than any at Philadelphia, and were uncomfortably crowded. The latest plan of the Centennial grounds enumerates only eight restaurants. These would not have sufficed for the daily attendance at Vienna. How they are to be made to accommodate the much greater attendance expected here is more than I can see. Besides, the three largest are rather close together in that part of the grounds near Agricultural Hall—in other words, remote from the chief centre of attraction. There seems to be a decided necessity for three or four good-sized restaurants, one or two at the eastern end of the Main Building, one at the western end of Machinery Hall, and one near the United States Building.

The programme for the opening day has not yet been settled in all its details, but will probably be as follows: The exercises are to be held in the open air and to be short and simple in their nature. There will be an ode by Mr. Bayard Taylor, a cantata by Mr. Sidney Lanier, some other music, instrumental and vocal, a very brief address of welcome to President Grant, and an equally brief response. In conclusion, a formal tour of inspection by the President and suite. When they reach the centre of Machinery Hall the Corliss engine is to be set in motion. The reader can judge how far we are ahead of Vienna in point of time when I add that the Machinery Hall there was not in running order before June. The time occupied in music and speaking will probably not exceed three-quarters of an hour. Altogether, the exercises will be plain, I might say democratic, and quite unlike the dress-coat and kid-glove affair of Vienna, which was a sort of court-reception.

MR. DISRAELI'S SURPRISES.

LONDON, February 22, 1876.

MR. DISRAELI prepared with some ingenuity a couple of surprises in the Queen's Speech, the one to dazzle the Philistines on whose active sympathy he confidently calculates, the other to get himself and his Administration out of a serious difficulty. The solemn announcement that the Queen deemed the present a fitting opportunity for making a formal addition to her style and titles in respect that the direct government of India had been transferred to the Crown some twenty years ago, has been received with acclamation by all the retired shopkeepers and villa-occupiers in England, and with regret by everybody else. Any trifle regarding royalty, even an unveracious scrap of news picked up by fashionable prints through the servants' hall, is read with interest by many well-to-do Englishmen and Englishwomen. A morsel of gossip about the precedency of the Duchess of Edinburgh, or the domestic doings of the Marquis of Lorne and the Princess Louise, is greedily devoured by these people. This sort of thing delights them and engrosses them more than the gravest piece of political intelligence. No one knows this better than Mr. Disraeli. Whether it be due to the insight of genius or to some obscurer cause, I do not know, but it is an undoubted fact that the creator of Mr. and Mrs. Putney Giles has a keener appreciation than most people of what will take with that numerically not insignificant class of Britons to which Mr. Thackeray has assigned the name of Snob. Years ago, when the present Prime Minister of England was a clerk in a solicitor's office, he displayed this peculiarity of his genius. He used to come down to his office, the story goes, day after day, and sit there listlessly reading Spenser's 'Faery Queen.' He had no turn for parchment deeds and musty documents, and, but for regard for his family, the head of the firm would have parted with him before his apprenticeship was over. But there came a turn in the tide of his fortunes. The firm was called upon to draw up prospectuses for companies, and by good luck it fell to the listless student of the 'Faery Queen' to try his hand on these. He acquitted himself to perfection. He turned the sentences and threw out the baits to catch the British Philistine of the day with an adroitness that charmed and amazed the head of the firm, who, no doubt, good man, was caught himself. And from that day to this, during a full half-century of time, Mr. Disraeli has been drawing prospectuses with an experienced hand, and dazzling Philistines with increased success. Just consider the various incidents with which Mr. Disraeli's name has been prominently associated during the last five or six years—the coining of the phrase, "Sanitas

sanitatum omnia sanitas"; the Bath letter; the reference to the "Straits of Malacca" in his address to the Buckinghamshire electors; the support of a "bill to put down Ritualism"; the telegram announcing that the Messrs. Rothschild had bought the "road to India"; and now the "formal addition to the style and titles" of the Queen. What are these but so many paragraphs or marks of exclamation in Mr. Disraeli's political prospectuses?

Analyze these emotional interjections, or analyze the whole of Mr. Disraeli's political life, and you will find it all of a piece—all tinsel, and spangles, and theatrical effects. Analyze his novels, and you will find the same ingredients. He is well aware that this artificial glitter, when applied to politics, acts upon the half-educated Briton who vegetates in a villa like a gaudy fly thrown over a sluggish salmon in a pool. The salmon cannot resist it, neither can the Briton. Sensible people in America must read with amazement, not unmixed with something like contempt, discussions in Parliament, like that of last Thursday, on the propriety of the Queen calling herself by this title or by that. The whole proceeding must have an air of unreality, almost of servility, about it in the eyes of your hard-headed, practical people. When the paragraph in the Queen's Speech upon the subject was read in solemn silence at one of the official dinners the night before Parliament opened, whether at the Duke of Richmond's or at Lord Granville's I do not know, a young peer was overheard to say in a loud whisper "Queen of England and Begum of India," amid the inextinguishable laughter of the assembled magnates. That light-hearted sally represents, not unfairly, the feeling of the majority of sensible people whom you meet. Mr. Disraeli, they say, having created three dukes, which is one more than any other prime minister ever managed, is insatiable. He now wishes to create an empress before he dies, and accordingly has taken the opportunity of making royalty ridiculous. The matter was unconsciously brought to its proper proportions in the discussion when Sir George Campbell suggested that the Queen should be regarded as the Great Mogul, and the Indian princes as the Great Maccallum. People feel that an error has been made in mooting the point at all, an error in taste which it is difficult to put right. The whole thing would be too silly if it were not for the certainty that the private feelings of a lady whom we all, as loyal subjects, love and respect must be hurt by the proceedings. But it is, to say the least of it, unfortunate that the Prime Minister should have been induced to initiate a discussion in which the name and dignities of the Queen could be held up to ridicule, both in the House of Commons and in the press—unintended ridicule, I do not doubt, but none the less unpleasing. And this manœuvre of the Prime Minister's is the more distasteful at the present time when we have, within a few days' sail of us, one of the greatest nations in the world glorying in its untitled grandeur; when our gigantic dependencies are flourishing without a shadow of these unmeaning formalities; and when, across the Channel, that nation which has identified imperialism with suppression of liberty, with profligate public expenditure, and with bloody and unsuccessful war, is struggling to emancipate itself from the dead weight of sham splendor which an empire imposed upon it. We all love our Queen. We respect our Queen's hereditary titles, which are associated with most that is great in British history, and we desire that these titles should be respected by foreign powers and foreign peoples; but we do not desire that she should add to these titles for no possible object but to gratify a whim, or please the vanity of one whom, with all his ability, we can never regard as a true-born Englishman.

The second surprise which Mr. Disraeli prepared for us was the announcement that a Royal Commission was to be issued to enquire into matters of international law on the question of slavery, which one would have supposed ought to have been within the cognizance of the Government of the day. I have hitherto refrained from mentioning those unfortunate slave circulars in my letters, because I have found myself at variance with most people about them. The motives which prompted the issue of some kind of instructions for the guidance of naval officers in the territorial waters of slaveholding states are intelligible enough. It is out of the question to suppose that British ships-of-war are to lie in friendly ports and act the part of cities of refuge for the reception of any natives who disapprove of the law of the land in which they unfortunately live. With all our national anxiety to set all men free, we have found ourselves compelled to bear with the institution of domestic slavery in certain states with which we have entered into treaty. How can we, with one hand, sign a treaty recognizing this institution, and with the other provide the means for its destruction, and employ our ships as slave-escapes? This country has taken a different view of the matter. The constituencies here got it into their heads that we are accepting slavery, and giving up the battle for which many good men at the end of the last and at the beginning of this century struggled nobly. Agitators and popularity-hunting members of Parliament and well-meaning philanthropists have fanned the popular excitement on the subject, and the Government have pusillanimously thrown over their law-officers and their under-secretaries and fled before the public wrath. They learned that the borough members who sit on their side of the House were alarmed, and were unable to give them their wonted support; and hence the appointment of this Commission, which will give the Government an avenue of escape. *Punch*—which, by the way, has of late been singularly happy in its political cartoons—has neatly delineated the situation. Mr. Disraeli appears as a mountebank conjurer—not the first time he has been represented as a mountebank—doing the "Extinguisher Trick." "Here," he observes, "you perceive 'Fugitive Slave Circular' number two, number one having disappeared already. I now take this cone into my hand. It resembles an extinguisher, and is called a 'Royal Commission.' I place it over the 'Circular,' and—hey, presto!—on raising it again 'Circular' number two *will have disappeared.*" Can you imagine Mr. Gladstone, or that fine old Englishman, Lord Palmerston, whose last twenty years of political life have just been published, acting the craven in this manner? I cannot, and I do not know the man who can. But be that as it may, the appointment of the Commission will stave off immediate disaster. The members have been named, and they are undoubtedly well selected. Their report will be looked for with much interest, especially by those who are out of harmony with the popular feeling on the subject. But the vacillating conduct of the Government in regard to these circulars cannot be too strongly censured. Mr. Whitbread, the member for Bedford, and a man of great weight with the Liberal party, has given notice of something very like a vote of censure, which comes on for discussion to-morrow night, and will lead to a protracted debate of several days. There will be some hard hitting on both sides and some powerful speaking. There will also be a good deal both of cant and rant. The Government will ride off on the Commission, and win a House-of-Commons victory with the half of their majority. But the debate will tell in the constituencies. It will not be difficult to show that the Government acted carelessly or ignorantly in issuing the first Circular; culpably in issuing the second, when their attention had been emphatically directed to the feeling of the country, to which they have now succumbed; and pusillanimously in shrinking from their own action, and shirking responsibility when they found that their supporters were as timid as themselves. So much for Mr. Disraeli's two "surprises." Perhaps it would have been better for the stability of his Administration if he had satisfied his soul with commonplace.

THE FRENCH REPUBLIC BEGUN.

PARIS, February 25, 1876.

YOU must not expect me to speak to-day of Dumas's new play, "L'Etrangère," or of the new American drama called the "Chevaliers de la patrie," in which I saw an Abraham Lincoln very different from the Lincoln whom I had seen in Washington. The new elections are the all-absorbing topic, and their importance for the future of France is such that it is impossible to think long of anything else.

Last night, while the various tableaux of the new American drama were unfolded before me, while I heard the pompous speeches of Abraham Lincoln receiving his visitors, I could not help thinking that the American Republic was as different from our new Republic as this actor Lincoln from the actual Lincoln. The actor may be some day a member of a "Comité central de la Commune," as many of his comrades were in 1871; he would only continue to play on another stage. There always seems to me to be a certain want of reality in all our political manifestations. During the two weeks which preceded the elections in Paris there were all sorts of public meetings. The men who appeared in them, were they not actors? Their bombastic eloquence did not seem to cover any deep feelings. You saw everywhere the same actors and the same people who wanted a little excitement and amusement. There was no platform to explain or to defend; all the candidates were republican, and the Republic has not yet lived long enough that there should be two parties equally ready to govern but with different and definite views. The last Assembly voted a republican constitution; it could hardly be discussed now in its details—the revision of the constitution can only take place after a certain time. There was, therefore, hardly anything to talk about, yet such a flood of turbid eloquence never rolled over the capital. In order to stir their audience, the popular orators had no need of promoting views of administration and of government; they all struck the same chord—the amnesty chord. The people whom they addressed were the very men who had cheered the Commune in 1871, and who, if they did not fight on the ramparts at Neuilly, received the pay of *fédérés* during the whole reign of the Commune. Amnesty in

their eyes is not an act of generosity and of pardon, it is the glorification of the Commune. It was always easy for a speaker at these public meetings to be applauded if he only abused the Versailles Assembly. Though the Assembly founded the Republic, it was always called clerical, reactionary, etc.; the real reason of its unpopularity lies in the fact that the Versailles Assembly vanquished the Commune.

This is also the real danger for Marshal MacMahon; he is now receiving the official marks of respect of those who must bow before the President of the Republic. But he is the man who reorganized the poor prisoners coming from Germany, who formed them into regiments again, who would not lend himself to the timid counsels of the men of the 4th of September, who re-entered Paris by force, and crushed the Commune with his strong hand. Can he like this word amnesty? He lost eight thousand of his men—good, honest French soldiers—in the long siege of Paris. Will they be amnestied? Will the hostages be amnestied? I was always of opinion that too much severity was exercised towards the foolish and ignorant instruments of the Commune, and too much leniency shown to the wicked men who were its chiefs and instigators. I can quite conceive that the Minister of the Navy, who has supreme authority over New Caledonia, should pardon as many unfortunate insurgents as possible; but individual cases of pardon are not what Victor Hugo, what our Radicals ask for. They want a general amnesty, an unconditional surrender of the Government and of MacMahon before the survivors of the Commune; they want Rochefort to be seen in Paris and to carry his *Lanterne* on the boulevards. Under this word amnesty lies a very deep question, which is only one of the formulas of the problem of the day. Will the Republic be conservative, or will it be radical, socialistic, communistic? The problem is all the more formidable inasmuch as these words are themselves vague and elastic. Every man is always a radical for one and a moderate for another. What is going on beneath this war of words is a dangerous war of instincts—what Mr. Darwin would call the struggle for life. It is the eternal war of the Revolution against the past. It seemed as if there was nothing more in France for the Revolution to destroy. It has destroyed the traditional monarchy; it has destroyed the old aristocracy; it has destroyed the influence of the church; it has destroyed, by the articles of the Civil Code, and sometimes by confiscation, the "grande propriété"; it has established the most absolute equality that the world ever saw anywhere; it has, finally, given the political power to direct universal suffrage; but it seems as if all this was not enough. There are still some poor among us, and still some rich. The fields of the country are cut up and divided in every generation; but there are still large fields and small fields. The socialistic ideas which have long pervaded the towns have, it seems, made some headway in the rural districts. Some of the men who made this last electoral campaign tell me that it is surprising to find what the one-sou papers have done in the country. They have been astonished to find that the poorest servants on the farms now take an interest in politics; the peasant who has increased his small piece of land with borrowed money is jealous of the peasant who owns a few more hectares. My friends tell me that there is much jealousy in the smallest village between those who have more land and those who have less; and that by some natural instinct of mankind all the malcontents vote the Republican ticket.

Now, if this be so, it will be always, and even under the most favorable circumstances, very difficult for a republican leader to form and constitute a conservative party. If adhesion to the Republican party has ever been the outward expression of discontent, disappointment, and envy, so soon as the Republican party shall be thought to have a quiet tenure of power the malcontents will be ready to give ear to some new tempter. And the danger of the future lies in the fact that this tempter exists. There is a party which professes as much love as even the Republicans do for the people, for universal suffrage; which professes contempt for the so-called privileged classes, for the old nobility, for the egotistical bourgeoisie: it is the Bonapartist party. The Bonapartist deputies will in the Senate as well as in the Lower Chamber assume the position which was held in the National Assembly by the Right; and they will besides speak as the friends of the people, the representatives of the democracy. Their minority will be the focus of the Conservative party. This result is much to be regretted, for the Bonapartists have so far found no favor at all with Marshal MacMahon. He said to one of the Bonapartist leaders some time ago: "You reproach me with my indifference to your cause, but I know only my duty. I am mounting guard for order. All the traditions of my family, all my own personal inclinations, drew me towards the cause of the legitimate monarchy. Still, at the very moment when the cause of the Comte de Chambord seemed on the point of triumphing, when the legitimate king had but one word to say to be proclaimed the sovereign of this country, I remained perfectly quiet and neutral. I did not discourage, but I did not encourage, the fusion. I did nothing for the Comte de Chambord. How can you expect me to do something for the Prince Imperial? Can I forget Sedan, if everybody else should?"

Marshal MacMahon may not be a brilliant political genius, but he is an honest and patriotic man. What will he do if he finds himself unable to stop the tide of demagogy; if all the conservative laws passed by the late Assembly are repealed; if amnesty is proclaimed? At the present moment he is perfectly willing to try the Moderate Republicans and to give them a fair chance. It was the last advice given him by M. Buffet, whom history will judge more leniently than the irate parties which combined against him. M. Buffet, if I am well informed, said to him: "Go as far Left as you can conscientiously do; I am done for; I have not been understood; call the men who have represented me in the eyes of the people as the enemy of the constitution which I was the first to organize and to protect, and tell them to govern after their own fashion. If they can find a majority in the Chambers, if they can make a respectable government, I shall be happier than anybody, and from my retirement I will send them my best wishes." The Marshal has appointed M. Dufaure to take the place of M. Buffet, and the administration of M. Dufaure will soon be at work. It is said that Gambetta meant at first to support it: he says openly in his paper that he has no intention of upsetting Marshal MacMahon. He may be himself now in a moderate mood, and half afraid of his own triumph; but will he be capable of enforcing a moderate policy on his own party—will he be able to satisfy the rancor of M. Thiers, who wishes before he dies to take his revenge for the 24th of May?

Time will soon answer these questions. One thing is certain: the fair trial of the true Republic has now begun, and it will be for the Republicans to show that they are capable of conducting the affairs of the country. They will find no obstacle in the Legitimist party—the Legitimists are now out of the field; nor in the Orleanists—they have taken refuge in silence or have swollen the ranks of the Constitutional party. Their only open enemies will be the Bonapartists; and universal suffrage, which has always been the hope of the Bonapartes, has just loudly proclaimed its verdict against them. Whatever may be said of the government which France has had during the past two years, it must be admitted that this government, which was lately personified in M. Buffet, has increased the prosperity of the country and maintained material order. France has revived, and her finances have never been so prosperous. The army has been reorganized with a wonderful activity, and would now be much readier for new struggles than it was in 1870. It can also be said that liberty has, on the whole, been respected; the late elections were as free as any elections which ever took place in France. The state of siege had, to be sure, been maintained since the Commune in Paris, Lyons, and Marseilles, but the press was completely free, and the triumph of the Radicals in these great towns shows that they have been crushed nowhere and that they have been left at liberty to keep up a pacific agitation.

Correspondence.

CAN NOTHING BE DONE?

To the Editor of The Nation:

Sir: The recent scandals at Washington are deplorable enough, but they will be still more deplorable if their only result proves to be the revival of the prospects of Democratic success, justly forfeited by the admitted incompetency, in Congress and elsewhere, of that party under its present leadership.

For several years each party has based its claims to power not on its endeavors to deserve public confidence, but on its efforts to prove that its antagonist is more dangerous than itself, and popular majorities have fluctuated not from conviction of the merits of the temporarily successful organization, but from well-founded dread of the other. Every intelligent voter has felt that he had but a choice of evils, and he has chosen the one which seemed at the moment to be the least. Should this continue, it requires no prophet to foretell the result in the near future.

The average voter is rapidly becoming independent to a degree unexampled in the experience of the present generation, and the demand for purity of administration is taking in his mind the place of the ordinary partisan war-cries. The Babcock and Belknap developments—to be followed no doubt by others equally flagrant—will intensify this demand enormously, and will present an opportunity which it would be insane to throw away.

The gravest public question of the moment is, What use will be made of it?

The fiasco of the Cincinnati Convention showed sufficiently, I think, the futility of an effort to construct a third party. At the same time, to do nothing is to invite the Democracy to offer some old "war-horse" for the suffrage of the disgusted Republican. Cannot, however, some movement be started to organize the independent voters of both parties into a body strong enough to turn the scale either way, which shall say emphatically to the Republican and Democratic managers alike that the only prospect of success lies in presenting candidates worthy of confidence?

I throw this out as a suggestion of what seems to me the only mode of bringing to bear decisively the healthy public opinion which unquestionably exists at present. Both parties just now would respect such a movement, and would exert themselves to secure its support or to avert its opposition.

Very respectfully, HENRY C. LEA.

PHILADELPHIA, March 6, 1876.

RESIGNATION AND IMPEACHMENT.

TO THE EDITOR OF THE NATION:

SIR: The Constitution of the United States provides in article 1, section 2, clause 5, that the House of Representatives "shall have the sole power of impeachment," and in section 3 as follows:

"6. The Senate shall have the sole power to try all impeachments. When sitting for that purpose, they shall be on oath or affirmation. When the President of the United States is tried, the Chief-Justice shall preside. And no person shall be convicted without the concurrence of two-thirds of the members present.

"7. Judgment in cases of impeachment shall not extend farther than to removal from office, and disqualification to hold and enjoy any office of honor, trust, or profit under the United States; but the party convicted shall nevertheless be liable and subject to indictment, trial, judgment, and punishment according to law."

And the Constitution contains in article 2, section 4, this additional provision:

"The President, Vice-President, and all civil officers of the United States shall be removed from office on impeachment for, and conviction of, treason, bribery, or other high crimes and misdemeanors."

Before and at the time of the convention that framed the Constitution, an impeachment before the Lords by the Commons, in Great Britain, in Parliament, was a prosecution of known and established law, and had been frequently put in practice against persons *who had ceased to hold office*. Before and during all the time that convention was sitting the prosecution was pending against Warren Hastings, *although he had resigned his office*. His resignation was in February, 1785. In the House of Commons, on the 4th of April, 1786, charges were exhibited against him. The resignation of his office did not prevent the House of Commons from impeaching him, nor prevent the House of Lords from trying the issue of guilty or not guilty.

When Mr. Justice Story, in his commentaries on the Constitution, alluded to that case in Vol. II., sec. 795, he had not seen how it was mentioned in the convention, those commentaries having been published several years before the publication of the Madison papers.

These papers show that on the 8th of September, 1787, when the convention had before it the clause providing for the President's removal from office on impeachment and conviction of treason and bribery, Col. Mason said: "Why is the provision restrained to treason and bribery only? Treason as defined in the Constitution will not reach many great and dangerous offences. Hastings is not guilty of treason" (Elliot's 'Madison Papers,' p. 528).

This reference to the case of Hastings being followed by an amendment embracing "other high crimes and misdemeanors" (besides treason and bribery), it is difficult to suppose that with that case present to their minds, and made the grounds of action, the framers of the Constitution intended that a civil officer of the United States should by resigning his office take away from one house the power to impeach, or from the other house the power to try impeachments, when the resignation of Hastings had no such effect. Such a supposition is the more difficult in view of the fact that those framers introduced safeguards and limitations when they saw occasion for them—*safeguards* prescribing that when the Senate sit for the purpose, they shall be on oath or affirmation, that when the President is tried, the Chief-Justice shall preside, and that there shall be no conviction without the concurrence of two-thirds of the members present; and upon the judgment this important *limitation*, that it "shall not extend farther than to removal from office, and disqualification to hold and enjoy any office of honor, trust, or profit under the United States."

Though resignation of office should be regarded as attaining all that could be attained by a judgment of "removal from office," yet it does not attain all that could be attained by a judgment of "disqualification to hold and enjoy any office of honor, trust, or profit under the United States."

Though the party is "liable and subject to indictment, trial, judgment, and punishment according to law," yet the effect of such indictment and proceedings therein might be less than the effect of judgment in case of impeachment: the President has "power to grant reprieves and pardons for offences against the United States, *except in cases of impeachment*."

C. R.

March 7, 1876.

Notes.

A. S. BARNES & CO. have assumed the publication, by subscription only, of Mrs. Martha J. Lamb's new 'History of the City of New York,' in 2 vols.——James Miller will republish in this country 'Letters from Elizabeth Barrett Browning and the Author of 'Orion',' with recollections of contemporaries, by R. H. Horne.——J. B. Lippincott & Co. have in press 'Elementary Physical Geography' and 'Elementary Astronomy,' by Richard A. Proctor; and 'America Discovered by the Welsh, in 1170 A.D.,' by Rev. Benj. F. Bowen.——F. B. Patterson, 32 Cedar Street, will shortly publish 'How to Steady our Dollar,' by Dr. James C. Hallock, jr.——Following the example of *Harper's*, with its fifty-volume index, we are promised a ten-volume index of *Scribner's* by the publishers of the latter magazine.——'A History of my Life and Times,' by the veteran George Cruikshank, is announced as in preparation, and will be eagerly looked for on both sides of the Atlantic.——Geo. P. Rowell & Co., the well-known advertising agents, have undertaken to ensure "a full and complete exhibition of American newspapers" at the Centennial, at an estimated cost of $20,000 for the building and its equipment, salaries, and a catalogue of 300 pages in solid nonpareil type, which will serve both as a directory to the various files, and as a gazetteer, showing the importance of our towns and cities as gauged by the newspapers they sustain. The enterprise is as praiseworthy as it is bold, and will rank among the greatest novelties of this or any international exposition.——The lately published 'Proceedings of the American Antiquarian Society' at its annual meeting last October is made valuable by Dr. Charles Deane's account of the fortunate filling of a lacuna in the 'Records of the Council for New England' (June 28, 29, 1623), and by what we may call a memorandum on the criminal laws of Massachusetts, by Judge Aldrich. The aim of the latter paper is to show the amelioration of the penal code of the State, and to defend the present time against charges of unprecedented corruption and of a growing insecurity of life and property. This is so ably sketched that one is led to hope the author may find time to elaborate the subject.——Still another summer school is open to the student naturalist—a school of biology at the Peabody Academy, Salem, Mass. "Especial attention will be given to marine botany and zoölogy, as the advantages for dredging and shore collecting are most excellent." Only fifteen students can be admitted. Dr. A. S. Packard, jr., editor of the *American Naturalist*, will direct the school, and in particular the zoölogical instruction.——The Rev. Isaac Taylor's paper on the Etruscan Language has been reprinted from the Transactions of the Philosophical Society of Great Britain. Now that Corssen is generally acknowledged to have broken down with his Aryan hypothesis, Mr. Taylor speaks with the authority of a presumed "fittest survivor." Perhaps his argument savors something too much of authority and dogmatic assertion, but it is very ingenious, and one at least of his wood-cut illustrations—that of a Samoyed-like Etruscan warrior—lends weighty support to his view.——With the new year began the eleventh series (Heft 241) of Virchow and Holtzendorff's 'Sammlung gemeinverständlicher wissenschaftlicher Vorträge,' and the fifth of Holtzendorff and Oncken's 'Deutsche Zeit- und Streit-Fragen' (Berlin: Carl Habel). These two publications are among the most remarkable of the day. We have frequently had occasion to call attention to them, and we wish we could think that like selections from the best current writing—political, literary, and scientific—of our own country would find a popular acceptance. No healthier or less repulsive form of tract could be devised.

—It is announced that examinations for admission to Harvard College will hereafter be held in Cincinnati simultaneously with those in Cambridge. The advantage which this will give the college in attracting students, and

the great economy and convenience of it for candidates living west of the Alleghanies, are patent. But it will be perceived, we think, on reflection, that the proposed step has a much wider importance than a mere move in the competition of our colleges. Not only will Harvard, for example, become and be felt as a near instead of a distant rival of Oberlin and Antioch, but her examinations (which are published, together with the number of *rejected* as well as of successful applicants) will contrast with theirs in a manner which will inevitably set either their officers or the public, and probably both, to thinking. We apprehend, however, that these and other Western colleges will not be the first institutions affected by the innovation. A great and rather sudden change for the better may be looked for among the preparatory classical schools, of whatever name; and what has been observed in Michigan in this respect under the influence of the University at Ann Arbor, is certain to come about over a much wider area when a still higher standard is set up by Harvard. Parents will insist that their sons be fitted to pass her examinations, and the test of a good school or a good teacher will shortly be the percentage of pupils who do so pass. That the colleges will long lag behind the academies we do not think likely, and the level of education and scholarship throughout the West will thus be raised—insensibly it may be, but surely—by the simple attendance once or twice a year at Cincinnati of Harvard's examiners.

—If any one is sceptical of the results we have foreshadowed, we commend to him the perusal of a little pamphlet on 'The Influence of the Older English Universities on National Education,' by the Hon. George C. Brodrick, Fellow of Merton College, Oxford. It is a reprint of a paper read before the Social Science Congress at Brighton, last October. The author begins by offering some statistics to show that Matthew Arnold was in error when in 1868 he alleged that in England there was "but one matriculated student for every 5,800 of population," against one for every 2,600 in all Germany, while "Prussia alone numbered 6,362 students in its eight universities." Mr. Brodrick increases the ratio for England and Wales to 1 : 4500, exclusive of the students of academical age of theological naval and military, engineering, and other colleges. He proceeds to argue that the practical influence of the older universities is not to be measured merely by the number of their students. Even when their number "was much smaller than it is at present, Oxford and Cambridge virtually governed the whole course of higher education throughout England. . . . Every school of reputation professed, above all, to prepare boys for the Universities, and, notwithstanding that only a small minority of boys actually proceeded thither, the instruction of all the rest was limited and fettered by University requirements"—a remark which has an obvious bearing on the probable working of Harvard's examinations at the West. Now that the Universities have begun to broaden their curriculum and have undertaken "the office of Examining Boards on a very large scale, they have strengthened to an extraordinary degree their former hold on secondary education. . . . It is not too much to say that by forming this widespread network of examinations and occupying the centre of it, the Universities of Oxford and Cambridge have virtually made themselves arbiters of learning over the great mass of schools above the elementary grade, and assumed some of the most important functions exercised by the Ministry of Education in other countries." Mr. Brodrick further points out that the Universities supply the leading public schools with trained masters; that "the great body of clergymen and of barristers, all the bishops, and nearly two-thirds of the judges, are alumni of English or Irish universities." Even more than in this country, and *ex-officio*, the clergy educated at the Universities "are the sole representatives of learning in most country parishes," and manage the great majority of parochial schools not under school boards. The Education Office is almost wholly manned from Oxford and Cambridge; "out of 123 school-inspectors for Great Britain, all but two or three are university men." They predominate on the staff of the Civil-Service Commission, and in the "whole administrative and political service of the state we find graduates of the older Universities filling high positions in a ratio out of all proportion to their numbers." More than a third of the present House of Commons were educated at Oxford and Cambridge alone, as were ten out of Mr. Gladstone's original Cabinet of fifteen, and are ten out of Mr. Disraeli's twelve—he being the only minister who has not received a university education. What the press owes to Oxford and Cambridge men for its characteristics may be guessed but cannot be exactly determined.

—Mr. Brodrick next considers the nature and tendency of the influence of the Universities on national education. "So long," he says, "as Oxford and Cambridge were treated as clerical seminaries rather than as national seats of learning and education, it was not to be expected that any kind of attainment would be effectively encouraged within them except such as might conduce to success in the clerical profession." Consequently, as the schools followed the lead of the Universities, "the whole educational growth of the country was dwarfed and stunted by the dogmatic immobility of institutions which ought to have been foremost in every advance of knowledge." The spell of ecclesiastical ascendency has, within the present generation, been markedly weakened, but there is yet a "want of what the Germans call freedom in learning and freedom in teaching." "Students"—this reads like an extract from one of President Eliot's reports—"might be left at liberty to pursue a special line of study from their first entrance to the University, and yet be subjected to as much control, both intellectual and moral, as may be thought desirable without forcing their various tastes and abilities into conformity with any Procrustean model. In a word, there may be a common basis of university training with an inexhaustible variety of university teaching; a certain family likeness and freemasonry among university men, with the greatest possible individuality of thought and multiplicity of accomplishments." We are again reminded of Harvard when we read: "It is admitted on all hands that without an effective extrance examination to exclude those who have not mastered even the rudiments of a liberal education, and to defeat the conspiracy of bad schoolmasters with bad college tutors, neither University can discharge its proper functions." We can do no more than allude to Mr. Brodrick's plan of enhancing the influence of the older Universities "by affiliating existing local institutions, by founding local University Colleges, or by otherwise colonizing the provinces from Oxford and Cambridge." His views are not without interest and instruction for us, but their application is still rather remote.

—Anything is of general interest that casts light on the way of working of so famous a scholar and critic as Max Müller; and this is especially the case at the present time, when his threat to abandon England and move back his "German workshop" to its native soil is drawing out the renewed and heightened adulation of the English press. A recent incident, now, illustrates in a rather striking manner his critical method. Müller has repeatedly made and urged against the "editors and contributors" to the great Sanskrit lexicon, completed last year, the charge that they are a "mutual-admiration society." In order probably to help correct the evil effects of their mutual flattery, he breaks out, in the preface to his last 'Rig-Veda' volume, with the following reproach: "Why are not such technical terms as *gîtin*, *'sirahkampin*, etc., given in the Petersburg Dictionary?" To this the editors reply, in their concluding preface: "In our dictionary a great deal is wanting, but these particular words are not wanting. They are in their proper place, properly explained, and each referred to the only known place of its occurrence. We might therefore ask on our part, How can any one find fault so wantonly?" In a late number of the London *Academy* (February 12) Müller explains himself, and covers the unsubmissive editors with confusion. He styles their answer a "petty remark," which they will hereafter sorely regret having made. He is sure that, if they had only studied carefully his criticism, they would have seen that nothing was farther from his thoughts than to intimate that *gîtin* and *'sirahkampin* were not to be found in their work. All the point of his objection lay in the "etc.," which was intended to inculcate three things—1, That certain other compounds occurring in the same treatise with the words mentioned ought, "though everybody would understand their general meaning," to be noted in any future possible edition of the lexicon; 2, That such words ought to be given more distinctly the aspect of technical terms; and, 3, That they ought to be invariably referred to the treatise in which they originally occur, instead of in part to an intermediate source. Truly a wonderful abbreviation, this "etc."! There are few living writers who can use the English language with such pregnant significance. Perhaps there is nothing in universal literature to be compared to it, except the Hindu *aum*, in the three letters of which the devout Brahman believes the whole of divine truth to be wrapped up. Only, to avoid such misapprehensions as this of which the editors of the lexicon have been guilty, Müller should, like some of the Hindu authors, accompany his text with an authoritative comment, pointing out that when he seems to say one thing he really means several other and very different things.

—A recent work on the 'Genuineness of the Moabite Antiquities,' by Professors Kautzsch and Socin, of Basel, has moved a writer in the *Athenæum* of Feb. 26 to commiserate to the length of a column and more the simplicity of the unfortunate individuals and government who have been duped by these "antiquities," and especially of the two writers named. He would not speak unkindly of their work, but at the same time he has "rarely met with so remarkable an instance of misapplied labor." The pity he bestows upon

them is somewhat misplaced. The work in question is not a defence but a most overwhelming attack, which seems likely to give the finishing stroke to a reputation which was always poor. The writers have thoroughly sifted—with needless thoroughness, many will think—Prof. Socin the external evidence, the circumstances, of the alleged discovery; and Prof. Kautzsch the internal evidence, arising from the supposed religious use, the palæographic and archæological character, of these "abominations of Moab," as they have been termed (see also Ps. lx. 8). The conclusion at which they arrive amounts to this: on the one hand the external evidence is so suspicious that only the most undoubted internal proofs of genuineness can save them; on the other, their internal character is so bad that even the best of external evidence would hardly suffice to prove them innocent. Their case, we fear, must be given over. Prof. Kautzsch has had the rare fortune to gain admission to the collection which is so closely and sacredly guarded in Berlin. We suspect he is the first "unbeliever" to whom it has been opened. It is possible that the writer in the *Athenæum* read the book, as papers are sometimes read before learned societies, "by title," and barely that, for the full title, 'Die Ächtheit der moabitischen Alterthümer *geprüft*,' should have put him on his guard. It is more than likely that his slender knowledge of German led him to translate *geprüft* "proved." He is now doubtless receiving back in contributions from his friends the pity he so foolishly squandered on Professors Kautzsch and Socin, who "have evidently no acquaintance with even the rudiments of archæology."

—The supplementary catalogue of the great Berlin circulating library has just been issued, and, taken together with the last complete catalogue (published in 1874), affords curious statistics in more than one branch of literature. We have found it especially curious as a list of the relative fame and worth of American authors. To appreciate the value of the test, it must be borne in mind that in Germany libraries for the general public do not exist, and that circulating libraries are very few and are the better patronized on that account. The catalogue is divided into the departments of "Belletristik" and "Wissenschaftliche Werke," and professes to embrace "die neuesten Erscheinungen und das Beste aus allen Zweigen der Literatur." The following is the American contingent in Belles-lettres: T. B. Aldrich, two works; H. W. Beecher, one ('Norwood'); Emerson Bennett, five; Brockden Brown, two; Alice Cary, one; Sylvanus Cobb, two; J. Esten Cooke, three; Cooper, thirty-one; Miss Cummins, four; Emerson, one ('Die Führung des Lebens'); "Fanny Fern," one; Bret Harte, three; Hawthorne, two ('Blithedale,' 'Das Sieben Giebel-Haus' [*sic*]); Holmes, one ('Elsie Venner'); Longfellow, three; Irving, one; Poe, two; Miss Sedgwick, one; Mrs. Southworth, twelve (51 vols.); Mrs. A. S. Stephens, eight (26 vols.); Mrs. Stowe, five; Bayard Taylor, two ('Hannah Thurston,' 'Kennett'); Miss Warner, eight; N. P. Willis, one ('Komische Geschichten'); Theodore Winthrop, one. As representing all other branches of literature, we encounter: Bancroft, three volumes of his history; Samuel Bowles, one; J. Ross Browne, one; H. C. Carey, one; J. W. Draper, two; Irving, two ('Granada' and 'Washington'); Dr. Kane, one; Prescott, one; Bayard Taylor, two. The library does not include works on natural science, but one wonders whether as regards the rest of our literature the German public is fulfilling the office of posterity. And again, are we to suppose that the German writers now so popular with the American public—the Marlitts and Werners and Hillerns, are held in the same estimation at home as the Cobbs and Southworths and Stephenses are here?

—Having recently spoken somewhat slightingly of the first two volumes of Reinwald's 'Bibliothèque des Sciences Contemporaines,' it is proper not to be silent when a volume appears which merits commendation. Such a one is the 'Anthropologie' of Dr. P. Topinard, which forms the third of the series (New York: F. W. Christern). The natural history of man from the physical point of view has made such immense strides in the last few years, and in one way or another its garbled results have become matters of such popular allusion (if not comprehension), that a compendium which shall accurately present the zoölogical, ethnological, and archæological facts and results, but which shall at the same time not be unwieldy, will prove a true public benefaction. We think M. Topinard's duodecimo fills this lacuna very well. All the important matters seem to be there, stated so concisely, and at the same time so conscientiously, that we are almost reminded of a piece of German labor. Any one who reads this book will be able to see the bearings of nearly any special investigation on the subject. It is pleasant to notice how already in France the lessons of the war are beginning to show themselves in the intellectual field. There is a distinctly new tendency to stick to matter and facts in scientific writing, even if general phrases have to suffer. Even the bugbear of appearing pedantic has lost its horrors, and we see polyglot bibliographic references starting up on every side in French writings which a few years ago would have scandalized the worshippers of classic form, who always preferred, even if they remembered perfectly, to *say*, "Je ne sais quel auteur a dit," etc. Of course this is, considering all the circumstances, an exceedingly healthy tendency, and one which we can cheer on its way with a good conscience; for we need not fear that in France it will ever run to pernicious extremes, as in some respects it has done across the Rhine.

SIDGWICK'S METHODS OF ETHICS.*

II.

MR. SIDGWICK'S "system" (to use a term he probably will repudiate) consists in maintaining that the utilitarian doctrine that it is reasonable to pursue as an end the greatest happiness of mankind, is in effect equivalent to the fundamental moral axioms propounded as intuitive truths by Clarke and Kant. The subtlety and skill with which this result is worked out and the utilitarian dogma is, so to speak, shifted on to an intuitional basis, can be appreciated only by those who have studied Mr. Sidgwick's work. It is apparent, however, at a glance that the position he occupies has some great advantages. It enables him to do ample justice to the strongest and practically the most important of the doctrines of Benthamism, viz., that the tendency to produce happiness is the test of virtuous action. The amount of cumulative proof which can be produced in favor of this dogma, and the invalidity of the apparent objections to it, are exhibited by Mr. Sidgwick with a fulness and force which may more than satisfy the wishes of ardent utilitarians. Its importance consists in its leading to the result that when moral sentiments conflict, as they certainly will do from time to time, with views of general utility, it is the dictate of duty, no less than of reason, to train our moral feelings into harmony with our views of utility. Another advantage of Mr. Sidgwick's position is that he can give to utilitarianism all the support derived from the idea of duty and obedience to a moral law. The opposition, in fact, between Benthamism (as Mr. Sidgwick conceives of it) and intuitionalism vanishes away under his treatment, and the really fundamental opposition in ethics becomes that between "egoism," or the theory that it is rational for an individual to seek his own happiness, and the theory that the only course of action which approves itself to reason is that which aims at the happiness of mankind. On this point, which is to him a vital one, Mr. Sidgwick writes with unaccustomed indecision. "Against any identification or blending of Egoistic and Universalistic Hedonism, and even against any representation of their differences as secondary or subordinate, it seems very important to protest. . . . The contrast between Egoism and Altruism is at any rate one of the most fundamental that morality exhibits."

In one point of view this is a self-evident truth. No two rules of action, considered as advice for the conduct of an individual, can be more different than the rule "seek your own happiness" and the rule "seek the happiness of mankind"; and it does not need half Mr. Sidgwick's dialectical power to bring this fundamental contrast into a clear light. It is, however, impossible not to feel a misgiving that this central point of Mr. Sidgwick's position, which involves this opposition of "Egoism" and "Utilitarianism," may be liable to damaging attack at the hands of professed utilitarians who are prepared to maintain what may be termed the orthodox utilitarian doctrine, that every one seeks and must seek his own happiness. One fact is clear: utilitarians in general have not attempted to dissever the "egoistic" and the "universalistic" view of utilitarianism. Mr. Sidgwick's own complaint is that they have identified or blended the two methods. It is of course possible that the teachers of the utilitarian school have mistaken their own positions; still, that they should have done so is *prima facie* improbable, and the necessity that Mr. Sidgwick is under, so to speak, of breaking with his natural allies, suggests the idea that he may have to fight hard for his position. No man is more capable of maintaining his ground against all comers. His diffidence of expression, his studied fairness, his persistent maintenance of the attitude of a mere enquirer, conceal from careless critics his amazing aptitude for logical fence, and his extraordinary power of analysis, and above all his boundless argumentative resource and fertility. It is scarcely an exaggeration to say that if you will approach ethical problems from Mr. Sidgwick's point of view, you will find that scarcely a single train of reasoning which bears upon his topic has escaped his attention. The enormous number of arguments which crowd his pages in fact considerably injures the general effect. Of no writer is it more true

* 'The Methods of Ethics. By Henry Sidgwick, M.A., Lecturer and late Fellow of Trinity College, Cambridge.' New York: Macmillan & Co.

that the "half" of his work would have been "more than the whole." The argument is constantly concealed by the mass of arguments. You cannot, as the saying goes, "see the wood for the trees." There is therefore not the least danger that he should not make a good fight for the ground he has taken up, and none but a very rash critic would venture to pronounce Mr. Sidgwick's position untenable. We, at any rate, have no wish to pronounce any decision on the subject; our object is simply to point out one of the lines of attack to which he seems to be exposed.

Let us suppose for a moment that a Benthamite who, like Austin, represented the narrowest but certainly the most consistent form of utilitarian doctrine, were to criticise Mr. Sidgwick's attempt to sever "Egoism" from Utilitarianism. His argument would, we conceive, take something of the following form: The opposition (he would urge) on which you dwell between the fundamental maxim of Egoism and the fundamental maxim of Utilitarianism arises from your treating the latter precept as if it were addressed primarily to an individual. It is in reality a maxim for the guidance of that mass of individuals which we call the state. Admit this, and there is no opposition between the two rules. "Seek your own happiness" is the rule which reason imperatively impresses on the individual. "Seek the greatest happiness for the greatest number" is equally the rule which reason suggests to a mass of individuals acting together. Reason suggests it just because each individual desires his own happiness; since there is no other course which secures to the mass of individuals an equal chance of securing the greatest lot of pleasure or happiness for each. Examples best exhibit what is meant. A hundred shareholders have equal shares in a joint-stock company. Each of them would like to get the greatest possible profit for himself; but just because of this the only rule for their collective action is to secure the greatest amount of profits for the company, *i.e.*, for all of them. A ship catches fire. Each member of the crew wishes to save his life. The captain shouts, Keep order and all or most of you will escape. The captain's advice is clearly the best which can be given, and based upon, not opposed to, each individual's private desire for life. Manifestly in each case the interest of individuals may conflict with that of the mass. The manager of the company tries to cheat the other shareholders, or a hulking blackguard attempts to force his way to the boats, crushing down his weaker companions. It were vain to call this conduct "irrational." The interest of the mass can only be protected by forcing individuals to conform to it. The manager is threatened with prosecution. The captain adds force to his utilitarian advice by giving notice that he will shoot any one through the head who breaks the ranks. This is precisely what on a Benthamite view is done by the state. The main object of legislation is by direct and still more by indirect means—which, it may be added, are infinitely more powerful than is generally conceived—to force individuals to pursue the general interest. But the ultimate motive for pursuing the general interest is that as far as the majority of men are concerned, the only mode of attaining the largest amount of individual happiness is to aim at the greatest happiness of the greatest number.

Of course no one would dream of putting forward these obvious considerations as thoughts which have escaped Mr. Sidgwick; they lie on the surface of the matter with which he deals. But they require attention because they suggest that, in order to effect a reconciliation between utilitarianism and intuitionalism, he has in fact altered the whole character of the utilitarian dogmas. A rational maxim of self-interest addressed to the state is transformed by him into a precept of self-sacrifice addressed to the individual. Unfortunately, what the maxim gains in moral elevation it loses in rational stability. Mr. Sidgwick, rejecting the support of "egoism," finds an admitted difficulty in pointing out to any one who does not admit the validity of a somewhat doubtful intuition the reasonable ground on which an individual is to pursue the precepts of philosophical utilitarianism. The last words of his book are "inevitable failure," and in its closing sentences he warns his readers—with a grandiloquence of which not a single other specimen is to be found in the 'Methods of Ethics'—of the peril that, if an unverifiable hypothesis be rejected, the "Cosmos of Duty" may be "reduced to a 'Chaos.'" This language recalls the tone in which certain political theorists announce that if their scheme of society be rejected we shall fall into the horrors of "anarchy." Anarchy, as represented by the unphilosophic prosperity of England or the United States, is a bearable condition of existence, and a hope suggests itself that the moral "chaos" which arises from the want of an absolutely coherent system of ethics may not greatly affect the moral prosperity either of mankind or of philosophers. There are, moreover, many steps between perfect order and chaos, and those who are not turned aside from the study of Mr. Sidgwick's work by the gloomy knell with which he quite unnecessarily gives melancholy to its close, will find that they obtain from it, if not a complete system, yet great help towards arranging their ethical ideas, and the still greater advantage which is always derived from the teaching of an author who sifts to the bottom a host of current notions, and devotes the whole power of a singularly original and subtle intellect, not to the maintenance of dogmas or paradoxes, but to the impartial pursuit of truth.

Le Nouvel Opéra. Par Charles Nuitter. With 59 woodcuts and 4 plans. 1875. (Paris: Librairie Hachette et Cie. Pp. 255.)—*Les Treize Salles de l'Opéra.* Par Albert de la Salle. 1875. (Paris: Librairie Sartorius. Pp. 315.)—*Histoire de l'Opéra.* Par Alphonse Royer. With 12 etchings. 1875. (Paris: Bachelin-Deflorenne; New York: F. W. Christern. Pp. vi.–238.)—The completion of an important national monument like the opera-house opened in Paris a year ago has naturally given occasion for the publication of entertaining monographs drawn from the annals of French musical drama. The scope of these different works can be seen in their titles. The first, by M. Charles Nuitter, who is now and has been for many years the archivist of the Opera, is a full account of the new building, from its inception to its completion, and may almost be considered official. The advocates of the paternal theory of government will be delighted to find it recorded in M. Nuitter's pages that the parental care of the executive went so far as to appoint a state commission to discuss the best method of scene-shifting. M. de la Salle describes the thirteen homes in which the musical theatre of France has been permanently or temporarily housed. The third volume, by the late Alphonse Royer, manager of the Opera from 1856 to 1862, is perhaps the most ambitious of the three. It is a history of the men and women who have succeeded each other upon the stage of the Opera; with an appendix containing lists of the managers and of the *chefs d'orchestre.* It is disfigured by etched portraits badly drawn, and printed upon thin, harsh paper, in marked contrast to the excellent woodcuts which illustrate M. Nuitter's text.

According to Voltaire, France owes her comedy and her opera to two cardinals. The assertion is not absolutely accurate, for while Richelieu was of material assistance to the earlier dramatists, credit is due to Mazarin only for suggestion. The success of a company of Italian singers imported by the cardinal to please Anne of Austria incited the Abbé Perrin to produce, in 1659, 'La Pastorale d'Issy,' with music by Cambert. Mazarin was disposed to encourage the new enterprise, but he died in 1661, and it was not until 1669 that Perrin received a royal patent according him a monopoly of the opera. This was soon revoked in favor of Lulli, the wily Italian, who is popularly believed to be the originator of French opera. Lulli, who had first attracted the attention of the king in one of Molière's pieces for which he had composed the music, opened the Opera in May, 1672, with a pastoral into which he had woven his musical interludes from 'Le Bourgeois Gentilhomme' and 'Georges Dandin.' The next year Molière died, and by royal command Lulli took possession of his more commodious theatre, thus supplanting Molière's company, as he had previously superseded Perrin. Lulli was versatile and industrious, and when he died, in 1687, he left behind him nineteen operas (not counting ballets and interludes) and six hundred and thirty thousand golden livres.

During the next hundred years there is but little of interest, excepting only the often-described quarrel between the partisans of Glück and of Piccini. But in 1781 there occurred an instance of royal generosity well worthy of record. The theatre in the Palais Royal, in which the Opera had been established for ninety years, was burnt, and, under the patronage of Marie Antoinette, the architect, Lenoir, by working day and night, built a new opera-house at the Porte St. Martin in eighty-six days. Rumors at once began to circulate at court that it was unsafe—that a building erected in such hot haste could not have been carefully constructed. The intimidated authorities therefore decided that, in order to test the strength of the new opera-house before permitting the Queen to enter it, a performance should be given gratis to the people of Paris. The beams having been thus tested by the common herd, their majesties honored the Opera with their presence.

In 1791, for the first time, the names of the singers appeared in the bill of the play. Previously it had been understood that the best singers appeared on Fridays only. Three years later, when the Opera was transferred to the building confiscated by chicane from Mlle. Montansier, the spectators in the pit were at last provided with seats. The year before this, under the Terror, on March 20, 1793, Mozart's "Marriage of Figaro" was performed for the first time. The vacillating Louis XVI., after absolutely interdicting Beaumarchais's piece, at length authorized its performance, and finally acted in it himself with his queen. His predecessor, Louis XIV., had danced in ballets, and his successor, Louis XVIII., when Comte de Provence, was the anonymous author of more than one opera-libretto, notably of the

"Caravane du Caire," set by Grétry. This composer did not long retain his royalist tastes. In the archives stored away in the capacious galleries of the new building are the scores of many revolutionary operas by Grétry, Méhul, and Rouget de l'Isle, in which representatives of the people, municipal officers girt with their tricolored scarfs, or sans-culottes curates replace the gods of Olympus as the *dei ex machinâ*. In these curious works we find the new-born Goddess of Reason dancing the Carmagnole or singing the Ça ira, a revolutionary song of particular interest to Americans, for it was suggested by a remark of Franklin's. The Goddess of Reason was the wife of the bookseller Momoro. The Goddess of Liberty was the beautiful Mlle. Maillard of the Opera, who had so often played the part in the "Offrande à la Liberté" that at last it became incarnated in her. The people, giving a local habitation to their ideal, no longer distinguished the actress from the goddess. In spite of her unconcealed royalist sympathies, she was constrained to personate Liberty in all the civic celebrations, and even to be adored in the "Temple of Reason" (formerly "Notre Dame"), together with Mme. Ducamp and Mlle. Florigny, also of the Opera, as Equality and Fraternity.

During the whole Revolution the stage of the Opera was prompt to reflect the shifting scenes of blood and iron; every victory over the foreign foe was at once set to music and represented before the footlights. Indeed, the Opera had a direct connection with the first great event of the Revolution: its property-room had been sacked of its sabres to assist in arming the populace for the assault on the Bastile. It was, perhaps, in return for this timely loan that, upon the spoliation of the churches, the Opera was presented with a chime of bells, unfortunately destroyed in the fire of 1873. M. Nuitter mentions a tradition, impossible to verify, that one of these bells came from the Church of St. Germain-l'Auxerrois, and after having been used to give the signal for the real massacre of St. Bartholomew, it had again tolled the alarm during the five hundred performances of Meyerbeer's "Huguenots."

Like everything else, the Opera felt the beneficent effect of paper-money issued by the people for the people. With the unlimited issue of assignats, the price of tickets was rapidly raised until a seat in the boxes cost 9,000 livres. On the 18th Prairial an IV. the receipts of the Opera were 1,071,350 livres! The real value of this million of livres was a little over two hundred dollars.

Under the Empire and the Restoration the Opera prospered. In 1822 it spent 188,260 francs upon the mounting of one piece, "Aladin, ou la lampe merveilleuse." In February, 1820, as the Duc de Berri was handing his wife into her carriage he was assassinated. In consequence, the Government razed the building and gave the ground to the public as the Place Louvois. A temporary home was found for the Opera in the rue Le Peletier, and there it remained for more than fifty years, until the night of Oct. 28, 1873, when the building caught fire. Within a few hours it was burnt to the ground. As M. de la Salle walked home from the fire he saw by the early dawn the wet and just posted bill of the Opera announcing the "100th performance of 'Hamlet' for this evening at 7½ o'clock."

England, Literary and Social, from a German Point of View. By Julius Rodenberg. (London: Richard Bentley & Son. 1875.)—Herr Rodenberg's book, though entertaining and worth printing, is rather disappointing. It is not, as its title seems to indicate, a study of contemporary manners, and it contains very little psychology. Neither is it in any especial sense written from the "German point of view." It is a collection of four long antiquarian essays by a man who knows and likes England so well that it is only to be divined from an occasional Teutonism of style that he is not an Englishman. It must be said, however, that the abundance of research and the paucity of personal observation are sufficiently characteristic of the author's nationality, and that only a German, probably, collecting impressions of a foreign country on the spot, would have looked for them almost exclusively in books. Herr Rodenberg knows his England perhaps better than M. Taine; but there is more of vivid portraiture—of the essence of the matter—in a single page of Taine's 'Notes' than in one of this author's long chapters. Herr Rodenberg writes upon "Kent and the Canterbury Tales," "Shakspeare's London," the "Coffee-Houses and Clubs of London," and the "Jews in England." To these lightly historic studies he affixes two chapters of inferior value, entitled "Pictures of English High-roads" and "Autumn on the English Lakes." These essays contain a great many curious reminders and allusions, and not a little unfamiliar information, presented in an easy, agreeable style, in which the "geniality" alone, perhaps, is a trifle overdone. Herr Rodenberg evidently knows English history and English literature with great exactness, and his manner of entering into them, the peculiar degree of his relish for the objects, persons, and places associated with them, are very remarkable in a foreigner. Beyond a certain point, generally, such facts become too minute for a foreigner's care; he is content to admire more in the gross. But Herr Rodenberg seems to feel a sort of intellectual birthright in the English past, and his intimate acquaintance with it may serve as an example to the English themselves, who certainly of all nations are, in the average, least acquainted with their own history and their own classics. For instance, it strikes us with a kind of respect for the thoroughness of a foreign observer that he should quote, apparently off-hand, some flat lines from the poet Akenside about Chaucer. How much must he have gone through, we reflect, before he arrived in the due course of things at drowsy Akenside! Herr Rodenberg, taking for his text the Kentish landscape and the streets of Canterbury, gossips very agreeably and eruditely upon Chaucer's life, and weighs one hypothesis against another as to certain contested points in it. The author's long prose synopsis of the contents of several of the Canterbury Tales might, however, have been profitably omitted from the work.

The article on "Shakspeare's London" contains a good deal of entertaining archæology and topography, and many curious details about the arrangement of the primitive English theatre. It is to be inferred, however, that the author's knowledge of the past is more exact than it occasionally appears to be of the present. After the play, in Shakspere's day, he says, the troupe of actors stood forth in a semicircle and dismissed the audience by a prayer to the queen—"a custom which is maintained to the present day in England, where no play, opera, or concert is left before the National Anthem has been sung." But Herr Rodenberg's most entertaining pages are those upon the London coffee-houses and clubs, into which he compresses the savor of the whole literature of the subject. He calls attention, properly, to the singular anomaly of the fact that though coffee-houses began to flourish about 1650, the coffee of England is still the worst in Europe, having usually a strange, barbarous, experimental flavor. It is also very odd that in a country where coffee is made with the least appreciation of its merits and has always remained a decidedly exotic beverage, the dining-room at hotels should invariably be dubbed the coffee-room. This often seems to the breakfastless foreigner like a wanton addition of insult to injury. "It is remarkable," says Herr Rodenberg in a note, "that the smell of coffee seems so unpleasant to the true Briton. Each of the above-quoted pamphlets [broadsides and satires of the seventeenth century] calls it a 'stink.'" We must thank the author for reminding us of one of the most characteristic and amusing instances of Dr. Johnson's conversational brutality. Garrick had been proposed for election into the Literary Club, and Johnson, who was supposed to be his very good friend, protested against the nomination. "Sir," he said, "I love my little David heartily, more than all, or many, of his flatterers do; but surely in such a society as ours one should not sit elbowed *by players, pimps, and mimes!*" Almost the only pages of contemporaneous allusion in Herr Rodenberg's volume are his descriptions of the great clubs in Pall Mall, "the almost overpowering splendor" of the Reform, and "those deep, handsome basins, in which it is a delight to bathe one's face and hands." We have mentioned the paper on the history of the Jews in England, which traces their varying fortunes up to their present highly comfortable condition, and is written, if we mistake not, from the "Semitic consciousness." We must add an extract from the chapter on the "English High-roads": "A universal shout of revolt went through the British nation when, at the beginning of the last century, the improvement of the roads began and post-chaises came into use. Some declared that the national courage would be destroyed if a man who had been in the habit of riding on horseback through the country, and of maintaining at any rate a struggle with a highway robber, should now allow himself to sneak along in coaches." These objectors, if they had been prophetic, might have held their peace; they would have foreseen a system of locomotion which was to be, in some of its ultimate developments, quite as effective a test of the national courage as the danger of meeting Dick Turpin and Claude Duval.

Tales and Traditions of the Eskimo, with a sketch of their habits, religion, language, and other peculiarities. By Dr. Henry Rink. Translated from the Danish by the author. Edited by Dr. Robert Brown. With numerous cuts drawn and engraved by Eskimo. (London: Blackwood & Sons. 8vo. 1875.)—In this new form Dr. Rink's classical work becomes available to many students who may hitherto have been deterred from attempting to master it in the original Danish. What is here offered us is

not merely a translation but a complete revision, in some parts slightly amplified and in others condensed from the original. As the foremost modern authority on the habits and traditions of the Greenland Eskimo, Dr. Rink's reputation has been long established, and the contents of the present volume can only extend still further, without in any way diminishing, this reputation. The most valuable portion of the work is its summary of the language, myths, distribution, and habits of the Eskimo, in which many old but still current errors are exposed in a quiet and scholarly manner which leaves nothing to be desired. As a matter of course the Greenlanders, as the best known and most studied of the groups of Eskimo, come in for the largest share of description, but in many particulars the details are also applicable to the whole Orarian stock. Were an equally careful study applied to the Western Eskimo, including the Aleuts, it is probable that many striking contrasts in habits and community-law, if not religious myths, would be brought out. Some remarkable coincidences in language and traditions between these widely separated branches of the same stock have been already made known, and we are aware of unpublished material which would largely increase the number. It may be mentioned that the Aleuts, the most specialized group of Eskimo people in existence, have certain traditions in regard to mythical "inland" people which are almost paraphrased by some of Dr. Rink's tales. The absence of other than family, housefellow, or communal ties in the different groups of Eskimo holds as good in the west as in the east. Their habits, of course, differ with their environment. The well-fed and warmly-housed Eskimo of Norton Sound, with his comparatively long and actually warm summer, his abundance of game and ignorance of glaciers and bergs, is a more joyous and keener-witted fellow than his cousin of Greenland. This difference extends to his myths and his temper. Many of his tales show close affinity to those of Greenland, but some of the fabulous animals seem to be wanting, and there is less of bloodshed, spite, enmity, and frostiness than in the legends from the east. Special modifications, induced by the environment, are noticeable in many of the western tales; and in not a few the sentiment of the lover, almost wholly wanting in the Greenland stories, lends an interest and a charm to legends otherwise rather bald and tame.

The translation is excellent, and the book will be a revelation to many of a strange and novel phase of human life, unlike anything afforded us by the Arctic voyages. The style is sufficiently attractive and clear to make it equally interesting to the school-boy and the philologist, and the illustrations seem as characteristic as they are quaint. The erotic element of the tales has been almost entirely expunged, so that they have not for students quite the value that they would have possessed if untouched by the scissors. This gives them, however, all the more value for miscellaneous reading, and does not detract from the incisive manner in which the other phases of Eskimo character are illustrated. A very brief summary of the author's views in regard to the origin of the Eskimo is given. This is the only specimen of really philosophical treatment of the subject which has come under our notice, and for that reason it is all too short. But the ground where this part of the problem must be worked out is on the northwest coast of America; and in the absence of exhaustive data the author's caution is praiseworthy. The book is edited by Dr. Brown, himself an eminent authority on Greenland, and printed in a neat and attractive manner.

Elements of English Grammar. By S. W. Whitney, A.M. (New York: J. W. Schermerhorn & Co. 1875.)—We are much in the habit of despising books of merely moderate size, and on this account the grammar before us will probably not meet with the reception which it deserves; yet the author gives sound reasons for shortening and simplifying his text-book. In the preface he says: "Grammar is but one department of the science of language, that which treats of the structure of speech. Some, from a misconception of its true province, have attempted to teach, under the name of grammar, subjects as foreign to its real nature as geometry and conic sections are to arithmetic." "Grammar is usually divided into four parts—namely, Orthography, Etymology, Syntax, and Prosody; but, properly speaking, it embraces only Etymology and Syntax. Orthography treats of spelling; Prosody treats of pronunciation and versification. These are taught in spelling-books, dictionaries, and rhetorical treatises." The 160 pages of which Mr. Whitney's Grammar consists are then divided equally between Etymology and Syntax. The former is subdivided into classification and inflection, to each of which 40 pages is devoted. We are particularly pleased with the neat and logical statements in which the parts of speech are defined and their subdivisions bounded. We wish we could quote and illustrate the seven and six classes into which nouns and pronouns are respectively divided. One class of adjectives compels notice: "A Pronominal Adjective is any adjective used as a pronoun"; as, "*Two* of the boys went," in contrast with "two boys," where *two* would be a limiting adjective. Under this class are ranked many words which are usually mistakenly termed pronouns. In fact, our author's is the first grammatical text-book we have ever seen which satisfactorily distinguished adjectives from pronouns. Our author boldly rejects the passive voice, and defends his position as follows: "Take the two sentences *I am glad* and *I am satisfied*. In the latter, *satisfied* would generally and unhesitatingly be coupled with *am* and called 'a passive verb,'" while *glad* is considered a modifier of *I*. "Why not be consistent and regard *glad*" and *satisfied* as construed alike? Neither of them modifies the subject; each of them supplements the verb *am*. Hence a new rule of syntax: "An adjective or a participle either modifies some noun or pronoun expressed or implied, or is the complement of some verb." The abstruse matter of the classification of subordinate clauses is condensed into the threefold division of such clauses into "pronominal, adjective, and adverbial," according as they act the part of pronouns, adjectives, or adverbs; as, *That fortune favors the brave* is cheering; I venerate the man *whose heart is warm and pure; Wherever I go*, I meet the same story.

Besides ample illustrations, the author has introduced frequent exercises by which a pupil's understanding of the text may be tested. The only points which seem deserving of censure are the omission of *because* and *therefore* from the list of conjunctions or conjunctive adverbs, the repetition of the familiar absurdity of calling *the* and *an* a different part of speech from *this* and *one*, and the hasty introduction of a tenth part of speech totally uncalled-for, including the three words *yes*, *no*, and *amen*, which our author terms "responsives"; we might ask wherein the word *no* in response to a question differs grammatically from *never*, *nowhere*, *hardly*, *scarcely*, *perhaps*, etc.; and wherein *yes* differs from *certainly*, *entirely*, *quite*, *indeed*, and a score of other adverbs of affirmation.

Presbyterians and the Revolution. By the Rev. W. P. Breed, D.D.—*Historical Sketch of the Synod of Philadelphia.* By R. M. Patterson, Pastor of the South Presbyterian Church, Philadelphia; and *Biographical Sketches of Distinguished Members of the Synod of Philadelphia.* By the Rev. Robert Davidson, D.D. (Philadelphia: Presbyterian Board of Publication.)—Presbyterianism and Calvinism can with full right assert for themselves the honor claimed by Dr. Breed of having been foremost in the great struggle for liberty, from the days of Coligny and William of Orange to our own Revolution. As representative of the denomination in this latter struggle, his book is largely devoted to a life and eulogy of Dr. Witherspoon, the only clergyman who signed the Declaration of Independence, and in all respects a leading statesman of his day. It was the Scotch-Irish Presbyterians again that have the credit of the Westmoreland County Resolutions and the Mecklenburg Declaration of Independence. Dr. Breed wholly ignores the disproval of the latter document; but, in truth, the credit of a series of patriotic resolutions was even greater than would have been that of the hot-headed secession of a single inland county. The Synod of Philadelphia deserves the special commemoration given to it by Dr. Patterson, from the fact that it at one time comprised the entire Presbyterian organization of America; this was its original seat in this country. An interesting note is found, p. 33, appended to the assertion "that it represents the largest and strongest religious denomination in the territory which it occupies." The note, in support of this assertion, examines the statistics of the Roman Catholic Church in the same territory, whose numbers, Dr. Patterson believes, are not so great as its adherents assert; they "seek," he says, "by the persistent array of the wildest claims, to carry by storm politicians who always want to be on the strong side." The Presbyterian organization in this district, he has told us, counts "256 ministers, 288 churches, and 45,737 communicants (p. 28)." Now, the Catholic "priests are largely clubbed together, two, three, and even more in a parish. . . . They report 'churches,' 'chapels,' and 'stations.' The chapels are generally apartments in the churches, which are reported as such, and are thus included twice in the returns, or little places of worship in their schools, academies, and theological seminaries; while the stations are spots also really connected with the churches, and visited by the priests in some cases (I quote the reports) 'monthly,' in others 'every six weeks,' 'every second month,' 'four times a year,' 'occasionally.' The figures in our bounds are two hundred and sixty priests, regular and secular, and two hundred and forty churches." No doubt, however, the Catholic churches will average more members than those of any Protestant denomination.

Fine Arts.

THE THEATRES.

THE theatrical season of 1875–6 is said to be principally distinguished for its pecuniary success. Last year there was a great deal of noticeable acting; this year there has been little or none, but at no less than three of the theatres the managers have brought out plays which have hit the public taste on the opening night, and have now been running each some three or four months. Last year we had in tragedy Ristori, in Shakspere (it is difficult to know how to classify "Henry V." except by the old term "History") Rignold, in low comedy Toole, *Col. Mulberry Sellers*, and Boucicault, to say nothing of almost continuous *opéra-bouffe* at the Lyceum, reduplicated in German *bouffe* at the Germania. This year we have had "Pique" for three months at the Fifth Avenue, "Rose Michel" for three months at the Union Square, and "Julius Cæsar" at Booth's. The Lyceum has been occupied for a short time by a very good French company (after a few nights of *bouffe*), but has been a great part of the time closed. The Park Theatre has experienced the vicissitudes of fortune, now making a success, as in the case of the "Mighty Dollar," and now a dead failure, as in the case of Mr. Oakey Hall; now collapsing altogether and closing its doors, and again suddenly reappearing with a broad comedy—distinguishable from a farce chiefly by its length—called "Brass," and apparently destined to have a long run. With the exception of Mr. and Mrs. Florence in the "Mighty Dollar," and Mr. Honey in his inimitable part of *Old Eccles* in "Caste," there can hardly be said to have been any actors of real note at the native theatres, and, nevertheless, the theatres have on the whole found the season a profitable one, and that is tantamount to saying that the audiences have not found much to grumble at.

The key to success in the management of a theatre in the present condition of the drama is the discovery (and in this term must be included not only translation and adaptation, but even writing) of a play which will run so great a number of nights as to reimburse the management for the enormous outlay a telling play now involves. When we say the present condition of the drama, we mean of the Anglo-Saxon drama. The amount of money required for the production of a pageant like "Julius Cæsar," as it is now given at Booth's, is so great that playing it for a short time must ruin the managers, and the same thing may be said of plays like the "Shaughraun," "Rose Michel," the "Two Orphans," or "Pique." The public taste demands fine dresses, gorgeous upholstery, absolute "realism" in the properties, and scenery constructed without regard to expense. This is sufficiently proved by the fact that the plays which have these peculiarities, and yet have nothing else in common, succeed. The taste may be said to be debased and material, and so undoubtedly it is; but the fact cannot be gainsaid, and the judicious manager is he who takes the most intelligent advantage of it. Instead of trying to make his theatre attractive by continual variety and change of bill, he sets to work to "establish" a play as he might a daily newspaper or a railroad. He is confident that if he only spends money enough on the "plant," acting that would otherwise be barely endurable will pass for excellent. If the candid theatre-goer, who has enjoyed—as we have ourselves enjoyed—the absurdities of "Pique," or the pageantry of "Julius Cæsar," or the "sensations" of "Rose Michel," will ask himself what the plays would have been without the accessories, the scenery, the dresses, the properties, he will, we believe, come to the conclusion that not one of the three would have run a fortnight. The true test of good playing is bare walls, cheap clothes, and the minimum of red and blue lights, practicable fireplaces, or other accessories. The actor who can create an illusion without anything more is a real actor; the more he needs to make the public believe he is acting, the less of an actor he is. These are rank heresies, but we will undertake to prove them truths to any one who, with even a very moderate equipment of German, will go to the Germania Theatre in Fourteenth Street and see a "Posse mit Gesang," or a "Schwank mit Gesang," or, on Tuesday night, a classical play, given by the company now playing there. There we are in a different country from that which has the "Union Square" and Daly's for its capitals; a country into which few Americans, for obvious reasons, intrude, and which keeps its traditions and canons of taste unchanged. There the great law regarding the "plant" is unknown, and the plan on which the theatre is carried on is that of perpetual variety. An admirable stock-company and a long répertoire of amusing and more than amusing plays are the German substitute for upholstery and tinsel, and we must say the substitute is a good one. The theatre, stage and all, is smaller than an ordinary New England town-hall, and has little to adorn its native, bare ugliness; the stage is extremely small, and the scenery, so far as we have observed it, of the simplest. But the acting is capital, and the company well drilled in every kind of playing. Looking, not at individual actors, who excel in particular parts—in this the native theatres make now and then as good a show as could be asked—but at whole plays, there has been better acting at this little theatre and the Lyceum, this winter, than at all the native theatres in the city put together.

Fechter is an actor who belongs to three countries, and his reappearance at the Lyceum was an event which was of almost as much interest to the American as to the French population of New York. But he has sadly fallen off within the last few years, and it has become almost painful to see him with such good-will and ardor attack the parts in which he won his fame, and in which he seems now determined to bury it. He is no longer suited in appearance to young parts, but this is a trifling matter which many an old actor has triumphed over; for some reason or other he has ceased to be interesting, and we are almost forced to ask ourselves whether his former success in this country was not a mistake, and whether the trumpet-blast from Dickens heralding his approach did not really overawe our theatrical provincialism and prevent us from exercising our own minds on the subject. The rest of the company made ample amends for Fechter's shortcomings, and while they were here fairly held their own with the *Franzosenfresser* beyond Fourth Avenue.

The "Mighty Dollar" deserves to be singled out from the plays of the winter as an exceptional success. Mr. and Mrs. Florence, always good actors, fairly outdid themselves, and the former in the character of an unsuccessfully corrupt Congressman, and the latter in the rôle of what we suppose we may call the Franco-American matron of the period, were capital low-comic characters. Perhaps they ought to be called burlesque, but as there are no less than two, if not three, living women of whom Mrs. Florence in this part is said to be a lifelike reproduction, this may not be a fair word for it. The *Honorable Bardwell Slote* is a real creation, not so delicately done as *Col. Mulberry Sellers*, but, like him, drawn from real life, and we regret to say containing a touch of nature that goes straight to the heart of an audience in New York; how it would be in the Puritan atmosphere of Massachusetts we cannot undertake to say.

Wallack's still continues to be the only theatre in the city which makes a point of keeping alive the traditions of English comedy, and for the most part strenuously resists the surging tide of sensational melodrama, of plays of "society," and of "contemporaneous human interest" which has carried everything before it in the other theatres. There is no stage in the city except Wallack's, probably, where the manager would dream of giving Mrs. Centlivre's "Wonder," now nearly two centuries old. Whether the attempt will prove a success or not remains to be seen. The play itself is a lively and entertaining comedy of a bygone school, and derives its interest now in part from the fact of its having held the stage so long. But a play must have intrinsic attractions to do this, and what these attractions are it is easy enough to see. The "Wonder" is a play of "situations," and the situations are very laughable. The jealousy of a lover, suggesting to him a suspicion of his mistress, and fed through four acts with all sorts of damning circumstantial proofs, which the audience meanwhile is allowed to see are no proofs at all, but derive their suspicious character from the fact that the lover's sister (escaped from the parental custody) is concealed in the house, while honor forbids any explanation, are the materials which furnish the play its life. It has something the effect of a practical joke played upon the chief actor with the connivance of the audience, and it is excellently carried out. The two principal parts, *Violante* and *Don Felix*, afford room for acting of a high order, and it is easy enough to imagine that Garrick may have found the latter well suited to him. The play is besides very well balanced, there being two "heavy fathers," two pairs of lovers in high life, and one pair in domestic service. The lover of *Violante* is the brother of the lady whom *Captain Briton* loves, and the servant of *Don Felix* is of course in love with *Violante's* maid. A Scotch retainer of *Captain Briton's* performs the necessary part of marplot, and the wit of his part is greatly heightened by a broad Scotch accent, and vigorous kicks administered by those in authority. The dialogue is rapid and bright, though without any distinct marks of originality, and the play is enriched here and there by one or two of those jokes which seem so very improper when made by the wicked Gaul, but when occurring in a standard English play fill us with delight, not unmixed with respect for the manly frankness of our sturdy ancestors of both sexes, who could make and laugh at them without blushing. The play requires better acting, or at any rate a very different kind of acting, from that which the market here affords, and though it may very likely succeed now, it is impossible to see it without feeling that the types it introduces are so obsolete that ordinary actors do not naturally take to them, and have to be forced into them, almost as the men and women of our day would have to be forced into the armor and dresses of mediæval times.

The Nation.

NEW YORK, THURSDAY, MARCH 23, 1876.

The Week.

THERE has not been as much *bouffe* as usual at Washington in the last week or two, but the Pinchback case ended in a scene which compares favorably with some which have preceded it. The occasion was a serenade got up by some of the colored inhabitants of Washington for the benefit of Senator Morton, whom the assemblage, in a series of resolutions, eulogized as fit for "any position in which law and justice may be equitably administered and defended by an honest and resolute person," while the Senate, for having refused to seat Pinchback, is denounced as having "bowed to caste, and aided proscription, rebellion, and anarchy"; on which Mr. Morton assured his hearers that "the great battle of human rights would be fought in the coming Presidential contest"—leaving it to be inferred that he does not intend to be found wanting when the firing begins. Benjamin F. Butler's appearance in the Dana-Lawrence case is, as might be expected, fiercely *bouffe*. General Butler spent, some years ago, a good deal of his valuable time in Congress in accumulating telegrams belonging to other people, which he used to hold *in terrorem* over the owners' heads, threatening publication if they did not do what he wanted. He now appears at Washington in the rôle of champion and defender of private literary property, while, by way of making his part perfect, he charges Mr. Dana with false swearing in a copyright case, and, in order to support his accusation, makes a statement as to what Dana swore to, which would, if made under oath in court, render him (Butler) immediately liable to indictment for perjury.

The Senate Committee have not reported against Mr. Dana's nomination, but they have requested the President to withdraw his name, which the President refuses to do. Mr. Dana at first intended to go on and ask for a hearing to defend himself, but on learning that the committee had practically decided the matter he refused to appear, in a very proper and dignified letter addressed to Mr. Boutwell. What is lamentable about the matter is not that the Senate should have even at this late day, and all of a sudden, set up so high a standard of character for foreign representatives that it will not confirm a man against whom charges of any kind may be made by anybody, but that they should reject a man of Mr. Dana's standing in the community without a hearing and without notice to him, on charges preferred by such men as Messrs. Butler and Lawrence. That charges, even from such a quarter, were sufficient to cause delay and fair enquiry, we admit, but they were not charges sufficient to carry conviction without fair enquiry and delay. In fact, Butler's character is so bad that his mere hostility ought to be enough to raise a presumption in a man's favor in the eyes of any right-minded tribunal, and his character, too, is notorious. It will be ludicrous indeed if his and the Committee's sensitiveness about copyright shall be displayed by a body whose treatment of the property of foreign authors, for long years, has given wholesale literary piracy the dignity of one of the rights of American citizens. It is quite true that the courts have decided that Mr. Dana has violated Mr. Lawrence's copyright in the notes to Wheaton, but the violation is well known to have been technical, and to have been the result of carelessness and not of intent, and to have been wholly and far removed from any taint of dishonor by the fact that his edition of Wheaton, as well as Mr. Lawrence's, was published for the benefit of Wheaton's family and not for his own profit. In fact, a milder, more harmless, more excusable case of "piracy" has probably never come before the courts; and that on account of it, and in such times as these, a gentleman of Mr. Dana's character should be rejected by the body which has confirmed Sickles and Casey and Billings is one of those things on which it is difficult to comment coherently.

The correspondence between General Schenck and the State Department cannot be understood without a little more reference to contemporary events than is made by Mr. Fish. Chronologically arranged, the correspondence brings out the following facts: On the 8th of February General Schenck telegraphed that he had just heard of the House enquiry, and begged the President, if he was embarrassed in any way by the malignant persecution to which he (Schenck) had been subjected, to accept his resignation; but declared that he should remain in London for a time, to vindicate his character in the courts. On the next day (the 9th) he telegraphed to know whether he might publish his telegram of the day before, and received a reply to the effect that the President did not think it necessary to act on the telegram, and that any publication of it was inadmissible. On the next day (the 10th) damaging testimony against the defence in the Babcock trial was given at St. Louis, to the effect that a witness had seen money mailed to Babcock; the next day (the 11th) the State Department, in the name of the President, asked Schenck to resign, either by telegraph or by letter, the resignation to take effect on the instalment of his successor. On the 14th, General Schenck telegraphed that he could not reconcile the two despatches of the 9th and the 11th, but was perfectly ready to resign, and would send his resignation by the next mail. On the 19th of February he mailed his resignation. On the 21st, he asked for leave of absence to appear before the Committee. On the 23d, he was given leave by telegraph to come, but was informed that the enquiry was as to the conduct of the State Department rather than his own. On the 24th, Schenck telegraphed that he would take his leave of absence if the enquiry into his character proceeded, and meantime would await the President's action on his resignation (did he hope for a reconsideration?) On the 28th, Lyon began his testimony before the Foreign-Affairs Committee, and on the 29th Belknap was found out, by Marsh's testimony. On the 29th, Schenck was informed by telegraph that the House Committee wished to investigate his conduct. On the 1st of March he telegraphed twice—first, that he would sail upon the 17th, and, second, that he protested against Lyon's statements as a tissue of lies, and would sail on the 4th. On the 2d of March he telegraphed that as he had resigned because the action of the Executive was questioned, he now begged, inasmuch as his own character was assailed, that his resignation might not be accepted. On the 3d of March he was informed that the President had taken steps to fill the place immediately, and on this and other accounts there could be no delay. On the 4th the resignation was received, and on the 6th formally accepted. The case, we must say, looks very much like a base desertion of a man under fire, on account of the opening of guns in the rear.

The work of the week in Congress may be summed up in a very few words. The Senate, by a vote of 26 to 20, has passed a bill putting the President's salary back to $25,000 a year, and the House has, by a vote of 108 to 109, refused to suspend the rules in order to repeal the Resumption Act. A two-thirds vote was required, so that the failure of the attempt does not show conclusively that the House may not be brought to pass a bill for the repeal at a later date; but every week of inaction makes it more and more certain that no bill can get through both Houses this session. Mr. Hallett Kilbourn, of the firm of Kilbourn & Latta, has been brought up at the bar of the House for refusing to produce his books containing the transactions of the District Real-Estate pool, and, still refusing, has been sent to the common jail, so that he may now be said by any one who cares to say it to be languishing in a Federal Bastile, though, according to the newspaper accounts, he is boarded and

lodged in a manner "fitting one of his antecedents and condition," or, in other words, in a manner fitting a member of a Real-Estate pool—a standard of comfort probably as high as any in the world.

The Senate has also devoted some time to exposing "newspaper lies," to wit, 1st, that "several senators keep private secretaries who are paid as clerks"; 2d, that the Senate Judiciary Committee are holding back the House Bill for the protection of witnesses, and that Messrs. Conkling and Logan are looking up authorities to defeat it and save their friends. The first lie was nailed on the head by Messrs. Cameron, West, and Logan, as far as they are concerned, by an emphatic denial; while the second lie was exposed by Mr. Conkling, who said that, though unaccustomed to "pay any attention to such paragraphs," he felt that he might lay himself open to misconstruction if he did not denounce it as false; and he added the cheerful remark that "the recent elections assured him" that the time "was passing, if it had not already gone by, when people will refuse to be gulled or deceived by such abusive articles." Mr. Logan said he had no knowledge that the bill had reached the Senate; that when it did he would do what his judgment dictated as best; that he was not afraid that any of his friends in the Whiskey Ring would get hurt, because he had no friends in the Whiskey Ring. Mr. Thurman said, what seems rather more to the purpose, that the committee were proceeding with the bill in advance of other business, and were hastening instead of delaying it.

Mr. A. S. Hewitt, on Thursday of last week, made a speech on silver resumption in the House in which he threw a good deal of curious light on some of the provisions of the Resumption Act of last year. The act, it will be remembered, directed the Treasury to buy silver to provide for resumption, but left it discretionary whether to issue it or not, and also provided for the coining of gold free of expense. Both these clauses were put forward as intended to assist in the process of resumption; but some of Mr. Hewitt's facts point to a strangely different explanation. At the date of the passage of the act, and for some months afterwards, the price of silver in London was on an average 56.99 pence, or practically 57 pence per ounce. At about the same time the well-known "Big Bonanza" mines began to deluge the market with silver, and it is a matter of common notoriety that these mines have very close connections with the Senate. What followed was this: The passage of the act forced the Secretary to begin buying the products of these mines, and, as it was impossible to do anything with the silver, to lock it up in the vaults of the Treasury, where, of course, it was effectually prevented from having any effect on the market. Up to the first of last October he purchased $12,658,054 68 at an average of 111.4 cents (or 56 pence) per ounce. Meantime the price in London fell 4 pence an ounce, and the "Big-Bonanza" capitalists accordingly, up to October 1, made about a million dollars, which, had there been no act in existence, they would have found it extremely difficult to make, inasmuch as the whole $12,000,000 would have been thrown into the market and broken the price still more. Since October 1 they have made another million in the same way. Besides this, these capitalists would, had there been no act in existence, have had to pay one-fifth of one per cent. on all gold coined for them. Their mines produce forty per cent. in gold. The act repeals the seignorage on gold, and makes coining free. Hence, while the mines secured the Treasury as a constant market for their silver, they at the same time got their gold coined for nothing, and then exported and sold at an advance of one-fifth of one per cent. over bullion. In fact, the act could hardly have been better for the "Bonanza" men if Congress had directed an outright purchase of the product of their mines.

The United States has still in its hands the sum of $10,500,000 of the *Alabama* award, which must either be distributed among claimants or turned into the Treasury, or returned to Great Britain. A Committee of the House has just made a report on the disposition of this fund which is a remarkable contribution to international and private law. The Geneva arbitrators, it will be remembered, decided that the United States could only recover damages for the acts of three vessels—the *Florida*, the *Alabama*, and the *Shenandoah* (after leaving Melbourne). All other cruisers were ruled out of the case by the judges, so that by no conceivable process of reasoning can any of this $10,500,000 be supposed to represent damages caused by any except those we have named. The committee accordingly conclude, 1st, in so many words, that "the most direct loss is that sustained by the persons who had vessels destroyed on the high seas by the cruisers *exculpated* by the tribunal of arbitration," and recommend that the ship-owners be paid first. In the second place, it is as clear as anything can well be that persons who paid "war premiums"—*i.e.*, who had to pay more insurance during the war than they would have done in time of peace—cannot be reimbursed, because, 1st, if we follow the rules laid down at Geneva, the increase of the premium caused by the *Alabama*, *Florida*, and *Shenandoah* cannot be separated from that caused by the other cruisers; 2d, even if we prefer the rules of a House Committee to those of the Geneva arbitrators, it is an absolute impossibility to determine how far those who paid war premiums were reimbursed by enhancement of price or otherwise. The committee accordingly recommend that these claimants be paid second. It is more than probable that these two classes of claims will exhaust the fund; and so the committee gravely proceed to consider last the only meritorious claims they had before them—those of the insurers. The underwriters, who had actually paid for vessels destroyed, were, by universal principles of law and justice, entitled to be subrogated to the rights of the ship-owners. There never has been any question as to the justice of their claims, nor any doubt that if the United States could have been sued by them in an ordinary court there would have been no defence. Accordingly, the committee recommend that if anything is left after paying everybody else who has invalid claims, the insurers, who have the only valid claims, may come in and divide what is left.

The Democratic party and the State of Ohio have lost a Favorite Son in the person of Mr. George H. Pendleton, owing to the recent revelation of this gentleman's rude and barbarous notions on the subject of the duties of trustees. Being President of the Kentucky Central Railroad, and also administrator of an estate belonging to his sister and her two minor children, and the railroad having an old claim against the Government for about $148,000, and the estate owning the greater portion of the stock of the road, he, as President, recovered the amount from the Government, pocketed one-half for his own trouble, and gave the rest to his wards. It is curious to see how the transaction gets blacker the more we turn it over. As President of the road he was bound, if the claim was a good one, to recover it without fee or reward; if it was fraudulent, no money ought to have been sufficient to induce him to assert it. That it was fraudulent was inferrible from the fact that it had been preferred in Mr. Stanton's day and disallowed, which legally killed it. Its renewal, therefore, in Belknap's time, coupled with Mr. Pendleton's intimacy with Mrs. Belknap before her marriage, warrants the belief that Belknap had been discovered to be more pliable. But even if Mr. Pendleton, as President of the road, had been unscrupulous enough to obtain the money corruptly and illegally, it became his duty as administrator when he got it to hand it over to his wards. But this duty he also violated by appropriating to himself half the amount. So that there is absolutely nothing gained for him by walking round him and looking at him on all sides. The Republican papers and politicians are highly delighted with this discovery, and apparently fancy that, if they manage to produce a match from among the Democrats for each Republican rogue, the country will have nothing to complain of. But the fact is that this only makes the situation more deplorable. If there was a respectable opposition ready to take charge of the government the Republican corruption would be a comparatively trifling

matter. As matters stand, it is a terrible calamity; for Pendleton's performances, far from palliating Belknap's, aggravate them.

The victory of the Republicans in New Hampshire by an unexpectedly large majority has been used to preach a good many sermons with, those on the Democratic side being mainly homilies directed against bribery and corruption, and those on the Republican side being mainly arguments to show that the result proves the intelligence, honesty, and discrimination of the voters of the State. As to the bribery and corruption, documents have been produced since the election which show pretty conclusively that there are those who do not spurn such means of getting votes. The Merrimac *Journal* has published two letters relating to the little town of South Hampton, which numbers no more than one hundred and forty voters. In one of these Mr. Natt Head—whose name our readers will remember as having been the cause of a terrible tumult in New Hampshire last year, which threatened to plunge the State into civil war—says he has put $25 into the hands of some "Democratic friends" in the town, who "say they can help me"; encloses $25 more, and promises additional assistance if he can afford it. The other is from one Hall, chairman of the Republican State Committee, and is addressed (as is that of Mr. Head) to a candidate for the Legislature. He says that he encloses $200 for the candidate's "political uses" in South Hampton, and adds that with this he ought not only to make his election "sure," but ought to "secure a better standing" on the ticket than he had done the year before. This, it must be confessed, looks very much like bribery. The usual reply made to the charge by the Republican newspapers is that it is unjust to suspect the purity and sturdy integrity of a New Hampshire citizen; that he would spurn the thought of taking money for his vote. This, however, is, we fear, a fancy-picture.

The excitement caused by the suspension of the Bank of the State of New York wholly died out before the close of the week. On the day following the suspension a new board of directors was chosen, headed by Mr. August Belmont, who was afterwards made president, with Mr. Lawrence Turnure, the business partner of Mr. Moses Taylor, vice-president. This board devoted several days to the examination of the bank's affairs, and on Monday began to pay depositors the sums which the books clearly showed belonged to them. The Comptroller of the Currency, taking into account the high character of the new board, did not appoint a receiver, but gave permission for voluntary liquidation. No official report of the result of the examination made by the directors themselves has been published; it is known, however, that there is ample to pay all the debts of the bank, and that there will be something left for the stockholders. On Mr. Meigs's examination, it was calculated that there would be, out of the $2,500,000 capital and surplus, about $1,000,000 left; it is now understood that there will be less, and it is a question whether the bank will be reorganized with a reduced capital. There were plenty of rumors about other banks, but none have proved to be more than stock-jobbing devices, and the week closes with no apprehension of further bank troubles. Bank shares have, however, been pressed for sale, and, with few exceptions, prices have fallen; the quotation for the stock of the Bank of the State was 30 @ 35. Money lent at higher rates than for several weeks; this was due to two causes—one, and that momentary, the disturbance to loans caused by the Bank of the State's suspension, the other the demand on New York banks for currency from their correspondents in New England and the Middle States, where the annual settlements are made on the first day of April. The surplus reserve of the banks last week was, deducting the figures of the Bank of the State, $12,800,000; a year ago it was $4,800,000. Domestic trade was dull during the week. There was, however, an active and strong market for breadstuffs for export. The imports of foreign goods were in excess of the corresponding weeks of 1875 and 1874, and amounted to $8,300,000. The exports of gold coin were about $1,200,000, and the rates for sterling exchange at the close of the week warranted further exports.

The value in gold of $100 greenbacks ranged during the week between $87 24 and $87 81. The value in gold of $100 subsidiary coin ranged during the week between $85 90 and $83 53. If the *Times* wishes confirmation of these figures, we advise it to take a business directory and select from the specie brokers or bullion brokers the names of such firms as it knows by common repute to be responsible. They will inform the *Times* that, while our figures correctly represent the gold value of subsidiary silver, it would be impossible to fill an order for $50,000 to $75,000 at any price, the stock being so small here; that these coins are worth 93 to 94 cents gold for small amounts to ship to the West Indies and South America, where they can be passed for 96 to 100 cents gold; that they can now only be obtained from the Treasury by paying gold for them dollar for dollar; and that, with a full supply in the market such as is contemplated by the Sherman Act, after having been issued at par in legal-tender notes, they would soon find their true value. The price of silver in London closes at 53*d.* per ounce, after having been, during the week, 54¼*d.* and 52¾*d.* The lowest price of silver last year was 55½*d.*, the lowest in 1874 was 58½*d.*, the lowest in 1873 was 59¼*d.*, which is the lowest average price for any year back to 1833, or as far as the record runs. The average price from 1860 to 1873 ranges between 60½*d.* and 61½*d.* These figures demonstrate clearly that if silver returns to anywhere near its average price for twenty years—and its decline was in large measure due to the action of Germany after the war with France—the subsidiary silver coin which it is proposed to issue here will leave the country as certainly as water will flow down hill. The more the silver business is discussed, the more apparent it becomes that it was conceived in jobbery. Considered in its most favorable light, it is a political rather than a financial measure.

An article on paper money in Italy, which will be found in another part of this paper, offers very important facts and suggestions for the consideration of statesmen in this country. The experience of Italy in the matter of paper money is more nearly analogous to our own than that of any other country, but with important differences. What is perfectly possible to us is at present impossible to the Italians, though they ardently desire to take the very steps to which neither political party in this country dares to pledge itself—steps, namely, for a speedy resumption of specie payments. Although the forced currency of Italy exceeds its former metallic circulation by only 25 per cent., the premium on gold is not much lower than with us. The reason of this is, that the finances of the country are still in a bad state. While our 5 per cent. consols are at 104½ in gold, those of Italy are at 71; while our national revenues yield a large annual surplus, those of Italy are heavily in arrears of the expenses; while we can redeem our paper money as rapidly as we choose, Italy cannot redeem hers without widening the annual deficit. Thus it is that, although she has the will, she has not the way; while we, who have the way, have not the will. The humiliating fact for us is, that while the people of Italy are unanimous in desiring to get back to solid ground, and are pushing on their public men to get there faster than they think it prudent to go, many of our people prefer to travel on a quagmire, at the risk, in case any national disaster should largely increase the public expenses, of sinking into it out of sight; and our public men dare not utter their true sentiments in favor of honest money for fear the people will not sustain them. Since our article was in type, the Cable reports the Budget speech of Signor Minghetti, presented to the Chambers on the 16th instant. Very unexpectedly, the deficit of 1875 proves to be only $5,000,000, against $14,000,000 estimated. Small surpluses are promised for 1876 and 1877. If these estimates should be realized, the time when Italy may begin to emancipate herself from the slavery of bad money is less remote than we had feared. Meantime, however, the Minghetti ministry has been driven out by a defeat on the grist tax.

THE CONKLING "MACHINE."

WE have hitherto refrained from expressing any opinion as to the resolutions passed a fortnight ago by the Union League Club, in the belief that they would have little or no immediate effect on the campaign in this State. What the gentlemen who passed the resolutions meant was well enough known to themselves and the public. They meant to prevent, if possible, the selection of Mr. Roscoe Conkling as the candidate of the Republicans of New York for the Presidency, and to send to the National Convention at Cincinnati a delegation composed of able, honest, and patriotic men, who would work for the nomination of a vigorous reformer for the Presidency. The resolutions, which expressed the opinions and feelings not merely of the Union League Club, but of nine-tenths of the Republicans in the city and State not connected with the "machine," declared that, "in view of the recent and repeated exposures of corruption and fraud," the common welfare demands "a searching and thorough investigation" of the "condition and conduct of every branch of the public service," so that all "who have abused and betrayed their public trusts" may be "exposed and punished"; that the "exclusive management and control" of the party in the State and city by "an organized machinery of office-holders" is an "intolerable grievance," to which the framers of the resolutions "refuse any longer to submit." They go on to demand a fair representation for "independent" and "disinterested" Republicans in the approaching conventions; denounce the practice of "pledging" as a "gross violation of the first principles of Republican institutions"; demand an unpledged delegation to Cincinnati, and, if this is not done, refuse to be bound by the action of the State convention; and, finally, declare the success of the party in the next election "not possible" "unless the candidate of the Republican party be a man who is not only identified with its great principles, and possessed by a proud appreciation of its past services, and who will be recognized by the common judgment of the country as fitted by ability and experience in public affairs for the responsibilities of his high office, but also a man who has had no connection, direct or indirect, with the errors and abuses which have brought reproach upon the fair name of the country and the party, who is above any suspicion of sympathy or association with those who have been guilty of these abuses, and whose name and career shall be in themselves a guaranty of a complete renovation of the public service, of a thorough purging of official abuses, and of an administration of the government upon principles of honesty, economy, intelligence, and fidelity to public trusts"—in a word, "who shall be deservedly recognized as a reformer as well as a Republican."

We say that these resolutions represent the opinions and desires of nine-tenths of the party in the State, but we might put it much more strongly. There is not a single quarter in which honest opinion has any opportunity of showing itself in which these resolutions were not at once taken up and warmly approved. Particularly was this the case in this city, where they were emphatically applauded by the whole press. No respectable newspaper had a word to say except in their favor. There was only one quarter in which opposition was to be expected, and even in that quarter everything was silent. The office-holders who run the "machine" are many of them members of the Union League Club, but they did not open their lips. They allowed the resolutions to be passed with absolute unanimity. They then went away from the meeting, sent orders to their henchmen throughout the city, and in ten days every Assembly district in the city of New York had elected delegates to the State Convention, and every single one of them was pledged to nominate Roscoe Conkling for President, and Mr. A. B. Cornell, the chief party manager and chairman of the State Committee, sent Conkling a despatch announcing this fact, and adding, "This is the answer of the Republicans of New York to the impudent declarations of the Union League Club."

Whatever may be the upshot of the convention, it is safe to say that the election of a unanimous Conkling delegation from this city, in the face of unanimous resolutions such as were passed by the Union League Club, is one of the most remarkable illustrations of the power of the "machine" and those who run it that we have seen for some time. Here we have, on the one side, in the leading commercial city of the Union, (the chief city, too, in a State which is very likely to hold the balance of power in the next election), the entire press, the entire body of respectable Republicans, and the entire moral force of an active political club, whose leading members are looked to to supply a large amount of the sinews of war during the campaign—on the one hand, we have all these throwing their weight against the nomination for President of a man whose only local qualifications for the place are that he has been the bitter partisan defender and apologist of every abuse which has sapped the sources of the commercial prosperity of his own State, and whose only recommendation to the country at large is that he is the next friend of an Administration which has made itself an object of universal public contempt. On the other hand, we have a small body of office-holders, headed by obscure men of doubtful or worse than doubtful reputation, without a particle of public opinion behind them; and the moment the contest begins these men call the meetings, get up the tickets headed "For President, Roscoe Conkling," organize, nominate, vote, and in every single case elect. Conkling's success at the present moment is the best possible illustration of the working of the system, for the very reason of his utter want of real merit as a candidate. If he were in any way a distinguished or able man, there might be some doubt about the true explanation of his rise in politics. But he is not. He has, since his appearance in Congress, done nothing that even his friends can bring forward, except make a number of windy speeches, containing no thought or suggestion of thought on any subject of interest to any human being. There is no profession, trade, or calling outside of politics in this country in which his manner of performing his duties would not in a month's time have brought him into general discredit and in danger of losing his livelihood. His success is, therefore, only attributable to one cause—the "machine." He has now for eight years been devoting his whole time to making the ten thousand, more or less, office-holders in this State his retainers; and he has succeeded. He has removed and appointed, punished and assessed, and encouraged and reprimanded, until they all feel, and feel rightly, that the Government which employs them is not that of the United States, but Conkling's government. They find that the herd of voters outside go on voting the "Boss's" ticket, while inside the "Boss" fixes the names on it himself.

There is a great deal in the present condition of national affairs that reminds one forcibly of the state of things in this city at the time of the Tweed exposures, and none more so than this election of Conkling delegates in the teeth of a unanimous public opinion, followed by Cornell's telegram speaking of the packing of the primaries by Bliss and Sharpe as the answer of the "Republicans" of New York to the "impudent declarations" of the best men in the city. Tweed, stuffing his plunder into his pockets, and asking what we are "going to do about it," cuts almost a respectable figure by the side of these engineers of "reform within the party." But it is not their shameless disregard of public feeling which is alarming: it is their success. We seem really to have reached a point at which, when there comes any contest between public opinion and the "machine," public opinion goes to the wall. The newspapers are unanimous for a good man or a good measure; so are the church-members, and the clergymen, and the lawyers, and the merchants, and all classes of the community who have anything to say on the subject at all. They hold meetings, they unite, they encourage each other, they get up petitions and pass resolutions, and no sooner are their backs turned than up jump Bliss and Sharpe out of their holes, put the "machine" in motion with a few turns of the crank, and we find that our pains were all for nothing. The utter futility of attempts on the part of honest men to get control of the "machine" by a resort to the arts of those who are "inside," has been now pretty well brought home to all of us.

Mr. Jackson S. Schultz, who knows more about the practical working of such attempts than any one in this city or State, has, within the past week, expressed his views on the subject to a reporter, and he says distinctly that he is not going to waste his time in going to primaries with Bliss and Sharpe and Davenport; that he finds by experience that when he does so, they get there before him, and the meeting is "fixed" when he arrives, or else if he gets there before they do, and attempts in his humble way to "fix" matters, they, as soon as they arrive, adjourn the meeting and hold another at some time and place where they know he will not be present. In fact, inasmuch as they devote their lives to politics, and their bread and butter depends on it, while he rarely has anything to do with it, and cannot afford the time to go into it morning, noon, and night, they always beat in the game.

We stand therefore in face of a serious difficulty, which, if we do not get the better of it, will certainly get the better of us. It is not Conkling, nor Conkling's friend Grant, nor Cornell, who is grinding us into submission with an irresistible force, while they laugh in our faces in our vain struggles for liberty, but it is a compact and drilled and disciplined body, who fill the custom-houses and the post-offices, the courts and revenue offices, who disburse and collect the public revenues, determine their own salaries, and fix their own tenure of office. They have no army behind them, neither foot, horse, nor artillery, and yet they ride rough-shod over us as if such a thing as the right of suffrage were unknown. What is it that produces this strange state of things? It is nothing but that the men who run the "machine" believe that no matter whom they nominate at Syracuse or at Cincinnati, the body of the party will "wheel into line" and support them. The gentlemen who passed the resolutions we have quoted declare that unless the delegation from Syracuse be left wholly untrammelled and free from all pledges, they "refuse to be bound by its action." But Bliss and Sharpe do not believe it. What they believe is, that no matter whom or what they put up at Syracuse, at Cincinnati there will be no bolt. We are not ourselves of their opinion. No free people will be content for an indefinite time with resolutions or newspaper articles as a remedy for political evils such as we are now suffering under; if they were, they would not only have some such "Boss" as Conkling to travesty government among them; they would deserve to have him.

THE LAST RAILROAD GRIEVANCE.

THE city of Chicago—the famous railroad centre of the West—has been loudly complaining of late of the very last thing of which it would have been supposed Chicago would ever have cause to complain. The railroad corporations have been discriminating against her and in favor of rival points. Singular and almost paradoxical as the proposition seems, it is nevertheless susceptible of proof. Milwaukee, Peoria, Cincinnati, and many other cities have, during the last few months, been able to exact from the railroad corporations far better terms on all shipments of produce to the East than could be obtained by the business men of Chicago.

The cause of this singular condition of things is obvious enough; the remedy is not so clear. The very prominence of Chicago as a shipping point for Western produce has brought the disaster on her head. The trunk lines leading to that city from the seaboard agreed upon a scale of charges, and, being few in number, they were able to hold each other up to their agreement. In other words, the corporations owning roads from Chicago east entered into a combination as to rates, and for once abided by it. Meanwhile, this agreement did not affect shipments from other points, at which consequently rates fell until they became almost nominal. Chicago thereupon saw its business rapidly diverted from it. To submit quietly to such a turn of fortune was too much to expect of human nature, and least of all of that energetic and somewhat impulsive human nature for which the Chicago people are noted. Accordingly, during the last few months the press of that city has rung with denunciations of the railroad "kings," "Shylocks," "robbers," and "monopolists," after a fashion with which the Granger rhetoric has long since made us familiar. Nor has the discussion been confined to the press. It was also taken up by the Chicago Board of Trade and referred to a committee of that body, which, after an elaborate investigation, has recently submitted a report. Almost at the same time that the report of this committee was published, the Board of Railroad Commissioners of Massachusetts issued their annual report. In it they also discussed at some length the Chicago grievance. The fact that a heavy discrimination in railroad freights exists, and adversely to Chicago, required no proof. It was matter of common notoriety. The remedy alone deserved discussion; and in this respect the wide diversity between the conclusions arrived at by the Western committee and by the Eastern commission is deserving of more than a passing notice. It may, indeed, indicate nothing less than a new departure in our public policy as respects the railroad system.

As we have already said, the cause of complaint was obvious enough. All the railroads concentrating at one prominent shipping point had combined to sustain freights from that point, while other and rival localities were not included in the combination. The remedy for this evil proposed by the Board of Trade committee was a happy combination of the commonplace and of the original. They saw no escape except through the construction of more competing roads. Chicago had already more of these than any one of its momentarily favored rivals, but this seemed of little consequence to the committee. The only distinction they drew, and here the commonplace yielded to the original, was one not openly stated but necessarily to be inferred: it was a distinction in favor of bankrupt roads. These the committee intimate are run to do business. Profits are with them matter of wholly secondary consideration. Consequently, to be served by bankrupt railroad corporations is a great felicity for any community, and may yet prove the salvation of Chicago. This view of the subject, however it may strike the proprietors of the railroad lines, can hardly but be encouraging to Chicago, inasmuch as all the railroads can scarcely fail to be bankrupted should the present competition among them be of long continuance. The astonishing feature of the situation is, also, that it is not pretended at Chicago that the rates charged by the combined roads are extortionate, or even unreasonable, but only that the competing rates from other points are unduly low; and consequently the Board of Trade committee gravely argue that, because certain roads are bankrupt and willing to bid for any business at any rates, all others are bound to do the same, with a view to ensuring equality to competing localities.

The conclusions of the Massachusetts Board are in strong contrast to this strange logic; they go to the very root of the railroad problem, as it is called. In the first place, attention is called to the fact that Chicago is now merely suffering from railroad competition, instead of benefiting by it as heretofore; that discriminations always have existed wherever free course has been given to railroad competition, and under such conditions always must exist—the only difference being, in the present case, that the boot, so to speak, is on the Peoria or Milwaukee leg instead of on the Chicago leg, where it has been wont to be. Pointing this out, the commissioners go back to the cause of the difficulty, and from the study of that they deduce its cure. They find that it arises from that combination of competing interests which necessarily takes place when the number of competitors is very limited. The remedy, they then proceed to argue, must be looked for, not in futile efforts to increase the number of competitors (who must by the very law of their existence ultimately enter the combination), but, once for all abandoning all reliance on competition, in an enlarged and systematized combination. The history of the famous and much-abused "Saratoga Conference" of 1875 is reviewed, but with conclusions very different from those commonly arrived at. The failure of that combination of railroad managers to effect the objects they had in view is referred to as a public misfortune, on the ground that, whether so intended or not, it would have resulted only in substituting a public and responsible agency in place of a

private and irresponsible one which has long existed. For it is too evident for argument that railroad corporations no more than communities can live always in a state of perpetual warfare; and it is notorious that for years all through business between the interior and the seaboard has been done in accordance with tariffs agreed upon from time to time by the freight agents of the various lines at conventions held for the purpose. In case these agreements were violated by one party to them or another, recourse was had to a trial of strength through competition, or, in other words, to private war. The railroad corporations thus existed in a species of natural savagedom. In place of this condition of armed truce, broken by fierce conflict, the Saratoga Conference sought to establish a permanent peace. Instead of being fought over, points of disagreement were to be settled by boards of umpires, and these same boards were from time to time publicly to establish tariff rates at which the combined routes were to perform the work of through transportation. It is needless here to tell how this attempt at combination failed. It was a first experiment, and it did not contain within itself certain of the elements essential to its success. It did fail, it is true, and its failure directly led to the discrimination against Chicago which has been referred to. It did this through the fact that the competition between the Western roads as a whole was beyond all control, while that between the lines terminating in Chicago was not. Accordingly, the rates over these could be and were temporarily sustained, while those over the first went all to pieces. The remedy for this state of affairs suggested by the commissioners is, not the introduction of new competing lines into Chicago, but the extension of the system of the combined lines over the whole Western territory.

Such a remedy will at first appear to most Americans as much worse than the disease. It is so opposed to all theory and to all tradition as to sound at first like a paradox. Yet it is by no means clear that the whole current of events is not tending to this result; nay, more, it is not clear that it is not the very best result to which they can tend. Recent experience has made two things as respects railroad development very clear. One is that the attempt really to control railway tariffs by legislation is in this country, for the present at least, simply hopeless. Meanwhile, for years to come, the reaction sure to follow upon the fantastic excesses of Grangerism will bring even judicious railroad legislation into contempt. The other point not less clearly established is that under the tremendous pressure of competition now felt throughout our railroad system, the process of railroad combination must go on with great rapidity. It cannot be otherwise. It is for the railroad corporations the single means of salvation, and no statute, however cunningly framed, can prevent them from resorting to it. The simple question, as combination goes on, is, what is to hold in check this great monopoly? The answer is that experience—an experience which now stretches over many countries and through not a few years—shows very conclusively that this combination does not, as respects railroads, bring with it either the political or material evils once apprehended. It does not do it for a reason which, in the discussion of the possibility of such a result, was formerly overlooked, but which, when once brought to notice, becomes very obvious. The reason is that concentration brings with it responsibility; that public opinion operates with tremendous power upon one, while it is wholly lost when dissipated among many. Especially is this true in America. Nor is this all. Concentration must also bring the railroads within the reach of judicious legislation, which will not have its force broken by the necessity of applying it to irreconcilable conditions.

Here, then, after all, may prove to be the unexpected outcome of the whole discussion of the last few years—Dartmouth College case and all. We have got back in spite of ourselves to first principles. The great railroad system is to be allowed to develop, subject only to its own natural laws—to combine, to consolidate, to monopolize. Meanwhile, in so doing it must necessarily draw itself together under one or a few heads, and those finally responsible in the full face of public opinion, with the strong arm of the law in the background. Such a system at least has one merit—it is thoroughly American in theory, and in this respect wholly unlike those weak imitations of French communism which, under the name of railroad laws, have recently disgraced the statute-books of the Granger States.

INCONVERTIBLE PAPER MONEY IN ITALY.

A LAW passed by the Italian Chambers on the 30th of April, 1874, "to regulate the paper circulation during the suspension of specie payments," made it the duty of the Ministers of Finance and Commerce to present a report upon the forced currency and upon the best measures to be adopted for its extinction. The Ministers Minghetti and Finali accordingly presented such a report in the spring of 1875, which has recently been published.*

The report itself is not a long document, but appended to it, and forming the largest part of the volume, is an historical memoir of great length, prepared by Signor Romanelli, Secretary of the Council of Commerce and Industry, upon the "Forced Currency (*Corso Forzoso*) in Italy, and its effects on Public Economy and the Finances, from May 1, 1866, to June 30, 1874." It is, in effect, a financial history of Italy during that period. Taken together, the report and the memoir constitute one of the most valuable recent contributions to the history of paper money and to the general currency discussion.

Specie payments were suspended in Italy on the 1st of May, 1866. The immediate occasion was the war by Prussia against Austria, in which Italy took part as the ally of Prussia; but the remoter causes are to be traced to the political revolution in Italy, by which its different sections were united under the Sardinian crown. This revolution entailed upon the Government greatly-increased expenditures, and wrought equally important changes in the industry and trade of the country. From 1861 to 1865 repeated deficits had occurred in the Budget, aggregating a sum of $400,000,000 (we convert the Italian *lira* into our money at the rate of five *lire* to the dollar). To meet these deficits, the Government had contracted loans to the amount of $500,000,000, besides selling the state railways, alienating and mortgaging the public domains, and largely increasing taxes. Public expenditures had risen from 162 to 214 millions of dollars a year, and the consolidated 5 per cents (*rente*) had fallen from 65, at the beginning of 1866, to 43 at the end of April. The effecting of new loans was practically impossible. The state of commercial affairs was equally unsatisfactory; in the four years, 1862 to 1865, the imports had exceeded the exports by $270,000,000. The large increase in the importation of merchandise is attributed to the substitution of tariffs based on the principle of free trade, for the protective tariffs previously existing in most of the Italian states. War expenses, works of internal improvement undertaken by the Government, the communes, and the provinces, and a great increase in industrial plant had united in creating a large foreign debt, represented by public stocks and the bonds and shares of railways and other companies. The interest payable abroad increased from seven millions of dollars in 1861 to eighteen millions in 1864.

In the early part of 1866 the state of credit in Europe grew rapidly worse, culminating in May in the memorable English crisis of that year. The general stringency fell severely upon Italy, and sapped the fountains of her credit in foreign countries. Her public securities, which had been before largely held in France, returned to the country, and fell as a new burden upon an overloaded market. The banks were drawn upon heavily, and resorted to all the customary expedients for resisting a drain of their resources. But, in spite of every precaution, they steadily lost ground, and saw their metallic stock melting away. The larger banks of Sardinia and Tuscany imported specie, and got assistance from the Rothschilds; but these expedients only served to postpone the crisis which impended, and which they would have been powerless to prevent. When war became imminent, and military preparations were begun, the Government could no longer remain inactive. The Finance Minister (Scialoja), although opposing the suspension of specie payments up to the last moment, became satisfied that, on the eve of a war of which it was impossible to foresee either the vicissitudes, the duration, or the cost, no other alternative remained. A bill was accordingly introduced and passed on the 30th of April, authorizing the Government to provide by extraordinary measures for the expenditures necessary to the public defence, and on the following day specie payments were suspended by royal decree.

To show the effect of this measure, Signor Romanelli has selected four

* 'Relazione sulla Circolazione Cartacea; presentata dal Presidente del Consiglio, Ministro delle Finanze (Minghetti) e dal Ministro di Agricoltura, Industria, e Commercio (Finali) nella Tornata del 15 Marzo, 1875.' Roma: Tipografia Eredi Botta, 1875. 4to, pp. xi. and 359.

principal data, which he presents in an effective manner by a statistical chart: (1) The price of sight-bills in gold at Genoa on Paris, (2) the price of the consolidated five per cents (*rente*) on the Paris Bourse, (3) the premium on gold at Genoa, and (4) the circulation of paper money in Italy. While the foreign exchanges have generally been against Italy, they have occasionally ruled in her favor. The extremes of fluctuation have been from three and a half per cent. discount to one and a half per cent. premium. The price of *rente* has varied much more widely. It stood at 43, May 1, 1866, when specie payments were suspended; it fell to 39½, its lowest point, by the end of June. It reacted suddenly to 57½ in September, in consequence of the treaty of peace and the cession of the Lombardo-Venetian kingdom to Italy. In January, 1868, it fell again to 43½, in consequence of the expedition of Garibaldi and the French reoccupation of Rome. From that point it rose, with some fluctuations, to 60 in the summer of 1870, but fell suddenly to 46¾ in July of that year, upon the event of the Franco-Prussian war. By the end of 1871 it had risen to 70, sharing the general buoyancy which succeeded the French peace; but in 1873—that year of "sad memories," as Signor Romanelli calls it—it fell again to 60. Since then it has profited by the tranquillity of Europe, and the latest quotation on the Paris Bourse is 71.

In the paper circulation there has been a steady expansion. Slight reductions in its amount have occurred from time to time, and there have been considerable stationary periods, but in general its course has been upward. This circulation includes not only bank-notes, but every other species of bank paper serving the purposes of money ("*fede di credito, polizze, ed altri titoli equivalenti a moneta.*") Beginning with $50,000,000 in May, 1866, it had risen to $310,000,000 in August last.

The price of gold has shown much less eccentricity than might have been expected in face of these very considerable changes in *rente* and in the volume of paper money. Bearing a premium from the moment specie payments were suspended, May 1, 1866, it rose suddenly to 18¾ in June, after the battle of Custozza, with which the war opened, and which was disastrous to the Italian arms. The war practically ended with the German battle of Sadowa on the 2d of July; and the treaty of peace, which was signed at Prague on the 23d of August, caused the gold premium in Italy to fall to 5 per cent. From that time till 1872, though never reaching what would be considered in this country a high figure, it underwent great fluctuations, rising and falling inversely with the rise and fall of *rente*, and subject to the same influences. The extremes of fluctuation in 1867, '68, '69, '70, and '71, were 14½ per cent. in January, 1868, and 2 per cent. in June, 1870. By the end of 1872 it had risen to 11, at the end of 1873 to 16, and it is now in the neighborhood of 10 per cent. Referring to the law laid down by Ricardo, that just in the ratio that paper money exceeds the wants of a country for a circulating medium it loses a proportion of its value, as shown by the premium on gold, Signor Romanelli concludes that the price of gold in Italy was not sensibly affected by the expansion of the currency, until it came to exceed the metallic circulation which had existed in the country before the suspension of specie payments. This metallic circulation he estimates at $220,000,000, including as a part of Italy, for the purposes of this estimate, Venice and the province of Mantua. It was not till the beginning of 1872 that the paper currency exceeded that amount, and from that time until the passage of the bank act of 1874, the gold premium followed, though it did not equal, its expanding volume. It has since fallen, in spite of a slight increase of paper money, doubtless because the law of 1874 has fixed a limit to its further increase, which limit is nearly reached, and because of the settled determination, both of the Government and people, to keep it in check and to get rid of it as soon as possible.

In gratifying contrast to the heresies which so largely prevail on that subject in this country, there is no public opinion in Italy which demands a continuance of the inconvertible currency. Nearly every Finance Minister since its adoption has proposed measures looking to its extinction. It is true that in 1868 the manufacturers of Piedmont, like those of Austria quoted by Mr. Göschen in his treatise on the foreign exchanges, asserted that it furnished a certain measure of protection to home industry, as was doubtless the case immediately after its introduction. The price of manufactured articles rose more rapidly than that of the labor, raw materials, taxes, rents, and interest on capital which entered into the cost of production; and Italian manufacturers, like those of the United States under like circumstances at the beginning of our war, reaped large profits on stocks of goods and raw materials on hand, and on goods produced immediately afterwards. But this state of things did not last long. All the elements of cost gradually increased in price, till they had swallowed up the earlier profits; and when gold fell, the cost of production did not fall with it, or fell tardily; while every such fall in gold inured instantly, and to its full extent, to the profit of the foreign competitor. Italian manufacturers now, therefore, recognize as fully as the Government, or the people who are the great consumers, that this expanded and feverish state of the currency is extremely detrimental to their interests.

In the late debates, the sentiment of the Chambers outran the more prudent counsels of the Finance Minister in the direction of a return to sound money. The commission appointed to report upon the proposed banking law, wished to insert a provision requiring the Government to present, within six months, a scheme for retiring the forced currency by a sinking fund. But Signor Minghetti persuaded the Chambers to suspend this imperative obligation until he could more carefully consider the possibility of complying with it. The law of 1874, the provisions of which we shall explain further on, was conceded on all hands to be "*a law of preparation only*—that is to say, a law which should be followed by other laws and provisions, intended to alleviate and gradually remove the injurious effects of the forced currency, and provide for its extinction at the earliest possible moment." Many members desired a more summary proceeding, but nobody was found to advocate a prolonged suspension on the ground that paper was the "people's money," or that "it stimulated trade."

After putting the law of 1874 into operation, and witnessing its effects for nearly a year, and after carefully considering the proposals which had been made in the Chambers for more specific action in the direction of resuming specie payments, the Finance Minister came to the conclusion that no more decisive steps could as yet be adopted. The finances of Italy are in a very different state from those of this country. While our revenues afford an annual surplus, which has enabled us to pay off many hundreds of millions of our debt within the past ten years, the Italian treasury has experienced continued annual deficits, in consequence of which the public debt of Italy has been increased almost as much as ours has been diminished. Signor Minghetti, therefore, very justly argues that until there is a surplus in the national treasury, as well as a commercial balance in favor of the country, it would be worse than useless to force resumption.

In arriving at this conclusion, he discusses at length two alternative methods proposed for reaching that result: (1) immediate resumption by means of a large loan; (2) gradual resumption, or preparation for resumption, by means of a sinking fund. As to a loan, it would be necessary to borrow not less than $200,000,000, which is the amount of *quasi*-Government paper authorized by the act of '74. The issue of such a loan, while the existing five per cents are so much below par, would still further depress their price, add largely to the annual interest, require the imposition of new taxes, and generally disturb trade. The bronze-token coinage, of which $15,000,000 is now in circulation, would speedily be reduced to its old amount of $4,000,000, and the balance would have to be redeemed in gold. A loan made under such circumstances would increase the annual deficit of the Budget by ten or twelve millions of dollars, and would be very likely to bring about a commercial crisis and a new and more hopeless suspension.

The creation of a sinking fund, though not so immediately dangerous, would lead almost as certainly to the same embarrassments, and it would be a very slow remedy, since an appropriation to the sinking fund of ten millions of dollars a year would not retire the $200,000,000 of paper, for which the Government is responsible, before 1894. Small as such an annual appropriation would be, so long as the revenue is deficient, it would have to be borrowed; and repeated small loans would be regarded in Europe as more detrimental to the public credit than a single large one, as they disturb quotations and are a constant reminder of new deficits.

The old method of sinking one debt by the creation of another is now thoroughly exploded, as was shown in the debate on that subject last summer in the English House of Commons. The only legitimate sinking fund is one derived from taxes, or from the sale or income of specific property; and in most cases it is far better to apply the available means directly to the debt, than to create a parallel sinking fund for its ultimate redemption. It was proposed in Italy to create a sinking fund of this sort by the conversion into *rente* of the domains held for charitable uses; but to this it was objected, that, so long as the ecclesiastical and public domains (already partly hypothecated to the public creditor) remained unsold, it would be useless to put more of that kind of property upon the market.

A loan to the Government of the whole or a part of the capital of banks, without interest, and in lieu of taxes, was also considered by Signor Minghetti. Such a plan was proposed in Austria in 1862, but had there failed. While recognizing the duty of the banks to co-operate actively with

the Government at the proper moment in restoring a sound currency, he considered that the present immobilization of a large part of their capital would bear heavily upon the industry of the country, and diminish production, which the Government have every motive to stimulate.

The whole tenor of the report goes to show that there is no trick of finance, and no ingenuity of conjuring, by which the hard reality of a deficit can be converted into a surplus, and that without a surplus, debts, however much they may be shifted, cannot be paid. The paper money of Italy is a debt, and so long as the Government is unable to meet its current expenses out of current revenue, it is a debt which it cannot pay.

It remains to say a few words in explanation of the Banking Law of 1874, a measure adopted solely with a view to its bearing on the currency question. Prior to 1866, each of the principal divisions of Italy had its own banks of issue, the circulation of which was almost wholly local. An attempt was made in 1869 to combine the national banks of Sardinia and Tuscany, in order to give a more national character to their issues; but it was defeated through provincial jealousies. Public opinion, however, both in Europe and America, has been making constant progress in the direction of a unitary currency, as was shown by the great preponderance of suffrages in its favor before the celebrated French Enquête of 1865-9. Italy has finally accepted the prevailing judgment, and the law of 1874, although it does not wholly do away with provincial issues of bank-notes, goes very far towards giving them a national character. The paper circulation is by that law restricted to the issues of six banks—namely, the National Bank of Sardinia, the National Bank of Tuscany, the Tuscan Bank of Credit, the Bank of Rome, the Bank of Naples, and the Bank of Sicily. These institutions have formed themselves into a syndicate or "consortium" (the former being the Dutch and the latter the German name for an association for financial purposes); they are jointly to issue $200,000,000 in *consortial* notes ("*biglietti consorziali*"), under their common guarantee, and the Government secures the issue by a deposit with them of public stocks. The Government is to pay the banks, for the first four years, ½ per cent. a year for the use of the notes, and after that ⅛ per cent. a year, and the banks are to make and renew the notes. They are to be printed on white paper, of the denominations of ½, 1, 2, 5, 10, 20, 100, and 1,000 *lire* (10c., 20c., 40c., $1, $2, $4, $20, and $200), and to be irredeemable and a legal tender. The banks will severally issue notes on colored paper, of the denominations of 50, 200, 500, and 1,000 *lire* ($10, $40, $100, and $200), to an amount not exceeding three times their capital as it stood at the end of November, 1873, exclusive of surplus. They are required to redeem their own notes on demand, either in coin or in notes of the syndicate, and to keep a reserve equal to one-third of their debts payable on demand, in the form either of the precious metals, of bills of exchange payable in gold, or of notes of the syndicate. Each bank is required to have an agency at Rome, and may have branches in all the cities of the kingdom. To provide for the extraordinary demands of commerce which occur at certain seasons of the year, and for cases of exceptional stringency, the Government may authorize one or all of the six banks to enlarge their circulation for a period not exceeding three months (which period may, however, be extended for good cause) to an amount equal to four times their capital, on condition of using the increase in the discount of bills. In such cases two-thirds of the gross earnings of the increased circulation goes to the Government. Contracts in gold are expressly authorized, and Signor Minghetti attaches much importance to this privilege, as a means of promoting resumption. All other circulation than that of the six banks is prohibited.

In this revision of the banking system of Italy there is manifested an entire familiarity, on the part of the framers of the law, with the best existing systems of Europe, and probably also with our own national banking law, from which the provision requiring a specific reserve against circulation and deposits seems to have been borrowed. The right conferred on the Government of authorizing an enlargement of the circulation in certain emergencies, is intended to provide against such a condition of things as has thrice led to a suspension of the English Bank Act of 1844, without previous authority of law.

Italy, while losing much by a suspension of specie payments, has also gained much in the development of her banking system, and in the familiarizing of her people with improved systems of credit and exchange, to which they were previously strangers. These benefits will remain after the evils of the forced currency have been got rid of. It must be remembered that a political revolution has taken place in that country, which, though bloodless, is not less remarkable than that which emancipated the United States from the curse of slavery. If it has not been able to escape the penalties which attach to all political revolutions, it has reaped advantages which amply compensate it for them: all Italy united under a constitutional government as popular as that of England, in place of an Austrian governor at Venice, the Pope and Cardinals at Rome, and a Bourbon at Naples; the emancipation of the people from the despotic power of priests, and a system of national education, which is eagerly embraced even by the adult population, in place of ignorance and superstition.

ENGLAND'S "IMPERIAL INSTINCTS."

LONDON, February 29, 1876.

WHEN Mr. Gladstone dissolved Parliament in January, 1874, and issued his lengthy address to the electors of Greenwich, in which he dwelt chiefly on the advantages of economy in the administration of public affairs, Mr. Disraeli, in his counter-manifesto to the electors of Buckinghamshire, taunted him with the tameness of his programme and proclaimed the necessity of "a little more energy in our foreign policy, and a little less in our domestic legislation." Mr. Gladstone's pleadings for economy were rejected, and Mr. Disraeli's proclamation was accepted by a large majority of the constituencies in the United Kingdom. These were brave words of Mr. Disraeli's, but up till the end of last session they were not followed by corresponding deeds. The "spirited foreign policy" which Mr. Disraeli had proclaimed was, like many more of his proclamations, up in the clouds. Matters went on at the Foreign Office under Mr. Disraeli's Foreign Secretary precisely as they went on under Mr. Gladstone's Foreign Secretary, and the country was well pleased that it should be so. Last spring, however, a vague idea was broached that England had said or had done something to Germany during the temporary war panic which seized upon Europe for a fortnight, and that this word or deed had produced a beneficial influence, and had materially helped to maintain peace. Mr. Disraeli, on being questioned in the House of Commons by Lord Hartington upon the subject, made use of some mysterious expressions, which his followers and the Conservative press construed into a declaration that England had averted a new Franco-German war. No one but his followers believed this for a moment: we have got to know his pleasant way of stating the reverse of what is true. And only the other day Prince Bismarck showed that so far from England having averted a Franco-German war, no such war was imminent; the suggestion even of such a war had no existence except in the imagination of some badly informed unofficial prints. Credit, therefore, for this stroke of foreign policy was bluntly swept away from Mr. Disraeli's Government. But he was equal to the occasion. He determined to show that his protestations were not all vapor. He first issued the Slave Circular, which surrendered the doctrine of the ex-territorial rights of a British man-of-war, and, in the interest of the slave-owner, reduced our proudest iron-clad to the level of a Zanzibar coaster; and then he bought, in the Queen's name, at twice their value, certain shares in a foreign canal company, and announced that by so doing he had made England's influence paramount in the management of the Canal, and that he had secured the road to India—a doctrine that has been rudely shocked this morning by the official statement that Sir Daniel Lange, the English representative, has been abruptly dismissed from his position by M. de Lesseps and his co-directors because he had presumed to criticise unfavorably the action of the company in some private letters which had been indiscreetly published.

But, strange as it may sound to you on the other side of the Atlantic, these vague words of the Prime Minister, and these strangely inadequate deeds, have produced some temporary effect upon the tone and feeling of the country. They have encouraged a certain restlessness of temper which cannot be regarded by sober-minded people with satisfaction. An impression has been given that the present Government mean to take up the rôle, which had been for a long time prudently abandoned, of meddling and interfering in the affairs of Continental nations. Mr. Disraeli has always expressed admiration for Mr. Pitt and his policy, both foreign and domestic, and has arrogated to himself and to his party the attributes and claimed the political inheritance of Mr. Pitt's legitimate successors. That Mr. Pitt's foreign policy was spirited and energetic we have good reason to know only too well, for since 1815 we have done little but regret it; and even now, although we have preached the doctrines of non-intervention since that time, and practised them, we are still weighted with a national debt of over seven hundred million sterling—the *damnosa hereditas* which Mr. Pitt's spirit and energy have left us. At the end, therefore, of sixty years of almost uninterrupted peace, we are alarmed—it may be unnecessarily alarmed—that the present Government have it in contemplation to signalize themselves by some course of action at variance with what has wisely become our traditional policy.

I fear, too, it cannot be said that these alarms are altogether groundless. There are certain indications that something of the kind is in the minds of

more than one of the Cabinet Ministers. Ten days ago Lord Salisbury—a man I can never look at without being reminded of the Strafford of Charles's time, and his ambitions, and his end—speaking at the dinner of the Associated Chambers of Agriculture, gave utterance to the following sentiments: "Nobody can fail to recognize," he said, "that a different feeling has pervaded the country during the last few months from that which we have been accustomed to in recent years. There is a kind of sensation, a thrill, a longing for action, a desire for a definite aim to be stated and a definite policy announced. Foreign nations have thought that a new spirit, one altogether strange, has come over the country." These are dangerous words for a Cabinet Minister to use. If it be a fact that this sort of feeling is abroad, the less it receives public recognition from a responsible Minister, the better for the country. If it is not a fact, then is the Minister who tries to generate it in the country without excuse. A longing for action once roused in a nation like England, fanned by silly or perverted newspapers, and fostered by unwise Cabinet Ministers, is apt to lead only too rapidly into something worse than longing. If the feeling exists, it should be checked; if it does not exist, it should not be suggested.

But Lord Salisbury is not alone in thus coquetting with dangerous incentives. Last week, in the debate on the Suez Canal operation, the Prime Minister made use of the following expression in the elaborately-prepared peroration of his speech: "I have always and do now recommend it [the purchase of the Canal shares] to the country as a political transaction, and one which I believe is calculated to strengthen the empire. That is the spirit in which it has been accepted by the country. . . . They are seasick of the 'silver streak.' They want the empire to be maintained, to be strengthened; *they will not be alarmed even if it be increased.*" This, taken alone, would be regarded merely as a piece of Mr. Disraeli's characteristic tinsel—thrown out to make a momentary effect or raise a cheer, and meaning no more than his "veiled rebellion" or any oracular sentence out of 'Lothair' or 'Henrietta Temple.' But, taken along with his protestations in favor of an energetic foreign policy, along with Lord Salisbury's studied words, along with an unusual activity in the dockyards, and a large increase in the army and navy estimates, it has set people who are not alarmists talking and thinking and wishing with some anxiety that we had less eccentricity and more solid sense at the head of affairs. The metropolitan newspapers, on the other hand—and in England it is always well to distinguish between the metropolitan and the provincial press, equally able, but not equally reflective of public opinion—or at least some of them, the wilder though perhaps not the wisest, have encouraged these eccentricities. They have manufactured a silly phrase—"the imperial instincts of the nation"—and they are working it as a child works a new toy. In season and out of season, they are tossing this phrase about. When Mr. Disraeli wishes to give a new title to our old monarchy, or when he sends Mr. Cave out to inspect the Khedive's private affairs, or when he gives Messrs. Rothschild an unreasonable commission for an unsatisfactory purchase, "the imperial instincts of the nation" are said to be asserting themselves. The new constituencies, these wild newspapers say, have an elevated ideal of the national honor, quite different from that of the old middle-class constituencies—the latter cared only for the breeches' pocket. They had the shop-keeping, not the imperial instincts. The new constituencies look for grander things. They look for the "strengthening," perhaps the "extension," of the empire.

I do not for a moment believe that the new constituencies care one straw for these new newspaper notions, or that they have in any respect either a higher or a lower ideal of national honor than the old constituencies. Every class in these islands is animated with much the same ideas or instincts on this matter. They are jealous of it almost to a fault, and they would rise in their wrath and hurl any Ministry from power under whom the national honor was tarnished. But the middle classes have more common sense. They have more political knowledge, and they are more critical than many of those recently enfranchised. They are consequently less likely to be carried away by the wild statements of Cabinet Ministers and the silly phrases of irresponsible prints. It is quite in the power of these Ministers and the metropolitan press to produce "sensations," and "thrills," and "longing for action" in the lower and less educated class of voters, if they are so reckless as to do so. In 1853, under the régime of the old constituencies, when we were drifting helplessly on the Eastern question, the newspapers insensibly acted as propelling currents which ultimately stranded us in the Crimean war. At the present moment we are just beginning to lose command of the vessel, and, unless some unforeseen events produce a change of policy, we shall soon be drifting we know not whither. The Eastern Question is opening up before us, and we have entered on what may turn out to be most complicated relations with the Egyptian Government. Only this afternoon a telegram has arrived from the Khedive, proposing that our Government should appoint a commissioner who, along with commissioners appointed by Italy and France, should act as delegates of the Egyptian Government to control the management of a new National Bank of Egypt which sundry French financiers have projected. In other words, the Khedive has asked the British Government to float a new company to pay off his debts, and we feel no confidence that the stock-jobbing instincts of the present Ministry will not lead them to undertake the operation. These complicated transactions must lead before long to serious entanglements with Continental states, and out of these entanglements too many opportunities may arise for gratifying this "longing for action" which Lord Salisbury has so sedulously fostered. He and Mr. Disraeli are the men of strong will and dangerous determinations in the present Ministry. Lord Derby means well, and would be honest if he could. But he is not a far-seeing man, neither is he courageous. He is like Lord Aberdeen in the Crimean Cabinet, and would follow, protesting and vacillating, where the stronger spirits lead. Mr. Gathorne Hardy is of that impetuous temperament that would make him follow also after what he would be told was the "imperial instinct." Mr. Ward Hunt will probably have to leave them soon. The Duke of Richmond, the Earl of Malmesbury, and Lord John Manners are of no account. There remain but four men in the Cabinet who have wills of their own. Lord Cairns would in all probability incline towards the stronger natures, and Sir Stafford Northcote could be persuaded to move reluctantly where they lead. Mr. Cross, the nominee and friend of Lord Derby, is a man of some character and independence; but he has no knowledge of foreign affairs, and has neither political reputation nor official experience to warrant him in asserting his own opinion against that of his colleagues. There is only one man in the Cabinet who could be trusted to take a decided line apart from Mr. Disraeli and Lord Salisbury, and he is the present Colonial Secretary, Lord Carnarvon. He is a man of strict integrity and good judgment, and one who thinks for himself. So long as he remains in the Cabinet, it is unlikely that any fatal mistake will be made. But he may leave his colleagues as he did in 1867. If he were gone, and the popularity of the Ministry were waning, I should be sorry to think of the difficulties and troubles into which we might be precipitated by the eccentric vanity of Mr. Disraeli and the arrogant wrong-headedness of Lord Salisbury, acting upon a public opinion which they, with the aid of a portion of the press, had stimulated and excited into a "longing for action" and a desire for an "extension" of the empire—whether in India or nearer home.

Notes.

SCRIBNER, ARMSTRONG & CO. have printed a second and cheaper edition of Ueberweg's 'History of Philosophy,' to the unusual merits of which, both as an original work and as a translation, we have already testified (*Nation*, No. 349). The same house will publish in this country the 'Memoirs' of the late Dr. Norman Macleod.——The 'United States Business Directory for 1876' (New York: George De Colange & Co.) enters upon its second year, and still remains, we believe, the only publication of its kind in the country, though its value by no means lies solely in this fact. It is very comprehensive and reasonably accurate, and its utility is too obvious to call for comment. It embraces the Dominion of Canada, the Island of Cuba, and selected parts and business houses of England, Scotland, and France. A list of dutiable articles under the existing tariff concludes the volume, which fills 1,600 pages.——The issues of the *Art Journal* (D. Appleton & Co.) since the beginning of the year have contained a large number of more or less striking sketches after Landseer, the usual proportion of steel engravings of the works of European painters, and of woodcuts of American paintings; serial illustrated papers on the "Costume of English Women from the Heptarchy to the Present Day," by Walter Thornbury; on the "Homes" of England and America; on "Japanese Art," by Sir Rutherford Alcock; and on "Household Art," by Mr. Charles Wyllys Elliott. A movement of some interest, and we hope of some importance, is described under the head of "Household Art in Chicago."——From the spring announcements of new books in the *Publishers' Weekly* we select the following:—Harper & Bros.: 'The Mikado's Kingdom,' by W. J. Griffiths, lately professor in the University of Tokio; 'Stray Studies in Italy and England,' by J. R. Green; and 'Homeric Synchronism,' by W. E. Gladstone. D. Appleton & Co.: 'Lessons from Nature, as manifested in Mind and Matter,' by St. George Mivart; 'Memoir and Correspondence of Caroline Herschel,' by Mrs. John Herschel—a charming work; 'The Progress of

Science,' a short history for scholars and young persons, by Arabella B. Buckley; and a 'Primer of English Literature,' by Rev. Stopford A. Brooke. Hurd & Houghton: 'Charcoal Drawing,' from the French of Auguste Allongé. G. P. Putnam's Sons: 'The Plains and their Inhabitants,' by Gen. Richard Irving Dodge. Jas. R. Osgood & Co.: 'Sights and Insights,' by Mrs. A. D. T. Whitney; Mr. Howells's serial, 'Private Theatricals'; and the admirably instructive 'Habitations of Man, in all Ages,' from the French of Viollet-le-Duc, of which some instalments have been given in the *American Architect*. Roberts Bros.: 'Paragraph History of the American Revolution,' by Rev. Edward Abbott; 'Buddecombe Hall,' by F. C. Burnand; Landor's 'Imaginary Conversations'; Lord Houghton's 'Poetical Works,' in 2 vols.; 'Outlines of the Religion and Philosophy of Swedenborg,' by Theophilus Parsons; 'A Nile Journal,' by T. G. Appleton, illustrated by Eugene Benson; and 'Mountains,' by Miss Cook. Lockwood, Brooks & Co.: Ewald's 'Antiquities of Israel'; 'Working People and their Employers,' by Rev. Washington Gladden; and a 'Life of Israel Putnam,' by I. N. Tarbox. Turnbull Bros., Baltimore: 'The Southern Side of the Story of Andersonville,' compiled from official documents by Dr. R. R. Stevenson; a 'Life of Gen. R. E. Lee,' by Col. Marshall; and a 'Life of Alex. H. Stephens,' by Col. R. M. Johnston and Dr. Wm. Hand Brown.——Mr. Henry James, jr.'s Tales, including his 'Roderick Hudson,' have just appeared in a German translation in 3 vols.——Mr. Alfred Russell Smith, 36 Soho Square, London, has issued a 'Catalogue of Books illustrating the Life and Works of Shakspere.' Its 568 numbers are supplemented by an index of authors and editors, as rare in such publications as it is welcome.——A recent advertisement in *Nature* invites applicants for the annual allowance provided in the trust of the late Robert Wilson, M.D., for a graduate in medicine of the University of Aberdeen who will travel under certain conditions in Western Asia, or Eastern or Northern Africa.

—The library of the late Samuel Gardner Drake is to be offered at public sale in Boston in two portions, the first on May 2 and the second on June 6; while a large number of manuscripts, autographs, and portraits, and about 15,000 pamphlets, will form the subject of a special sale, to be announced hereafter. Mr. Samuel Adams Drake sends us Parts I. and II. of his catalogue of the bound volumes, to which he has prefixed a modest and brief account of his father's career as antiquarian, bookseller, publisher, editor, and author. Valuable as this collection is, and highly specialized in some directions, it is clearly not one that will escape the fate of dispersion. The great public libraries will contend with private collectors for its prizes, but as a whole it could hardly be absorbed profitably by any who are likely to compete for it. The catalogue contains 10,417 numbers, of which the first half appear to be the more valuable, since they embrace the 215 Indian titles associated with Mr. Drake's earliest and favorite researches, the 160 family genealogies, the collections and transactions of historical societies, the catalogues of a great number of public and private libraries, an unusual assortment of city directories, "author's editions" of his own works, etc., etc. No less than 75 numbers represent works by various persons of the name of Drake. No. 2866 is the author's copy of the 'History and Antiquities of Boston,' in folio (folded), with 183 plates, folio size. "The plates are a unique collection, embracing many of great rarity." Among the MSS. to be sold later are five manuscript volumes, closely written, containing the materials gathered by Mr. Drake during forty years for a biography of Sir Francis Drake, and now ready to the hand of any literary aspirant. Nos. 2809–2816 are the printed works relating to the great admiral. Other lines which we have noticed as being well represented are, in Part I., Hakluyt, Franklin, Wm. Hubbard, Thomas Fuller, Jonathan Edwards, "election sermons," and early pamphlet editions of our foremost poets; in Part II., the works of the Mathers, of Jedediah Morse, of Paine, of Whitefield, Washington and Webster pamphlets, local-history pamphlets, maps, old newspapers, etc. The catalogue is well worth owning for its own sake, albeit not above criticism typographically and otherwise. For instance, the query at No. 1346, "Bangay, Geo. W. (Pseud. ?)" was surely unnecessary.

—Those who have ever enquired into the origin as well as studied the development of the lecture system peculiar to this country know that it had its rise in Essex County, Mass., and that in the beginning it was designed to furnish the means of popularizing the best science of the day. In other words, the first lecturers were men whose title to be listened to was that they really had something to impart, and understood what they were talking about, and who depended neither on their brilliant delivery nor on mere notoriety to gain hearers. Without asserting that the only proper function of the lecture course is to instruct, we think it will not be denied that the system has been so shockingly abused, has become to so large an extent the vehicle of gab, that any return to its primitive direction is fairly to be welcomed. The invention of photography and of the stereoscope, and the combination of these in the stereopticon, have paved the way for such a return, with an effectiveness impossible in those earlier days. We imagine it is owing to the lack of a cheap and easily portable as well as powerful illuminator—such as we may hope for eventually from the electric light—that serious exhibitions with the stereopticon are still so infrequent; and yet if lecture committees were to provide regularly for at least one such exhibition in every course, the supply would doubtless soon be found equal to the demand, with a corresponding increase of facilities. The lectures given by Mr. Wood, the explorer of Ephesus, in this city and elsewhere, will be remembered as of the sort which we are recommending; and on a similar subject the Rev. Henry G. Spaulding, a graduate of Harvard, has been lecturing with great acceptance for the past two seasons, at the Lowell Institute in Boston, the Peabody Institute in Baltimore, and in other institutions and cities. His purpose is to describe, with all the force of photographic illustrations from ancient remains in Rome and Pompeii, the mode of life of the Romans, the nature of their architecture, the Catacombs, St. Peter's, etc., etc. It is one of a thousand branches of knowledge which might profitably be treated in the same way, by object-lessons on a grand scale, and we hope Mr. Spaulding may have a good many imitators, as well as continue to meet with success in his own chosen field.

—Miss Valeria Gigliucci writes us from Genoa, under date of February 20, as follows:

"In reading the first chapter of 'Maumat'ha,' by Charles A. de Kay, which appears in the February number of the *Atlantic Monthly*, I was struck with the extraordinary resemblance it bears to one of the most striking episodes in Mrs. Cowden Clarke's charming, fanciful story of 'Kit Bam, Mariner,' which appeared in England in 1849. The episode I allude to is that of Velata, the invisible girl. Not only is the principal fact of a real flesh-and-blood woman, being of a race invisible to usual mortals, the same in both tales, but many of the minor details also, such as her coming to visit a mortal man, and dwelling in his hut—objects in the room moving apparently of their own accord—the two, visible and invisible, falling in love with each other—members of the invisible race coming to fetch her away, etc. Probably all this is merely a coincidence (or, as Mr. Puff says, in Sheridan's *Critic*, 'of no consequence; all that can be said is, that two people happened to hit on the same thought—and Shakspere made use of it first—that's all'); at all events, I wish to vindicate Mrs. Cowden Clarke's claim as original author of so imaginative a conception, so poetically and touchingly carried out in her delightful book."

—In the 'Rules of Rhyme,' an excellent little hand-book to verse-making, written half-a-dozen years ago by the younger Tom Hood, we find a suggestion to which we may refer as bearing somewhat on the subject of our remarks upon 'Feminine Poetry' in No. 556. Mr. Hood advised the general instruction of the young in the art of making verses, as a means of escaping the ever-swelling tide of "poetry" written by those who can truly echo the hero of Mr. Browning's 'One Word More' in saying, "Verse and nothing else have I to give you." It would seem at first as though this treatment would aggravate rather than reduce the disease. Mr. Hood did not think so. In the note to p. xi. he says: "There is one decided advantage to the public which would accrue from the teaching of versification in schools. We should be saved the infliction of much nonsense published under the name of poetry. For it is to be hoped that no man who had been well-grounded in the mechanism of verse as a lad would think of publishing in mature age what he would know were but school exercises only, and not poems." Not only would the practice of verse-making have the negative merit here claimed, but it would also positively do good from its tendency to correct inaccurate pronunciation. In those colleges the design of whose curriculum is to give general culture, English versification might well be considered, even though there could not be allotted to it the time now given to the piecing-out of Latin verses in the English public schools.

—The last numbers of the *Romania* contain two curious instances of the way in which valuable MSS. supposed to be lost occasionally turn up. A year or two ago a French scholar, while calling on a professor of one of the Paris lyceums, noticed an old pasteboard box covered with scraps of parchment. He examined these, and, among others of no value, found several leaves containing verses belonging evidently to a *chanson de geste*. He at once copied some and showed them to M. Paul Meyer, who immediately saw that they belonged to the poem of "Mainet." All that was legible was afterwards copied, and is now given to the light for the first time by Gaston Paris. The value of these fragments will be evident when we say that they are all that remain of the French version of "Mainet," the name given to the young Charlemagne, who, according to

tradition, spent his youth in Spain, fell in love with the fair Galiana, and escaped after many romantic adventures. Another MS., long supposed to be lost, was a collection of old French lyrics known as the 'Chansonnier Clairembaut,' and often quoted by Sainte-Pelaye and the Marquis de Cangé. G. Paris and P. Meyer thought they had identified it with the MS. in the National Library fr. 845, but Julius Brakelmann, one of the victims of the late war, showed conclusively in the *Jahrbuch für Romanische und Englische Literatur*, xi. 97, that they were mistaken. The original MS. has just turned up in the possession of a lady who inherited it from her father. It must have been lost by some accident when the books and papers of Clairembaut were taken at the time of the Revolution to the National Library. Arrangements have been made for its restoration to the already rich collection of old French lyric MSS. in that library.

—The January number of the same periodical contains an interesting account by P. Meyer of an old French poem on the subject of the first Crusade, lately discovered by him in a MS. belonging to the Vicar of Spalding in Lincolnshire, England. It is known that the metrical histories of the first Crusade have either been lost or made over in such a way as to deprive them of their value. The poem before us is of no historical worth, as it has been taken from well-known Latin sources, but possesses considerable literary interest. Reinhold Köhler contributes an Icelandic story which bears a strong resemblance to the Italian novel of Prester John in the 'Cento Novelle Antiche.' Another article of interest to students of comparative folk-lore is the first instalment of a collection of popular stories of Lorraine, edited by E. Cosquin, with valuable annotations. Besides these, there are a number of purely philological articles, book-notices, and, what constitutes such a valuable feature of many European journals, a résumé of articles in other periodicals relating to the Romance languages and literature.

—Ferdinand Freiligrath, who died at Cannstadt on Saturday last in his sixty-sixth year, was perhaps better known in this country than a critical study of his writings would warrant. He had a bold, brilliant style, and generally took for his subjects only the most striking things he could find or invent, and hence those who prepared German Readers for the use of students found his highly-colored verses more attractive to youth than better poetry might have been. If he belonged to a somewhat artificial school of writers, he yet deserved credit for the number of excellent translations he made of French and English authors into German. These form the best part of his work and are wonderfully good, and may serve as admirable examples of the flexibility of the German language. Freiligrath was born June 17, 1810, in Detmold, and was for some years engaged in trade. In 1838 he published a volume of poems, which met with a ready sale and encouraged him to devote himself to literature. In 1842 he received a moderate pension from the King of Prussia, which the growth of his liberal principles compelled him soon to resign. He took part in the troubles of 1848, and on that account was obliged to leave Germany, and he lived a long time in London, but the last few years of his life he has passed in his own country.

—A few months ago (see the *Nation*, No. 538) we reviewed briefly the fifth and sixth volumes of Waitz's 'Deutsche Verfassungsgeschichte,' being the first and second volumes of the 'Deutsche Reichsverfassung von der Mitte des neunten bis zur Mitte des zwölften Jahrhunderts.' This is the fourth division of the entire work; the first and second—the Primitive and the Merovingian periods—forming each one volume, and the Carolingian period two volumes. Supposing that this fourth division was complete with these two volumes, we expressed surprise at the omission of certain points, especially the city organization. A third volume, however, the seventh of the entire work, has just appeared, containing four very important chapters—the Counts (including Margraves and Landgraves), the Dukes and Pfalzgraves, the High Ecclesiastics, and the Principalities and Cities; by *Principalities* being understood the administration under the princes, especially the office of *Vogt*. The period under consideration, being that of the development of feudalism, presents few distinct and defined institutions. The counts and dukes are no longer pure magistrates, but are not yet fully-developed hereditary princes; the *Vogt* is still the officer of the lord of the Immunity, but is on his way to become his superior; the gathering place for purposes of market and defence is beginning to acquire a corporate existence, but is not yet a free city. The office of duke, by the way, is regarded by Waitz (p. 65) as in a certain sense developed from that of *Markgraf*—that is, the men who had in charge the defence of the several frontiers raised themselves to a leading position at the head of their respective nationalities (*Stämme*); and this was a chief source of the revival of the national dukedoms in the tenth century.

MÜLLER'S CHIPS FROM A GERMAN WORKSHOP.*

THE miscellaneous character suggested by the title of Professor Müller's Essays belongs more to the collection as a whole than to the separate volumes, the grouping being such as to give to each volume a distinct and somewhat homogeneous character. This fourth volume is occupied mainly with the science of language, and contains the following lectures and essays: Oxford Inaugural Lecture on the Value of Comparative Philology as a Branch of Academic Study (1868); two Rede Lectures before the University of Cambridge—on the Stratification of Language (1868), and on Curtius's Chronology of the Indo-Germanic Languages (1875); lecture on the Migration of Fables (1870); lecture before the University of Strassburg on the Results of the Science of Language (1872); lecture on Missions in Westminster Abbey (1873), to which are added Dean Stanley's sermon on the same occasion, and a postscript on the Vitality of Brahmanism; address before the Oriental Congress on the Importance of Oriental Studies (1874); Life of Colebrooke, with extracts from his manuscript notes on Comparative Philology (1872); Reply to Mr. Darwin (1875); In Self-Defence (1875). Three of these, the Oxford Inaugural, the Second Rede Lecture, and "In Self-Defence" are here first printed, and to some of the others illustrative notes have been newly added. The last-named essay contains such an extraordinary defence of himself and still more extraordinary attack upon an American scholar, that we shall make no apology for devoting to it the space at our disposal, merely saying of the volume as a whole that it is not inferior in interest to the earlier volumes of the series.

The circumstances immediately leading to the publication of the article in question are these: Mr. George H. Darwin, a son of the celebrated naturalist, had given in the *Contemporary Review* for November, 1874, with additions of his own, an outline of the argument contained in Professor Whitney's article in the *North American Review* for July of the same year, entitled "Darwinism and Language," and directed mainly against the position which Müller had taken in his "Lectures on Mr. Darwin's Philosophy of Language." This called forth "My Reply to Mr. Darwin," published in the *Contemporary* for January, 1875, and in the *Deutsche Rundschau* for March. A rejoinder from Professor Whitney, entitled "Are Languages Institutions?" appeared in the *Contemporary* for April and in the *Rundschau* for August, 1875. Next in order comes "In Self-Defence." In a letter to the editor of the *Academy*, printed in the number for January 1, 1876, Professor Whitney pointed out a few of the misrepresentations contained in the article, and in the next number Müller withdrew and apologized for one of them, but passed over the others in silence, which under the circumstances was a confession that they admitted neither of defence nor of excuse.

The vulgar abuse so freely heaped by Professor Müller upon his opponent, whom he introduces to us (p. 464) as "a gentleman who had acquired considerable notoriety, not, indeed, by any special and original researches in Comparative Philology, but by his repeated attempts at vilifying the works of other scholars," is too obviously the "mire and dirt cast up by the waters of a troubled sea" to require comment. It is only his misrepresentation and falsification of the facts of the controversy which can mislead. To set forth the full extent and variety of these would require a volume; we can here give only a few characteristic specimens. And first, an example or two of the manner in which Professor Müller quotes from his own writings. To show that so long ago as 1854 he was no stranger to the correct distinction between vowels and consonants, he quotes (p. 492) from his 'Proposals for a Missionary Alphabet,' published in that year, as follows:

"If we regard the human voice as a continuous stream of air, emitted as breath from the lungs and changed [by the vibration of the *chordæ vocales*] into vocal sound as it leaves the larynx, this stream itself, as modified by certain positions of the mouth, would represent the vowels. In the consonants, on the contrary, we should have to recognize a number of stops opposing for a moment the free passage of this vocal *air*."

In quoting this passage, Professor Müller has interpolated the words which we have enclosed in brackets, and substituted at the close vocal *air* for vocal *stream*, with the obvious design of disguising its real sense, which would be anything but suitable for his purpose. The work in question, and even the very passage quoted, teach unmistakably a doctrine which Müller would now be the first to repudiate, namely, that the breath with which *all* the consonants are uttered is, as it leaves the larynx, intonated, and is subsequently shaped, according to the nature of the obstacles which it encounters, into surd and sonant. In other words, he at that date obviously

* 'Chips from a German Workshop. By F. Max Müller. Vol. IV. Essays chiefly on the Science of Language. With Index to Vols. III. and IV.' New York: Scribner, Armstrong & Co. 1876. 8vo, pp. 565.

knew nothing whatever of the office of the *chordæ vocales*. A further quotation from the 'Proposals' (p. 5) will place this beyond question :

"*Formation of the Tenuis.* If the voice is stopped sharp by the contact of the organs, so as to allow for the moment no breath or sound to escape, the consonant is called *tenuis*, hard or surd (k, t, p).

"*Formation of the Media.* If the voice is stopped less abruptly, so as to allow a kind of breathing to continue after the first contact has taken place, the consonant is called *media*, soft or sonant (g, d, b)."

In his 'Science of Language,' Professor Müller fell into the opposite error, and denied that even the sonant mutes were pronounced with tonic vibrations of the vocal chords, although he now (p. 497) emphatically disclaims this doctrine also, and denies that he ever held it. We need, however, only to supply the passage which he judiciously omits from the middle of the quotation given on page 496 to show the contrary. It is this :

"Some persons have been so entirely deceived by the term sonant that they imagined all the so-called sonant letters to be actually pronounced with *tonic vibrations* of the *chordæ vocales*. This is physically impossible ; for if we really tried to intone *p* or *b*, we should either destroy the *p* and *b*, or be suffocated in our attempt at producing voice" ('Science of Language,' II., p. 156 ; 6th (Engl.) ed., p. 158).

Yet on the page following this omission (p. 497), he says : "If Professor Whitney asserts 'that I *repeatedly* will not allow that the sonant letters *are* intonated, but only that they *may be* intonated,' I have no answer but a direct negative." Then in a foot-note he admits that he has used the language attributed to him, "but," he adds, "that a professor in an American university should have taken my words in that sense (*i.e.*, only capable of intonation, not necessarily intonated) is to me, I confess, a puzzle, call it intellectual or moral, as you like." In other words, Professor Whitney ought to have understood him to mean what in the same chapter he had declared to be a physical impossibility !

A few examples, next, of his quotations from Professor Whitney. In his 'Language and the Study of Language' (page 51) Professor Whitney, speaking of the "absence of reflection and conscious intent which takes away from the facts of language the subjective character which would otherwise belong to them as products of voluntary action," had said : "*So far as concerns the purposes for which he [the linguistic student] examines them and the results he would derive from them*, they are almost as little the work of man as is the form of his own skull." Professor Müller, in his "Reply to Mr. Darwin," had quoted this sentence, omitting the italicized portion, and giving it thereby just the opposite force. When his attention was called to this by Professor Whitney (*Contemp. Rev.*, p. 736 ; *Deutsche Rundschau*, p. 273), Müller, taking the German version, in which "so far as concerns the purposes" had been rendered, very properly, by "gegenüber den Zwecken," retranslates this into English "*as opposed* to the objects," making thereby the whole passage absolutely meaningless. And having in this ingenious manner got his parallax, he proceeds to measure the difference between what Professor Whitney "really said" and what he (according to Professor Müller) "says that he said," and fitly crowns the impudence of his procedure by the following comment (p. 479) :

"But even thus, the facts [what facts ?] remain as I, not as he, had stated them. There was no garbling on my part, but something worse than garbling on his ; and all this for no purpose whatever, except for one which I do not like to suggest."

Of the array of quotations which Professor Müller brings forward (page 505 ff.) in support of the charge that Professor Whitney had been guilty of the use of abusive language, the first is this :

"Page 332 ['Orient. and Ling. Stud.' I]. Why does he call Professor Steinthal *Hajjim Steinthal ?* Is that personal or not ?"

It would be a sufficient answer to say that the reference is to the first sentence of Professor Whitney's essay on Steinthal, where the latter would be entitled by common usage to receive his full name. To show, however, what a keen scent Professor Müller has for personalities (in others), we give the sentence in full : "Hajjim Steinthal, though little known to the general English-reading public, is one of the leading linguistic scholars of Germany." If now we should ask Professor Müller why, in the middle of the present essay (page 500), he twice speaks of "Mr. William Dwight Whitney," he could only answer that he meant to be offensive. But he is by no means content with such violence as may be done by merely taking a word, phrase, or sentence apart from its connection ; he frequently alters the language which he quotes, omitting qualifying expressions, making of a particular statement a general one, extending a criticism of a single argument to the mode of arguing in general, of a single chapter to the whole book, and applying to persons what was said only of things. Thus, Professor Whitney (*Jour. Amer. Orient. Soc.*, VIII., p. 68) had said of a certain statement of Lassen's respecting Colebrooke : "The statement is wholly and reprehensibly inaccurate : Colebrooke has neither done, nor attempted to do, any such thing" ; and the quotations which he proceeds to give from Colebrooke show that the language was not at all too strong. This is the use which Müller makes of it (page 510) : "A man who could say of Lassen that his statements were 'wholly and reprehensibly incorrect' because he said that Colebrooke had shown that the Arabs received their lunar mansions from the Hindus, was not likely to show mercy to any other German professor." Sometimes, while still preserving the marks of quotation, he gives a mere travesty of Professor Whitney's language, as when he makes him say of Oppert (page 515), "He is a Jew, and wanted to stand up for the Shemites."

Professor Müller, in his "Reply to Mr. Darwin" (p. 431), had given a list of "*epitheta ornantia*, such as *worthless, futile, absurd*, etc.," gathered from Professor Whitney's writings very much as one might pick them out of a dictionary, adding, "I believe there is not one of these choice counters with which, at some time or other, he has not presented me." Professor Whitney, in replying (*Contemp. Rev.*, p. 737), quoted in full, by way of example, the passage from which Müller had taken some of these epithets, showing that no personal application was or could have been intended, and if any were made, it must be by Müller, not by himself. Professor Müller, returning to this point, says (p. 516), "I add a few more references to the *epitheta ornantia* which I was charged with having invented. 'Utter futility' (p. 36) ; 'meaningless and futile' (p. 152) ; 'headlong materialists' (p. 153), etc." Now, he had nowhere been charged with the invention of these epithets, he has only invented the charge ; but to show what kind of fish come to his net, we give in full the passages above referred to, the first three in his list :

"The *utter futility* of deriving such a doctrine from such a pair of incidents, or from a score, a hundred, or a thousand like them, is almost too obvious to be worth the trouble of pointing out."

"To ascribe the differences of language and linguistic growth directly to 'physical causes,' to make them dependent on 'peculiarities of organization,' whether cerebral, laryngal, or other, is wholly *meaningless and futile*."

"There are *headlong materialists* who pronounce man the slave and the sport of nature."

These are average specimens of the personalities which Professor Müller finds, and this is his comment upon them : "What a contrast between the rattling discharges of these *mitrailleuses* at the beginning of the war, and the whining and whimpering assurance now made by the American Professor that he never in his life said anything personal or offensive"—this last being the simple *Mülleresque* of Professor Whitney's declaration respecting his essay on Steinthal : "That there were any personalities in it I utterly deny ; it was an argument throughout, if a polemical one ; it addressed itself only to the opinions it opposed and the considerations by which these were supported" (*Contemp. Rev.*, p. 729 ; *Deutsche Rundschau*, p. 276).

Nor are Professor Müller's statements of fact any more to be taken on trust than his quotations. Witness the explanation given (p. 511 ff.) of his shameful attack on the editors and contributors to the St. Petersburg Sanskrit dictionary, to which we alluded last week. The history of the affair is in brief this : Professor Goldstücker, in the *Westminster Review* for April, 1855, had made a violent assault upon the plan of the dictionary, then just begun, mainly on the ground that too little respect was shown for the authority of the Hindu grammarians and commentators. Professor Haug, in the preface to the 'Aitareya Brahmanam,' published in 1863, repeated, in a milder form, the same charge. In a review of this last-named work, published anonymously in the *Saturday Review* of March 19, 1864, Professor Müller says that Dr. Haug "protests like Professor Goldstücker against the system followed of late years by the editors and contributors to the work, who sing each other's praises in the literary journals of Russia, Germany, and America, and speak slightingly of all who have not joined this International Sanskrit Insurance Society," and Professor Haug is assured that "any attacks on his work in the journals of the Mutual Praise Society will little affect the opinion of those whose good opinion is alone worth having." Now, neither Goldstücker nor Haug has made any such protest. Müller simply forged their endorsement to a false accusation of his own. The two editors—Professors Böhtlingk and Roth—wrote nothing in defence of the dictionary, much less in praise of each other. Of the contributors two only, Professors Weber and Kuhn, replied to the attack, but Goldstücker in his rejoinder (in his 'Panini,' 1861), which was in other respects virulent enough, did not venture to charge them with the offence in question. So much for the original merits of the slander, the innocent motive of which, as Müller now tells us, was his desire to give a proof of his friendship to Goldstücker, who, "when the attacks by the company of collaborators on him grew thicker and thicker [like Falstaff's men in buckram], . . .

persuaded himself that I had taken part against him, that I had, in fact, become a sleeping-partner in what was then called [as we must suppose, by Müller and Goldstücker in their private intercourse] the 'International Praise Insurance Society.'" In the following year, 1865, the article was republished by Weber in the ninth volume of the 'Indische Studien' with a few words of comment, and in 1867 Müller himself reprinted it with some alterations and additions in the first volume of 'Chips,' omitting the offensive paragraph, but supplying its place with a note still more offensive (p. 114). Five years after the original publication of the article, and two years after it had been reprinted by the author (the dates are important), Professor Whitney, who had hitherto taken no part in the controversy, in a notice of Müller's 'Chips' in the *North American Review* for October, 1869, took occasion to speak of Müller's conduct in the affair in language which, though severe, was too mild for the offence. The facts were even worse for Müller than he represented them, and would have justified even greater severity. And now Müller (p. 512) coolly sets the evidence of the dates at defiance by the assertion that "one of the chief culprits, nay, as appeared afterwards, the most eager mischief-maker, was Professor Whitney himself." Nor is this the only anachronism of which he is guilty. In the note in 'Chips' Müller had characterized Weber's remarks on his article as "a very loud and boisterous denial," and Professor Whitney in his notice had taken him to task for the expression. Müller now, after quoting some of the language of this notice, adds: "And this, we are asked to believe, is not loud and boisterous"—*i.e.*, he gives us to understand that these words which he wrote in 1867 were meant to apply to something which Professor Whitney wrote in 1869!

We have seen how Professor Müller can be just, let us now see how he can be generous:

"It was because I thought Professor Whitney capable of rendering useful service to the science of language in America that I forbore so long; that I never for years noticed his intentional rudeness and arrogance; that I received him when he called on me at Oxford with perfect civility; that I assisted him when he wanted my help in procuring copies of MSS. at Oxford. I could well afford to forget what had happened," etc. (p. 527).

Professor Müller's language implies that his forbearance, and of course the occasion for it, began before Professor Whitney's Oxford visit, whereas this visit, the last occasion on which they have met, took place in 1856, several years before the publication of the views, chiefly on the science of language, which Professor Whitney felt himself called upon to controvert. His grievances began, at the earliest, in 1863, and could hardly have become serious before 1865, when Professor Whitney first reviewed his 'Science of Language.' The service of which he speaks consisted in finding a young man who for a suitable compensation collated a Sanskrit MS., and he forgets to mention that he had himself on three previous occasions asked and received from Professor Whitney favors of at least equal magnitude, the last of them in 1864, within a few weeks of his indecent attack in the *Saturday Review*, distinctly aimed among others at that scholar. That since 1865 he has assiduously nursed his wrath we can easily believe—the violence of the present explosion is not otherwise to be explained; but we cannot help thinking that it would have been better if he had not forborne so long. If he had let off his anger by degrees, the consequences to his own reputation must have been much less serious.

After these specimens of the "bare facts" to which, as Professor Müller (p. 528) informs us, he wished to confine his reply as much as possible (what must the part suppressed have been!), it is hardly necessary to remark that when he tells us (p. 498) that for the last twenty years he has submitted everything that he has written on the alphabet, before it was published, to the approval of such men as Helmholtz, Alexander Ellis, Professor Rolleston, and holds their *vu et approuvé*, or when he would allow us to infer that his 'Reply' had wrought some change in Mr. Darwin's views (p. 466), it will be safer for us, and more agreeable, no doubt, to the gentlemen whose names he has borrowed, if we go for their views on these points to their published writings.

Professor Müller concludes with a proposal for an international arbitration, concerning the object of which we are, however, left in doubt. The reason here assigned is to satisfy Mr. Darwin, Professor Haeckel, and others whose good opinion he highly values; in the *Academy* of January 8 he tells us it was for Professor Whitney's sake, not for his own; perhaps he will next say that it was meant only as a satire upon the method of international arbitration in general, and it is, we must confess, cleverly enough contrived for such a purpose. For what he proposes to submit to the tribunal is not the *acta* of the controversy as it stands, nor a "case," nor even a definite number of points to be presented on either side, but twenty questions of his own selection, after which he generously allows his opponent to name the judges. Admirable fairness! We can call to mind nothing except Mr. Midshipman Easy's famous duel worthy to be compared with it. The details are quite in keeping with the general plan. To the common apprehension, the question whether the science of language is an *historical* or a *physical* science, and the question whether Burnouf produced *one* or *two* bulky volumes on the Avesta, do not appear to be, mathematically speaking, of the same order of magnitude, but in Müller's classification both are alike "principal bones of contention." (For a full list of Burnouf's Avestan publications we refer him, though we beg pardon of our readers for so doing, to the same volume in which he made his wonderful discovery, viz., 'Oriental and Linguistic Studies,' I., pp. 176–8.) Professor Whitney's criticisms have been directed chiefly against the underlying theories and main arguments of Müller's writings (and it by no means follows from this that there are not errors enough of lesser magnitude to repay any one who has the leisure and the inclination to point them out), while Müller's counter criticisms relate mostly to small and even to the smallest points of detail. Professor Müller himself appears to have felt this difference, and has tried to make up in the number of his points what they lack in weight. Of the twenty counts in the mutual indictment, fourteen are unmistakably his, either by right of discovery or of invention. Some of the most serious of Professor Whitney's charges he has passed over altogether, and has not taken extraordinary pains to present fairly the six which he has taken up; rather unusual odds to demand, one would say, in an arbitration proposed by himself. But even this Professor Whitney, in the letter to the *Academy* before referred to, has signified his readiness to grant, and his willingness also to appear before a court, as well as on the indictment, of Müller's own choosing. There appears thus to be no obstacle to Professor Müller's present vindication if he desires it. Perhaps he will prefer to await, and we see no reason why he should desire to anticipate, the judgment which scholars and honorable men everywhere will in the end with sufficient unanimity pronounce, both upon the merits of the controversy as a whole and upon his "*manly* art of self-defence."

PRESIDENT JOHN QUINCY ADAMS.*

THE first hundred and four pages of this volume complete the Presidency, bringing, in three chapters, the diary down to 1829. The general characteristics of the work are the same as those to which we have already called the attention of our readers—a frank and unreserved expression of the author's opinion upon the wide range of topics which came under his observation, interspersed with striking anecdotes and interesting sketches of character.

Few very young men have been brought so early into the society of very eminent men, or have seen so early great events from so commanding a point of view. Mr. Adams may almost be said never to have had any private life. From boyhood upward he was trained to great things. Most boys love to see fireworks; but he, at the age when curiosity and wonder are strongest, had watched the fierce flight of British and American shells as they crossed each other on their fatal errand, high above the waters of Boston Bay. He had crossed the Atlantic when to cross it was a perilous adventure; had contended with the frozen waters and wild tempests of the Baltic when other boys were studying their geography in books; had learnt his French in French schools with French boys, his Dutch in Dutch schools with Dutch boys, his German in Germany. His companionships were mostly with earnest men already engaged in the great questions of life. What time had he to be a boy? Neither had he ever time to be at leisure; and when well on in life he declared that he had never known ennui. Every page of his diary bears witness to his untiring industry. His records of his diplomatic interviews are often treatises upon fundamental principles of international law. His report on weights and measures is the profoundest and completest treatise upon that subject ever written. "He has thrown more light," writes a distinguished English author, "into the history of our old English weights and measures than all former writers on the subject; and his views of historical facts, even when occasionally in opposition to the reports of our own Parliamentary committees, appear to me the most correct. For my own part, I do not think I could have seen my way into the history of English weights and measures in the feudal ages without his guidance."

He had aimed very high, and reached his aim, as a debater, as a diplomatist, and as head of a cabinet. With such preparation he brought with him to the Presidency a carefully-formed ideal, in which the duties and re-

* 'Memoirs of John Quincy Adams. Comprising portions of his Diary from 1795 to 1848. Edited by Charles Francis Adams.' Vol. VIII. Philadelphia: J. B. Lippincott & Co. 1876.

sponsibilities of the office were carefully marked out. Thoroughly prepared in every department, he brought to the discussions of his cabinet depth of research, maturity of judgment, and all the higher qualities of the statesman. He won his elevation by a rigid performance of his duties, and lost it by a conscientious adherence to principle. "He early adopted two principles, as rules of his political conduct, from which he never deviated—to seek or solicit no public office, and to whatever station he might be called by his country to use no instrument for success or advancement but efficient public services." "Of Mr. Adams," wrote Henry Clay to the people of his Congressional district in Kentucky, "it is but truth and justice to say that he is highly gifted, profoundly learned, and long and greatly experienced in public affairs at home and abroad; intimately conversant with the rise and progress of every negotiation with foreign powers, pending or concluded; personally acquainted with the capacity and attainments of most of the public men of this country whom it might be proper to employ in the public service; extensively possessed of much of that valuable kind of information which is to be acquired neither from books nor tradition, but which is the fruit of largely participating in public affairs; discreet and sagacious, he will enter upon the duties of the office with great advantage."

Various attempts were made to induce him to contribute money for the advancement of his own election. "The Presidency of the United States," was his invariable reply, "is not an office to be either sought or declined. To pay money for securing it is, in my opinion, incorrect in principle. The practices of all parties are tending to render elections altogether venal, and I am not disposed to countenance them." The practice of "interviewing," which in the last few years has assumed such an offensive form, he looks upon as perhaps an unavoidable evil to which a President must submit. "I have never denied access to me as President to any one of any color; and, in my opinion of the duties of that office, it never ought to be denied. Place-hunters are not pleasant visitors or correspondents, and they consume an enormous disproportion of time. To this personal importunity the President ought not to be subjected; but it is, perhaps, not possible to relieve him from it without excluding him from interviews with the people more, perhaps, than comports with the nature of our institutions." In the hot contest for re-election his opponents uttered the grossest calumnies against him. Henry Clay came to his defence. "It is unnecessary," said he. "Enough has already been said to put down that infamous slander, which has been more than once publicly branded as falsehood. The conspiracy will, however, probably succeed. When suspicions have been kindled into popular delusion, truth, reason, and justice speak to the ears of adders. The sacrifice must be consummated. There will then be a reaction in public opinion. It may not be rapid, but it will be certain." In nothing did Mr. Adams take higher ground than in his appointments to office, never removing an officer except for failure to perform his duty, or appointing one without satisfactory proof of his qualifications. "S. C. Allen thinks," he writes in December, 1828, "I have suffered for not turning my enemies out of office; particularly the Postmaster-General."

In the Presidency, as in his other offices, his industry was unceasing. Dividing his time with rigorous method, he was always occupied, passing continually from one subject to another, and leaving no minute unaccounted for. "My rising hour," he writes in December, 1828, "has varied from quarter past four to seven, the average being about five. After making my fire, I have constant writing till breakfast-time, between nine and ten. The morning papers then engage an hour more, and visitors and the heads of departments and the mail despatch time till half-past three or four. Then comes the ride of two hours or the walk of one. We dine between five and six. I spend an evening hour or two with my wife, and then two or three hours in my chamber, writing again till eleven and sometimes till near midnight."

He evidently takes to heart his failure to be re-elected, but nerves himself for his new position. It is less the loss of office that he regrets than the loss of occupation. He who for years had not known an idle hour had now to cast about him for something to do. Happier than Walpole, he loved books. Still, as he looks back, a certain bitterness mingles with his reflections. "Life," he writes, "is full of disappointments, and among the most mortifying of them to me has been the misconduct of peculiarly befriended." . . . . "The sun of my political life sets in the deepest gloom, but that of my country shines unclouded." But there was still work—some of the best work of his life—for him to do. From time to time cheering words reached him. A senator from Illinois assured him that he had fewer personal enemies than any public man he knew.

"Mr. Bailey spent the evening with me. He enquired if I would accept a seat in the Senate from Massachusetts if it should be offered me. I answered that the first objection would be that I would on no consideration displace any other man. He said he believed that Mr. Silsbee was very averse to coming again to the Senate, and would be glad to decline if I would accept. I said there were other objections, my intention being to go into the deepest retirement and withdraw from all connection with public affairs. He said Dr. Condict, of New Jersey, had expressed to him the hope that I should not thus withdraw. . . . Miner asked me if I had determined definitively to withdraw from all public service after the expiration of my present term. I told him that my intention was absolute and total retirement, but my principle would be what it had been through life. I should seek no public employment in any form, directly or indirectly. It was not for me to foresee whether my services would ever be desired by my fellow-citizens again. If they should call for them while I have life and health, I shall not hold myself to decline repairing to any station which they may assign to me, except for reasonable cause. But I desired him to receive this in confidence as a candid answer to his question, for I wish not even to give a hint to the public that I am yet eligible to their service."

Among the various occupations for the future which presented themselves to his mind was a history of the United States and a life of his father. Little did he or his friends dream what a work was preparing for him.

From time to time nature warns him that he is working too hard, and he averts the danger by long walks, by long rides on horseback, and swims in the Potomac. He takes his exercise as he performs his official duties—earnestly. Of his brief recreations the one in which he seems to take most pleasure is natural science. There is something like a tender exultation in the record of his visits to the greenhouse. "I there counted ninety-seven Spanish cork-oaks, but found nothing further. I observe only that a few of every kind of tree that had come up are perishing, the causes of which are various; the heat of the sun withers some, others suffer prostration from rain; insects above ground devour the leaves, vermin beneath nip the stalks. The infancy of plants seems to be as delicate as that of animals. . . . I make two remarks: one, that the self-planted seeds thrive most vigorously; the other, that the plants which I most cherish are the most apt to disappoint me and die."

When at last the 4th of March came, and he became once more a simple citizen of the United States, Mr. Adams still strove to turn his time to account. Visitors came, if not in throngs, in great numbers. The politics of the day engaged his attention as an observer, though no longer as an actor—a novel position for him, the greater part of whose life had been passed in public service; but an instructive position, inasmuch as it gave him new points of view, and brought him into a different kind of contact with his fellow-citizens. Two resources stood him well in stead in this enforced leisure. He had never laid his classics wholly aside. Horace he always read with delight. He still loved to sit at the feet of Cicero. In the day of his trial he found them ready to cheer, to strengthen, and to console. With them came La Fontaine. To imitate an ode of Horace or a fable of La Fontaine gave a purpose to his daily rides and walks, which mere riding for pleasure could not have given them.

But his classical reading was not confined to poetry. "I read the fragments of Cicero's poetry," he writes on the 24th October, 1830, "and with them completed the perusal of everything written by him now known to be extant. It has occupied on an average two hours a day for ten months, and has left me with a desire to spend at least as much more time in studying him more profoundly." We give one more characteristic extract, and then close this part of our study of this remarkable man:

"September 24th.—In the evening I read several of Madame du Deffand's letters. It belongs probably to the effect of age upon the taste and judgment that these letters are more interesting to me than any novel. They are records of realities. In youth it was exactly the reverse; fairy tales, the 'Arabian Nights,' fictitious adventures of every kind, delighted me, and the more there was in them of invention, the more pleasing they were. My imagination pictured them all as realities, and I dreamed of enchantments as if there was a world in which they existed. At ten years of age I read Shakspere's 'Tempest,' 'As You Like It,' 'Merry Wives of Windsor,' 'Much Ado about Nothing,' and 'King Lear.' The humors of *Falstaff* scarcely affected me at all. *Bardolph* and *Pistol* and *Nym* were personages quite unintelligible to me; and the lesson of *Sir Hugh Evans* to the boy *William* was too serious an affair. But the incantations of *Prospero*, the loves of *Ferdinand* and *Miranda*, the more than ethereal brightness of *Ariel*, and the worse than beastly grossness of *Caliban*, made for me a world of revels and lapped me in Elysium. With these books, in a closet in my mother's bed-chamber, there was also a small edition, in two volumes, of Milton's 'Paradise Lost,' which, I believe, I attempted ten times to read, and never could get through half a book. I might as well have attempted to read Homer before I had learnt the Greek alphabet. I was mortified even to the shedding of solitary tears that I could not even conceive what it was that my mother and father admired so much in that book, and yet I was ashamed to ask them an explanation. I smoked tobacco and read Milton at the same time, and from the same motive—to find out what was the recondite charm in

them which gave my father so much pleasure. After making myself four or five times sick with smoking, I mastered that accomplishment and acquired a habit which, thirty years afterwards, I had much difficulty in breaking off. But I did not master Milton. I was nearly thirty years old when I first read the 'Paradise Lost' with delight and astonishment. But of late years I have lost the relish for fiction. I see nothing with sympathy but men, women, and children of flesh and blood. Madame du Deffand's suppers afford me savory food, and I was charmed this evening with her picture of the Lucan family sending a piano to her apartments, the father making his daughter play and sing an hour or two, Lady Stormont joining in the concert, the piano and the children being then sent home, leaving a party to sup. The visit of Dr. Franklin and Silas Deane with Mr. Le Roi is also very amusing, and her remark that all the company were in favor of the Americans excepting herself and Mr. De Guignes, who were for the court, is more interesting to me than ten volumes of 'Waverleys.' Can philosophy tell me why this is so?"

COUNTY JAILS AND ALMSHOUSES.*

THE earliest reports of the Prison Associations of this country are full of unpleasant accounts of our county institutions for charity or punishment. The report of the French commissioners, MM. de Beaumont and de Tocqueville, sent to this country in 1834 to investigate our prisons, speaks in the strongest terms of reproach of the county jails. Miss Carpenter, in the accounts she has published of her recent visit to the United States, is equally severe in her criticism of these institutions. And now it is impossible to take up any report of a State board of charity or prison association without finding shocking revelations of the condition of the county jails and rural almshouses. So common are these complaints and descriptions, and so indescribably repulsive are the evils which they portray, that the public have almost become wearied of hearing of them, and have fallen into somewhat of the state of mind towards them with which the evils of the weather are regarded. In fact, to any one of a philanthropic turn of mind it is somewhat discouraging to turn over the reports of, for instance, the Boston and New York Prison Associations during the past fifty years, and find each year the same shocking abuses and evils so bitterly complained of, and the same unbroken enthusiasm in the hopeless struggle with them. If the evils were merely sentimental, or such as ought only to touch a highly-organized and humane mind, the long and unsuccessful crusade against them could be better understood and better endured. But the abuses are the most palpable sources of new evil to the community—the most stupid and brutal inhumanities, such as no civilized community ought to permit, and which violate all the instincts and practices that the slow culture of Christianity has gradually formed in modern communities.

In what we have to say of these county institutions, it should be understood that we merely summarize the facts from hundreds of reports from every portion of the Union. The abuses are not peculiar to any one State or even division of the country. They belong to the old and new States, though they are perhaps most glaring in the new.

Beginning with the almshouses, we are compelled to say that till within three or four years no abodes of so-called charity were ever such dwellings of unmitigated misery as the county poor-houses of the United States. The first consideration of any wise legislation on pauperism is to prevent its transmission and inheritance. The philosophical principle which plays so important a part in the Darwinian speculations, and which must guide all systems of classification, of the reduplicated power of inheritance in each new generation, is equally true in human affairs. The second and third generation of a pauper and vicious family contains tendencies to degeneracy, to physical and moral evil, which have increased in geometrical ratio, and which (if they do not utterly destroy the mental and bodily powers) become almost unconquerable by any humane or moral influences. Accordingly, the first object of scientific legislation in regard to the dependent and vicious classes should be to break them up, and prevent transmission of their habits and weaknesses. The rural almshouse, under the system which has prevailed here, has, on the other hand, been a nursery and propagation-bed of pauperism and weakness. The pauper mother is brought there for the birth of her first child. The child grows up and is trained and educated there. Her companions are persons of the worst habits and character. She is stamped with both her inherited weakness and with acquired tendencies and ways of life peculiar to the place. She in her turn becomes early a mother of an illegitimate child, and so the vicious line begins and is transmitted, until we have such terrible facts in criminal inheritance as have appeared recently in the history of a certain unhappy "Margaret, Mother of Criminals," in Ulster County, New York, where a family-line is discovered made up of more than seven hundred criminals and paupers.

In most almshouses of the United States children are kept with old offenders or mature paupers and vagrants, and the poor-house becomes naturally a nursery of pauperism. In very few of them are the children taught or brought under any elevating influences. But almost worse than the condition of the children is that of the unhappy creatures bereft of reason. Of all spectacles of human misery which the light of day looks upon, we suppose that of the lunatics in American almshouses is the most pitiable. Unlike many sufferers under the great evils of society, they are often persons who have been in better circumstances, and who must, in their dim way, feel and see the abuses of their treatment. In the country poor-houses they are treated as lunatics were a hundred years ago in Europe. They are chained, put in cages, beaten, kept in dark holes, without fire, often naked, their food reached to them as to beasts, their clothes seldom changed, without bedding, except straw, left in their own filth and eaten by parasites. This horrible treatment, it should be understood, was (till within three years) common in many of our States, and is still the fact in the majority.

The writer has known a lunatic who was kept fifteen years in an outhouse on Staten Island, in so narrow a place that his flexor muscles became permanently stiffened; another, a woman, who was confined with chains in a state of nudity for ten years; another, a man, chained in a cage for thirteen years, in a frightful state, and so of many others, kept in almshouses and treated with similar neglect and apparent cruelty. Such instances can be found all over the country. One singular and horrible result of the condition of rural poor-houses throughout the Union is, that the lunatic and half-witted women not unfrequently become mothers in these places, and a new and unnatural progeny begins—the offspring of lunacy and crime, of epilepsy and vagrancy.

The county jails, again, though not presenting such fearful pictures of human misery, are even more dangerous in their character on the future of the community. In every country town many children, young girls and boys, are committed for criminal offences for a short term to the county jail. Here they are placed and confined, without separation, with old ruffians, thieves, burglars, prostitutes, and even murderers. The weeks of idleness are spent in such society. The jail becomes the seminary of crime. Each child or youth graduates with well-learned lessons. In this common receptacle are many honest and innocent persons, witnesses, people accused wrongfully, paupers, lunatics, and the like, but the influential inmates, whose tone governs all the others, are naturally the criminals and the vagrants. The effect of this is plainly seen in many of our counties. The vagrant and criminal youth are perpetually returning to prison. A class of skilfully trained convicts is being educated. Both law and good morals seem in many villages to make little headway against youthful vice and criminality. The jail educates. Then that large class of young criminals who, perhaps, commit their first offence from passion or under overwhelming temptations, are here prepared as future and professional criminals. Many county judges will not sentence a very young person at all, unless for a weighty offence, for fear of the influences of these prisons.

Nothing, in short, could be more destructive of the interests of society than the present arrangement and management of county jails. The hardship to innocent persons and to lunatics alone is a matter which humanity and right reason ought to cause at once to be reformed.

We could fill pages with the evils and abuses existing in the rural jails in every State of the Union: worst of all, perhaps, in Texas and the new States, but bad and disgraceful enough in the oldest States. So wide a reach of inhuman and unreasonable practices and arrangements existing through all our history shows that there is for it some other reason than the mere inhumanity or stupidity of public officials, especially in a community of such marked humanity as the American. We believe the especial reason of these abuses and enormities to lie in what in many respects has constituted our strength—the extreme subdivision or decentralization of administration which characterizes our local government. We have inherited the system of county or parish management of the poor from at least as far back as Henry VIII.'s reign. This system was much changed and somewhat centralized in England by the Poor-Law reforms of 1834; but still in both countries there continues an extremely subdivided administration of all matters connected with pauperism and petty criminality. In the United States each county is expected to provide for its own poor, its "defectives," unfortunates, and its petty criminals. All the modern improvements in treating these various classes of subjects are founded on classification and distinctive treatment. Pauper and criminal children, for instance, are easily improved and prepared to be useful members of society by individual influences, either in a "family reformatory," or, what is much better, the real family itself. The defectives, the blind, deaf, and dumb, even the idiotic, can be restored to a considerable use of their faculties by skilful

* Annual Reports of State Boards of Charities for Pennsylvania, Massachusetts, and New York. 1875.

care in their appropriate asylums. Insanity is more and more regarded as a physical ailment, and though the best modern treatment does not restore as many to reason as might be expected, yet the unfortunate sufferers are, under humane and skilful treatment, relieved of many of the worst features of the disease, and rendered comparatively comfortable and useful. The old cruelties and barbarities of management are quite abandoned in all good asylums, and in England non-restraint is carried even further than here.

Now, a county poor-house has no opportunity for classification or even separation of its subjects. All—young and old, sane and insane, and often men and women—must be kept together. No science and little humanity can be permitted to enter into its management. The insane in such society soon become more wild, and must, for the sake of the others, be confined separately. There is never room in an almshouse for any suitable confinement of this kind; the officials are naturally men of inferior intelligence, and so the cruel and barbarous practices of the almshouse soon begin. The same thing is true of the county jails, and for similar reasons. Moreover, there is nothing which is so little under the supervision of the humane and intelligent public as the county "institutions." Most people of ordinarily compassionate feelings have a horror of even seeing the rural almshouse and jail.

The remedy for these evils has already begun in our oldest States, and should be carried out thoroughly in all. It lies in these directions: (1) Societies should be formed among the fortunate classes for the inspection of the public institutions of charity and penalty. One association of this kind—the State Charities Aid Society—in New York State has already accomplished much good under the able management of Miss Schuyler. (2) The effort should be made to give a broader scope to the care of the county poor, defectives, and petty criminals. This is best secured by founding State asylums and State intermediate or reformatory prisons, in which the counties shall be obliged to board their own poor and unfortunates and their youthful criminals. By this plan all pauper children would be placed in private families or orphan asylums; all insane, blind, deaf and dumb, and idiotic persons each in their appropriate asylums; the petty criminals in reformatories; and the able-bodied in State workhouses. The only persons left in the rural almshouses would thus be the incurably sick and helpless, and those remaining temporarily before they were transferred to State asylums. The system would indeed be somewhat more expensive than the present; but it is more than questionable whether economy is permissible at the cost of so much human suffering, and at the risk of such transmission of pauperism and crime. (3) With these State asylums and reformatories there must also be a central supervising power; some board, if possible, of distinguished citizens serving voluntarily, chosen by the Senate of the State, employing one first-rate official, who shall inspect and unify the management of all these institutions for charity and punishment. Then at length we should begin to see an improvement in our poor-law management and our prisons worthy of our civilization.

A NEW WORK BY DR. BRINTON.

The Religious Sentiment.

Its Source and Aim; a Contribution to the Science and Philosophy of Religion. By D. G. Brinton, A.M., M.D., author of 'Myths of the New World.' Large 12mo, $2 50.

"The main questions I have had before me in writing this volume have an interest beyond those mere science propounds. What led men to imagine gods at all? What still prompts enlightened nations to worship? Is prayer of any avail, or of none? Is faith the last ground of adoration, or is reason? Is religion a transient phase of development, or is it the chief end of man? What is its warrant of continuance? If it overlive this day of crumbling theologies, whence will come its reprieve?"—*Preface.*

Myths of the New World.

A Treatise on the Symbolism and Mythology of the Red Race of America. By Daniel G. Brinton, A.M., M D. Large 12mo, $2 50.

"Justifies the belief that, in whatever Dr. Brinton may in future contribute to the literature of Comparative Mythology, he will continue to reflect credit upon himself and his country."—*North American Review.*

"When we consider the vastness of the subject and its inherent difficulties, . . . we cannot do otherwise than accord high praise to the author for diligent research, discriminating criticism, good sense, and, we may add, a large charity."—*Nation.*

New Novel by the author of 'My Little Lady.'

ERSILIA. 16mo. Leisure-Hour Series. $1 25.

RECENTLY PUBLISHED.

HISTORY OF THE UNITED States, in Freeman's Course. By J. A. Doyle. With Maps by F. A. Walker, Professor of History and Political Economy in Yale College, author of the 'Statistical Atlas of the United States.' 16mo, $1 40.

WM. H. SPOONER, Boston, Mass.

AN INDISPENSABLE WORK FOR TEACHERS AND STUDENTS.

The True Order of Studies.

By the Rev. THOMAS HILL, D.D, Formerly President of Harvard College.

12mo, cloth, $1 25.

"To older teachers and educators the simple announcement of such a work by Dr. Hill will be sufficient to attract their attention. . . . In his 'True Order of Studies' we have in plain, simple English the most practical, compact, and at the same time profoundly philosophical exposition of the fundamental processes of education it has been our fortune to meet in any language."—*New England Journal of Education.*

"A volume illuminated by the most brilliant of imaginations, and containing the rarest hints upon the simplest and most beautiful methods of handling the most difficult subjects. For profound analysis in educational matters, for simplicity in illustrations and fertility of invention, the author has no equal. . . . To many readers the book will be the beginning of a new intellectual life. . . ."—*E. Hunt, Superintendent Schools, Portland, Me.*

The Nation.

NEW YORK, THURSDAY, MARCH 30, 1876.

The Week.

THE great Conkling Convention came off at Syracuse last week, and produced a resolution referring to Conkling in glowing terms as a "statesman and a patriot of the highest ability and character," declaring his "long and distinguished public career" to be "without reproach," and "presenting" him as the choice of New York for President. The Independents, headed by Mr. G. W. Curtis, made a struggle for an absolutely unpledged delegation, but the Conklingites mustered two-thirds of the convention, and might, if they had dared offend public opinion to such an extent, have cut off debate altogether and sent a pledged delegation to Cincinnati. But the strong expressions of dissatisfaction from all parts of the State convinced them that it would be a mistake to attempt to carry things with a high hand. The delegates who now go to Cincinnati number among them some good men, but as a whole they are products of the "machine," and in a good position to "trade" Conkling votes against votes for some other machine candidate. It is a curious illustration of the present condition of politics that while all the interest in the convention turned solely on one question—whether Conkling is or is not a fit man for President—there was not in the speeches of his supporters any reference to this point whatever. With 250 members enthusiastically shouting for Conkling, a stranger reading the accounts of the meeting would not be able to gain the faintest idea of why they had been shouting for him or why they wanted him elected. Everything that was said on his side would have been just as true and just as much to the purpose if, instead of being a senator, he had been a horse or a block of wood.

The Supreme Court at Washington has decided two important cases under the Enforcement Act of 1870. The first of these came up from Kentucky on an indictment against two inspectors of a municipal election for refusing to receive and count the vote of William Garner, a citizen of African descent. The third section of the act provides that whenever, by the laws of any State, any prerequisite is required of the citizen to entitle him to vote, the offer to perform the act shall be considered equivalent to a performance, in case the voter is wrongfully prevented from performing it, and that all officers of elections must treat it as performed, and for a wrongful refusal, on the application under oath of the citizen, shall be liable to punishment. The fourth section contains the familiar provisions against "intimidation," bribery, and conspiring for the purpose of obstructing votes. In deciding the case, the Court says that the Fifteenth Amendment "does not confer the right of suffrage upon any one," but prevents discrimination on the ground of race, color, or previous condition of servitude. Under this Amendment Congress might have passed a law purely and simply to prevent discrimination of this kind; but instead of this the act is directed against all sorts of interference with elections, besides those which relate to race and color. The Court therefore held these sections of the act unconstitutional, and decided that Congress has "not as yet provided by appropriate legislation for the punishment of the offence charged in the indictment." The other case was an indictment found under the same act for "banding" and "conspiring" to intimidate two colored men and deprive them of "rights and privileges granted and secured to them, in common with other good citizens of the United States, by the Constitution and laws of the United States." The opinion in this case is in part technical, but the upshot of the whole is that it will not do to suppose that whenever any breach of the peace occurs in a Southern State in which a black man is concerned, the United States can be brought in to indict those who have taken part in it for "kukluxing" or "conspiracy." The Court has also decided that the head-money tax imposed by this and other States on emigration is void, as being a "regulation of commerce," and so within the exclusive province of Congress.

The Senate, by a vote of 32 to 26, has passed Mr. Morton's bill to regulate counting the electoral vote for President, the Democrats generally being against it. Mr. Thurman voted with the majority, and entered a motion to reconsider. This bill, which has now been for two years or more before the Senate, provides that where more than one return is received from a State by the President of the Senate, all the returns shall be opened by him in the presence of the two Houses, and that return shall be counted "which the two Houses, acting separately, shall decide to be the true and valid return." Mr. Thurman wanted a clause added to provide that, in case of a failure of agreement between the two Houses, the President of the Senate shall decide which return shall be counted. It is very important that some rule should be made on the subject, as the Constitution has provided no safeguard against double sets of returns. The election of a President by a doubtful vote, with half the country convinced that his election was due to the improper inclusion or exclusion of some one or two States, would, in the present condition of politics, be a national misfortune.

Besides this, no business of importance has been transacted, unless we except the Senate's action in determining to stand by its amendments to the House West-Point Bill, which will now go to a committee of conference. The House has had a debate on election frauds, and passed by an almost unanimous vote a bill making it a misdemeanor for any Government employé to solicit or contribute funds for election purposes or to canvass in any way. Mr. Blaine succeeded in having the bill amended so as to include senators and members of Congress, and, in their case, to make any violation of its provisions as to contributions by candidates of money or money's worth, a disqualification for office. Penalties are also prescribed for threats of injury to the lives or limbs of voters, and the United States Courts are authorized to enforce the law. The measure is really a sort of force bill, but, curiously enough, was supported on both sides of the House; by the Republicans as being likely to prevent "intimidation" at the South, and by the Democrats as being a blow at political assessments. The House has also repealed the act forbidding the appointment to military positions of Confederate civil and military officers. On a motion to suspend the rules and pass the Payne bill for "gradual resumption," that measure received its death-blow, by a vote of 81 to 156. This seems to dispose of all general schemes of resumption for the present session, and leaves as the only "live" measure the Silver Bill, which is likely now to pass.

The State Department and the President seem to have washed their hands entirely of all responsibility for the disposition of the *Alabama* award, and are apparently willing that it shall be given to anybody Congress pleases. The State Department is, however, morally bound to do all in its power to prevent the perpetration of the fraud now proposed by the House Committee, because the State Department from the first assumed the position of trustee toward the claimants, collected their claims against Great Britain, got judgment for them at Geneva, and put the money into the Treasury. On October 17, 1872, Mr. Caleb Cushing, who had just been representing the Government as counsel at Geneva, wrote a letter to a claimant in this city, in which he declared in so many words that the award was for a "definite sum of money" paid over to the United States "for distribution among the parties interested, *according to the award of the Tribunal*," and further added: "It will be received and held by the United States as a *trust fund*, to be distributed among the parties interested *conformably to the tenor*

and spirit of the award of the Tribunal." The Committee's bill, to which we alluded last week, proposes to admit as claimants two classes of claimants who, according to the "tenor and spirit of the award," are no more entitled to any of it than Chorpenning or the Grangers are. The money was given as damages caused by the escape of the *Alabama*, *Florida* (with their tenders), and the *Shenandoah* (after leaving Melbourne). No one who lost by other vesse's has any more right to any of the money than he would have for losses caused by Chinese pirates. In the same way, the "war-premium" men were absolutely ruled out by the Tribunal itself. It would be interesting just now to have Mr. Fish in the House, and hear an Opposition member interrogate him on the subject of international "trust funds."

Mr. William M. Stewart of Nevada is the only one of the Emma-Mine operators who has at this writing been examined by the Committee in Washington, and his cross-examination by Mr. Hewitt was at times a pitiable and yet diverting spectacle. His evidence, both oral and documentary, helped in a remarkable way to confirm Lyon's story, as showing that he (Lyon) is now telling the tale and making the charges he made from the moment he thought himself cheated in London in 1871; that Albert Grant got $500,000 for "rigging the market"; that Professor Silliman was employed to make a report, not by the vendees, as he has represented, but by the vendors, as the very first step in their operations, and was actually engaged by telegraph through their confederate Baxter in this country; that after Stewart had thrown Lyon overboard (*i.e.*, got him to settle his claim for $500,000 by taking $150,000), and had returned to this country, Park became frightened in London by Lyon's threats and paid him $50,000 more as hush-money—or, as Stewart called it to the Committee, "black-mail"—in order to prevent his bringing a suit against them both for fraud, or, in other words, "splitting on them" and breaking the market; and that when the two worthies got home Park "settled" with Stewart by giving him nearly $300,000, which, as Mr. Hewitt pointed out, bore a curious resemblance to the balance of Lyon's $500,000. The most dramatic portion of the examination, however, was the scene where Mr. Hewitt, having elicited from Stewart the fact that he had, when selling the mine in London, never seen it, confronted him with the boast in the prospectus of the peculiar value to owners of the Emma Mine in particular of having him and Park on the board of directors, owing to their experience. The Western statesman, at this point, displayed a bodily uneasiness and a slowness of mind and speech which were very interesting to witness. Park and Schenck come up this week.

There is but little excitement over the Connecticut election, which takes place next week, partly from there being no exciting questions before the people. In one of the Congressional districts—that represented by the late Mr. Starkweather—the contest ought to have a great deal of interest for all independent voters, as the result will show, or at any rate might show, how much strength they have. The Democrats in this district offered the nomination to Mr. D. A. Wells, and on his declining the offer refused to make any nomination or to adopt any platform, but passed a resolution recommending people to vote for Mr. Wells. Votes therefore cast for Mr. Wells do not represent a longing for "soft-money" or a prejudice in favor of rebellion, or secession, or assassination, or any of the other longings or prejudices with which the Democratic mind is frequently supposed to be filled. They simply represent disgust with the present corrupt and imbecile administration of affairs at Washington, and an honest desire to have as representative not a party hack but a man of education, intelligence, character, and settled views on the questions which are now demanding solution of the country. Mr. Wells belongs to that large and constantly increasing class of men who have been driven out of public life by Grant and his friends because they have devoted themselves to the country and not to party, and have had the courage to believe that the people were better pleased with the truth, even when unwelcome, than with flattery and lies.

The Democrats have unearthed a letter written by the chairman of the New Hampshire Republican State Committee to one Barney, couched in the following plain, straightforward language: "You must carry Canaan at all hazards. If the $1,500 I have already sent is not enough to carry the town, I rely upon you to carry it at all events; and if it costs $5,000 you shall be made whole. Don't fail"—a despatch which reads very much as if the chairman and Mr. Barney regarded the operation of "carrying" towns as being in its nature analogous to that of "carrying" stocks, and to depend for its success chiefly upon the size of the "margin" put up with the brokers. This discovery, coupled with those of last week as to the town of South Hampton, seems to throw doubts upon the soundness of an observation in the *Times* of a fortnight since to the effect that "to attempt to explain the great results of such a campaign in a State like New Hampshire by any theory of mercenary motives, argues not only the most thorough recklessness but the most absolute stupidity." We have no doubt that what the *Times* calls the "standard of civic virtue" is quite as high in New Hampshire as it is in a great many other places. But it is a standard which varies so greatly with the education, income, and intelligence of the citizen, and the temptations to which he is subjected, that general deductions from it as to particular elections having been carried by means of bribery are of little value.

Important questions regarding taxation have lately arisen in California and Massachusetts, and in both cases have been settled in a satisfactory way. In California, the Supreme Court of the State has had before it the vexed question of taxation of mortgages, and the judges have decided, in accordance with justice and common sense, that, as mortgages do not in any way increase the body of wealth in a community, any tax laid upon them is laid upon a fictitious value, is in so far an imposition upon the taxpayer, and, inasmuch as it represents a second tax on real estate already taxed in the hands of the owner, is "double" taxation within the meaning of that term in the constitution of California and other States. In Massachusetts, the city of Boston has tried to make a descent upon the abandoned character known as the "tax-dodger." The "tax-dodger" is one who, finding that the rate of taxation in Boston is too high for his means, flies, with his wife and children, to some rural town where the cry of "Boardman and Revolution" (which is said to have been the slogan of the Boston communists at a recent election) has not yet been heard, and where there are "selectmen" instead of a common council, and constables instead of a police department, and where there is neither paving nor widening of streets. The reason and excuse for the existence of the "tax-dodger" are to be found in the barbarous system of taxation adhered to by Massachusetts. This system consists in taxing personal property to the last extreme. The State taxes all the property of its citizens whether in the limits of the State or not. It also establishes, and carries out with a fair degree of success, a system of personal espionage and inquisition unequalled in any free country in the world. Every man must file a sworn schedule of his exact wealth annually, or the assessors "doom" him until he confesses or flies abroad. The "dooming" is no idle pretence, but is continued on an increasing scale every year until the victim gives in.

One little loop-hole has always existed in the law. The State has said that the towns should levy the whole tax together with their local rates, and, of course, has taxed but once in a year. The local tax is usually eight or ten times as much as the State tax; in Boston the latter amounts to only 13 cents against $1 25 collected in all. In a small town like Nahant the rate is 35 to 40 cents in all, and perhaps 8 or 10 cents go to the State. Now, certain astute Bostonians, finding that their tax on personal property is levied in the town where they claim a legal domicile, have gone into small villages, and there enrolled themselves as citizens. If the town spends little, the rate is low. In no event does it reach the rate of cities with expensive tastes and prodigal of the money of others. This legal evasion has gone to the very soul of the present

worthy Mayor, and the Legislature has been asked to pass a law that if a man stays a single day over half the year in Boston his domicile shall be there; that, unless the "dodger" will spend more than six months out of Boston, he must pay; and that the inhabitant claiming any exemption must file a supplementary schedule showing how his months and days have been spent in every year. The game was indeed hardly worth the chase, since the Boston assessors compute that if all the capital now taxed elsewhere were kept in Boston the rate would be reduced only two and one-half per cent.—that is, if a man's tax be a dollar, he would pay ninety-seven and one-half cents. This fact has led to the defeat of the proposal and the escape of the "tax-dodger." If this termination should lead to a revision of the tax-laws, it would be a happy result of the discussion. The modes of escape from oppressive taxation furnished by railroads and steamboats are now so numerous that nothing short of incarceration of the entire tax-paying part of the population will ever ensure complete success for the "Massachusetts system."

Threats of another railroad war were attended during the week by a "bear" speculation at the Stock Exchange, and there was a considerable decline in prices. Otherwise, Wall Street was very dull. Money was easily obtainable at 3 to 5 per cent., although the banks have been sending large amounts of currency to the States in which the 1st of April is annual settling-day. The surplus reserve of the New York banks is now $11,750,000, or nearly double what it was last year at the corresponding time. The banks now hold nearly three times as much gold as then. During the week a large amount was received from California, enough to diminish materially the effect of an export of $1,425,000 and payment into the Treasury of $2,500,000 for customs. The week closed with sterling exchange warranting further exports. The London market, however, does not require gold now, since the Bank of England rate is down to 3 per cent., and exchange with Paris warrants the flow of gold thence to London. There was a flurry at the London Stock Exchange, but it had no influence on the money market nor on the securities in which this country has an interest. The European markets for American products continued strong. The value in gold of $100 greenbacks ranged during the week between $87 43 and $87 81. Silver fell in London to 52½*d.* per ounce and closed at 53*d.* to 53¼*d.* It was semi-officially announced that the Treasury had bought from the Big Bonanza owners $4,000,000 more silver bullion.

In England, the public mind has been mainly occupied with Mr. Disraeli's melodramatic attempt to give the Queen the title of "Empress of India," which is likely to succeed in Parliament, but which the Liberals, who are intensely disgusted, intend to try and frustrate in the last resort by addressing the Queen, asking her not to assume it. The affair, trifling as it is, has shocked many of the most deep-seated national prejudices, particularly that one which denies the existence of any loftier title on earth than that oldest of existing titles, "Queen of England," and refuses to believe that the Queen can be promoted. Not only the idea, but some of the arguments used in support of it, particularly the one drawn from the eager desire of the natives of India, are in all respects worthy of a brilliant novelist, and have about as much relation to actual politics as the speculations in 'Coningsby' or 'Lothair.' The Suez Canal purchase, too, has received a severe blow, as a political measure, by the peremptory dismissal by M. Lesseps of Sir Daniel Lange, the British representative on the Board of Directors, on the publication of private letters of his to the British Foreign Office criticising the management of the Canal, and urging the late Ministry to buy it up. Moreover, the mission of Mr. Cave, who was sent out to examine the financial situation in Egypt at the Khedive's request, has proved a failure, inasmuch as His Highness, on finding he was to receive no aid in establishing a national bank, declined to allow the report to be made public, and there was at once a panic in Egyptian securities on the London Exchange, although there was some abatement of political anxiety, as it revealed the fact that the Government did not propose to bolster up Egypt financially. There is no improvement in the situation in Herzegovina, owing to the refusal of the insurgents to lay down their arms and their continued success in the field.

The new French Assembly is now definitively constituted, the supplementary elections having all taken place; and the result, according to the best calculations, gives the Republicans of all shades 339 votes; the Bonapartists, 92; the Liberal Conservatives (who might for all practical purposes be counted Republicans), 58; and the Legitimists pure and simple, 36. The Republicans pure have thus a majority of 144 on all questions affecting the permanence of the existing constitution, and, even if they are compelled on any question to part company with the 60 Radicals, they have a majority of 84. The Legitimists have got in a respectable body of their best men, and, though the Bonapartists have done pretty well, they have not done as well as they expected, and have to contend against the hostility of all the other parties. Marshal MacMahon, too, has formed his new Cabinet, and both in forming it and in its composition has disappointed his enemies. It was not expected, for instance, that a man who was as much a Conservative as he is, and had his notions of his mission in the present crisis, would adapt himself to the constitutional régime sufficiently to change his ministry in obedience to a hostile popular verdict rendered at the polls, but this he has done. It was not supposed, too, that he had learnt enough of parliamentary politics to make his new Cabinet out of the materials presented to him by the election, but this, too, he has done. He made an effort to get the Ministry of War and of Foreign Affairs excepted from the operation of the parliamentary system, as having charge of interests too weighty and too much in need of permanence of policy to be influenced by the ups and downs of party politics; and there was, especially in the present condition of France, a good deal of reason in his view—but then the Republicans could not forget that it is the army which makes *coups d'état*. The matter has been arranged by the retention of General de Cissey in the War Department, and of the Duc Decazes in the Foreign Affairs, and Léon Say in the Ministry of Finance—all tried and excellent men for the places. M. Dufaure, who is the President of the Council, is also Minister of Justice, and M. Waddington, a Protestant, by the bye, of English origin, has the portfolio of Public Instruction. M. Ricard, a very pronounced Republican, gets the Interior, where he will have the control of the prefects. The Minister of Public Works is M. Christophle, one of the fiercest enemies of the late Ministry; and the new Minister of Marine, Admiral Fourichon, served under Gambetta at Tours.

The new Chambers met on the 8th inst., and were addressed in the name of the old Assembly, which then passed out of existence, by the Duc d'Audriffet-Pasquier, who bade them welcome, and solemnly handed over to them "the sovereign power" vested in the National Assembly by the nation. It was probably the most interesting and hopeful ceremony ever witnessed in France. M. Dufaure replied on behalf of the President, and expressed in his name "his profound confidence that, with God's help and the co-operation of the two Chambers, he (Marshal MacMahon) would never exercise the Executive power except conformably with the laws for the honor and interest of their great and much-beloved country." M. Gauthier de Rumilly, the temporary president of the Senate, addressed the Senate in a similarly hopeful strain, but the strangest scene of all occurred in the Chamber of Deputies, where old Raspail, now we believe in his eighty-second year, who has passed a long and eventful career as a pronounced Red, and has been often in jail for his opinions and plots, being by right of seniority temporary president, declared that "a new era had that day begun for France; that all parties should be silent before the popular voice; that the interests of the country called for unity in aid of the prosperity and liberty of the Republic," and was loudly applauded.

THE DEMOCRATS AND THE GOVERNMENT.

THE Democrats in Congress are affording an excellent illustration of the inconvenience of that feature of our system which makes a change in the House of Representatives the only mode of giving even early expression to popular dissatisfaction with the party in power. The House did not meet until a year had elapsed after its election, and when it did meet, the feeling which had given the Democrats a majority in it had largely subsided, and this subsidence was due to the mere fact that the Republicans had been defeated. That is to say, the election was intended to be a rebuke to the Republican managers and not an indication of confidence in the Democrats or of willingness to try them with power; and as soon as the rebuke was given, the voters were satisfied, and wished the matter might not go any further. The consequence was that when the session opened, the majority of the House found itself substantially without constituencies, and without that close connection with present public opinion which is necessary to vigorous and useful legislation. The state of mind to which it owed its existence was already remote, and it had really no instructions from the voters which might serve as the basis of a policy. There was, therefore, under the circumstances, nothing for it to do but investigate, and this it at once began to do, and has done, we must all admit, whatever the clumsiness of the process, with excellent effect.

But even in this, the inconveniences of giving one branch of the legislature to one party, and leaving the other branch and the Executive in the hands of the other party, have been made abundantly manifest. Investigations into official conduct made and controlled by the Opposition are apt to be conducted in a vexatious and captious spirit, and with a close eye to political effect. They thus lose at once a good deal of their moral weight, and therefore of their political value. In saying this, however, we do not mean to fall in with the notion that when the Democrats discovered such a scandal as Belknap's corruption they ought to have seen nothing in it but matter for mourning, and have joined the Republicans in bewailing it as simply a national disgrace. No such display of magnanimity or patriotism is to be expected from any Opposition, and no Opposition has ever made it. It was natural and not improper that the Democrats should be pleased to discover actual proof of the charges they had been so long making, and it would have been mischievous as well as hypocritical for them to have joined the Republicans in lamenting over it as a public calamity only. The Republicans of course would have liked to have the affair treated either as a general disgrace befalling the whole community, or as what the lawyers used to call an "act of God"—that is, a calamity occurring in the order of nature. But it was the duty of the Democrats, as of everybody else, to fight against this view, for if accepted it would relieve the party in power to a most mischievous degree from all responsibility. Belknap's fall was not the "act of God"; and, though of course it was a public misfortune, it was one for which the Republican party was distinctly blamable. He was their creature, chosen for high place by their much-admired chief, and was led into temptation through a system of administration which they have condemned in words but sedulously maintained in practice. It was, therefore, both healthy and manly politics for the Democrats to be glad they had found him out, and to rejoice publicly over his fall. What was most contemptible in their dealing with it was, to our mind, not their glee, but their attempt at pathos. If Mr. Clymer and his committee, instead of going into the House with their pocket-handkerchiefs to their eyes and a quaver in their voices to make their report, had gone in honest, outspoken indignation, had said boldly that they had known for years that their opponents were corrupt knaves, and that here was the proof, and that they thanked God they had at last been able to catch them, they would have displayed exactly the spirit which is just now needed in public men. Mr. Clymer's eye for the dramatic side of the story, and his attempt to whimper over his own trumpery picture of the dead baby and its corrupt mother, was simply a sign of the diseased sentimentality from which both our politics and religion are suffering, and which all our rogues cultivate—it is so much easier to weep than to be clean or honest.

The shortcoming of the Democrats lies in the absence of a proper sense of responsibility for the manner in which the Government is carried on. They have the power to find fault and to cut down the appropriations, but they will escape the responsibility which ought to result from vexatious criticism or reckless economy—for there is such a thing as reckless economy as well as reckless extravagance. They have made a curious and flagrant display of it in their attempt to diminish salaries and to reduce the number and pay of consuls and diplomatic agents. The ignorant impetuosity displayed in this latter case was well shown up by one of their own members—Mr. Hewitt—and it would hardly have been displayed by any party actually charged with the administration of the Government. Their object is to tickle the imagination of the masses during the next six months with an appearance of frugality and simplicity. About the effect on the service and on American commerce, as it will not show itself for a year or two, they care nothing, because they will not at best have charge of it for a year or two. The onslaught on the salaries of the Government employés and the proposal to reduce some of the bureaux of the Departments, without any consultation with the Secretaries and apparently without caring in the least what the result will be to the service, is another striking illustration of the kind of madness which comes from giving men the power of meddling with business without making them liable to be called on at once to conduct it themselves. And it affords, too, let us add, a measure of the value of Democratic lamentation over the condition of our civil service. The service is, for one in which the tenure of office is short and insecure, miserably underpaid. The employés of nearly all branches of it are a ragged regiment, whose condition is a disgrace to the American people, who are largely recruited from the failures of our busy life; and, having got hold of them, we do what we can to kill in them all hope and energy and interest in their work by low wages and the terror of arbitrary dismissal. If the Prince of Evil had been called on to devise a mode of undermining the character of a large body of men and women without resorting to open violence, he would probably have suggested some such system, and if a committee of lunatics at a well-managed asylum had been asked for a machine for transacting public business, they would almost certainly have contrived something more rational than "the best civil service on this planet." The sufferings of the public employés are well known to all Democratic politicians, and so are the temptations to which these sufferings lead, but we have yet to see the most trifling move towards any real reform. Security will compensate men for poor pay, and at the same time cultivate honesty, but no suggestion of security or of any change in that direction has come from the Democratic side of the House. Senator Gordon's admirable speech has met with no echo there, any more than from the Republican managers; and, in fact, its one contribution to civil-service reform thus far has been an attempt to disorganize every one of the Departments by reductions proposed in complete ignorance of the wants and wishes of the persons charged with the administration. The whole country has been watching the House eagerly for four months for signs of what we should gain by putting a Democratic Administration in power, and has been treated to little but displays of what it is no exaggeration to call a spirit of mischief.

THE "SIDE SPECULATION" IN SILVER.

AT this writing it seems likely that the assault of the silver miners on the United States Treasury will be deprived of a considerable portion of its mischief by an amendment to the bill before the House giving the Government the seigniorage—or, in other words, the difference between the value in legal-tenders of the bar silver and the silver-token money issued in exchange for it. In this way the silver men would only be able to obtain for their wares the

exact market price of the day, while the Government would get the price as fixed by the legal relation of coined silver to coined gold—the difference between the two being at present about three per cent. The silver men have, on the other hand, been pocketing this difference themselves by compelling the Treasury, under the Resumption Act of last year, to buy their bars above the market rate. It had, up to the 1st of October last, bought nearly $13,000,000, on which the proprietors of the Big Bonanza made $1,000,000, and as the Secretary had no way of disposing of the silver except by locking it up in the Treasury, they were able to get rid of this enormous amount without in the least injuring their market. Since the 1st of October they have made, as Mr. Hewitt has pointed out in his late speech, another million in the same way, and, to crown all, as their mines produce forty per cent. in gold, and they get it coined for nothing under the Resumption Act, they thus make on this operation one-fifth of one per cent. It is now proposed to let loose all the stored silver, and as much more as the speculators are able to bring in, on the market in the belief that it will, in the present relation of silver bullion both to gold and to greenbacks, keep afloat as token-money, and thus prove *pro tanto* a "return to specie payments."

The New York *Times*, which is the principal and indeed only noteworthy advocate of the measure, defends it on the ground that "silver is preferable to paper in point of security, durability, intrinsic value, cleanliness, and healthfulness," which may all be very true, but then it does not follow that its substitution for the fractional currency just now is desirable. Token coinage is not the most pressing want of the country at this juncture, or, indeed, a pressing want at all. It is a good thing to have, but not a good thing to procure at the cost of things of more importance. What we need above all things is the substitution of gold for paper as a legal-tender, and the restoration of the gold standard in fixing prices and making contracts; and anything which prevents, postpones, or obstructs this—whether it be the Boutwell scheme of paying bonds before they are due, or the Kelley scheme of issuing "introconvertible bonds," or the Phillips scheme of issuing paper on farm mortgages, or the Nevada scheme of locking up considerable quantities of gold in silver bullion or tokens—is mischievous, and so mischievous that the advantages of silver dimes over postal currency are nothing to the purpose. Even if the proposed issue of silver tokens is sure to be successful, we need the gold spent in it for something else. We do not need the silver, and the very best thing we can do with it is to export it for what it will bring. There is no popular discontent with the fractional paper currency. Many people, unwisely as we think, prefer it to coin for its lightness and handiness. If the waste of it is great, the cost of it is small; the assertion of the *Times* that "the value of silver bullion is as far from being synonymous with that of silver-token coins as the value of blank paper is from being the same thing as that of currency," being one of those statements which it is hardly worth while to contest until the author has read it over again and reiterated it. If it were true, it would be folly to make silver coins of silver, even when silver is fifty-two pence an ounce, inasmuch as it would do just as well to make them of nickel or brass, and call them silver. We get on reasonably well, everything considered, with our paper small-change; it is not undergoing and cannot undergo any peculiar depreciation, because it is convertible into greenbacks and receivable for Government dues. To vex ourselves about it, therefore, or go to any expense to change it, or do anything whatever about it which in never so small a degree diminishes our capacity for dealing with the question of resumption in gold, or which seems likely to turn popular attention away from it, or to make people believe that we have taken a step towards it when we have done nothing of the kind, would be unfortunate, because probably mischievous.

Whether, after having put afloat even a quantity of silver coin barely sufficient for popular needs, we could keep it afloat, is a point on which there is of course room for difference of opinion. There is more knowledge current on the conditions of "silver resumption" now than there was when Mr. Richardson began his great experiment. We presume that even Senator Logan is now aware that, in order to "resume" in silver, not only must we have a large stock of silver on hand, but the value of silver bullion must bear a certain fixed relation to that of the legal-tender, and that if an increase takes place in its value over the legal-tender sufficient to pay for exporting it, and give the dealer the smallest profit, exported it will be. We grant that the margin between the exportation-point and the value in legal-tenders is now sufficiently great to make it sure that a reasonable quantity of it, thrown on the market in substitution of fractional currency, would go into circulation and stay there. The agencies which have lowered the price of silver and are filling the Anglo-Indian world with confusion, are certainly powerful, and likely to last for some time. Not only has the product of our mines increased greatly, and is likely to increase, but silver has been thrown out of circulation as a standard by the German Empire, by Holland, and by Japan; and France, Italy, Belgium, and Switzerland have, in order to protect themselves against a flood of German coins, entered into a convention limiting their own coinage of silver to $20,000,000 annually. In fact, there is now no country in which there is any immediate chance of getting rid of the surplus silver of the Western world except China and Central Asia, and nobody knows how much these could absorb. The glut in India, which has been the principal silver consumer, is so great that there is a depreciation of twelve and a half per cent. in the standard of value, and the Indian Government is suffering a loss of nearly $10,000,000 a year in its payments made abroad. These are all strong reasons for believing that we might for the present safely go back to silver tokens, even without heavy adulteration of the coins. But then there are contingencies which might any day upset all our calculations, and drive the silver out of the country. The yield of the mines may drop down suddenly; the rise in prices may stimulate industrial activity in India and all over Asia to such a degree as to raise again the value of the standard, and France may resume specie payments with a double standard (though this is now somewhat unlikely); or there may be such a fall in greenbacks as would drop them below the silver level, for the value of greenbacks is unhappily not dependent either on the laws of trade or the product of the mines, but on the folly or ignorance of men. In any of these cases we should wake up some fine morning and find ourselves, as we found ourselves in 1861, without small-change, and have to fall back once more on bits of paper, and the experiment would enure wholly to the advantage of the inflationists, who would point to it as an illustration of the futility of resumption, and of the superiority of paper to coin as a standard and instrument of exchange.

In fact, the state both of our own currency and of the currency of the world and the state of public opinion in this country, are such as to demand the utmost caution in dealing with the problem of resumption. There is too little strength in resumptionist opinion, too little agreement among resumptionists as to ways and means, and the fallacies of the inflationists are too plausible and taking, to make "side speculations" like this silver investment a safe or expedient thing for the friends of sound currency to dabble in. They have too little force for the far greater and more important problem of the substitution of the gold for the paper standard of value, to have any to spare in this trumpery silver operation.

THE POLITICAL MORALITY OF WOMEN.

MR. T. W. HIGGINSON, in a recent number of the *Woman's Journal*, gives an interesting account of his submission of the Belknap case to five ladies of his acquaintance, one of them a person "whose moral standard is rather exacting, and whose absolute directness and truthfulness would drive Charles Reade to despair." This last one saw nothing wrong

in Belknap's performances, and argued the matter with Mr. Higginson. Of the other four, only one looked at it as an honorable man would look at a case of bribery; the others denounced the ex-Secretary and his wife solely on philanthropic grounds—*i.e.*, because they raised the prices of the sutler's goods to the soldiers. The conclusion Mr. Higginson draws from this state of things (which he deeply deplores) is that the loose views of these ladies on the subject of public morality were due, not to their sex, but to the habit of their sex—that is, to their remoteness from public affairs and their want of familiarity with them; and he compares their notions about bribery to those of a recluse or unworldly man—to those, for instance, of Charles Lamb, who humorously approved of smuggling. As a matter of fact, we think Mr. Higginson greatly underrates the political morality of recluse and unworldly males. We have never happened to come across one who, in his retirement, was not much more sensitive and exacting on the matter of official purity than "those more actively engaged." We say "in his retirement," because we admit that very often a recluse, suddenly immersed in affairs, gets confused through lack of experience, and loses the thread of his morality in the mazes of business, and often becomes in an almost ludicrous way the accomplice of sharpers. The result of the attempt to manage the Indians through the missionaries affords some good examples of this. But we are quite sure that the standard of official honor is nowhere higher or more sharply defined than among men whom the circumstances of their lives have withdrawn from active temptation and actual experience of mercantile and political affairs in our day. Indeed, we doubt if it would be possible for the most upright administrators to live by the code of official honor which would be drawn up, say, by the scholars, clergymen, professors, and men of refined leisure of this country. If Mr. Higginson will pursue his researches in that class, we venture to assert that he will find no vagueness whatever in their finding on the Belknap matter, except perhaps in the small body which has cultivated benevolence to an unusual degree, and would therefore, like the women, be more impressed by the hardships of the soldiers than by the Secretary's knavery.

This little anecdote of Mr. Higginson's and his comments on it afford so good an example of the surface treatment of the relation of women to the world that we cannot help presenting one of the views which it completely overlooks, but which must not be overlooked. One reason, then, and we believe the most powerful, why corruption will never wear as ugly a look to women as it does to men, is that in the moral scale of the two sexes offences do not, and probably never will, stand in the same order. This order, let us repeat—for we have more than once before touched on the subject in these columns—is settled, not by authoritative teaching, but by the actual necessity and experience of society. Prophets and preachers and lawgivers can do a good deal, but they can never for any great length of time get a community to arrange degrees of guilt by any other than a utilitarian rule. Among fighting people, who have to depend for their existence on their valor, personal bravery will stand highest among the virtues, personal cowardice be considered the lowest of vices. Falsehood, too, will be condemned as a form of cowardice. Among a people compelled by weakness or the general lawlessness to rely on shrewdness and finesse to protect themselves or their property, capacity in deceiving people will stand high and gullibility excite contempt. In a commercial community, pecuniary honesty will occupy the chief place among virtues, even if truthfulness be of small account. Cheating was held in abhorrence in Venice when lying and adultery were mere trifles. There are parts of the West in which horse-stealing is a worse offence than murder. In the South, in the slavery days, tampering with negroes argued the lowest depth of criminality. There are parts of England in which a man who shoots or traps a fox is held capable of almost any kind of fraud or meanness. It is therefore natural enough that the mere difference in pursuits and interests of the two sexes should create a difference in their respective moral outlook. The management of the pecuniary affairs of the world—the buying, selling, contracting—being in the hands of men, it would be natural that, even if women were simply another class of men told off to different duties, the male standard of morality touching all pecuniary trusts and obligations should be higher, and the male perception about such matters keener, and the male conscience more sensitive. By this we do not mean to say that women are less honest than men in such commercial transactions as fall to their lot. They undoubtedly will compare favorably with men in the discharge of the ordinary obligations, and have perhaps, on the whole, a greater horror of debt. But if we examine this honesty closely, we rarely find that it has the same roots as men's honesty. The horror of debt is, in nine cases out of ten, the result either of the timidity and hopelessness arising out of the consciousness of weakness or of the sensitiveness to local opinion which the circumstances of women's lives often develop to the point of morbidness, or of strong affection, which makes pecuniary sacrifice in one form or another—saving, for instance, for others' benefit—to many women the most grateful of tasks.

But the main cause of the difference lies much deeper than the difference of occupation in the ordinary sense of the word, or than the remoteness of women from affairs, viz., in the nature of the part played by women in the preservation of the very foundation of civilized life—the family. We here touch on a matter on which it is necessary that both the friends of female suffrage and the rest of the world should now and then be forced to listen to the language of soberness and truth. We do not know when the family was founded and the rearing of children became the first social duty of the parents, but, whenever it was, personal purity became the first and most imperative duty of the mother, because, without that, whatever the father's conduct might be, the family would be impossible. The family rests wholly on the husband's certainty about the paternity of his wife's children, and his certainty can only come from confidence in his wife's character. Consequently, all that portion of the moral code of all civilized communities which touches on the relations of the sexes, places personal purity highest in the scale of female virtues, and points in the clearest manner to the preservation of the family as its first if not only object. In fact, if we said that all the restraints which usage and education and manners and law impose on women in society were intended simply to make clear the paternity of children, we should say what is literally true, though it is a truth usually and naturally covered up in periphrases. The bearing of all this on the possibility of giving purity as high a rank among the male as among the female virtues, by which the imagination of some of the woman's-rights orators is occasionally so much stirred, was pointed out one hundred years ago by Hume in plainer language than we care to use here, but is tolerably plain to any reflecting person. Society, however, has found it by no means an easy task to impose this burden on women. All attempts to regulate the relations of the sexes have been the very hardest part of the hard fight of civilization against savagery, and, of course, it has been only partially successful. But to succeed in it at all in never so slight a degree, the sternest and most far-reaching discipline has been and is absolutely necessary. It has been necessary to allow no exceptions whatever to the rules which form the conventional defences of marriage, and, accordingly, even when it is admitted that the preservation of the family is the object of female purity, it has never been permissible even for the women who lay aside all intention to enter into matrimony to escape the common law. Society has reasonably enough said that the struggle was too severe to allow of exemption, and that whatever restraints were found necessary for the fortification of female character should be submitted to by all, whatever their aims in life, that in or out of matrimony there should be but one code of morals for women, and that in this code that virtue most useful to society should stand first, or, in plain English, that it was more important that women should be chaste than that they should be honest. So it is; so it always has been, and so it always will be, until the basis of civilization is changed.

To complete the argument, we only need to add that there are certain well-known limitations on moral culture in human character that help to maintain the classification of female virtues which the needs of society have prescribed. It is only in rare cases that this culture is equable or many-sided. In the best men and women, the virtue which for any reason most impresses the imagination, is nurtured, sometimes inordinately, at the expense of others; and so true is this, that a person equally virtuous in many directions is apt to become so at the expense of his general mental and moral vigor. The soldier, in his admiration of courage and truthfulness, becomes comparatively indifferent to chastity; the philanthropist, in growing sensitive to the sight of physical misery, becomes reckless in his speech and unscrupulous in his methods; the priest, in pursuing earthly poverty and abasement, grows in spiritual and professional pride; the lawyer cultivates devotion to his client at the expense of his immediate duty to the community at large; the patriot, in his zeal for his own country, grows indifferent to the larger and loftier claims of the human race. Attempts have been made in various systems of education, mostly ecclesiastical, to impose on men the female scale of morality, and we know with what results, with what loss of the real purity of the soul which comes of the hearty direction of the thoughts to the work which society most plainly requires of us. As far as the world has yet gone, the best thing a man can be is manly. We can conceive of great benefit to it from his being womanly too, but all experience forbids the expectation of any such happy combination in our time, and warrants the belief that great mischief may result from attempts to achieve it.

THE REPUBLICAN CABINET IN FRANCE.

PARIS, March 10, 1876.

UNIVERSAL suffrage has spoken and given its verdict in favor of the Republic. I would even say more: it has spoken not only in favor of the Republic, but of democracy, and I am inclined to think that universal suffrage in France is even more democratic than republican. What has been called the Conservative Republic is a little too aristocratic in its character and its tendencies. The Conservative Republic would be the Republic of the wealthy, the literary, the educated classes of the country, which have lost their belief in a monarchy. The typical representatives of such a Republic are men like M. Thiers; M. Casimir Périer, who has long been an Orléanist, and who is still one of the wealthiest men in France; Léon Say, the actual Minister of Finance, and one of the proprietors of the *Journal des Débats;* M. Dufaure, the Minister of Justice. M. Thiers once said, after he had crossed the Rubicon from the monarchical to the republican side: "The Republic will be Conservative or it will not exist." Now Gambetta also calls himself conservative, only he does not give the same definition of his conservatism as M. Thiers; and universal suffrage, on the whole, seems to be disposed to accept M. Gambetta's definition.

Gambetta enters the new house with a very large following of men who will represent what he once called the "new social strata." The conservative Republicans, the men who belonged to the Left Centre of the last Assembly, are not capable of opposing the new majority—not perhaps even of controlling it. The men of the Left Centre are to the Republicans of the democratic type what the bayonet is to the gun; they have made the Republic, but they can no more keep it in their own hands and control it than the bayonet can lead the gun. Gambetta is the accepted leader of the new Republican majority; M. Thiers has already tried his strength with the strength of Gambetta, and he has failed. In the last Assembly there were various Republican groups—the Left Centre group, the Republican Left, the extreme Left. M. Thiers and his friends were very anxious that these groups should continue to exist and to have distinct organizations; Gambetta, on the contrary, convoked all the new Republican deputies to a meeting in Versailles, and he maintained that these old divisions had become unnecessary: the new majority would be much more respected if it spoke as a whole. According to his desire, the meeting passed a resolution in virtue of which "the new Republican majority, just issued from universal suffrage, will only give its confidence to a Republican and perfectly homogeneous cabinet."

This question of the "homogeneous cabinet" is likely to become very troublesome. It must not be forgotten that Marshal MacMahon was named the Chief of the Executive by a Conservative majority; that he considers himself bound to preserve the peace of the country. He has very honestly accepted the republican form of government, and seems quite willing to form his cabinet after the rules of constitutional countries; but he has told M. Dufaure that the interests of the country, under her very peculiar circumstances, seem to him to demand some stability in those ministries which are especially concerned with the national interests of France. He asks that the Minister of Foreign Affairs, the Ministers of the Army and of the Navy, be placed, if possible, outside and above the party contests. This pretension is not unreasonable, as the Parliament, having choice of all the other ministers, can always have in the cabinet a majority inspired with its own views. Marshal MacMahon is probably not well versed in American institutions; otherwise he would have asked much more than he has done, and insisted upon his right to choose his own ministers. The constitution of the 25th February, it is true, declares that he is only responsible in case of high treason; the last Chamber did its best to create for him a sort of irresponsibility similar to that of a constitutional monarch, in the futile hope that the revision clause would some day change the President into a king, without any necessity for remodelling all the constitutional laws. Still, it is quite clear that the president of a republic can never be irresponsible to the same degree as a king. First of all, he may or may not be re-elected at the expiration of his term of office; secondly, he does not represent a dynasty, a historical tradition. Marshal MacMahon cannot fold his arms and behave exactly like a constitutional king; he must take, as a soldier, the deepest concern in the reorganization of the army; he must have in his Minister of Foreign Affairs a trusty adviser, holding the lofty position of your Secretary of State. The Republicans themselves have thus far seemed to admit this necessity; they helped the re-election of the Duc Decazes as deputy, but they began their campaign by attacking the Minister of the Navy, and by asking his removal, under the pretext that he belonged to the Right of the last Assembly. M. Casimir Périer, whom the President was willing to accept for the Home Office, made himself their organ on this point; he refused to enter the cabinet if Admiral Montaignac was not replaced by Admiral Pothuau, who belongs, like himself, to the Left Centre. But it is clear that the three ministers I have mentioned are like a citadel with three bastions; if you give up one bastion, the two others will soon be assailed.

Gambetta has joined in the cry for what is called a "homogeneous cabinet," but I have it from good authority that he is not inclined to create too much embarrassment for the Marshal. He shows himself much more moderate on this point than M. Thiers, who is burning to take revenge for the 24th of May, and who will never be satisfied till the Marshal is disgusted out of office. Gambetta is young, and he is in no hurry. He has the flexible mind of an Italian, and he has no desire to bring matters to a crisis. He must see that the Republic has never had so good an opportunity; for the first time it has sprung out of legality, and not out of sedition. It has seemed even to the old supporters of the constitutional monarchy the necessity of France. The head of the Bourbon family lost his last chance when he insisted upon the substitution of the white flag for the tricolor. The Princes of Orléans have quietly resumed their places in the army, and have retired from the political arena. The Duc d'Aumale is engrossed with his corps d'armée, and with the duty of repairing the frontier places of the East; the Duc de Chartres commands a regiment at Lunéville; the Duc de Nemours is studying the Austrian cavalry manœuvres, and trying to improve the French cavalry; the Comte de Paris is finishing quietly at Eu his 'History of the American War.' There remains no hostile party before the Republic except the Bonapartist party, which struggles with difficulty against the painful memories of the Empire. If the republican experiment should fail this time, it will be proof that the Republicans are really incapable of governing France and of satisfying the legitimate wants of the country. Many good citizens may remain for one reason or another neutral witnesses of the experiment, but none will be found to throw difficulties in the way of the Republic.

The sense of this responsibility cannot but weigh on the minds of the younger Republicans, who do not belong to the old school of the barricade-makers; and though Gambetta showed at the time of the war that responsibility sits rather lightly on his shoulders, it is so clearly his interest to give satisfaction to the nation that he must keep his party in order and substitute the word of reform for the word of revolution. Universal suffrage is as capricious and as irresistible as the sea; it brought the Republicans into power in 1849, and it supported Louis Napoleon in 1851; the flood which has now forced the Republicans into power may retire like the tide, if they do not show themselves worthy of the confidence of the country. Thus far there is nothing extravagant in the programme of Gambetta; but he will soon find it difficult to control the impatient members of his party, and then the world will see if he has in him the stuff of a real statesman, or if he is only a Ledru-Rollin or a Castelar. He already declares to-day in his paper, the *République Française*, that he would not consider himself satisfied with a ministry which contained no members of the true Left, and was composed only of the Centre Left. This language is in contradiction with his own utterances at Versailles; if, as he said, all the Republicans ought to merge in one great party, why should he keep these old and now worn-out denominations?

Marshal MacMahon and M. Dufaure, finding M. Casimir Périer too intractable, have decided to do without him, and have confided the Home Office to M. Ricard, who belonged to the last Assembly, and who is a good lawyer of Poitiers. M. Ricard was one of the stars of the Left Centre, but it cannot be said that the rays of his glory have as yet extended very far. Besides, he has been beaten in his own section by universal suffrage, and in order to secure his position in the new cabinet it will be necessary for the Senate to make him a senator in place of M. de la Rochelle, the only senator who has died since there has been a Senate. The new cabinet, as it appears this morning in the official paper, cannot be said to be a strong cabinet. The only man of any importance in it is M. Dufaure, a wonderful speaker and good debater; but M. Dufaure is getting old, and moreover he will confine himself as much as possible to the Ministry of Justice. The Marshal has made a concession in allowing a change in the department of the Navy, but he has retained General de Cissey and the Duc Decazes. The new ministry will be immediately assailed, and will probably find support only in the Senate. The election of the Bureaux (the permanent committees of the French Chambers) has shown that while there is an overwhelming Republican majority in the Chamber of Deputies, the majority of the Senate will most likely be controlled by those moderate Republicans who call themselves Constitutionalists. The Senate will have to play the part which has so long been played by the House of Lords in England: it will have to throw over many laws

inspired by false economical, political, or religious views. It remains to be seen whether there will be enough vitality and energy in it for this difficult part of a political brake. The experiment is an entirely new one; hitherto, the Upper Chambers in France have been conducted with a quiet and useless majesty; they have enjoyed *otium cum dignitate*. The new Senate, having been formed of the nominees of the Communes of France, may have more life. At any rate, it is not much to be doubted that the duty of defending the national and social interests of the country will inevitably fall upon this new body, as the spirit of the Chamber of Deputies is the product of a strong reaction against the Conservative party.

Correspondence.

LEGISLATION IN REGARD TO INSECTS INJURIOUS TO AGRICULTURE.

To the Editor of The Nation:

Sir: Your satirical remarks on the above subject in referring (p. 169) to the passage by the Senate of a bill for the investigation of certain insects seems to me unwarranted. If your ridicule is aimed simply at the bill as it has passed the Senate, there is, perhaps, justification for it. But it appears to be aimed at the idea of any national legislation having for object the investigation of injurious insects with a view of protecting our agriculture from their ravages. It is this attitude which, as a constant and generally delighted reader of the *Nation*, I regret.

You will not deny the importance of our agricultural interests. You will, further, not deny—if you are at all familiar with the facts—that insects, by their devastations, reduce in an enormous degree the products of our agriculture, and form the most serious obstacle to its advancement in many portions of the country. They often cost the United States, at the lowest computation, a hundred million dollars annually.

These facts being granted, it is my conviction that Congress ought to make some especial effort to save to the country a part at least of this immense loss, and I would urge, among others, the following reasons:

1. Thorough knowledge of the habits of any insect pest is most essential to enable us to overcome it.

2. Most insects will succumb if we attack them at the right time, in the right place, and with the proper force, while their injuries may often be entirely avoided by wise preventive measures.

3. There are certain pests, such as those mentioned in the bill originally introduced by Senator Ingalls, which have so wide a range and such great destructive power that they affect the whole nation. The habits of these have never been fully investigated, nor have any extended experiments as to how best to control them ever been made, for the simple reason that such investigations and experiments require much more time and means than have ever been at the disposal of any of the State entomologists, and that no person or persons have ever been empowered and commissioned to do the work. There remain to-day many enigmas in the life-history and habits of the cotton worm (*Anomis xylina*, Say), which, if solved, might give the planter easily-obtained immunity from its injuries, while there is every reason to believe that a thorough study of the Rocky Mountain locust (*Caloptenus spretus*, Thos.), in its native breeding-places, would give us the means of preventing its occasional irruptions into the States of Kansas, Nebraska, Minnesota, Iowa, and Missouri, in all of which it is not indigenous. Instances of this kind might be multiplied.

4. In this line of research the Department of Agriculture has hitherto signally failed to give the farmers of the West any relief. The present head of that Department, influenced perhaps by his experience in the East, where the people do not begin to suffer from insect pests as we do here in the West, has shown a total lack of appreciation of the needs of the West in this regard, else he would long since have asked of Congress the means and power to organize and carry on the investigations referred to.

It is owing to the inefficiency of said department in this field that a strong appeal has been made to Congress from this part of the country to have the investigations made by an independent Commission; and those who are familiar with the losses, the destitution and suffering that insects often entail on our farmers, find nothing to ridicule in any national legislation that will tend to relieve them. In this matter we may learn a lesson from other nations who have felt the necessity of enacting laws and creating commissions for the suppression of insect enemies. But if any legislation is to be had, let it be wise—let it be such as to give some guarantee that the objects had in view will be attained, and not such as to court failure. Any commission, to be of use, should be composed of from three to five persons, trained and competent; and to secure such, the appointing power should not be left to any one individual, or to political influence, but rather to some body like the National Academy of Science. It should, further, be given sufficient time—at least five years—and means for experimentation somewhat commensurate with the interests at stake.

I am decidedly of the opinion that if we cannot get legislation that will secure these qualifications in the Commission, we had better have none at all. The amended bill, as it has passed the Senate, providing for a single commissioner for one year, would scarcely do more than give a sinecure to some individual willing to accept it, and would bring reproach on science by attempting in its name to do that which it is impossible to do with such inadequate means.

In conclusion, I take the liberty of enclosing a couple of articles from the St. Louis *Globe-Democrat*, in which this subject is more fully considered.

Very respectfully yours,

C. V. Riley.

St. Louis, Mo., March 20, 1876.

THE LONDON *ACADEMY* AND PROFESSOR WHITNEY.

To the Editor of The Nation:

Sir: I feel constrained to appeal to you to help set me right before the public.

In the recently published fourth volume of his 'Chips' Professor Max Müller has made upon me, in return for my repeated and often unfavorable criticisms of his views and reasonings, a personal attack, as to the character of which you have clearly expressed your opinion in your last issue. To that attack the London *Academy* editorially called attention in advance of publication, assuring the English people that its "piquant justice" would be appreciated by all classes of readers. The same paper admitted from a contributor a notice extolling the truthfulness and candor of the author as displayed in the volume, and inviting the public to the enjoyment of the concluding article. I therefore sent to the *Academy* a letter, which it had the fairness to print (Jan. 1), pointing out about a dozen of the grossest of Müller's misrepresentations; doing it in language so studiously calm that I have been privately and publicly reproached, on both sides of the ocean, for not speaking out more frankly. And whereas Mr. Müller had challenged me to set up a tribunal of my European friends, not below the grade of professors ordinary, to judge a certain series of points which it had pleased him to select and put forth as the principal matters at issue between us, I offered to let them be judged by *his* friends instead of mine, provided he could find any who were willing to sit on such a case. To this letter Mr. Müller was allowed to make in the next number of the *Academy* what purported to be an answer. He withdrew, with a lame and shuffling defence (so it appeared to me), one of his original charges, but buried in utter silence the rest of the points I had made; he took no notice of my proposal in answer to his challenge, but improved the occasion to misstate the ground on which he had in the first place called for the tribunal. I did not feel willing to let the matter rest there, and addressed a second letter to the *Academy*. This the editor has declined to print—a result for which I was not wholly unprepared, knowing well how difficult it is to procure a hearing in England for any charge against Müller, however justly and reasonably made. But, not content with a bare refusal, the editor has seen fit to announce the fact publicly, and in a paragraph which seems to me gravely to misrepresent both the present aspect of the question between us and the character and contents of my letter. His words are these:

"... The letter is simply calculated to stir up further bad blood, without contributing a single point towards the final settlement (if such be desired) of the controversy at present outstanding between the writer and Prof. Max Müller. We understand Prof. Max Müller to have offered or accepted the submission of some points at issue between him and Prof. Whitney to the judgment of one or more dispassionate persons. It matters not, as it appears to us, whether these gentlemen, provided that they were willing and competent to act, be the 'friends' of one party or the other, or of neither. Prof. Whitney's letter, so far as it is not occupied with angry recrimination, harps exclusively upon the question whose friends the judges are to be. ..."

It is due to me, I think, that the letter thus described should itself be given to the American public, that they may see whether the description is truthful. The following is an exact copy of it:

"In a recent letter, printed in your paper for January 1, I offered to submit Mr. Max Müller's twenty points of indictment against me to the judgment of *his* personal friends instead of mine, provided he could find three who were willing to take them into serious consideration. At the same time, I made a few statements in illustration of the kind of justice and fairness and candor which your correspondents had extolled as characterizing his accusations and his plea in their support. In your next number

(for January 8) you admitted what purported to be an answer by him, but an answer defective in two important respects. In the first place, he took notice of only a single one of the dozen points which I had made against him, absolutely ignoring the rest, although there were among them cases in which he seems to have laid himself fully open to the imputation of having sacrificed the truth for the purpose of casting odium on me, and which therefore called imperatively for explanation on his part. In the second place, he pays no heed to my acceptance of his summons to judgment, on terms even more favorable to him than he demanded, but merely shifts his ground with regard to the intent of the summons. In the 'Chips,' namely, he says that his suggestion of a Joint High Commission, of nicely defined constitution, is made 'in order to satisfy Mr. Darwin, Professor Haeckel, and others whose good opinion I highly value, because I know that they care for truth far more than for victory.' Now he asserts instead that he wanted me for *my* sake, not for his own, to submit the points in question to the judgment of *any* of my friends. I do not know how to understand this otherwise than as preparing the way for a complete abandonment of the proposal on his part, by transferring to me the intended benefit of the solemn adjudication, and hence the responsibility of organizing the means of making it. The plan, however, was none of mine. I have little faith in such tribunals, which, so far as I know, never do and never can settle anything: a controversy begun before the general public must be finished and judged at the same bar. Only, as it has pleased Mr. Müller to ask for a tribunal, I wish to make it distinctly understood that, if none is constituted, it will not be because I have not expressed my entire willingness to appear before one. I should, I believe, have little difficulty in proving to the satisfaction of every fair-minded man, however he might beforehand have been prejudiced against me, that the twenty charges fall into four classes—1, Those which I can easily refute; 2, Those which have no pertinence, as involving mistaken and unfair statements; 3, Those which are too trivial to be worth notice; and, 4, Those which come under two or three of the heads already mentioned.

"Mr. Müller asks to be allowed to append my former letter to his article should he have occasion to reprint it. I willingly assent to his request, and permit him also to add the present note; and further, I will, if he desires, furnish him for the same purpose with a score or two more of refutations of his errors and exposures of his misrepresentations."

You alluded a fortnight ago (p. 179) to Müller's peculiar dealings with the St. Petersburg Sanskrit lexicon, in a notice of that work which has drawn forth from its venerable senior editor, Professor Böhtlingk, in the Jena *Literaturzeitung*, one of the most withering rebukes that was ever dealt in such a case. To show that there are others besides myself who feel compelled to charge Müller with dishonesty and insolence as a critic, I allow myself to quote a few sentences from Böhtlingk's reply. After exposing in detail the shifts and evasions of Müller's plea, Böhtlingk says:

"Now, I ask whether we were not right in characterizing his criticism as a wanton one. If, now that his justification of it has appeared, I were called upon to express my opinion of his conduct, I should first take counsel of a lawyer as to how far I might go without rendering myself liable to an action for libel."

And again, further on:

"I close with the following requests: that Müller, whose scientific ability I estimate at its full value, will henceforth spare me his commendations, since they neither give me pleasure nor do me special honor. On the other hand, I beg him, as distinguished linguist and talented investigator, to scrutinize my works as severely as he pleases, and to expose my errors—only, in accordance with truth. Surely, I have often enough shown that I am ready to be grateful to even the youngest scholar, provided he gives me valuable correction. Further, I believe I speak out of the hearts of the great majority of scholars in our department when I give him the advice *to write less*. Sundry of his books and articles border hard on the trivial. Also, let him learn at last to be less assuming, since he cannot, after all, succeed in becoming, and in inducing competent judges to take him for, what he would fain seem to be. The pitcher that goes too often to the well is at last broken."

Yours respectfully,

W. D. WHITNEY.

YALE COLLEGE, NEW HAVEN, March 21, 1876.

P.S.—Since writing the above, I learn that a friend in London to whom I sent a (somewhat altered and extended) copy of my letter to the *Academy*, for use in case the latter refused it admission, has found in the *Examiner* (of March 4) a paper fair and independent enough to publish it. As, however, there is nothing to show the relation between the two letters, and as many in this country will be likely to see the *Academy's* paragraph and not the letter, I do not think there is any reason why I should withdraw the above explanation.

Notes.

J. H. COATES & CO. have imported a limited number of sets of the maps accompanying the French edition of the Comte de Paris's 'History of the Civil War in America,' which they are able to offer at the very low price of $6 50—about half what will be charged for any subsequent importation. These maps are beautifully executed in three colors, and are folded into a folio of 12½ x 18 inches. They are in two parts, each accompanying two volumes of the original work, and number in all thirteen sheets, holding forty-five maps and plans. They ought to find a ready sale not only among the purchasers of the Messrs. Coates's edition of the History, but among all students of the war.——Guizot's posthumous work, a 'Popular History of England, from the Earliest Times,' edited by his daughter, will be published in this country by Estes & Lauriat, Boston. The work is illustrated.——S. C. Griggs & Co., Chicago, have in press 'Words, their Significance, Use, and Abuse,' by Prof. Mathews; 'Two Years in California,' by S. M. Cone; 'The Pilot and his Wife,' a love story from the Norwegian; and the following works by Prof. R. B. Anderson: 'Viking Tales of the North,' from the Icelandic sagas; and translations of the Elder and the Younger Edda.——Scribner, Armstrong & Co. will shortly begin the publication of a 'Sans Souci Series,' edited by Mr. R. H. Stoddard in a manner to supplement his 'Bric-à-brac Series,' with which also it will be uniform in appearance. From the rather vague prospectus we learn that the new series will be made up of "historical and biographical *ana*, particularly those which illustrate several important epochs in the civilization of modern Europe."——The Oneida (N. Y.) Community are to essay a new literary venture, more propagandist than their present *Circular*, to be called the *American Socialist*. Mr. John Humphrey Noyes will be the responsible editor.——*Notes and Queries* announces the publication of a two-volume catalogue of the printed books and MSS. bequeathed to the South Kensington Museum by Alexander Dyce. A portrait and a biographical sketch by the late John Forster are prefixed.——It is proposed to ask Congress to appoint national commissions to report at the next meeting of the International Medical Association on the feasibility of securing uniformity of measures, instruments, and methods of medical observation.——Dr. Daniel Sanders's large dictionary, which has long been indispensable to advanced students of German, is now appearing, a new edition, in parts. There are to be thirty-six in all, at two marks (about forty-seven cents in gold) apiece, and the last one is promised before the end of the year. Dr. Sanders's latest work is a German grammar for use in the public schools ('Deutsche Sprachlehre für Volks- und Bürgerschulen'; Berlin: Langenscheidt). There is at the end an appendix of some twenty pages, containing a very complete and useful list of irregular verbs and verbs of the strong conjugation.——The addresses of President Gilman and others at the dedication of the Johns Hopkins University have been printed in pamphlet form. It is announced that instruction will begin in Baltimore October 3.——The "Choral Training School for Music" in London is making excellent progress. Ninety-three scholarships, of £50 each per annum for three years, have been provided; the Queen, the Prince of Wales, and the Duke and Duchess of Edinburgh being among the donors.

—In response to an enquiry in regard to a recent advertiser in the *Nation*, the Postmaster-General authorizes us to state that the use of his name as a reference by the person in question (C. A. Lincoln, of Jacksonville, Florida) was without permission; and that he knows nothing of him, except as an office-seeker whose application he had refused.

—We are glad to record the fact that a bill constituting a commission to conduct a trigonometric and topographical survey of the State of New York was introduced into the Assembly by Dr. Isaac I. Hays, who succeeded in passing it through that body by a vote of 68 in favor to 33 opposed—a remarkable majority for a scientific measure. The movement, as our readers know, originated with the American Geographical Society.

—Mr. Charles A. de Kay writes us from this city, under date of March 25, as follows:

"Mr. Howells handed me a copy, word for word, of the letter you have thought fit to publish in this week's *Nation*. It had no date or address; merely the postmark Genova. I had no means of knowing whether the signer, 'Valeria Gigliucci,' was Miss or Mrs., but since you speak of her as Miss, I am led to infer that you know her. I can only inform Miss Gigliucci that I have never even heard before of Mrs. Cowden Clarke's 'charming, fanciful story of "Kit Bam, Mariner,"' and must rest my case for integrity—the merit of the fiction is nothing—on the good opinion of my friends. If the parallel between the two stories is so striking, I can only regret having written mine."

—It is a comfort to think that the generation which is to succeed the present incompetent managers of the national finances will have had some training for the task, not only from the discussions and experience of the past few years, but from downright study. The direction of this study could heretofore only have been surmised, but the recent answers to the *Publishers' Weekly's* prize question on Political Economy appear to furnish a tolerably accurate means of judging what the tendency is. The "prize list" happens to be identical with the "list by popular vote," so that there
